The Secretary apparently thinks he's going to have a tough time selling his plan. He attacked farm organizations and their leaders in an effort to discredit their position without stressing the merits of his own plan. Even on his plan the Secretary was confused. At one point he said there was nothing new or revolutionary in it and that most of it was lifted from the Agricultural Act of 1948. A few minutes later he said 125 employees of the Agriculture Department worked night and day for 6 months drafting the plan.

Brannan didn't get around to explaining his plan. But he did make it clear that he intended to stump the country to elect Representatives who will support it. He reminded the audience that he toured the country blaming the Eightieth Congress during the 1948 campaign. But this year he's going to blame, not the Eighty-first Congress, because it is controlled by his own party, but "selfish groups in the Eighty-first Congress."

He spent a great deal of time playing potato politics. He blamed the potato and egg situation on everyone but the Department of Agriculture.

As Senator GEORGE AIKEN, of Vermont, told the Senate recently: "Secretary Brannan now has ample authority under existing laws to handle the surplus-potato situation. He has been dramatizing potato supports and trying to make Congress look bad."

The crowd roared with laughter when Brannan said: "I am for Government economy." That really sounded funny in light of the Hoover Commission Report, which pointed out that the Department of Agriculture has mushroomed from 18,000 to more than 80,000 employees in 20 years, and its share of the national budget from less than seventeen million in 1912 to a high of $2,500,000,000.

Brannan also said we don't have regimentation. But a look at the so-called farm bill which bears his name belies that fact.

The following provisions of section 401 (b) on page 79 of the Brannan-plan farm bill:

"Farmers engaged in the production of any agricultural commodity shall furnish proof as to their acreage, production yield, storage, and marketing of the commodity in the form of records, marketing cards, reports, storage, or sales receipts or otherwise as the Secretary may prescribe as necessary for the administration of this title.

"Any person failing to make such a report or keep any record as required by this subsection shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined not more than $500 and any such person making a false report or record shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined not more than $1,000, or imprisoned not more than 1 year, or both."

That language, which the Secretary didn't take time to explain, sounds very much like regimentation.

The Los Angeles Examiner, commenting on the vote bait being used by the Truman administration, said: "Of course, the Brannan plan is modeled to catch votes among workers as well as farmers * * * this scheme resembles the current British Socialist Labor Government farm plan. The gold brick element of the Brannan plan inheres in the fact that the city dweller in reality will pay twice for food—once to the store and again to the tax collector."

Brannan apparently let his feelings of vehemence against a farm organization cloud his vision and instead of discussing "the extra bushel" he tossed out bushels of politics.

United Nations Must Be Strengthened

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 4, 1950

Mr. HOLIFIELD. Mr. Speaker, it is my firm belief that the United Nations Charter must be amended in the light of our experience and in view of the change of world conditions since the United Nations was founded.

I believe the changes necessary include: The elimination or drastic revision of the present veto provision, and the tightening of joint procedures of the democracies in cases of aggression or threatened aggression. Certainly a new definition of aggression should be made in the light of the Soviet refusal to cooperate with the great majority of the United Nations signatories plan for atomic-energy control, which must include internal inspection of all nations' facilities.

Under unanimous consent, I include with these remarks a statement which I made on October 12, 1949, before the Committee on Foreign Affairs of the House of Representatives. My statement was in support of a resolution to achieve this purpose.

STATEMENT OF HON. CHET HOLIFIELD, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Mr. HOLIFIELD. I have never believed that a preventive war against the Soviet Union presented even a last-ditch alternative to a peaceful solution of the world crisis. I have never believed that our sole possession of the secret of the atomic bomb gave us anything more than a fleeting moment of time in which to develop a policy which might lead to a peaceful solution. I have never believed that a peaceful solution could be found through purely negative means—that is to say, through a policy which aimed merely at stopping Soviet or Communist expansion.

Given the existence of the Soviet menace, I have gone along with the various means improvised to contain that menace, in the effort to make western Europe as a whole impervious to subversion or military conquest. I have accepted the necessity of maintaining our own military strength at a level which should make it clear to the men in the Kremlin that aggression would involve the Soviet Union in a war in which it would meet overwhelming military strength.

Nevertheless, I have felt that these negative, precautionary steps were not enough—that our policy lacked an affirmative constructive approach to the making and preserving of a lasting peace. I have felt that, while defensive preparation has been essential to the Nation as a preventive to war, defensive preparation alone could not lay the foundations of lasting peace. Moreover, it has been apparent for some time that defensive preparation to prevent war, if carried far enough, would eventually lead to war; that a sterile arms race would preempt the resources needed for building the peace; that a way must be found to halt the vicious circle of mutual distrust and provocation.

I am convinced that the only way to halt the arms race is to do the one thing which makes disarmament possible, namely, to establish world law and world law enforcement. This, I know, cannot be done overnight. But what we can do overnight is to make the establishment of world law and world law enforcement the avowed aim of American foreign policy. Once we do this, all our defensive actions will fall into an entirely different context. Once we do this, we shall give a constructive purpose, a clearly understandable constructive purpose, to our at-present disjointed efforts to promote economic health and political stability.

The fact that Russia has broken our monopoly on atomic weapons merely confirms a thing which has been apparent for a long time: There can be no way out of our present difficulties through war. It follows that the United States must take the lead in turning its back upon reliance on armaments and start working toward the establishment of peace machinery which will make such devices unnecessary. The resolution before us is merely the first step in this direction. The road to the development of the United Nations into a world federation is long and arduous. Many obstacles stand in our path. But, irrespective of these obstacles, we shall have failed in our mission as a Nation if we do not now, at this moment, make up our minds to start along this road to overcome the obstacles by patient effort and to lead the world at last into the tranquil harbor of a secure and enduring peace.

A Tax Problem

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD and to include extraneous matter, I am inserting a letter which I have received with reference to a tax problem which is disturbing business. I am also enclosing an article by Raymond Moley entitled "A Tax Against Safety and Progress."

FEBRUARY 28, 1950.

Hon. DANIEL A. REED,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN REED: Thank you for sending us a copy of H. R. 6563 and of your statement on the introduction of the bill in the House on January 3.

We think that your bill and your comments thereon represent one of the most constructive approaches to the tax problem that we have seen.

We have particularly noted your proposed revision of section 102. Your proposal is, of course, in the right direction and represents, we assume, your realistic appraisal of the extent to which the Congress might be persuaded to go in alleviating this menace to the sound economic growth of our country.

We urge you, however, to consider whether in view of the increasing realization that section 102 as applied to active business corporations is fundamentally unsound, the Congress might not recognize the need of more drastic revision. For example, it might be provided that no company shall be deemed to have accumulated surplus beyond the reasonable needs of its business if its total capital and surplus at the end of the tax year is not in excess of its expenditures for pay roll and purchase of materials during the year plus investments in fixed assets, or is not more than double the expenditures for pay roll and materials exclusive of fixed assets. Another possibility would be to provide that section 102 is not applicable to any corporation where 90 percent of the

shareholders own less than 50 percent of the voting stock, because in such instances the minority stockholders themselves have recourse through the State courts to prevent any undue accumulation of earnings.

Enclosed is a copy of a reprint of an article by Raymond Moley in the February 6 issue of News Week, which you may have seen. You will note that he has suggested that section 102 should either be repealed or amended to make it clear that it does not apply to companies employing a given amount of labor or realizing a given turnover of goods in relation to the amount of capital invested.

Your efforts in the direction of sound tax laws are sincerely appreciated.

Respectfully yours.

A TAX AGAINST SAFETY AND PROGRESS

(By Raymond Moley)

If Congress really wants to increase national wealth, guard us against depressions, and protect the jobs of workers, a good place to begin is with section 102 of the Internal Revenue Act. This section was innocently written in 1913 and ignored for 25 years. It was rediscovered in 1938.

In 1935 President Roosevelt shocked and angered Congress by proposing his notorious share-the-wealth tax program. He did it because he was at the moment afraid of Huey Long, who intended to run in 1936. One of the proposals then recommended was a tax on corporation surpluses, designed to force the paying out of profits in dividends. This idea was enacted into law in 1936. In 1938, against the President's vigorous opposition, it was substantially repealed. Roosevelt then turned to the sleeping section 102.

Under this law, the Treasury, not the business concerned, decides how much a company should withhold from stockholders and keep as a reserve against future needs and emergencies. The people who make this decision are not the people who have made and live with the business, but are revenue officers without business experience generally and altogether without knowledge of the specific business involved. The section has been an unjust burden and a sinister threat, particularly to small business.

There has been a stepping up of this threat since President Truman assumed office. In the 1946 tax-return forms the Treasury inserted a warning which meant to most companies that they should dissipate their earnings or else. This was later omitted. Meanwhile, the Department of Commerce was encouraging companies to invest more and more of their surplus funds in Government bonds, substantiating this suggestion by a reference to section 102.

The fallacy of this policy is that it implies that a business surplus is an unnecessary economic precaution. The fact is that a surplus constitutes basic purchasing power. It represents the ability to pay labor, buy raw materials, restore machinery and equipment, and provide security for business credit. It becomes the central power plant which supplies jobs, purchasing power, improved products, and a better standard of living for all.

To build up strong and productive companies means more income for normal taxation and larger revenues for Government. But to compel this security to be dissipated in dividends produces an insignificant amount of tax revenue. The wide scattering of share holdings, in which 80 percent of stocks are in the hands of relatively small taxpayers, provides a very limited tax source. Thus, the drastic enforcement of section 102 decreases tax revenues.

This law was originally intended to prevent abuses through incorporated pocketbooks. That purpose is already accomplished through the personal holding company tax.

Section 102 should either be repealed or it should be amended.

One part of an amendment should be to make it clear that it does not apply to companies employing a given amount of labor or realizing a given turn-over of goods in relation to the amount of capital invested.

Further, the burden of proof should be placed upon the Commissioner of Internal Revenue to show both the unreasonableness of the accumulated surplus and the existence of a real tax-avoidance purpose. In addition, it should be provided by law that long-term capital gains should be excluded from section 102 net income.

And corporate reserves set up out of profits already taxed, which reflect higher costs of replacing plant and equipment, should be excluded from section 102 net income.

Finally, there is a problem that has grown as the Government has, more and more, placed its heavy hand on business enterprise. That is the problem of unreviewable administrative decisions. The Supreme Court has refused to review cases brought under this law. As a result, the only law available to taxpayers and advisers has been the law as interpreted by the Treasury. The result is that business has been the helpless victim of administrative caprice.

Lewis Defends His Tactics, Asks Dealing With Owners

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 4, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from the New York Times of Friday, March 3, 1950:

LEWIS DEFENDS HIS TACTICS, ASKS DEALING WITH OWNERS—INSISTS IN INTERVIEW PUBLIC IS IN NO DANGER—STOCKS HELD SUFFICIENT IF DISTRIBUTED—HE ASSERTS PROFITS BACK HIS CAUSE

(By Arthur Krock)

WASHINGTON, March 2.—John Llewellyn Lewis, whose leadership of the coal miners of the United States has for years alternately paralyzed the flow of this essential fuel into commerce or released it to turn the wheels of ever-expanding industry, in an interview authorized for publication today answered seven questions that ranged from the source of his power to the most effective methods of preventing and settling disputes between labor and management.

Although Mr. Lewis is the target of more bitter criticism from the public than he ever experienced except during the wartime strikes of the United Mine Workers in 1943 and 1945, he submitted to the questions and agreed to let his answers be published.

Publication of Mr. Lewis' comments on the situation in the coal industry was deferred while the Government's civil and criminal contempt charges against his union, the United Mine Workers, were on trial before Federal Judge Richmond B. Keech here. Today Judge Keech dismissed as unproved these charges—that the union, though not Mr. Lewis, connived to keep the miners from returning to work in defiance of the judge's order.

In his answers the president of the UMW made these statements:

"No strike in the coal fields, including this one, has ever imperiled public health or safety.

"Enough coal is on hand, if fairly distributed, to last out the time we shall require to adjust the current dispute fairly."

His current wage and other demands on the operators are justified by statistics of the Departments of Commerce, Labor, and Interior which demonstrate to him that the profits of the coal industry (before taxes) rose from $34 per miner per annum employed in 1939 to $733 per miner per annum employed in 1948.

The power attributed to him has its source only in the degree to which the coal miners will follow his leadership, and this they do only when he is right.

His control of the selection of some officials in the union mine districts is exercised only where and because the miners, left to themselves, would make choices against their true interests.

The sole proper way to settle disputes where public health and safety are concerned is through collective bargaining in good faith, and in the current dispute the industry has never wanted that, being convinced that delay would bring into operation the Taft-Hartley Act. The procedures of the Railway Labor Act merely defer a strike, not settle it or its causes.

If he could bargain always with the real owners of the mines instead of their employees it would produce prompt and fair settlements.

As substitutes for the Taft-Hartley and the Wagner Acts he favors a simple law which would guarantee collective bargaining in good faith and establish a few unspecified, unfair practices for both management and labor.

He is not enthusiastic over Government mediation, but at times it can be useful.

The coal industry deserves the epithets of "cruel" and "conscienceless" which he at times has launched against it, as its cessation of welfare payments recently demonstrated.

A PRIVATE PERSONALITY NOTED

After Mr. Lewis answered the seven questions, this correspondent asked him to clarify and expand three of his replies and submit to two more. These are listed at the end of this dispatch.

Mr. Lewis said he did not have the time at hand to deal argumentatively with these. This is regrettable, though understandable in his current circumstances, because this material, whether or not to the satisfaction of his critics, would fill out or clarify what they are certain to point to as omissions and evasions.

Mr. Lewis' responses to the seven questions were written down by this correspondent from memory, but soon after he made them. In authorizing the language as his own, the union leader said:

"Naturally you have not written it the way I would write it, but 't will do."

In a personal conversation of this character Mr. Lewis gives a very different impression of his personality than the one he projects to the public. His tone is devoid of wrath, his words carry no trace of that purple bombast which is so familiar to readers of his public prose. His diction is clear and extensive, and he finds the mot juste without visible effort. His speech reflects deep reading, and is both simple and cultivated. The barking polysyllables which he employs for propaganda and personal attack are wholly absent.

The impression one gets is that Mr. Lewis, like most effective dealers in the marketplace of politics and social economy, puts on that make-up and assumes that dramatic role, as an actor does, which he has decided are best suited to create the impression he feels will serve his purpose best.

QUESTIONS AND ANSWERS

The questions and Mr. Lewis' answers follow:

"Question. Do you think you have too much power for one citizen?

"Answer. What is my power? As a union leader I have no more special privilege under

the law than any other, and much less scope under the Taft-Hartley Act than I had under the Wagner Act. The mine workers in the coal fields have usually followed and supported me because they believe that their cause is mine.

"If I had the power suggested by your question, would they not have returned to work the other day when I urged them to do so for the protection of their welfare and that of the union? When they think I am right they follow me, and that is the extent of it.

"I know it is said that between the local officers and members and myself there is a set of secret signals, that I phrase such urgings as the above in a way which they will understand to mean the contrary. But how could there be such signals? And if there were, why has no one in the industry, with spies all about, been able to detect and expose them? It is nonsense.

"Tomorrow a psychological wave might pass through the minds of the mine workers and wash away whatever influence over their actions I have as an individual and as president of the UMW. That isn't power in the sense the word is generally employed about me.

"The President has power which no psychological change can take away from him while he holds his office. Other officials have the same. Industrialists have the power conferred by financial resources on which labor depends for its bread. That is real power, of which I have none.

"Question. Do you think that labor's sense of responsibility has caught up with its present power?

"Answer. I believe that in the unions as elsewhere a sense of responsibility always catches up with increased economic strength. I think that is the situation in labor today.

"Question. I understand that in some areas miners do not elect their own union officers. If this is so, why?

"Answer. In perhaps a dozen districts the miners do not choose their district president and secretary. That is because these districts showed a tendency to make poor choices and the national organization decided its interest required that these officers be selected for them until their choices could be more relied on. But in these districts as well as in all the others each miner has a vote on the national officers and the decisions of each convention.

"I have heard it said that I have the power to expel a union member for any reason I may wish. The truth is that not for years has any attempt to expel been ratified by the controlling committee.

"Question. How should a labor dispute be settled where public health and safety are imperiled, as in this one in the coal industry? Would the Railway Labor Act procedures help? Would labor and management be better off if both the Taft-Hartley and the Wagner Acts were repealed and nothing substituted?

"If you and the operators do not present demands when negotiations begin how can there be prompt bargaining? Would it be helpful if both sides were required by law to state their demands in writing at the outset?"

GOOD FAITH AS ONLY WAY

"Answer. Collective bargaining in truly good faith is the only way to settle any labor dispute. And no strike in the coal fields has ever imperiled public health or safety, this one included. When has the Nation been really imperiled by one? There is enough coal on hand, if it were fairly distributed, to last out the time we shall require to adjust the current dispute fairly. The outcries are coming in part from those who did not stock up as they should have in view of the end of the contract period last June. Others did, some in remarkably large quantities.

"As you travel through Indiana and Pennsylvania these days you will see reserve piles of coal for the steel industry, piles so high that they obscure the big plants. And the TVA has a reserve of 650,000 tons. It should be simple to send around a few carloads to hardship cases in that region.

"Now for the Railway Labor Act. This has become weaker and weaker in practice, and in full operating strength it merely delays a strike; it does not prevent one. The present strike in the coal fields was delayed without such procedure, and the next time you are on a train if you will talk to any railroad employees you will find they no longer take stock in this act.

"The delay in this current coal strike came because the union did everything possible to avert it—witness the 3-day week—and continued to hope that management would sincerely sit down to real collective bargaining. Until that disposition was made manifest I could not protect the miners and at the same time state my requests either verbally or in writing. It was clear that the operators were anxious to drag out negotiations—if they could be called that—to the point where Taft-Hartley would be invoked. Had that law not been on the statute books I believe we would have had an agreement long ago. The operators want to weaken the mine union and they know that Taft-Hartley is the means to do that.

"I am for its repeal, as I have made plain, but I would not want to surrender all the protections of the Wagner Act. What I propose is the substitution of both acts with a simple statute, giving labor the protective guaranty of collective bargaining and adding a proscription of certain unfair practices on the part of labor and management alike. That, with supplemental laws like Norris-La Guardia, Wages-and-Hours, etc., would be all the labor legislation needed to maintain a steady economy."

MEDIATION SERVICES AN AID

"Question. What part should State or Federal mediation services play in labor disputes? Have they been helpful in the terms of your own experience? If not, how could they be made so?

"Answer. In my experience, these services have been somewhat helpful but not more. It is useful occasionally for labor or management to have solutions suggested by official conciliators that, for tactical reasons, cannot be proposed by either party to the controversy. In this way settlements have been forwarded now and then.

"Question. Nearly always you and the coal operators accuse each other of failure to bargain in good faith. You represent some of them as conscienceless, cruel men. What is the solution of these attitudes?

"Answer. Here are some figures showing the consequence to disabled miners, their widows, their children—some of them orphans—of the stoppage of welfare-fund contributions by management in the coal business. [These listed thousands without this means of subsistence.] This is what I have in mind when I sometimes represent the operators as cruel, conscienceless men. Even now, when the court says the old contract is temporarily in force, many of them have not resumed payments to the welfare fund. Yet Government statistics reveal that the coal industry, which made a profit of $34 per miner in 1939, made a profit of $733 per miner in 1948.

"I don't know how to melt the hearts of such men. But a step toward a solution of what you call these attitudes would be for the coal industry to send its real owners to the bargaining table. I speak for the union. But on the other side of the table I find only employees who have no authority to come to terms which I have the authority to offer. If the industry will send its owners to the table, we can come quickly to fair agreements, as was demonstrated when Myron Taylor and I made the first contract in the steel industry. Instead of George Love and the others I deal with, the industry should send Ben Fairless, G. M. Humphrey, R. R. Young, and James D. Francis, as examples."

LABOR AS POLITICAL ENTITY

"Question. With the British example in mind, do you still oppose the formation of American labor into a political party? And what do you think of statements that your methods are taking coal out of the competitive fuel market and costing the miners large sums of take-home pay every year?

"Answer: Let us begin with the case of Great Britain. The population there is sitting on a coal deposit which, if taken from the earth by modern methods, would solve the economic problem of the British. But first British management made the mistake of letting obsolescence weaken the industry. And then British labor made the mistake of becoming a political party and using the political instead of the economic approach to national problems. The result is what you see. In 1948 American miners took out approximately 600,000,000 tons, British miners took out less than 200,000,000 tons. And in this country the mining force was 404,000 and in Britain it was 736,000. The UMW has been greatly responsible for the methods employed in the industry and its modern equipment. This should be remembered when the dead cats and brickbats are flying around the heads of coal union leaders.

"However, I read editorials which say that my methods have advanced the use of competitive fuels and doomed coal to become a drug on the market. When the miners read that they laugh. They laugh because they know that any housewife whose husband can find the money will put in gas for fuel; it is clean and requires no hand labor. They also know that industry will use coal over other fuels because its lower cost appeals to industry."

LOST PAY VERSUS STRIKE GAINS

"I also read editorials which say that the pay I cost miners who go out on strike represents much more in any year than any wage gains I procure for them. When the miners read that they laugh, too. They laugh because they know these things: That about 200 work-days per year is maximum in the industry and that the time spent in strikes would be idle time, anyhow. That is history, and it will be the same in 1949–50 when this strike is settled.

"The trouble with the editorial writers and many others is that you have to know coal miners before you can write about their affairs and their leadership. Mining is the only labor which is done underground. It is performed amid hazards, in foul air and is backbreaking. To choose to be a coal miner means that you are a certain type of man. These I know well, their needs, their interests and their psychology. For many generations members of my family have been miners or operators, and I well know labor in the depths of a mine."

The answers Mr. Lewis was asked to amplify were as follows:

"Question. In 1948 you did deal with the tricts where this is the arrangement? Are the elections of members to the international executive board also barred to these workers? Is it true, as has been stated, that the last opposition candidate for president of the UMW was taken off the ballot and out of the convention by something resembling force? How much beating up of the opposition is the practice?

"Question 6. What is there in the industry contention that they suspended welfare payments partly because you were spending the money faster than it was coming in?

"Question. In 1948 you did deal with the real owners, Messrs. Fairless and Humphrey, and got the able and willing clause from them, over the protest of Charles O'Neill. Do

you think that proves or damages your argument in this respect, from the public viewpoint?"

The additional questions submitted but not answered were:

"What are the arguments for a wage increase at this time beyond the profit per miner figures you gave me? What is there in the belief that your strategy all along has had the objective of Government seizure?"

STATISTICAL DATA CITED

For statistical data supporting his answer No. 6, Mr. Lewis offered the following:

"Office memo to Mr. Lewis:

"We have just completed a thorough analysis of the bituminous-coal industry profits per employee for the 10-year period 1939-1948, based on Department of Commerce national-income figures and United States Bureau of Labor Statistics employment figures. This shows:

"1. Profits—before taxes—per miner employed, increased from $34 per miner in 1939 to $733 per miner employed in 1948.

"Rate:

1939	$34
1941	182
1942	225
1945	313
1947	577
1948	733

"2. A wage increase of 95 cents per day, and a royalty increase of 15 cents per ton could be given, on the basis of 1948 figures, without any price increase and with a 22 cents per ton profit to the industry.

"The 1948 figures show 404,000 employees and profits of $296,000,000; per employee, $733, or approximately 50 cents per ton.

"Applying the wage and royalty increase to this 1948 data, profits would be $130,088,000; per employee $322, or approximately 22 cents per ton.

"Sources of profit data: from table 17—Corporate Profits Before Federal and State Income and Excess Profits Taxes, by Industry, in United States Department of Commerce's National Income Supplement to Survey of Current Business; years 1939, 1941, and 1942, page 30, July 1947 issue; years 1945, 1947, and 1948, page 16, July 1949 issue.

"Sources of employment data: from table A-6—estimated number of employees and indexes of weekly pay rolls in selected nonmanufacturing industries, in United States Department of Labor's Handbook of Labor Statistics, 1947 for years 1939, 1941, 1942, 1945, and 1947, page 24. Year 1948 from United States Department of the Interior, Bureau of Mines, Bulletin C. M. 1 No. 12, page 11, table 5—average number of men, days active, man-days, man-hours, and production in bituminous coal and anthracite mines during January-December 1948."

Statement of George J. Burger

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 4, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of George J. Burger, vice president, National Federation of Independent Business, before the Subcommittee on Study of Monopoly Power, Committee on the Judiciary, House of Representatives, Washington, D. C., February 15, 1950:

My name is George J. Burger. I am vice president and a member of the board of directors of the National Federation of Independent Business, Inc., head office, San Mateo, Calif., a national nonprofit organization organized under the laws of the State of California, which has the largest individual membership of any business organization in the Nation. I am also in charge of the Washington office of the National Federation of Independent Business, Inc., located in the Bond Building, Washington, D. C. We also maintain offices in Chicago, Cincinnati, and New York City.

I want to take this time to thank the chairman, the Honorable EMANUEL CELLER, for the privilege extended to me in behalf of the federation and its membership to appear here today and present our views on this major legislative proposition. In the first instance, it has been the keystone of the objectives of the federation to protect our free enterprise system and through this the people we represent, independent business, through the all-out enforcement of antitrust laws. Our position in this matter was stated in plain and understandable words in the privilege extended to us in our appearance before the platform committees of both the Republican and Democratic National Conventions held in the city of Philadelphia in the summer of 1948. At this time I want to have it on the record that we received the most courteous and interested attention of both committees to the federation's position on antitrust law enforcement. Our position then was, and it is now, and I quote:

"First and foremost, members of the federation desire that a consistent, vigorous, effective antimonopoly campaign be waged by Government. To this end, federation members have repeatedly urged their Congressmen to vote adequate appropriations to the Department of Justice and the Federal Trade Commission. To this end, officers and directors of the federation have constantly contacted Congress and congressional committees, including the congressional Joint Committee of the Economic Report, suggesting that both these agencies be freed to voluntarily inform congressional Committees on Appropriations whenever, and the extent to which, their budget requests have been cut by the Bureau of the Budget.

"In this connection, federation members have consistently demanded that Congress strengthen our antitrust laws wherever needed and have urged Congress and Government to refrain from all actions designed to weaken these laws. Recognizing the fact that present antitrust-law-violation penalties are really insignificant and ineffectual, they have repeatedly asked Congress to legislate stiffer penalties for violators of these laws. And, in recognition of the fact that antitrust-law litigation is many times subjected to suffocating delay, it has been requested that Congress act to provide some means of speeding action on this type of litigation.

"You may wonder at the stress that federation members lay on this phase of Government activity. The fact is that the tendency in our economy is toward more rapid and more certain concentration of power in the hands of a relatively few business giants, both in private hands and in the hands of cooperative-type organizations. Pacing this trend toward concentration is an increasing disregard for the rights of independent business, which is mirroring itself in increasingly serious curtailment of economic freedom of opportunity. Our members see as one of their main bulwarks the antitrust laws of the Nation, and they demand that these laws be used for that purpose."

It must be understood, Mr. Chairman, that no officer or group of officers sets the position of the federation, but our position is set exclusively by the registered vote of the Nation-wide membership of the federation through its official publication, the Mandate, and in the Mandate itself a ballot is affixed on which the member votes his views and the ballot is returned by him to the district chairman, an independent businessman, and the ballots are then forwarded by the district chairman direct to the respective Members of Congress. The federation's position then is controlled exclusively by the expressed vote of its members. Such a procedure has been consistently followed by the federation's members in their use of the ballot through the Mandate, and I attach herewith as a matter of record, which I would like to have included in the record, Mandate Nos. 158, 159, 160, 161, and 162 which contain questions on antitrust enforcement.

On November 17, 1948, I was requested to appear and give testimony before the subcommittee of the House Small Business Committee To Investigate Monopolistic Practices. In my testimony I said in part:

"In my visits in the respective cities it would appear that antitrust violations are becoming more rampant than ever before in the history of our Nation. It has reached an exceptionally low level. In most States there are laws for protection where violations are taking place, but it is my opinion that many States are deficient in carrying out the laws and the public is being gouged through such practices. More important, small business is being misled and the free-enterprise system is falling by the wayside.

"In my own industry, rubber tires, with which I have been connected for close to 40 years, I do know that many of the suggested and recommended ideas for violations of either State or national laws originate in the minds and thinking of the big monopolists of that industry. I say this without fear of contradiction, and apparently if such conditions exist in that industry, possibly the same pattern is being followed in other industries controlled by monopolies. Again, small independents are being misled and free enterprise is being destroyed, and regimentation is coming from the dictates of those who desire to protect the monopoly in their respective field, and not from the Government as monopoly would have us believe.

"Encouragement should be given to the youth of this Nation to go into the various trades so that the services of sufficient and adequate numbers in their own businesses will be available to the American public.

"It must also be understood that we take no position that merely condemns big business because it is big, for such is not the case, but we do condemn big business where, by its own action, it prevents the free-enterprise system from functioning, and the public is the victim."

It is our opinion that the committee should thoroughly explore the public hearings Senate document titled "Officers and employees of the Federal Government, hearings before the Committee on Civil Service, United States Senate, Eightieth Congress, first session, on Senate Resolution 41, a resolution to investigate certain matters relating to officers and employees of the Federal Government, part 3, February 4, 6, 8, 11, 12, 13, 15 and 18, 1947." The committee will be particularly interested in that part of the testimony relating to the Hon. Wendell Berge, where the matter of the application of fines and jail sentences was thoroughly

explored by the members of the committee present during Mr. Berge's testimony before them.

We are particularly interested in the statements from committee members or by the witness as to the application of fines levied by the courts where convictions took place, that is, as to their value as a deterrent to continual violations, irrespective of what the fine might be.

It is interesting to quote some of Mr. Berge's testimony. He said:

"We can get convictions in price-fixing cases, and we generally get them, and I would point out the amount of fines we collect annually in the criminal cases is very substantial, but my point, Senator, is this, if your defendant is a large corporation, and they generally are, the financial penalty is not a big item to them and they'll spend hundreds of thousands of dollars—I know of a case where they spent $2,000,000 in attorney fees—to fight a fine liability at most of a few hundreds of thousands of dollars."

It is interesting to note during the same hearing, an exchange between Mr. Vogel of the committee and Mr. Berge, and I quote:

"Mr. VOGEL. Did you ever think of the question that your penalties have not been sufficient to do the job? That is, the penalty of $5,000 was not a deterrent and possibly a jail sentence might produce something that had not been produced in 57 years.

"Mr. BERGE. Of course, we have considered it. But as I told you, and for whatever my judgment is worth—I may be wrong—but I am sure if we are given a mandate that Congress wants jail sentences, we will go out and try to get them. We had not understood that was what was wanted. It has been our judgment that was not."

Later in his testimony Mr. Berge made the following statement:

"My experience, and I would be less candid if I did not bring to your attention, is that the courts are very loath to impose even the maximum fines we have now because there is some feeling, which I do not share, but nevertheless there is something about a Sherman Act violation that is a little nicer than the ordinary kind of crime, and we cannot be tough with the kind of a defendant we have in Sherman Act cases."

He continues:

"No; how do we get around that and have an effective penalty? It is not because the court is afraid to extract money from the average corporate defendant. He knows that they can afford to pay it and knows that the lawyers before him are drawing more in a single day than the maximum fine he could impose. So when he decides to make it $2,000 instead of $5,000, it is not because he does not want to impose the burden but because there is a feeling in the minds of many people, including judges, that criminal fines are not quite the kind of punishment that defendants ought to have. I say that as a fact that you cannot ignore."

In view of the above authority, the then Assistant Attorney General, a career man in the Department of Justice, it is our opinion that the fine provisions in antitrust law violations will not be a deterrent to continual violations of the antitrust laws. It goes without saying that the fine penalty would be a deterrent to independent businesses where they are found in violation of antitrust laws and convicted, and in most cases our opinion would be that fines could really put independent business out of business, but in the higher brackets in our business economy, where big business functions in high gear, we hold to the view that fines would be no deterrent, irrespective of the amount of the fine involved. For example, during the World War II emergency, where rubber tires were an essential commodity for our war efforts, and at which time the Government laid down specific regulations and laws where violations took place, we find that when the Government moved in to correct the violation of a small firm and the penalty was inflicted, in most cases it resulted in the fact that the small fellow's right to do business was suspended for a term, which action put them out of business. But, on the other hand, when a larger member of that industry deliberately, Nation-wide, violated the law in a similar manner, by some manner or means he was able to get away with it. Or would we put it this way, Mr. Chairman, "Don't do it again," which is the line with the comments referred to above as made by members of the Senate Civil Service Committee during the examination of Mr. Berge, the then Assistant Attorney General on antitrust enforcement.

Mr. Chairman, it would be in order, in our opinion, to amend H. R. 6679, and to add thereto the provisions outlined in H. R. 4402, as follows:

"That any person convicted of any offense under the antitrust laws shall, as part of the punishment for such offense, be barred, for not less than 2 nor more than 5 years, from serving, directly or indirectly, in the capacity of officer, director, executive, legal counsel, adviser, and any similar capacity, with any corporation or corporations convicted in the same proceedings, and from directly or indirectly receiving any compensation, remuneration, or other consideration therefor, or by way of indemnification for being so barred. If he shall have been connected with any such convicted corporation in any such capacity during the commission of the criminal acts for which he has been convicted, he shall be so barred from such corporation for not less than 3 years, instead of 2 years as provided above. If he is a second offender by reason of prior conviction under the antitrust laws, he shall be barred for not less than 10 years, instead of the time provided for above; if a third offender, he shall be permanently barred, and the bar shall extend to serving with all corporations engaged in commerce."

Finally, as we see the situation, speaking solely in the interest of independent business of this Nation, we come to the conclusion that increasing fine penalties would not arrest the continual violations of antitrust laws, but, on the other hand, if the penalties for removal of officers were added thereto, and the Congress would vote such legislation, it would result in a watchful step by many corporations and their executive officers before they would chance losing their jobs through their own actions, either for a time or permanently.

We also believe there is immediate need for Congress to vote such recommended legislation in view of the fact that such action should be taken before any attempt is made for financial aid for independent business, as the above legislation would provide real protection for long-term capital loans.

It is our hope that your committee will take under advisement the suggested amendment to the bill under consideration and report out the amended bill at the earliest possible moment as such action would be in keeping with the expressed platform promises to independent business for more vigorous enforcement of antitrust laws and the strengthening of the laws by both the Democratic and Republican platform committees. This would be keeping their pledge to independent business of this Nation whom we believe number 3,000,000 or more. We believe for the good of our Nation's welfare that stronger antitrust laws must be enacted immediately, and the penalties for violations being more severe, if our free-enterprise system is to remain and function as independent business of this Nation understands the words "free enterprise."

Hospitalization of Mental Patients by the Veterans' Administration

EXTENSION OF REMARKS

OF

HON. W. M. (DON) WHEELER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 4, 1950

Mr. WHEELER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am enclosing herewith a resolution adopted by the House of Representatives of the Legislature of the State of Georgia which I think will be of interest to the Members of this House who may have such conditions as described in the resolution existing in their States.

Mr. Speaker, in line with the resolution referred to above, I have introduced H. R. 7534, a bill to amend veterans' regulations to establish for persons who served in the armed forces during World War II a further presumption of service connection for psychoses developing to a compensable degree of disability within 3 years from the date of separation from active service. I commend this bill to the attention of the membership of this House and hope that we may secure speedy passage of same so that many deserving veterans may be taken from county jails and placed in Veterans' Administration hospitals.

The resolution follows:

Whereas it has been forcefully called to the attention of the several members of this house of representatives by the State department of veterans service that hospitalization for mental patients by the Federal Veterans' Administration has become so critical as to be almost unobtainable; and

Whereas we are informed by the Veterans' Administration that this crisis is due to the lack of bed facilities in the various Veterans' Administration hospitals in the vicinity of our State; and

Whereas there are Georgia veterans suffering with mental disabilities languishing and suffering in Georgia jails because of the inability to secure beds for them in Veterans' Administration hospitals; and

Whereas there are many of our young veterans that can be cured of these mental conditions if adequate treatment is received without delay; and

Whereas there are 130 Georgia veterans entitled to hospitalization in Veterans' Administration facilities who are hospitalized in the State Hospital for the Insane, Milledgeville, Ga., because the Veterans' Administration was unable to hospitalize them because of the lack of bed facilities; and

Whereas the Veterans' Administration hospital at Augusta, Ga., will admit only veterans suffering with mental disabilities incurred as a result of service in the armed forces of the United States of America; and

Whereas the laws of the United States of America provide for hospitalization of veterans irrespective of their service-connected status and since these laws do not discriminate as to the type of disability and since there appears to be discrimination by the Veterans' Administration against mental patients resulting in the aforementioned deplorable condition of our mental patients; and

Whereas it is felt that the Congress of the United States of America did not intend nor does it now desire that the men and women who fought for the preservation of our way of living against the enemies of

our country be thus abandoned to the tortures of mental derangement in jails, inadequate homes and wherever else they may be because the Veterans' Administration will not accept them, and until beds can be made available at the already overcrowded State hospital: Be it therefore

Resolved, That the House of Representatives of the Legislature of the State of Georgia herein assembled strongly deplore the treatment received by Georgia veterans suffering mental disabilities at the hands of the Federal Veterans' Administration by refusing hospitalization for non-service-connected mental cases, thereby necessitating their prolonged incarceration in the jails of the various counties of this State without treatment and adequate care; and be it further

Resolved, That this critical condition be made known to the Georgia delegation of the Congress of the United States now in session so that they may do all within their power to relieve this critical situation by securing more beds and adequate medical personnel to staff the Veterans' Administration hospitals whereby effective treatment may be rendered and these veterans removed from the pitiful conditions now existing; and be it further

Resolved, That this resolution be spread upon the minutes of the House and that copies be sent to the United States Senators and Representatives in the Congress from this State.

In house, read and adopted February 9, 1950.

J. BOONE,
Clerk of the House.

Visit to the United States by Delegation From World Congress of Partisans of Peace

EXTENSION OF REMARKS
OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Wednesday, February 22), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a State Department release relative to the proposed visit to the United States by a delegation from the World Congress of Partisans of Peace.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

PROPOSED VISIT TO THE UNITED STATES BY DELEGATION FROM WORLD CONGRESS OF PARTISANS OF PEACE

The World Congress of Partisans of Peace, the leading over-all Communist-front organization in the world, has announced that it is sending a delegation of 12 Europeans to the United States on March 3. The announced purpose of the delegation's visit is to present a petition to the Congress of the United States for (1) cessation of the armaments race by immediate reduction of war budgets and military effectives; and (2) prohibition of atomic weapons.

Members of the delegation have applied for visas to come to the United States. The 12 delegates, on the basis of available information, are either known Communists or fellow travelers and are therefore subject to exclusion from the United States under the immigration laws.

The Department of State, because of the avowed intention of the group to present a petition to Congress, has consulted with majority and minority leadership in both Houses. On March 1, the majority leader of the House, Representative JOHN W. MCCORMACK, addressed the House on the subject. Mr. MCCORMACK said in part:

"Heretofore, the function of this Soviet front-organization has been manipulation of the peace symbol in ways calculated to exploit for selfish Soviet purposes the sincere longing for peace of hundreds of millions of souls throughout the world. It has shown little genuine concern for peace as that term is understood in the free world but abundant zeal for the establishment of conditions favorable to extension of Soviet powers.

* * *

"It is singularly presumptuous of this Soviet-front organization and its sponsors to assume that the legislative branch of this Government would, for a single moment entertain any fraudulent appeals calling on this body in effect to abandon its principles and disregard its solemn responsibilities to the American people and their allies for the security of the United States and the preservation of democratic institutions throughout the free world.

"I am sure the State Department recognizes the situation and will govern itself accordingly in the proper way."

At the close of Mr. MCCORMACK's remarks, the minority leader, Representative JOSEPH W. MARTIN, JR., requested permission to make the following statement:

"I agree with the remarks of the gentleman from Massachusetts [Mr. MCCORMACK], and I hope the State Department will take the proper action and not permit the visit to be made."

On March 2 Senators TOM CONNALLY, chairman of the Foreign Relations Committee; SCOTT LUCAS, majority leader; and KENNETH WHERRY all spoke in opposition to the granting of visas to the delegation. Similar opposition was expressed in the House by Congressmen JOHN KEE, chairman of the Foreign Affairs Committee, and JAMES G. FULTON.

The Department of State, in full concurrence with the congressional expressions above stated, is therefore refusing to grant entry to the proposed delegation.

ANNOUNCEMENT AND SPONSORSHIP OF THE PROPOSED VISIT

The first public announcement of the membership of the delegation to the United States was contained in the February 18, 1950, issuance of the Paris Communist newspaper Humanite. The same source, on February 10, had reported on a February 9 meeting of the Paris Secretariat of the movement at which the decision was made to send delegations to various countries including the United States.

On February 23 a welcoming committee for the World Peace Delegation, with its headquarters in New York, extended an invitation to the delegation to come to the United States. The American group is headed by O. John Rogge and reportedly includes Bishop Moulton, Dr. Linus Pauling, and others who were associated with the so-called Cultural and Scientific Conference on World Peace which met at the Waldorf-Astoria Hotel, New York, March 25–27, 1949.

BACKGROUND OF PARTISANS-FOR-PEACE MOVEMENT

The partisans-for-peace movement was organized at Communist-line meetings held in Paris and Prague, April 20–25, 1949. It stemmed from an earlier international peace congress at Wroclaw, Poland, held in August 1948. The World Congress of Peace Partisans at Paris established a permanent world peace committee as the central unit in the peace movement. The committee consists of representatives from 54 countries and includes key leaders from such Communist-front organizations as the World Federation of Trade Unions. It has a smaller executive bureau headed by the French atomic scientist, the Communist, Frederic Joliot-Curie.

The peace congresses held in various countries under the auspices of this organization have uniformly followed a Communist line. They have centered their attack on "United States warmongers" and have been most sympathetic to the U. S. S. R. and Soviet foreign policy. The organizational pattern has been to use as spokesmen prominent intellectuals, some of whom are consistent fellow travelers and some of whom are independent leftists, while the direction and machinery remained firmly in Communist hands. Rarely have non-Communist viewpoints been expressed at these congresses. When presented they were quickly blanketed by orthodox Stalinism.

PROGRAM OF THE PARTISANS FOR PEACE

As a major Soviet instrumentality for propaganda and political pressure, the partisans-for-peace movement encompasses virtually all important front organizations through which Communists are appealing for support to labor, women, youth, and other peace-loving people. Leaders of the movement have stated recently that the movement has completed its basic organizational stage and that the time has come for it to undertake concrete tasks.

A series of campaigns, seeking such concrete results, is under way at the present time. A striking aspect of this stage of developments is its open connection with the Cominform and the world Communist movement. Thus, the best summary of the Partisans of Peace program is to be found in the leading editorial of the Cominform organ for February 10, 1950, which claims that the world-wide struggle for peace is entering a new phase of concrete patriotic action against war in which declarations and pacifist phrase-mongering are not enough. The Cominform, therefore, states that the tasks of the Partisans of Peace include a campaign to secure refusal by the workers to produce weapons of death; a campaign among western European transport workers to obtain their refusal to handle American arms, agitation for the withdrawal of French troops in French Indochina, the replacement of the present reactionary governments in France and Italy in order that their parliaments will stop the arms race and annul the North Atlantic pact, and the active support of Soviet proposals to prohibit atomic weapons and to conclude a peace pact among the big powers.

Although the Partisans of Peace are participating in each of the campaigns mentioned by the Cominform, the most important work is being done with reference to two of these. The most spectacular campaign is directed toward closing European ports to American shipments under the mutual defense assistance program. The effort to do this centers largely around a strike campaign coordinated by the World Federation of Trade Unions, an affiliate of the World Congress of Partisans of Peace. The various local and national committees of the Partisans of Peace movement in Europe and actively assisting in this strike campaign by attempting to mobilize mass support through demonstrations, other propaganda methods, and the collection of funds, and by providing a propaganda cover to the strike campaign, which is justified in the name of peace.

In the second of the important Partisans of Peace campaigns, an effort is being made to mobilize world public opinion behind a series of peace proposals which coincide with those presented by the U. S. S. R. delegation to the United Nations—a connection that is mentioned in the official journal of the Partisans of Peace.

A variety of methods is being used by the Partisans of Peace in their effort to mobilize what they will claim to be world public opinion in support of these proposals. These include the collection in a number of countries of millions of signatures for peace ballots, torchlight processions, and other demonstrations, and the petitioning of thousands of municipal councilors and members of parliaments. In this country there is now underway a drive to collect a million signatures in protest against H-bomb diplomacy to be presented to President Truman on April 12, the anniversary of President Roosevelt's death.

The most important aspects of the Partisans of Peace campaign in support of the Soviet peace proposals centers around the effort to secure their formal ratification by the various national assemblies of the world (of which the proposed delegation to the United States is one example). This is being done in two ways: First, the Partisans of Peace organizations in each country are petitioning their own parliaments to ratify these proposals. (A number of satellite parliaments, including Bulgaria and Czechoslovakia, have already responded to such appeals.) Second, the World Congress of Partisans of Peace is now planning to send a number of international delegations to appeal to the parliaments of such countries as Belgium, Holland, Italy, France, Mexico, the Soviet Union, and the United States.

MEMBERSHIP OF THE DELEGATION TO THE UNITED STATES

Pablo Picasso: World-famous Spanish painter. A member of the French Communist Party since 1944, he has been a leading figure in various Communist-front organizations, including the International Committee of the World Partisans of Peace.

Rev. Hewlett Johnson: Dean of Canterbury. Member of the editorial board of the Daily Worker. Delegate to several conferences of the Partisans of Peace and British member of the World Peace Committee.

Iver Montagu: British film producer, director and scenarist, and active in many phases of motion-picture production. He has been a Communist Party member since 1932 and is a member of the Daily Worker editorial staff.

Dr. Max Cosyns: Belgium's foremost atomic scientist and associate of Professor Piccard since 1932. An avowed Communist sympathizer, Cosyns has been playing a vigorous role in various front organizations.

Eugene Aubel: Professor of chemistry and biology, University of Paris. A member of the French Communist Party. Active in Communist-front organizations. Delegate, World Congress of Intellectuals, Wroclaw, Poland, 1948, and a member, National Council Combattants de la Liberte et de la Paix (Fighters for Liberty and Peace).

Hans Erni: Well-known Swiss modernist painter. An ardent fellow traveler, he is a leader of the Swiss-Soviet Friendship Association.

Jean Lurcat: Artist, reportedly a member of the French Communist Party and an active member in numerous Communist-front organizations.

Luigi Cacciatore: A parliamentary deputy, Cacciatore is an active leader of the Italian Socialist Party which cooperates with the Italian Communist Party. He was Minister of Posts and Telecommunications in the De Gasperi cabinet in 1947.

Dr. Mario Montesi: Communal councilor of Rome since the liberation. He was at one time active in the Christian Democratic Party but later joined the pro-Communist Christian Movement for Peace.

Giuseppina (Pina) Palumbo: A socialist senator and former social worker, she was the first woman given a post in the Italian Government after liberation. She is now active in leftist women's groups.

Prof. Oliviero Mario Olivo: Highly regarded Italian specialist in anatomy and histology and one-time Rockefeller fellow in the United States. He took part in the leftist-sponsored Congress of Italian Culture in 1948.

Furio Diaz: Communist mayor of Leghorn since the liberation. Thirty-three years old, law graduate; formerly taught at University of Pisa. Member of the Italian Communist Party and its organ, the Friends of Unita.

Not Fooled by President Truman

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 4, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial from the Pontiac Daily Press of Pontiac, Mich., dated March 2, 1950.

The President may think that he can fool all of the people all of the time. This outstanding newspaper has pointed out in its editorial that the one person to blame for the present coal famine is President Truman, himself.

Many telegrams have reached my desk, urging that impeachment proceedings be instituted against the President.

As long ago as October 27, I wired the President, urging action in the coal crisis. That appeal has been repeated by me to him since that time. Such appeals have been entirely ignored.

Whatever credit the President may take for settling the coal strike is entirely unjustified. The people of the country should know that for political purposes and for political purposes only, he neglected to do his duty to the American people.

The editorial follows:

THE TRUMAN COAL FAMINE

Is your coal bin empty?

If it is or so nearly so that you are alarmed by the threat to your family's health, do you know who is to blame?

The easiest answer to that question would be John L. Lewis and the mine operators. But it wouldn't be the right one.

Mr. Lewis and his United Mine Workers certainly must accept great responsibility for the catastrophe now gripping the Nation. Neither are the mine owners guiltless. But the major weight of blame belongs to one man.

He is President Harry S. Truman.

His dilly-dallying brought on the crisis.

It explains why Pontiac is one of the forty-six Michigan communities forced to the last ditch resort of coal rationing and sharing.

His refusal to take a firm and early hand in this dispute idled nearly 200,000 employees of coal-using industries, besides the 370,000 miners still on strike in defiance of two court injunctions.

At every stage of this slowly developed national emergency the President has procrastinated. Perhaps, as has been suggested, he desired to show the weakness of the Taft-Hartley Act as a means of settling disputes endangering the national welfare.

Instead he has proved his own weakness. And the people are left in the middle.

They are being squeezed between the two ruthless forces of a big labor monopoly and a socialistic Democratic-Labor administration.

The United Mine Workers Union belatedly has been brought into court on a charge of contempt. But there is no certainty that even a heavy fine will persuade the miners to resume work.

Sentiment in Congress is growing for legislation authorizing the President to seize and operate the mines.

We hope this can be avoided.

It is objectionable on two counts.

For one thing it would put Government into a business which should be privately operated. Second, it would enable the administration to make a contract with the UMW the union never could hope to win from the operators.

Past experience shows that the result would be higher coal prices and no greater probability of uninterrupted production in this sick industry. An administration banking heavily on rank-and-file labor votes can't be expected to handle contract negotiations without those votes in mind.

This very step apparently has been the goal of John L. Lewis ever since he cut the workweek to 3 days with the definite intention of bringing on a critical situation. All the way through many months in which the national situation grew steadily worse, President Truman sat quietly by, replying to frequent questions merely that there was no crisis.

The American people should know by now where the major blame lies. They know that votes put the man mainly responsible in the White House. If they don't like the way he has acted, they should remember that votes also can take him out of it.

Transit Radio's Case

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1950

Mr. SHAFER. Mr. Speaker, there has been some agitation about the pros and cons of radio broadcast to trolley cars and busses here in the District of Columbia.

Transit Radio, Inc., is a concern of high reputation and its operations are participated in by some of the best daily newspapers in various sections of the United States. Perhaps music makes some people nervous but this article points out in an honest manner that, contrary to recent agitation, the broadcasts are welcomed by most car and bus riders and, of course, they are not used for anything but legitimate commercial purposes as are any other lawful broadcasting companies. In order that the people of the country will not be deluged by hysteria on the subject I am presenting the following article, reprinted from Broadcasting-Telecasting, a trade publication, issue of February 6:

(By C. L. (Chet) Thomas, president, Transit Radio, Inc., general manager, KXOX-AM-FM, St. Louis)

The case for Transit Radio has never been fully made. It is impressive. The main arguments in favor of Transit Radio are:

The riders of public transportation like Transit Radio.

They like its music. It is good music—popular in the best sense, neither heavily

classical nor radically "jive." It is the type of music that, according to psychologists and experts in industrial relations, soothes people and reduces tension. Without cost the riders of public transportation are given the same kind of service with which many businesses at considerable cost provide their customers and employees. Without cost the riders of public transportation receive the very best radio service available to the riders of private automobiles. Without cost they hear this service reproduced with a fidelity equal to that of the most expensive receiving sets in private automobiles. The riders of public transportation receive this excellent transmission of this excellent program during what is to most of them the most tedious parts of their day.

CITES LISTENER APPEAL

The riders of public transportation like the nonmusic services provided by Transit Radio also. They like the brief newscasts and weather reports. Most of them like the advertising because it acquaints them with available goods and services.

We know the riders of public transportation like Transit Radio because we have checked it. Here is the summary of the results of five surveys made in St. Louis, Washington, D. C., Baltimore, and Kansas City by Edward G. Doody & Co. during 1948–49:

"Eight out of 10 riders favor Transit Radio as a part of regular service. Less than 1 out of 10 object. The rest don't care or are undecided. However, even among those who say they object, there is a substantial group which would not object, if the majority favored permanent installations. Thus, only a fractional group of active objectors remains opposed even against majority will."

Transit Radio helps the transit companies provide sound, efficient, and economical service.

Insofar as Transit Radio provides public-transit companies with a source of income in addition to their fares, it is helping to make possible good public transportation at minimum cost.

Transit Radio makes it possible for the drivers of busses and streetcars to meet emergencies.

In this regard Transit Radio has already shown its capabilities. Because of newscasts received over Transit Radio, bus and streetcar drivers in Washington, D. C., and St. Louis have known how to avoid areas blocked off by fires. Because of newscasts over Transit Radio, drivers in Houston, Tex., did their jobs better during a hurricane. These instances are portents of vastly more important uses.

The American people are just beginning to look full in the face the job of reducing their vulnerability to atomic attack. The need was underscored once when the United States developed the atomic bomb. It was underscored a second time when the Soviet Union did likewise. It is being underscored a third time by debate over the forthcoming development of a hydrogen bomb, potentially 1,000 times more powerful than the A-bomb. One of the obvious and essential requirements of civil defense will be a means by which the public transportation systems can be mobilized to move great numbers of people out of threatened areas and to move civil defenders to their posts of duty. The means, of course, is FM radio, which was used by tanks, artillery, planes, infantry, etc., during World War II.

Thanks to Transit Radio, the busses and streetcars of 19 American cities are already equipped with radio which in the event of an emergency could be used for guidance. This is done without cost to the taxpayers, the riders, or the public transit companies. It is being done while giving the riders the best radio service available. It is being done while giving that same service to the entire community. Arrangements are under way to provide Transit Radio to 25 or 30 other American cities.

Against this imposing array of advantages, only one argument has been advanced by its critics. "It violates the rider's right not to listen," they say. "In this way it violates his right to privacy and assails the freedom of his mind."

First, how many riders of public transportation do not like Transit Radio? Take the 8 out of 10 riders who like Transit Radio. Add those who are undecided. Add those who do not care. Add those who do not like it but who withdraw their objections in deference to the majority preference. As the Edward G. Doody Co. says, "only a fractional group of active objectors remains." This fractional group ranges from 1.2 percent to 5.3 percent.

But the critics brush these figures aside. "It isn't a question of percentages," they say. "It is a question of the rights of the minority however small. The offensive thing about Transit Radio is that it holds its audience captive."

Is advertising over Transit Radio really different from advertising generally? The answer is no. All advertising tries to hold the attention of its audience.

Take the ads in newspapers and magazines. Can a person escape seeing them? Not if he wants to read the paper or magazine. The periphery of his vision takes them in, willy-nilly.

HIGHWAY SIGNS

Take advertising on aural radio or TV. Can a person in his home escape hearing and seeing the "plugs?" Not if he wants to listen and watch. Of course, he could switch the program off or turn it down during the commercial. But he doesn't. And to do so would require a greater attention and a greater exertion than not doing so.

Take advertising signs along the highway, particularly those head on at curves. Can a driver escape seeing them? Not if he wants to keep the car on the road.

This list could be expanded—the show windows of stores, the card advertising in busses and streetcars, the posters on subway pillars, etc.

In each case the individual who does not want to hole up like a hermit is exposed to advertising.

But he certainly is not a captive. He frees himself by controlling his attention, either consciously or, more often, unconsciously. The stream of stimuli assailing the senses is limitless and unending, even on a desert island. The mind selects those it wants to use and of necessity ignores the others. This is elementary psychology. Everybody does this every minute of every day, even when asleep. One does it so naturally that one isn't aware of doing it. Nobody, on a bus or streetcar who doesn't like transit radio need pay attention to it. One can bring to bear the same habits by which one is able to ignore other things one wants to exclude.

People who ride public transportation systems are already prepared to "tune out" transit radio if they want to. They have been trained to do so by the noises that inevitably attend public transportation, the sound of the motor, the clash of gears, the jolts and jars, the horn, etc.

Privacy on a bus? The same kind of privacy that there is in Madison Square Garden: The privacy of concentration. If a rider doesn't want to listen to the conversations of his fellow passengers, he doesn't have to. ("This morning when I got up I didn't feel well. I wasn't really sick. Just butterflies in the stomach, you know.") If he wants to, he can pay attention. ("And I told my husband, if you want to keep your little girl friend, you can, but you can't keep me.") In the same way the rider can tune transit radio in or out at will.

Minority rights are not at stake. But the rights of the majority are at stake—the rights of the 8 out of 10 riders, who want transit radio. These the competitors of transit radio would deprive. They would deprive them of the radio service they like. They would deprive them of an agency that may some day save millions of lives.

The real reason for most of the opposition to transit radio is not ideological at all. It is mercenary self-interest.

Transit radio is able to do effectively what all advertising tries to do. It reaches a mass audience. It can tell its clients precisely how big. It reaches special kinds of audiences. It can tell its clients precisely what kinds and the precise times when they can be reached. It provides these services to the advertisers in the best tradition of advertising—while providing a public service that the people need and like.

Competition for the pieces of the pie of the advertiser's dollar has always been keen. It has never before been so keen as it is today. Established media have always tried to block newer competitors. AM radio was opposed. FM radio was opposed. Car-card advertising was opposed. Billboard advertising was opposed. And so on. Now, and for the same reasons, transit radio is being opposed. The only differences are two: The opponents of transit radio are hiding their commercial motives behind a facade a bit more fancy than usual. And the opponents of transit radio are resorting to tactics of unprecedented viciousness and desperation.

The Future of the Coal Industry

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. BIEMILLER. Mr. Speaker, yesterday I introduced a resolution calling for the creation of a special bipartisan commission, appointed in the same manner as the Hoover Commission on Organization of Government, to study the coal industry and report back to the Congress in January 1951. The commission would recommend a long-range program to put the industry on a sound economic basis and prevent the recurrence of the constant crises in the industry which in recent years have so seriously threatened our country's economic stability.

Two excellent articles in the Christian Science Monitor for March 2 present data which show the need for such a study. Both are written by the able journalist, Harlan Trott.

I include these articles, entitled "Coal's Smoky Future" and "Coal Faces Dark Technological Future," in the RECORD and commend them to the serious attention of my colleagues:

COAL'S SMOKY FUTURE

(By Harlan Trott)

WASHINGTON.—Just because the Nation is in the throes of a national crisis over the miners' refusal to dig coal is no sign that management in the coal industry is without its blind spots.

The big commercial operators do not seem alarmed unduly over the fact that their market is shrinking at the rate of several million tons a year due to switchovers to oil and gas, not just by householders, but by big industrial users as well.

One hears little about these shrinking markets except during coal strikes, at which time comments on John L. Lewis' ability as a gas and oil salesman are in order.

Coal operators take the view that the future of coal is secure because of its essential tie-in with the electric power industry. The latest bituminous coal annual has this to say: "If this be the 'age of electricity,' consider that bituminous coal is the foremost fuel for producing electric power and lighting, and it is basic to the expansive prospects. The electric utilities in 1949 became bituminous coal's largest single market, and will probably continue so."

Lately, however, several big electric power companies have switched from coal to oil, and some of the big coal companies along the eastern seaboard have gone into the business of selling oil to industrial customers who have converted to oil.

Conversions of steam-generated electric plants from coal to natural gas are increasing, too. Gas pipe lines are spreading their steel tentacles all over the map. Right now, Texas natural gas is worming its way to Bangor, Maine.

One wonders whether coal operators are not being unduly optimistic about their security in the age of electricity. Opponents of public service monopolies would have us believe that the linked power systems they call the electric power trust still epitomizes the danger of bigness.

But how about oil?

Actually, the electric power industry does not begin to compare in size with the business of supplying fuel for the Nation's millions of automobiles.

Private electric power companies own about 100,000,000 horsepower of combined installed generating capacity. But the automotive industry manufactures 100,000,000 horsepower of new automobile engines every 2½ months. That means that five times a year the branch of private enterprise which technologists call the "oil-power trust" duplicates the electric power industry's entire installed capacity.

In order to fuel this vast market, big oil companies have acquired control of crossroad corner lots and staked out their claim with shiny motor pumps. These oil-power dispensaries are known in our motorized folklore as gas stations. Their slogan is "Fill 'er up!"

In thinking about coal, the country seems to have fallen into a kind of mass fatalism whereby we write off any future for coal on the theory that, as President William Green of the AFL told Congress last week, it is a "sick" industry. Calling a thing sick never healed it.

For a long time coal technologists have been trying to tell us that there's nothing sick but the industry's thinking. They have been demanding that the industry dust off its data and widen the horizons of its research in order to perfect and apply the processes of converting coal into oil.

If the coal industry's faith in the electric power industry's shaky dependence on it is not enough to save it, perhaps oil will. Many years ago State universities and Federal research agencies learned how to run automobiles on gasoline distilled from coal.

Officials in the United States Bureau of Mines have said on numerous occasions that the bulk of the Nation's vast coal deposits contain upward of 20 to 30 gallons of good refinery oil per ton of coal.

This is another way of saying that the Nation wasted in excess of 300,000,000 barrels of oil last year in the 600,000,000 tons of raw coal that Mr. Lewis' men poured into the market.

Bureau of Mines officials will tell you that the smoke that goes up the chimney is more than a blot on the landscape. It's writing on the sky, a warning against squandering the earth's wealth, an appeal to make this a richer and more beautiful America.

Barely a fortnight ago the Standard Oil Co. announced the closing of its oil-from-coal experimental plant at Library, Pa., due to unstable labor conditions. Given the vigorous, perceptive leadership of a union leader like Walter Reuther, the miners would not have let this happen.

Here certainly is the underlying challenge that emerges from this current crisis in coal. Put technology to work, and there will be work enough for the men who dig coal.

COAL FACES DARK TECHNOLOGICAL FUTURE

(By Harlan Trott)

WASHINGTON.—"There is no technology in sight to save the coal industry."

This is the opinion voiced by the Government's second-ranking expert on synthetic fuels. He is Dr. W. C. Schroeder, Chief of the Office of Synthetic Liquid Fuels in the Fuels and Explosives Service of the Bureau of Mines.

Dr. Schroeder's views carry special impact, coming at a time when the Nation is in the grip of its worst coal crisis in history.

Behind the unwillingness of John L. Lewis' 400,000 members of the United Mine Workers to dig coal without a contract is the economic fact that competition from natural gas and oil has cut into the coal market so badly that full-time employment for most of the coal miners appears to be a thing of the past.

ATOMIC PLANT CONVERTED

A series of postwar coal strikes has forced many large industrial coal users as well as householders to turn to other fuels, which are not only more convenient than coal but the supply will not be interrupted by strikes.

Uncertain coal supplies resulting from labor unrest in the mines was directly responsible for the Atomic Energy Commission's decision to convert its huge Oak Ridge project from coal to natural gas.

When the Pittsburgh Consolidated Coal Co. and the Standard Oil Co. opened their joint coal gasification pilot plant at Library, Pa., a couple of years ago, it appeared that industry leaders were determined to try to save the coal business by converting the Nation's vast, latently oil-rich coal deposits into synthetic liquid fuels by this German-pioneered approach to oil-from-coal technology.

Such an undertaking held big implications for the men who dig coal. Mr. Lewis was invited to the formal opening of the pilot plant. Bowing to George Love, president of Pittsburgh Consolidation, the miners' chieftain told the gathering: "The great financial efforts of the company to increase not only its own earnings, but those of its employees, augurs well for the future stability and strength of America."

No such fanfare marked the closing of this project last January 6, while the Nation was suffering for want of enough of the 2,000-year supply of coal that lies underground.

Mr. Love blamed the failure of the project on the miners.

"Things are so bad from an economic standpoint," he declared, "that we see no reason to carry on this particular work further at this time. To be successful, a plant of the type we had planned would have to have cheap coal and complete assurance of a regular coal supply. Under present circumstances the labor relations in the industry are so bad that none of these things are possible. No sane person would dream of investing great sums of money in a venture which was tied to coal as a raw material when the future cost is so indefinite and the supply of coal so unreliable."

Standard Oil took a different tack.

LONG-RANGE VIEW

"With the return of a more nearly normal increase in oil demand and with greatly increased world petroleum supplies," the company said, "it now appears that the need for converting coal to oil is not pressing."

Dr. Schroeder discounted the explanation given out by Mr. Love. He said he thought Standard Oil had "got all the data out of it they were going to get."

Some observers are wondering how the coal miners feel about this oil-company view of the miners' dismal long-range prospects for steady employment.

A prominent coal technologist recently told Mr. Lewis that now is the time to begin making a coal and shale supply the base load of the Nation's oil requirements.

At the same time, he was asked to throw his weight behind the idea of having the country's diminishing petroleum take care of seasonal peaks or national emergencies. He was told that the miners should have a say in the best use of the Nation's fuel reserves.

Mr. Lewis was told that this was labor's opportunity to create new, steady, full-time employment, and to help develop low-cost power for the farmers, who now use 10 times more oil-consuming automotive power than industry.

Ye Were Afraid To Live, and So Ye Perished

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 4, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by Hal Boyle:

YE WERE AFRAID TO LIVE, AND SO YE PERISHED

(By Hal Boyle)

There came a time when the earth was divided into two hemispheres, the east and the west.

Great was the contention between them, and each charged the other with seeking to rule the world. And the hemispheres became armed camps.

There were then 4,000,000,000 people in the world. No man's mouth was free to speak his yearning, and all men bent under the burden of readying their hemisphere against the enemy.

Nine-tenths of every drop of sweat, every yard of cloth, every pound of gold, every ton of steel was spent to safeguard the peace. This was true everywhere upon the globe. The people groaned in their tatters, but the engines of war were gleaming and fed.

It chanced that on a warm and moonless night in April the Island of Bermuda disappeared, with a titanic crash, beneath the surface of the sea. Two passing air liners saw it go down in a dim tower of foam. They radioed an alarm.

Three hours later a 50-square-mile area of forestland in Siberia erupted in broken greenery from the impact of a gigantic force.

The chancelleries of the world held hurried conference and agreed: Counterattack.

And the engines of war were unleashed. Each side sent up huge guided missiles, carrying hydrogen bombs in their warheads. The slender missiles passed in midair over the Atlantic and Pacific Oceans, leaving a murmurous sigh in their wake.

Where they landed, cities or landscapes disappeared—and so did radio stations, and cows, and violins, and old books, and the paintings of Rembrandt, and the lives of millions of people.

"Victory or death," cried the eastern leader.

"Win or perish," cried the western leader.

And the bombs mushroomed by the hundreds, then by the thousands. And great winds arose and carried the dust of death over every land. In 6 weeks every man,

woman, and child, every bird, every beast, was gone. The trees gave up their leaves, the moss turned white, and no ant crawled.

The last thing on earth to die was a worm 4 miles south of Oak Ridge, Tenn. It was washed out of the soil by a radioactive rain—and collapsed.

Then the spectral spirits of earth's 4,000,000,000 people flew in a vast host to the gold bar of Heaven. Through the gates they could see green grass and rainbow flowers. And the gates opened, and the souls of all the slain children skipped into Heaven.

And the parents surged after them, but a mighty voice called:

"Wait." And they waited.

"Why did ye this unto Me?" said the voice.

"They started it," cried the leader of the East.

"No, you started it," cried the leader of the West.

So, the celestial bookkeeper was called, and he said:

"On a night in April a small island in the Atlantic was struck by a large meteor. Three hours later—hmmm, very unusual—another meteor landed in a Siberian forest. Then everyone on earth just seemed to lose his mind."

"Why?" said the mighty voice.

"Because we were afraid," said the leader of the West.

"Yes, because we were afraid," said the leader of the East.

"Ye were afraid to live—therefore ye died," said the voice. "Look at the Eden I gave ye."

The great host turned and looked across the fields of space. They saw the dear familiar earth, the hills of home, spinning in gray ruin under a silent sky.

And as they watched the gates of Heaven closed noiselessly behind them.

The Fearless, Able Work of the House Committee on Un-American Activities and the Ability of J. Edgar Hoover and the FBI To Ferret Out the Truth and Their Courage To Make It Known Made Possible the Exposure and Conviction of Alger Hiss

EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 4, 1950

Mr. JENNINGS. Mr. Speaker, the persistent, able, patriotic, and fearless efforts of the House Committee on Un-American Activities, and the work of J. Edgar Hoover and his FBI forces, the ablest fact-finding organization in the world, brought to light the treasonable acts of Alger Hiss in stealing secret documents from the files of the State Department and turning them over to a Russian spy ring. There would have been no exposure of Hiss and he would not have been indicted, tried, and convicted for perjury in denying his treasonable conduct but for the work of the House Committee on Un-American Activities and the FBI.

Always, as a Member of the House, I have supported both the Committee on Un-American Activities and J. Edgar Hoover and the FBI.

The Federal Deposit Insurance Corporation

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article concerning the Federal Deposit Insurance Corporation, which appeared in the United States Investor under date of February 18, 1950. This Corporation protects more than 100,000,000 depositors in our banks, and it is the major stabilizing influence for the entire banking structure.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FDIC ITSELF—TWO PHASES NOT ASSOCIATED WITH THE PRESENT MOVEMENT TOWARD REDUCTION OF ASSESSMENTS HAS MADE OTHER CONTRIBUTIONS

In all this discussion, now current at Washington, as to the Federal Deposit Insurance Corporation and its assessments, two phases can easily be overlooked. One is that the Corporation has made other definite contributions to the uplift of American banking besides the protection of depositors from loss. Our banks of State charter operate on a definitely higher level now than in the days before this Corporation came into being and no small degree of credit for the improvement must be given to the Corporation and to the very capable men who have served at its head.

MEMBERSHIP COST THUS FAR

The other is the fact—and we are prepared to defend this statement against those who cling to an opposite view—that the cost represented by the annual assessments paid by banks into the Corporation has not been exorbitant. We do not mean by this that the present movement for reduction of these assessments is out of order or even badly timed. We do wish that the banks of some of our States were blessed with greater capital funds than they have thus far accumulated. A ratio of capital funds to deposits of no better than 1 to 20, existing now in several major States, is not so large a first defense against bad banking or economic upheaval as it should be. But with the American Bankers Association on record as believing that the funds saved through reduced assessments may well go to the building up of capital account, the case for reduction at the present time is strong. Hitherto, the money accruing to the Corporation from the assessments has represented no more than a reasonable outlay by the American banking system for the protection of its depositors.

THE PROBLEM OF STATE EXAMINATIONS

Let's talk a bit further about each of these phases of the problem. First, about the uplift to American banking which the Corporation has very definitely helped to bring about. It was no secret, in the days prior to 1933 that bank examinations varied in quality as between national banks and State banks in a good many parts of this country. Of course, in a State like New York or Connecticut or Massachusetts, there had been a determined purpose to bring the examinations of State banks and trust companies up to the level of national-bank examinations and for the most part this result had been accomplished. Even in those States, however, there were occasional lapses from the avowed high purpose. Some less worthy person, pushed forward on political considerations, would obtain the office of superintendent or commissioner of banks and a let-down in quality of bank supervision would almost inevitably follow. On the whole, however, you could count on the State bank examinations of part of our States.

Unfortunately, there were plenty of other States where examinations of State-chartered institutions were way below the level of examinations of national banks. It became something of an axiom among people moving their businesses from one State to another that if they wished to play safe with their bank accounts they would better lodge these with a national bank. The quality of national-bank examinations was good and had a tendency to become even better. For a number of years before 1933 the office of Comptroller of the Currency was held by a series of strong men and they instilled the quality of strength in the bank examining force. In the States, there was much less attention given by Governors to the quality of commissioners whom they appointed and these in turn set mediocre standards or worse for the work of their examiners.

CORPORATION HAS ACCOMPLISHED MUCH

Indeed, when the Federal Deposit Insurance Corporation first became a reality, there were plenty of critics to declare that it would certainly flounder upon the reefs created by poor State bank examinations. One of the greatest tributes one can pay to the splendid record which Leo T. Crowley made as the first chairman of the corporation is to say that he sensed quite clearly the challenge presented to him by the then character of State bank examinations. One of his first undertakings was to lift such examinations to a level comparable with that of national-bank examinations. Under chairman Hart this same high purpose has been continued.

At times, this undertaking on Mr. Crowley's part called for a considerable measure of diplomatic skill. State bank examiners have never been noted for their enthusiasm over suggestions from Federal authorities. To make matters more complex, there was a considerable disposition among the State banks themselves to look askance at the new bank examining force which the Federal Deposit Insurance Corporation was creating and to complain that this meant duplication of examinations of State banks and a lot of annoyance, therefore, to bank operating men. But patience and diplomacy on the part of the head of the Federal Deposit Insurance Corporation won out in the end. Not only is there a fine spirit of amity today between State bank examiners and the examiners of the corporation, but there is a genuine purpose that examinations shall be of a distinctly high order.

LESS OF POLITICS NOW

The commissioner of strong political antecedents and present political activity is a rare creature among our State banking systems today. It is literally true that in some of our States where political rivalry is very much in evidence, all of the factions seem to have come to the common belief that politics has no place in the office of the Commissioner of Banks. One State of the South comes very much to mind in this connection, where three groups are savagely contending for mastery of State affairs and where in ordinary matters no holds are barred. Yet in that State, the bank commissioner's office has been kept quite out of the struggle and examinations of banks are worthy of the standards which the most enlightened States are setting. A large degree of credit for this goes to the Federal Deposit Insurance Corporation which has set high standards of examination for itself and by its example has

done much to create high standards among each State's own examiners. As a matter of fact, the men who operate State banks would probably make their voices heard if State examinations were to drop below the Federal level.

ITS OWN EXAMINING FORCE

All along, of course, the corporation has sensed the grave need of keeping its own examining force up to a high level of quality. The Corporation has an exceptionally heavy assignment. It must keep itself so strong financially that it will never fail to indemnify the bank depositors of this country against loss. It has a substantial trust fund committed to its care for this purpose, and it must protect that fund to the extent of its ability from erosion. Big as $1,200,000,000 of capital and surplus sounds, to the ears of most of us, it is really a tiny accumulation when compared with the hundreds of billions of deposits which it undertakes to insure against loss. The Corporation really has no choice but to keep capable and wide-awake examiners on the job if it is to make that modest insurance fund do the work. There is no room for political appointees in that examining force. There is room only for the best examiners that the means of the Corporation will permit it to employ.

Now how does it go about the selection of men for this force? It selects them by two kinds of examinations. There is first the written examination, common to all people nowadays who wish to enter the civil service of the Federal Government. As everybody knows, however, written examinations can turn up some bewildering results. Your man whose marks are high is not always adapted to the work of examining a bank. He has to have personal qualities in keeping with this particular kind of work. Besides the ability to go over books of account and wring from them the story they have to tell, and perhaps the secrets they are withholding, the examiner must know how to get along with people, how to cooperate with his fellow examiners and how to make the people of the bank respect the work he does and the things he says.

So each person who passes the written examination appears before a committee for judgment of his personal aptness. There are representatives of the Civil Service Commission, of the Federal Deposit Insurance Corporation and of the banks on this committee. The man who emerges from this test ought to make a good assistant examiner, the grade to which he is assigned at first.

THE TRAINING IS CONTINUED

Don't you believe, however, that the efforts of the corporation to keep its examining force up to a high order stop with this set of examinations. It has a vigorous educational program which all the assistant examiners must take. As of a comparatively recent date, over 300 members of the examining force of the corporation were taking courses through the various chapters of the American Institute of Banking. They are expected, you see, to train themselves for evermore skillful work. The force already contains a great number of AIB graduates.

Then a picked group who have advanced from assistant examiners to examiners and have shown particular aptitude for the work are given courses at the expense of the Corporation either in the Graduate School of Banking conducted under the auspices of the American Bankers Association at Rutgers University, or at the corresponding school in Wisconsin and on the Pacific coast. Something like a dozen men, we believe, were enrolled at Rutgers as of a recent date, and several others enrolled at the two other institutions.

Quite a far cry, isn't it, from the kind of bank examiners which this plan aims to create, and we think does create, and the kind of examiners of other years who not infrequently owed their appointments to the endorsement of some man high in political life or to the proneness of some bank commissioner for favoring his political henchmen? While it has been lifting the quality of State bank examinations generally, the Corporation has devoted earnest effort to equipping itself with a dependable and capable examining force. Through these it is conducting the examinations of 6,600 banks or nearly half the whole number of insured banks in this country.

THOSE OUTLAYS FOR INTEREST

Now for our second assertion, namely, that the cost of deposit insurance up till now has not been exorbitant. When we say that, we must naturally produce a yardstick for measuring the accuracy of our statement. We can do it. Prior to the banking troubles of the early 1930's, one extravagant expenditure had taken deep root among the banks of this country, that of paying interest on demand deposits. Somehow the banking profession could not get rid of this evil, no matter how much the more thoughtful bank men were inclined to deplore it. Competition among banks had brought the unfortunate practice into being and that same competition was too keen to permit discontinuance of the practice. Some fine old banks stood out against it but they succumbed in the end for fear of losing deposits to the banks which were paying interest. This one outlay constituted a drain upon bank income which was considerable, and we are firmly of the belief that it contributed in some measure to the banking debacle of 1933.

Along with this unhappy practice was another mischievous arrangement, the effort on the part of banks to pay rates of interest on time deposits which earnings did not warrant. The practice reached its worst phases in areas where joint stock banks, National or State, attempted to pay the same rates as mutual savings banks were paying. The latter could very comfortably pay 4 percent and sometimes paid 5 percent. And commercial banks competing with them tried to keep up with this pace that the mutual savings banks were setting. As they look back now, they know that they cut an absurd figure by any such antics as these. The savings banks had abundant surplus funds on which they had no interest to pay, whereas the commercial banks were quite without this happy feature.

So here were two drains upon the commercial banks in the 1920's and early 1930's, interest on demand deposits and excessive payments of interest on time deposits. Not until the Government itself stepped into the situation and brought order out of chaos was anything done to cure this evil. The Government decreed that no interest whatever should be paid on demand deposits and it put control over interest on time deposits in the hands of the Federal Reserve Board and the Federal Deposit Insurance Corporation.

MAKES COST OF INSURANCE LOOK SMALL

Now we have no figures as to the whole amount of money that was being wasted each year through these two drains. We have some figures from the national banks as to how much they paid out each year in interest on demand deposits. In 1928 the amount was $186,287,000, in 1929 was $173,204,000, in 1930 was $170,838,000, and in 1931 was $152,383,000. Remember, these outlays were for interest on demand deposits alone. What the national banks paid by way of excessive interest on time deposits is a figure not available. Furthermore, we have no figures for the payment of interest in these same years by State-chartered banks on either demand deposits or by way of excess payments on time deposits. So it is safe to say that the amount wasted in 1928 was several times $186,287,000 and was likewise several times the amount given above for the succeeding years.

Well, here is our yardstick for measuring what has been the actual cost of Federal deposit insurance to the banks of this country in each of the years from 1945 through 1948. The total assessments paid by the banks in 1945 were only $93,662,000. That, you see, is just about one-half the amount paid by the national banks alone in 1928 for interest on demand deposits. The whole amount of the assessments paid by the banks of this country for deposit insurance in 1946 was $107,033,000. In 1947 it was $114,429,000; in 1948 it was $119,227,000. How modest is each of these figures compared with what national banks alone were paying out prior to the act of 1933 for interest on demand deposits alone, and how positively tiny it must be in comparison with what National banks and State banks together were paying by way of interest on demand deposits and excessive interest payments on time deposits. So it cannot very well be argued that deposit insurance has been a luxurious outlay for our banks, taking them as a whole, when this outlay is so much less than they were paying in the 1920's as a penalty for certain evils of competition which they could not eradicate.

PURGED OF WEAKNESSES

The story of Federal deposit insurance is a record of splendid achievement. It confounds those of us who were inclined to look askance at the whole idea at the time of its inception and to question whether it had one chance in many of success or even of survival. Part of this success, of course, is due to the fact that both National and State banking systems had been pretty thoroughly purged of weak situations before the Corporation came into being. But the Corporation, by diligent attention to its own bank examinations, on the one hand, and to those of the State bank commissioners, on the other, has done much to keep State bank systems purged in the years that have followed. One may fairly say that, thus far, Federal insurance of deposits has been worth all it has cost.

Hon. Walter F. George, of Georgia

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Senator WALTER GEORGE," under the caption "Did you happen to see," written by John White, and published in the Washington Times-Herald of March 3, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DID YOU HAPPEN TO SEE

SENATOR WALTER GEORGE

Here is the rock of Capitol Hill, the great moderate, the immovable moderate, the man who believes that the country's future depends on careful, thoughtful, slowly wrought change, the long-term optimist who will not be discouraged by sudden jerks which threaten to upset the governmental struc-

ture, nor falsely encouraged by the appearance of quick illusory blessings.

Like a rock in stormy seas, he seems occasionally lost in the winds and waves which roar over Capitol Hill—but when the storm subsides, there he is, unshaken. He goes on and on. Not overly concerned with present fame or blame, he concerns himself always with the future.

President Roosevelt found that out in 1938. F. D. R., because GEORGE had opposed the Supreme Court packing plan, tried to purge him from the Senate. GEORGE, the long-term optimist, showed a thorough mastery of short-term politics—he campaigned himself to a thumping victory—but the first thing he did when he returned triumphantly to Washington was appeal for peace in the Democratic Party.

He, like TAFT of the Republicans, displays the rarest of qualities of modern statesmanship, a profound and fixed regard for important issues and their ultimate effects.

WALTER FRANKLIN GEORGE was born some 3 miles from Preston, county seat of Webster County, Ga., on January 29, 1878, and in 1889 moved to Cordele, where he went to school. He also went to school in the musically named town of Arabi. For 2 years he taught school, then in the fall of 1897 he entered Mercer University, emerging in 1900 with a bachelor of science degree. Mercer has since honored him with an honorary doctor of laws degree and has named its law school after him.

He was admitted to the bar in 1901, practiced in Vienna, pronounced Vi-anna, Ga., became a solicitor general, a judge, and finally an associate justice of the State supreme court.

In 1922 he was elected to the Senate to fill the vacancy caused by the death of Thomas Watson, and he has been reelected faithfully ever since. In 1928 he was his State's choice for the presidential nomination.

His main interest has always been finance, although for a while he had to divide his time between chairmaning the Finance Committee and the Foreign Relations Committee, and in his 28 Senate years he has taken part in some of the most important tax legislation ever passed in this country.

Now he is particularly anxious to broaden social-security coverage and increase benefits, abolish wartime excise taxes on necessities, and in general revise our tax-law structure.

GEORGE is a serious, direct man, who has watched with great concern the drift of Government toward expansion, more power, and more bureaucracy. He does not like this drift. But he believes it is inevitable, and he believes the solution depends not upon laws, but men, "selection of good men by the executive branch—good American citizens of broad vision and devotion to the economic and political system we have built up, men who regard administration of the laws as a sacred trust."

Men, that is to say, like himself.

JOHN WHITE.

Corporate Profits, Taxes

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Corporate Profits, Taxes," published in the Evening Star-News of Culver City, Calif., on Monday, February 27, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CORPORATE PROFITS, TAXES

A Department of Commerce report shows corporate profits, one of the big sources of taxes to support the Government, turned upward in the third quarter of 1949, but will be considerably less for the year than for 1948. In 1948 corporate profits before taxes amounted to $34,800,000,000 compared with an estimated $28,900,000,000 last year.

But after taxes corporate profits retained for dividends and reserves for improvements were reduced last year from $21,200,000,000 in 1948 to an estimated $17,500,000,000. This is a little less than 8 percent of the total national income of $223,400,000,000 or a little over 12 percent of the compensation of all employees amounting to $142,200,000,000.

While profits for corporations were down last year, compared with 1948, compensation of employees was up and amounted to nearly 65 percent of the national income. Corporate taxes to be paid this year on last year's earnings will amount to $11,400,000,000, only $5,400,000,000 less than the pay rolls of Government civilian workers last year, which amounted to $16,800,000,000 or almost 15 percent of all the wages paid to all the workers in private industry.

Corporation profits are very much overestimated by many uninformed voters who do not realize that wages, interest, proprietors' business, professional, farm, and rental income last year accounted for nearly 86 percent of the national income. Corporation taxes, therefore, are a heavy burden placed on less than 15 percent of the national income.

Yet corporate profits after taxes are only a little more than the wages of all the civilian workers in the Government service. The Government workers produce nothing and, therefore, their wages and salaries add that much to inflation and increased prices on goods produced outside the Government and taxed to support Government bureaucracy.

Corporation taxes like all other taxes must be added to production costs. Therefore, the greater the cost of Government the greater the cost of living to those at work outside and inside Government bureaucracy. And, added to the high prices of goods and services because of high taxes, we are now faced with further inflation in the cost of living by deficit financing at Washington that will increase the public debt and still further increase the cost of living for this and perhaps future generations.

Taxes

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Taxes!" which appeared in the Cavalier Chronicle, published at Cavalier, N. Dak., on the 12th of January 1950. I particularly recommend this to all Senators who have been voting in favor of sending American money across the ocean.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAXES

Although the weather has been cold for the past some time in our good country, there is one subject that may not warm the atmosphere too much but it does bring up the blood pressure so a person can get warm under the collar regardless of what the thermometer says outside.

When groups of individuals (two or more) are in a huddle and having a discussion you can bet that they are all talking about the same thing. The writer is not too sure that many are not only talking over this subject but it is constantly on their minds while they sleep as well.

Well, it may be that people have become aroused, and many have become angry over this subject that seems to be first in the minds of the folks today.

Readers, it is not the atomic bomb, it is not the China question, it is not the price of wheat, spuds, or any other farm products. Neither is it John Lewis, Truman, or the Governor. All these seem to be in the background now.

The big question today is taxes.

Since the tax notices have been sent out a person hears nothing else discussed.

For the benefit of those who are not interested in decreasing taxes the writer wishes to inform them that the people are not only talking about the situation, but they will see that something is done about it. They will not stand idly by and see this situation continue.

Like everyone else, this writer has no idea where or how to start. That is the $64 question. But there is a way and if the people continue in the spirit they now have you can bet they will find a way to decrease the tax burden as it is today.

This big increase in taxes is not piled onto any particular group or class of people, according to reports that have reached the ears of this writer. The farmer, the businessman, the home owner, and the owner of personal property have all been hit and hit hard. Some received a stiffer rap than others because of unjust valuation of property, but generally speaking everyone has been hit and, believe me, hard too.

Let me point out the seriousness of this situation and the writer hopes some definite action will be taken before it is too late. If it continues we are in for times much harder than can now be realized.

How will we be able to continually pay this heavy tax burden if our income continues to go down?

Remember those taxes must be paid. They are not an income tax and your ability to pay is not based on your income, but you must pay them. Income tax is paid on the basis of your income. Property tax of any kind must be paid regardless of whether you have made the money to pay them or not.

According to law, if you do not pay property taxes, in time you will lose your property. That is what must be prevented, not when it is too late.

It is well known that income to almost everyone in Pembina County and over the Nation has decreased. Cost of production continues to rise, whether you are engaged in farming or in business, and in case of an employee his cost of living shows no signs of going down.

With production cost continually rising and income or business volume decreasing it is obvious that something must happen. What it will be no one knows or when; no one knows—except Truman—who can see big things in year 2000.

The writer believes it is best for us not to wait 50 years or take much stock in Truman's predictions that in 50 years all will be rosy. Something has to be done now to prevent, as one farmer stated, "death by taxation."

One good, honest, reliable man, who does not have the reputation of being a complainer, stated to the writer this morning that "you can bet there will be nothing done in Washington this session to reduce taxes." That looks like the picture.

It is the belief of many that economy should start in Washington, and start this session, not after they are elected this year.

Personally I read several newspapers and looked them over closely, but I do not find many in Washington today thinking along the lines of economy. It seems they have a tendency to increase our taxes rather than save.

We as taxpayers—that means all of us—should show the politicians, regardless of what party they are associated with, that we want economy and want it now.

No doubt there will be action if the temperament of the people today is an indication of what is to come. People cannot and should not be expected to have such a tax burden placed upon them. There must be a way to find cuts, and no doubt organizations will be formed that will look into the question and make a drive for economy.

Voters, this is your year to put the ax to spendthrifts. Don't let politicians make promises and break them. Let them know we want economy and will accept no substitute.

We realize the opinions of this newspaper will not change the tax deal, but we wish to tell those responsible for such tremendous increases that no one likes it, and it will not be taken lying down by the people of Pembina County.

They will not allow anyone to tax them out of their homes, off their farms, out of business, or take their personal belongings by taxation.

They will rise up and fight this thing until economy gets into the heads of the powers to be.

If taxpayers will sit down and write Messrs. LANGER, YOUNG, BURDICK, and LEMKE and tell them in no uncertain terms how they feel about economy, they, at least, know what the people want from Pembina County. What they will do to help cut expenses is another question but they at least will know what is expected of them at this session.

These discussions bring out different opinions as how to cut taxes. and there are many. The writer cannot answer that question, but he is sure things will have to change some way to get the tax bill down to where it is sensible.

If we do not fight this now from all angles, it will continue to be a burden to us, and at present it does not look like those in the driver's seat are looking for economy.

It is up to us—so let's make ourselves heard and get action.

Unemployment Insurance

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a message from Gov. Thomas E. Dewey to the Legislature of the State of New York, dated March 3, 1950, in which he points out certain inequities and undesirable features in the present administration of unemployment insurance as a part of Federal policy under existing law. Governor Dewey does not criticize the Federal Government, however. He calls rather for the enactment of new Federal legislation to take care of this inequitable condition which is causing great trouble in States like New York in the direct administration of their respective unemployment insurance laws.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, N. Y., March 3, 1950.

To the Legislature:

For many years the people of the State of New York and of all other States have been the victims of the tangled Federal law relating to the administration of unemployment insurance. In the hope that a joint resolution adopted by your honorable bodies might increase the likelihood of improved Federal legislation, I urge such action.

The Federal Government levies on employers a pay-roll tax of three-tenths of 1 percent for administration. By appropriation it decides how much of the money so collected shall be returned to the States. The Secretary of Labor then apportions this money among the respective States.

During the operation of the unemployment insurance law the employers of New York have paid to the Federal Government through this tax for administrative costs $150,000,000 more than the State has received back for the administration of the system. Each year for the past 12 years the amount allowed to the State of New York has been grossly inadequate. So unscientific has been the planning of the Federal Government that the Division of Placement and Unemployment Insurance has been faced regularly with the complete exhaustion of funds before the end of succeeding fiscal years. Many employees have been released only to be rehired or replaced a few months later.

With such instability of employment and such a sense of insecurity among the employees, it is a miracle the law works at all.

Lack of funds and personnel makes exceedingly difficult the detection of improper and fraudulent benefit claims. It impedes and periodically suspends all efforts to cope with tax evasions. It makes impossible effective policing of the placement and unemployment insurance program. These facts have been repeatedly made known to the Federal Social Security Board and its successor in function, the Secretary of Labor. No relief has been forthcoming.

The Federal Government has been regularly siphoning money collected for unemployment administration into its general funds for use in its general purposes. The general revenues of the Federal Government have profited by over $1,000,000,000 from diversion of these taxes. Conceding that the tax collections of the States for administrative purposes should be pooled to permit wealthier States to contribute to the administrative costs of smaller States, there is no justification whatever for diversion of moneys so collected into general Federal revenues.

If we are to improve the administration of placement service and unemployment insurance in this State, there must be a fundamental overhauling of the system which controls the allocation of necessary funds. The rise in the number of persons unemployed makes such a change imperative.

Legislation is presently pending before Congress which would earmark all taxes collected under the Federal Unemployment Tax Act and provide for their return to the States in an equitable and sensible fashion. The objects of this legislation are most desirable. They are:

1. Earmark all taxes collected under the Federal Unemployment Tax Act for use in connection with the unemployment insurance and employment service programs.

2. Permit Congress to continue to restrict the total amount which it deems necessary for efficient basic State administration.

3. After making provision for the amounts granted to all States, return to the States the excess of taxes collected within each, for additional administration expenditures or to meet benefit claims.

Properly administered unemployment insurance is a program of inestimable value. Improperly administered, it is an open invitation to waste and indolence. In times of decreased employment such as we have had during the past year, it has kept families from need and sustained business generally. The enormous size of the system administered in this State is little realized. It will distribute in benefits this year some $400,000,000—more than is spent for State purposes by the entire State government.

Like any insurance venture of such size, there is great danger of fraud. Such fraud is a danger not only because of the immediate loss it causes or the dishonesty which it encourages, but also because it brings the entire system into disrepute and encourages movements to curtail its benefits and to embarrass the people who through years of hard work have become entitled to benefits during periods when they are unemployed through no fault of their own.

Bungling, unscientific administration is a hazard to any program. Unemployment insurance is one of the great accomplishments of recent years. In the next few years when our systems may be called upon to make full use of this benefit, we must be assured of competent administration. To this end I urge the action of your honorable bodies.

THOMAS E. DEWEY.

The Coal Strike

REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Saturday, March 4, 1950

Mr. SIKES. Mr. Speaker, I do not think it requires either courage or judgment or leadership to let the Nation sweat out a crisis. I hope this House and the Senate will take action to provide legislation which will at least be ready and available when needed in the inevitable recurrence of the present crisis. I do not know whether the policy makers of this Nation's Government realize it or not, but a lot of people get hurt on every occurrence of crisis such as the one which now confronts us. Domestic economy and national security are threatened. I think it is part of our job to help provide the machinery to prevent its recurrence and to provide it now. We, the Congress, and the administration, have a responsibility to the American people. We can, at least, discharge ours.

The Oklahoma Leopard

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Sad Story of the Leopard Stirs Philosophic Musings," by John M. Cummings, a political columnist of the Philadelphia Inquirer, published in the Philadelphia Inquirer on Friday morning, March 3, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAD STORY OF THE LEOPARD STIRS PHILOSOPHIC MUSINGS

(By John M. Cummings)

If pressed for an opinion we should say the happiest leopard in Oklahoma is the one that died the other day, victim of poisoned bait planted by the most intelligent and at the same time the cruelest critter that walks the face of the earth—man.

Life had been anything but happy for this particular leopard during the 60 days that elapsed from the time of its capture in an India jungle to the moment of its demise in a cage at the Oklahoma City Zoo.

Perhaps the leopard did get some sort of cattish satisfaction from the excitement—and the fear—of the countryside for miles around during the 61 hours it was at large. Man, intelligent man, trembled and quaked at the thought of this 175 pounds of sleek and sinewy jungle cat, its savage nature intensified by hunger, roaming a region where untold wealth gushed from the earth in the form of oil.

This was strange country to the leopard. In its jungle habitat the problem of survival, tough as it is for all wildlife, would be easy compared to the handicaps it faced in a wilderness of oil derricks. Trained hunters stalked the big cat, even the Marines were called out to help capture an animal which made an 18-foot leap from a "safety" pit to gain its freedom.

The urge to live is great. Of no less importance is the urge of a species to perpetuate itself. When to these are added the driving force of hunger you can understand why the Oklahoma leopard, having avoided the hunters, the marines, and the dogs placed on its trail, returned to the point of departure. There it would find food, there it would find its mate.

The leopard found food, all right. But it was poisoned food, food loaded with dope. It was not the intention of intelligent man to kill the leopard with poisoned meat. The idea was to give it enough of a powerful sedative to put it to sleep—in fact, an Oklahoma veterinarian now says excitement and overexertion killed the beast. Rendered helpless it could then be safely returned to its cage. But this was a hungry leopard just returned from 60 hours of liberty. It ate a lot of the meat and consequently got a lot of dope. In 17 hours it was dead.

Freedom is a precious thing. It is difficult to realize how precious it is until it is lost. The easiest way of life is the surest way of losing your liberty. In its India jungle home the leopard saw a piece of meat—a hand-out. It went for it because it offered a meal without effort. In seizing the meat it sprang a trap. Its liberty was gone. Sixty days later it was in an Oklahoma zoo.

To the leopard, as to some men, the loss of liberty proved unendurable. The leopard took a chance and got away. But it was in a wrong environment. Hunger sent it back to its jail—hunger and a female.

There is a lesson for intelligent man in the life and death of the Oklahoma leopard. The hand-out of today may mean prison, poisoned meat, and death tomorrow.

Torture of Offenders Against Communist Regimes

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. O'CONOR. Mr. President, recent reports of shocking tortures to which alleged offenders against the Communist regimes in eastern Europe have been subjected were tragically confirmed in the official statement and affidavit just made public by the State Department regarding Soviet methods in this field.

The State Department release, which includes the verbatim affidavit which 38-year-old Michael Shipkov, a Bulgarian, wrote in the American Legation at Sofia, after he had been grilled for 32 hours by the secret police there, presents to the world first-hand factual confirmation of the methods reportedly used by Communist officials to extort confessions such as were made use of in the trials of Cardinal Mindszenty at Budapest, of the 15 Protestant clergymen at Sofia, and on other occasions.

It is a horrible record of Soviet brutality thus documented—one that should be given fullest publicity in order that the people of the entire world may know and appreciate the brutal and inhuman lengths to which Communist leadership will go to justify their own actions and to prejudge the unfortunate victims of their hatred.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SHIPKOV ON HIS INTERROGATION IN BULGARIA

(Following are the text of a statement by the State Department on an affidavit by Michael Shipkov, Bulgarian, who was employed in the United States Legation in Sofia and is under indictment for espionage, and excerpts from his affidavit, which was released in full by the State Department.)

UNITED STATES STATEMENT

As a result of the publication on February 21, 1950, of the Bulgarian public prosecutor's indictment of Michael Shipkov, the American Legation learned with regret that this innocent employee has fallen once again into the hands of the Bulgarian security militia. Accordingly, the Department of State is honoring the request of Michael Shipkov to publish his sworn affidavit, which he concluded by writing:

"I want the Legation to bring to the knowledge of the militia that any attempt of theirs to make use of that statement of mine [i. e., his forced confession] will be countered by exposure of this. * * * I furthermore request that this statement here be made public and used to justify the good name of the Legation and my name in case the militia attempts to make use of the confession they drew out of me."

Like Cardinal Mindszenty, the Bulgarian evangelical pastors, and recently the American citizen, Robert Vogeler, Michael Shipkov was forcibly persuaded in August 1949 to sign a false confession. At the end of his ordeal he had written and signed a seven-page confession and an agreement to return to the Legation as a spy informer for the militia. Among other things, he confessed that, under orders, he had organized intelligence contacts to submit economic, political, and military information to the American Legation; that these orders came from the American Minister and other officers of the Legation; that he had willfully and "venemously" exaggerated, distorted, and misinterpreted events in Bulgaria to discredit his country and its Government in the eyes of the outside world; and that in this manner he had hoped to be instrumental in encouraging foreign intervention in the internal affairs of Bulgaria.

A familiar pattern

The pattern of Mr. Shipkov's confession has become tragically familiar, whereas the method of how such confessions are extorted has remained a mysterious enigma. For the first time, however, a victim of this apparently hypnotic process has had the spiritual fortitude and courage painfully to piece together again the shattered pieces of his moral character and to reveal in detail how a man of integrity can be completely broken and forced to describe in his own words a fantastic story of imaginary crimes of espionage and treason.

In reading Michael Shipkov's affidavit, it is essential that the reader first have a clear understanding of his mental condition at the time he wrote it. In addition to his own personal ordeal, he still had fresh in his memory the recent death of his colleague, Ivan Secoulov, who had met death 3 days following his arrest by the militia.

Mr. Shipkov's affidavit is being released exactly as he wrote it, untouched and without a comma or word removed. The story he tells is not an orderly one. It represents a series of thoughts written as they came to him as he struggled to search his memory and recall every minute item of his interrogation that might be of value as throwing light upon the methods used by the secret police to force confessions from innocent people. His afidavit must be read carefully for its full significance to be appreciated. Otherwise it is difficult to separate and place in the right perspective the factual and interpretative material which is interwoven without distinction throughout his statement.

The reader will see that in many sections of his statement Michael Shipkov is relating how he was compelled to build out of his own imagination details of meetings with Americans and other officials and other acts, which in reality never took place, but which would meet the militia's conception of espionage and treason.

Under months of pressure

It is important to realize that Michael Shipkov was not broken down by the 32-hour interrogation alone. For months prior to his arrest, as he explains near the end of his statement, he was afflicted with a feeling of oppression, fear, and resignation, owing to the steady pressures exerted by the militia on his sisters, his brother, and his colleagues in the American Legation, particularly Ivan Secoulov, who had just died.

Michael Shipkov's affidavit exposes, as he had hoped it would, the complete falsity of

the charges made against him, the American Minister, and against members of the Legation staff in the indictment published on February 21, 1950, by the Bulgarian Government. This indictment was built up on imaginary evidence which Shipkov proved was extracted from him by force in August 1949, following his arrest and 32-hour interrogation.

Not only has Shipkov destroyed the validity of the evidence contained in the indictment against him, but as important a Communist authority in Bulgaria as the Foreign Minister, Vladimir Poptomov, who is now also a Vice Premier and member of the Politburo, confirmed officially to Minister Heath his conviction that Michael Shipkov was innocent.

During the prolonged negotiations which Mr. Heath conducted with the Foreign Office for the issuance of passports and exit visas to Mr. Shipkov and his family, during which time Mr. Shipkov resided in the American Legation, Mr. Poptomov personally assured Mr. Heath on October 11, 1949, that the maltreatment of Shipkov was absolutely against the policy of his Government. He went so far as to inform Mr. Heath that he had personally recommended to the Interior Minister that passports and exit visas should be granted to the Shipkovs.

Michael Shipkov knew when he returned to the Legation and requested that he be permitted to remain there that he was already a doomed man as far as the militia was concerned. If he failed to leave Bulgaria and fell again into the hands of the Bulgarian militia, he knew that his fate was determined. It was to provide for this eventuality and to fight back at the militia and all it stands for through the only means available that he provided the Legation with his detailed statement.

His tangible bequest

Another compelling reason for providing the Legation with his statement was Mr. Shipkov's desire to salvage his good name and moral character. In a real sense, Shipkov's affidavit represents the only tangible item he felt he could bequeath to his survivors.

Michael Shipkov was not a spy. He was not an intelligence agent of the United States. Michael Shipkov was not a traitor. He was an employee of the American Legation who performed the routine, legitimate, and nonconfidential duties of a translator. However, Michael Shipkov was an intelligent, honest Bulgarian citizen who nourished not only a deep-seated devotion to his Christian ideals, but also a concern for the welfare of his country.

As a private citizen he did not conceal his nonadherence to Communist dogma, nor his opposition to certain policies of the present Government. The pursuit of this freedom of expression and conscience, guaranteed to him and to all Bulgarian citizens by the treaty of peace and the Bulgarian Constitution, did not, in his eyes nor, according to the standards of any civilized democratic country, constitute a crime or treason.

However, in the words of the public prosecutor, his family background, his act of seeking employment with the American Legation and the expression of his opposition to the Communist creed and to some of the Government's policies, constituted treason, for which the prosecutor concluded in his indictment of February 21, 1950, that Michael Shipkov was turned over to the Sofia County Court to be tried, to be found guilty, and punished.

SHIPKOV'S STATEMENT

(In opening his statement, Shipkov told how he was picked up by a plainclothes policeman on Saturday, August 20, 1949, as he was bicycling home from his job at the American Legation in Sofia. He was taken to the National Assembly Building, where he was forced by guards to enter an automobile that took him to police—or state security militia—headquarters. There he was escorted into a small office.)

On entering, I was made to stand left of the door, in the corner, facing the window. In front of me was a desk, two chairs on either side, and a metal cabinet on the right of the window. On the wall to my left was a picture of Lenin, on the opposite wall a frame with the phrase, "Merciless fight against foreign agents."

I was taken up by a team of two agents of the State Security, age between 25 and 30, stern, serious, and incredibly earnest. I was ordered to empty out my pockets on the desk, which I did. I had been previously asked whether I carried any arms on me. I was not made to take off my watch.

I was then asked whether I was aware of where I had been taken, and the reasons for my detention. I replied that I was in the building of the militia—they corrected that to state security militia. I told them that I was perfectly aware and that I had been expecting for many months, that any employment at the legation would end in trouble with them.

First, presumably until the arrival of a superior functionary, I was made to answer the questions contained in militia form No. 10–T, which I had filled out on two previous occasions when I had been trying to obtain a passport. * * * I noticed that they were writing down my replies in perfunctory manner, which confirmed my belief that that was to give time to the actual investigator to arrive.

Effort of resignation

My state of mind at that stage: I was trying very hard to reconcile myself with what I had long considered inevitable and to impress into my mind the necessary fortitude and resignation. Already I had been faced with the difficulty of maintaining any continuous line of thought within me, while having constantly to correspond to their moves and give them the replies or indications requested.

In about 30 minutes another functionary arrived, presumably of superior standing, as the chair at the desk was ceded to him. After a whispered conference, he began to direct the interrogation. There always was a great play of locking and double locking the door whenever anybody came in or out of the room.

I was immediately faced with the accusation, no, with the statement, that I had been a spy, a traitor, and a saboteur of my country; an enemy. I was told with a fair display of solemnity that I had been arrested on express authorization of the chief prosecutor, on the strength of undeniable proof, and that now I was to complete their knowledge by a full confession and repentance of my guilt. * * *

While this lasted, I had made the acquaintance of all the seven functionaries who dealt with me throughout my stay in the building. There were two relays of lesser agents, working in teams of two, one of which was always on hand. Then there were two higher ranking fuctionaries, aged between 30 and 40, who conducted the interrogation proper—the lesser ones merely ranking man, head of section, department, etc. * * *

I maintained a show of resistance, without a semblance of defiance, up till some time late in the evening—9–10 o'clock. Tempers had been rising in the meantime, I had been often warned not to exhaust their patience, not to force them to turn the other leaf. I was told that this had been the behavior of all the numerous spies and traitors who had passed through their hands in this very room and they mentioned Dimitrov, Peev, Hadji Christov, my brother, Cheshme, Nikola Petkov, the Protestant pastors. And they stressed that any such obstinacy on my part would only worsen my future, without any real inconvenience to them. They also stressed and to which I sincerely agreed, that I could not really hope for aid from the Legation.

I had been so long prepared for this that I agreed sincerely and told them I was quite resigned to accept their judgment and penalty. Already there appears in the mind of the person arrested a desire to be told the extent of one's punishment, and to begin serving it, if only to be gone from the pressure and fear of their presence. Before the investigations passed from one to another, the outgoing one would come near, bluster, slap me in the face: one of the middle category ordered me to turn around and face the wall and then hit me on several occasions with the thick of his palm, I imagine, in the back of the neck. I recall that this treatment was not particularly painful nor frightening, nor that I was so afraid of its recurrence.

The head of the team

Before I had broken down, I saw the head of the team in the room for half an hour—a short, stout, pasty-faced individual of evident superior rank to all the others. Yellowish tinge, thinning hair, carelessly and slovenly dress, no culture, great energy, very sharp and cunning, very high-strung and tense, very self-assured, I suspect, very self-satisfied. He professed and indicated more knowledge of me than even myself. * * *

It was he who gloated—there is no other word—on the quixotic mental attitude of my brother, who had refused in a very romantic way to translate for the English and inform the security militia at the same time. And the familiar way in which he used my brother's first name, and recalled the further unhappiness which had befallen him, made me think it had been him who had ordered my brother to be beaten up into insensibility in the street, to pay him for his gallantry. He lingered long on the subject of my private family life, accepting the theory that I had nothing any more in common with my wife, that I had engaged in picking up mistresses here and there, and that I had not cared if my wife did the same—mentioning persons of the tennis club.

It was again he that suggested the parallel between my espionage and that of the Protestant ministers—and that was ruthlessly taken up later by his subordinates, until they had got me to tell them exactly the words that fitted their theory—that the British were the master minds in all the systems of espionage, and that this espionage, this loyalty they exacted from their agents, included espionage on the American employees to the benefit of the English. * * *

I was ordered to stand facing the wall upright at a distance which allowed me to touch the wall with two fingers of my outstretched arms. Then to step back some twelve inches, keep my heels touching the floor, and maintain balance only with the contact of one finger on each hand. And while standing so, the interrogation continued—nor was I allowed to collect my thoughts.

This posture does not appear unduly painful, nor did it particularly impress me in the beginning. And yet, combined with the mental strain, with the continuous pressure to talk, with the utter hopelessness and the longing to go through the thing and be sent down into silence and peace—it is a very effective manner of breaking down all resistance. I recall that the muscles on my legs and shoulders began to get cramped and to tremble, that my two fingers began to bend down under the pressure, to get red all over and to ache. I remember that I was drenched with sweat and that I began to faint, although I had not exerted myself in any way.

If I would try to substitute the forefinger to the big finger, I would be instantly called to order and the same if I tried to bolster my middle finger by placing the forefinger over it. No attention is paid to the suffering, nor is there any place for hope that they would take pity on you. And when the trembling increases up to the point when I collapsed, they made me sit and speak. I did get several minutes respite, catching my breath and wiping my face, but when I had uttered again that I was innocent, it was the wall again.

Final breaking down

And after a time of this, I broke down. I told them I was willing and eager to tell them all they wanted. The main appeal is to end the pain, to stop needless, futile resistance, and to come nearer to the moment when they would let me in peace. * * *

At this moment I believe that I had covered the worst and that I would tell them I am a spy and a traitor and that I would be sent below into a cell to await or serve my punishment. And that did not appear very grim at the moment.

It is a very painful surprise to realize the error I was in. The interrogation took on again, unrelaxed. Here I want to describe their method of interrogation. You are a spy and a traitor, tell us what tasks you were given to do, who gave them to you, in what manner and with whose help you achieved them and to whom and in what manner did you report? No further indication and no generalities, no over-all statements of guilt accepted. And this went on, hour after hour, throughout the night, throughout the day, without respite or end.

How can I best explain? The only straw for which I could reach is the impression that I had, in my emptied, vacant thoughts, of some sentence that had pleased them, or that had conformed with the pattern I had so often seen in the newspapers. And if I were to stop and plead fatigue, or poor memory, or ask to rest—the wall again and again, and the slaps, and the blows in the nape. And I remembered I would come up gasping and talk and talk and feel utterly broken.

It began with my prewar origin—the well-to-do bourgeois family, the American school, the attraction of English prestige and power. September 9—I am a class enemy, if only my antecedents have made me into a natural class enemy. Then, turn this class enemy into active resistance—then come the British—hasten to place myself in their service.

(At this point Mr. Shipkov related in great detail how the police gradually forced him with hours of questioning to construct a story of espionage involving him falsely with British and American officials in Sofia. Those thus brought in included a General Oxley, head of the British section of the Allied Control Commission for Bulgaria at the end of the war; Maynard Barnes, who had been United States political representative there; Milton C. Rewinkel, a United States Foreign Service officer during the armistice period; Robert C. Strong, another Foreign Service officer; a Mr. Weitzel, former Socony-Vacuum Oil Co. representative in Bulgaria; John E. Horner, a United States Legation secretary; Raymond F. Courtney, also a Legation secretary; the American Minister, Donald R. Heath, and others.

(Mr. Shipkov also referred to many Bulgarians in his statement—acquaintances and friends, but the State Department said it could not identify them.)

The forced confession

How about your personal letter to Maynard Barnes, asking for intervention? First, I refused having ever written MBB, later confessed. How about your mistresses, who are they, when did you meet, how often, in whose apartments? And there comes a time when I found myself in such unbearable depths of degradation and misery that I would gladly have ended it all at once. You plead with them not to force you to incriminate innocent persons, persons whom you have never engaged in any such activity—no response. Speak on, tell us more.

Out of the jumbled memories, some impressions stand out vivid. One: They are not overinterested in what you tell them. It would appear that the ultimate purpose of this treatment is to break you down completely, and deprive you of any will power or private thought or self esteem, which they achieve remarkably quickly. And they seem to pursue a classic confession, well rounded off in the phraseology, explaining why you were induced by environment and education to enter the service of the enemies of communism, how you placed your capacities in their service, what ultimate goal did you pursue—the overthrow of the People's Government through foreign intervention.

And they appear to place importance on the parallel appearance of repentance and self-condemnation that come up with the breaking down of their prisoner.

Second: I rarely could perceive any personal hatred or enmity for me—contempt certainly but sooner an academic detached dealing with an annoying problem in order to achieve the goal, and a fanatic, rabid obsession of devotion to communism and hatred for Anglo-American resistance to them—all the newspaper talk is to them gospel truth.

And in this respect they are to be taken as disciples and fervent followers of the dogma. Not much imagination, nor quick brains nor much intellectual baggage nor sensitivity—but enormous stores of character, undeviating loyalty to their creed, fanatic belief in their own cause, fanatic hatred and mistrust of anything else. No possible contact with them on any intermediary grounds. No fear of possible retribution, not within the ranks that I met. No conscience, unless that of their duty to their creed.

Toward the evening of Sunday, I had given them satisfaction. They gave me a glass of water, a bit of bread which I could not eat, and altered their bearing. I had been taken to urinate in a nearby toilet. And I was given a cigarette, and time to relax and control my trembling—hands, feet, teeth, so that I could write down what I had told them. It was then—just before I sat down to write, visited by the chief who seemed satisfied and mentioned, or sooner alluded to, my nearly freedom in exchange for perfect frankness and sincerity, and I remember him mentioning my daughter and that it was worth while looking up to seeing her again.

Writing out a statement

I wrote six lined pages, beginning with my unfortunate origin and education, my formation into a class enemy, then a description of my espionage with stress on each individual task—who had entrusted me with it, when, how I had achieved it, whom I had enrolled to help, how I had handed in my report. At the end, a plain statement of the purpose I had been pursuing—the destruction of the regime through foreign intervention. Signature after that—and although my deposition was controlled and checked paragraph by paragraph by the two lesser persons on duty, one of the superiors insisted that I add specific information as to my secret preference for the British and on my spying for them on the Americans.

When that was completed I was allowed a cigarette and some rest and I remember dozing off straightaway. Then one of the superiors went into a lengthy preparation of my future, on my youth, my daughter, on the necessity to reform and be an honest Bulgarian—on my acceptance to collaborate secretly with the State security and report to them everything I see, hear, or learn of the attempts of foreign spy centrals to undermine the people in Bulgaria. He dictated the thing to me in most solemn manner, and I wrote and signed. * * *

(Shipkov was then released.)

In the morning I overslept. * * *

In the Legation, my first obsession was to clear my conscience of the sense of guilt I had for all the people I had incriminated. I wrote a brief statement in the morning, intending to enlarge on it in the afternoon. I could not do as I wished as I felt observed and attended all the time by other Bulgarian employees. * * * On Tuesday, I tried first through Wallace and then through Burke to get Courtney to call me in the ordinary way. When he did not, I sent up the two statements through Burke and when that was done I knew that the militia no longer had any power to use me and to use my words against other people.

(Frank E. Wallace was a guard in the Legation; Timothy J. Burke was vice consul.)

I would like to make a few points very clear. I have been officially connected, first with the British Military Mission, and then with the American Legation, from the end of 1944 up to now. And from the very beginning, I have even more clearly understood and borne the mistrust, suspicion, and hatred of the regime for anybody who is in any way connected with the British or Americans.

This feeling of oppression and fear has grown steadily, first because of the chain of unhappiness and hardship which have descended on my friends and relatives—my two sisters expelled from their homes with their families and deported to the province; my brother, first beaten into insensibility in the street, with a cowed spirit afterwards, later packed off to a concentration camp; my closest friends arrested, obviously subjected to some similar method of intimidation, and then, one of them has disappeared, the other doing his second stretch in a concentration camp; the succession of other Bulgarian Legation employees who are arrested and either disappear from view or are reported hanged.

Building up of fear

This is in parallel to the other instances of fear, those that are featured in the newspapers and which I have had to translate—a translation which has been more and more personally depressing with time. This depression is augmented by a feeling of helplessness and despair, no possibility of evasion, no issue, no real hope for assistance or protection by the legation, not while the militia alone has force on its side. Resignation is achieved to a certain extent never enough to keep off the fear of the day when it will arrive on me. And the last instance, that of Secoulov, was very difficult to resign myself to.

(Ivan Secoulov, another Legation employee, had died in police hands.)

Therefore when I had been resisting them in the first day I had long since been prepared to accept my lot—prison, concentration camp, without any hope for reprieve. From that it is easy to decide to end the struggle, accept their accusation, give them satisfaction, and be allowed to relax my mind. And this breaking in is immediately followed by the realization that it is not the end but the beginning of an even more painful period, much more degrading, because before I believed I would draw upon myself their penalty by agreeing to their accusations and the thought of prison or camp for myself only is not so awful as that moment.

However, with the first acceptance my power of resistance grew weaker and I slipped steadily lower and lower, not only drawing punishment but time and time again speaking of others—friends and relatives of mine, involving them in deeds or thoughts utterly untrue, unfounded, slanderous. And then the feeling of resistance is wholly broken;

and I remember going deeper and deeper in this awful disloyalty, feeling utterly degraded and wretched, and yet powerless to protest and deny. Indeed, the only things I did not tell them were things they never thought of leading me into describing. At the end, when I wrote down the confession of guilt and repentance, I remember that the whole thing appeared fantastic and ridiculous, but it seemed to give them complete satisfaction.

News Letters by Hon. Francis J. Myers, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD copies of my biweekly news letters for January 12, February 9, and February 23, 1950.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

JANUARY 12, 1950.

Don't be fooled by the FEPC and excise-tax riders on the oleo bill. They aren't intended to lift the wartime luxury taxes, or to give us a Fair Employment Practices Act. Both riders are aimed at killing the oleo tax repeal—and nothing more.

A stalemate would occur in the House if the Senate were to adopt either rider. The reasons are technical, but essential to full understanding. These facts are important:

The Senate and House must agree down to the last comma before any measure may be sent to the President for signature.

Oleo, excise taxes, and FEPC are unrelated issues—and each is handled by a different legislative committee of the House: oleo by the Agriculture Committee, excise taxes by Ways and Means, FEPC by the House Committee on Education and Labor.

Only the oleo bill has been passed by the House—an FEPC bill is out of committee and on the House Calendar— and the House Ways and Means Committee has not completed its work on excise-tax legislation.

So, though I support FEPC and reduction of excise taxes, I oppose both riders because they're improperly intended here to cause confusion and block oleo tax repeal.

Both the Senate and House are scheduled to debate FEPC within the next few weeks. Our experience with the Fair Employment Practices Commission that guarded against employee discrimination by firms handling Government war contracts was extremely successful and I intend to fight vigorously for the adoption of FEPC legislation this year.

Excise taxes will be reduced by Congress this session. These are the wartime taxes on so-called luxury items—fur coats, ladies' handbags, luggage, cosmetics, theaters, and others—and the heavy taxes put on travel and telegrams to discourage excessive use of wires and unnecessary travel.

President Truman and leaders of both parties recommend changes in excise-tax laws. The reasons for these war measures have changed. The House of Representatives, which, as required by the Constitution, must originate all tax bills, will act promptly to aid consumers and stimulate business by relieving the excise-tax burden.

And as a member of the Senate Finance Committee (which has Senate jurisdiction over tax matters) I'm confident we will act speedily when the House sends the excise-tax bill to us for consideration.

New social security legislation is now the big job before the Senate Finance Committee. In the closing days of the first session of the Eighty-first Congress, the House passed the bill, after lengthy consideration by the House Ways and Means Committee. The bill makes numerous liberalizing amendments to the old social security law, amendments which will afford much more adequate protection to widows, orphaned children, the disabled, and the retired.

I plan to summarize the social security amendments in a subsequent News Letter after Senate hearings give us a better picture of the changes we may wish to make in the bill.

Housing legislation for middle- and lower-income families will be considered shortly by the Senate. The pending bill aims at encouraging investment and construction of private housing for families now more or less priced out of the housing market. The proposed legislation is a comprehensive companion for the Public Housing Act of 1949, and in a later News Letter, I will outline the major provisions of the new housing bill.

FRANCIS J. MYERS.

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

FEBRUARY 9, 1950.

What are your plans for retirement? Your future—and that of your family—will be influenced by the kind of social-security law Congress passes this year, and thus it's essential that you understand the proposals now before the Senate.

You—or your family—may be eligible now, or later, for insurance benefits resulting from retirement, disability, or death.

As a taxpayer—possibly as a recipient—you'll be affected by the Federal grants-in-aid to States for public assistance in the form of money or emergency medical care for the needy blind, the aged, the disabled, or the dependent children.

And Federal assistance to States for Child Welfare Services plays an important role in the development of healthy, responsible citizens.

A Nation-wide, self-supporting insurance program is the ultimate social-security goal. Adequate insurance protection can do away with distress resulting when families lose their income because of death, retirement, or injuries which make future employment impossible.

Thirty-five million of the sixty million working Americans now contribute to social security. Seven to eleven million would be added by provisions now being considered. These new groups include the self-employed small businessman (grocers, barbers, etc.), nurses, social workers and others employed by nonprofit charitable, religious or social organizations, some cab drivers, some domestic workers, contract loggers, mushroom pickers, poultry workers, many salesmen, perhaps others.

Farmers and farm workers weren't included in the Social Security bill as it passed the House last year—although more and more farmers want to be covered because one-fourth of them have contributed to social security while working at seasonal jobs or in war plants.

All employees of local and State governments—teachers, clerks, police, others—will become eligible for social security for the first time. This is primarily to help thousands of these employees who today have no pension coverage, but those now covered by their own pension systems may add the Federal program to their present benefits if groups of them decide by referendum to do so. However, I am submitting an amendment to safeguard the benefits now enjoyed against possible reduction as a result of this provision.

Insurance benefits would be doubled for the 3,000,000 now drawing social-security payments if the House provisions are adopted. This would not run social security into the red because the Federal insurance program is now more than self-supporting. Another new feature would permit insurance benefits to the permanently disabled, whatever their age.

Present grants to States would be increased. These are Federal contributions to the public-assistance programs operated by each State to meet urgent needs of millions of older people, dependent children, and the blind who are without insurance protection or income from other sources. Public assistance payments are now inadequate, and large State and Federal funds must be spent to help our needy until more people have insurance coverage.

Old-age assistance payments in Pennsylvania are small * * * averaging only $39.57 monthly * * * $4 below the national average. Thirty-one States make larger old-age grants * * * and four States gives 50 percent more than Pennsylvania. The proposed bill would add $19,000,000 next year in Federal money to Pennsylvania for all public assistance. Both the Federal share and old-age payments would be larger if Pennsylvania were willing to increase its old-age contributions.

Direct public assistance grants can be decreased as more people are permitted to pay for retirement and disability insurance. This is a strong argument for social-security insurance because it is a self-supporting, self-respecting means of providing for the future without depending upon tax-supported public-assistance grants.

America is growing security conscious. More and more people are planning ahead by combining social-security benefits with private retirement policies. And this thoughtful looking ahead has developed tremendously since the first social-security law in 1935.

FRANCIS J. MYERS.

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

FEBRUARY 23, 1950.

Good health is everybody's business. Health protection costs us at least $10,000,000 a year. Our 150,000,000 people spend about $8,000,000,000 for treatment and drugs. State and local governments spend another $1,250,000,000—and the Federal Government, $750,000,000.

But our health protection is inadequate. These facts aren't contested:

As a Nation, we go to the doctor too late. Troubles that could have been detected in a periodic check-up are often neglected until they cost much more to correct, or are allowed to become completely incurable.

Though our doctors, dentists, nurses, hospitals, research facilities and medical schools are the world's best, few people get the best available.

Health protection is expensive. It takes years of training and thousands of dollars to become a doctor. Research is costly, but must go on. And the best in scientific, technical equipment and hospitals is expensive.

Prolonged illness, usually unexpected, can wipe out savings and drive families far into debt.

Our rural areas need help desperately. The Hoover Commission said "for practically every category of service, the rural population receives services smaller in quantity and lower in quality than urban, and far less adequate than would be warranted by the burden of illness and impairment it bears."

All levels of Government are working to provide more people with better care. These activities are carried out largely by local and

State health and welfare officials, usually assisted by Federal funds and technical advice and training from Federal agencies. Here are some of the United States Government grants that went to Pennsylvania in 1949:

Children's Health and Welfare: $342,598 for aid to crippled children—$148,815 for delinquent, homeless or neglected children, $448,967 to aid Pennsylvania with its maternal and child care program. In addition, the Federal Dental Health Service has helped 32 Pennsylvania communities provide fluorine treatment for protection of children's teeth.

Hospital Construction: Over $4,500,000 in Federal grants went to Pennsylvania communities for building public and nonprofit hospitals in 1949—mostly in smaller towns and rural area. Last session, the Eighty-first Congress doubled this program, and Pennsylvania will get $9,241,058 yearly.

Cancer Research: $151,036 for research and aid to Pennsylvania doctors for special training in treatment and control of cancer.

Tuberculosis: $265,639 for detection, prevention and cure of TB.

General Health Assistance: $739,708 to be used by the State as it saw fit for such things as health education, industrial hygiene, research.

Pennsylvania engages in most Federal health programs, though our State (and Wyoming) has not entered the United States Mental Health program, and we've lost $200,000 yearly since 1947.

Meeting doctor and hospital bills still remains the big problem for most families. Some form of health insurance is the only solution. The American Medical Association, once opposed to any health insurance, now supports voluntary group insurance as its answer to proposals for Government health insurance that would provide protection for everyone.

Voluntary health plans should be encouraged in every way. In the past 15 years, 3 million of our 39 million families have become regular members of some health insurance program. The Senate, recognizing that the success of voluntary plans depends upon enlarging all medical facilities, passed and sent to the House a bill providing medical scholarships and Federal grants to enlarge medical schools—as well as a bill establishing clinics for school children. Research funds for ruthless killers, polio, heart disease and cancer—and direct grants for rural health facilities—are essential. Government help through such programs as these is imperative if voluntary health insurance is to be the way our people provide themselves with the best that modern science and skilled training can offer.

FRANCIS J. MYERS.

Republican Policies

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "More Advice to the Republican Party," from the current issue of the Exeter (N. H.) News Letter. The article is by Dr. Henry Phillips, of the faculty of Exeter Academy, and refers largely to an article written by our colleague, the junior Senator from Massachusetts [Mr. LODGE], which appeared in the Atlantic Monthly, discussing the Republican Party.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL WEEK—MORE ADVICE TO THE REPUBLICAN PARTY

One of the results of the recent parliamentary election in Great Britain, in which the voters demonstrated a swing to the right, is said to be renewed hope that this country too may turn to the more conservative Republican Party in the 1950 congressional elections. This overlooks the fact that trends in the two countries have, more often than not, been in opposite directions. For example the swing here away from Republicanism in 1932 was matched in England by a return to conservatism under Stanley Baldwin and then Neville Chamberlain.

However, this may be, it does no harm to seek trends where they may be found and judge them for what they may be worth. Trends are worth no more than the forces which cause them, and among these may be numbered luck, personalities, and good management.

Good management includes giving the voters some notion as to what a party stands for, and we have taken occasion twice within the last 2 months to comment on statements of Republican Party principles. The first was a reference to Governor Driscoll, of New Jersey, who, at his inauguration, expressed support for reforms proposed by the Hoover Commission, certain economies and improvements in State government, and above all economy at the level of the Federal Government.

The statement issued by the Republican National Committee early in February stated the issue between the parties as "liberty against socialism." It, too, saw extravagant spending by the Federal Government, with its powers of taxation, as one of the critical dangers of our time. It also pointed to the danger inherent in the increasing tendency to look to the Federal Government for solution of all problems.

Now Senator HENRY CABOT LODGE, JR., writing in the Atlantic Monthly, offers some suggestions toward modernizing the Republican Party in order that it may fulfill its function in a strong two-party system, provide the country with an attractive alternative to the policies of the present administration, and possibly win elections.

Senator LODGE's program is limited to domestic policies and does not cover all the possible fields of opposition to the Democrats. He favors tax reductions, especially in favor of corporations doing under a million dollars worth of business a year, and of businesses which help to stabilize general production with low prices, increased production, steady employment and use of older employees.

On civil rights the Senator is more specific than the statement of policy of the national committee. He favors elimination of the poll tax in elections for Federal officials, making lynching a Federal offense, enacting fair employment legislation, doing away with segregation in the armed forces, and in Government housing projects.

Health legislation can be enacted by the Republican Party which will be superior to the proposal for socialized medicine by the administration. His aim would be to increase the supply of young doctors and get them to the places in which they are needed; lower the costs of medical care through financing the building of hospitals, educating nurses and interns; and expand the possibilities of the voluntary hospital and medical associations which already have a membership, it is claimed, of 60,000,000.

The problem of the aged should be tackled more realistically than by a program which allows an aged couple $41 a month—the present social-security figure. Tax exemption on income toward a voluntary annuity plan is one suggestion for bringing up old-age assistance to $150 monthly. Also tax assistance to industries which provide benefits, keep employment steady by annual wage plans and agree to provide jobs for older employees, is one of the strongest guaranties of the strong competitive economy which is the key to the country's greatness.

Senator LODGE's proposals in agriculture center around the need to favor food farming against speculative farming. That is, present legislation discriminates against the small food-growing farmer, and in favor of the large factory farms which pile up huge surpluses and waste the taxpayers' money in support programs.

Finally, on labor the need seems to be for remedial legislation to cover individual problems in the labor front, rather than package legislation which lumps all labor problems together. Labor will also benefit from other items of legislation previously referred to: health, social security, old-age assistance.

No constructive program, however, will succeed unless it rests on sound finances. A balanced Government budget and stable currency are prime considerations.

EXONIAN.

Bipartisan Approach to the Farm Problem

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Pillsbury Raps Food in Politics; Urges Bipartisan Approach to Farm Problem," from the Minneapolis Star-Journal. The article is very thought-provoking, and I think it would be well to have it printed in the Appendix of the RECORD, so that all may read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PILLSBURY RAPS FOOD IN POLITICS—URGES BIPARTISAN APPROACH TO FARM PROBLEM

Phillip W. Pillsbury, president of Pillsbury Mills, Inc., proposed a bipartisan food commission today "to put an end to the folly of using food as a political football."

Speaking as general chairman of the annual Minneapolis farm forum at Nicollet Hotel, he said:

"Politicians are outpromising each other for votes with food issues as bait. Half the world is hungry. This country's mechanized farms are producing surplus after surplus.

"Food is too important to too many people—and to world peace—to be in politics any longer."

With a Bernard Baruch or a Herbert Hoover as chairman—Pillsbury proposed:

"The same bipartisan approach to a solution of the food and farm problems as the Hoover Commission brought to reorganization of the Government or as the Republican and Democratic Parties brought to our foreign policy."

Pillsbury's plan urged establishing at once "a bipartisan food commission, staffed to

develop an intelligent, efficient program for economical use of our abundant food."

"There is not, nor never was, a food surplus," he declared. "Let's once and for all get the best thinking of the Nation at work selling the food we produce."

Pillsbury said he decided to call for the bipartisan food commission at the outset of the farm forum to lift its program beyond the realm of party politics.

He desired, he said, to explore the commission plan with such farm leaders as Albert S. Goss, master of the National Grange; Allan B. Kline, president of the American Farm Bureau Federation; Knox T. Hutchinson, Assistant Secretary of Agriculture, and D. W. Chapman, president of the Montana Farmers Union, who were to speak at the forum session on national farm problems.

"It's not just a United States farm problem we are up against," he declared. "It is a world-wide food program we need—a food plank for peace.

"If our experts can make an H-bomb that will work, we ought to have men who can make a food plan work—and for peace, at home and abroad."

Wire Tapping

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Clarification Needed on Wire Tapping," which appeared in the St. Louis Star-Times on the 18th of January.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CLARIFICATION NEEDED ON WIRE TAPPING

The present Federal law concerning wire tapping is entirely inadequate. It provides that no person, not being authorized by the sender, shall intercept any communication and divulge or publish the existence, contents, substance * * * or meaning of such intercepted communication to any person.

Two interpretations have been put upon this provision. One, by a succession of Attorneys General over the past 16 years, holds that it is not illegal to intercept provided there is no divulgence or publication. If this is correct, then anybody may tap any wire without punishment provided he does not divulge what he learns. This situation would be intolerable.

The other interpretation, by such persons as James L. Fly, former Chairman of the Federal Communications Commission, holds that all wire tapping, even by the Federal Government in situations of extreme danger to the national security, is illegal. If this is correct, an important gap in the Nation's security legislation needs to be filled.

A situation where in the use of wires the enemies of society would be protected and the protectors of society would be hampered would not make sense. It would not be respected by those responsible for the defense of the country. It is quixotic to expect that in the fight against spies and saboteurs military intelligence and the FBI are going to be bound by Marquis of Queensberry rules. They haven't been. They won't be. Even Frank Murphy, a stanch disciple of civil rights, permitted wire tapping to be used when he was Attorney General.

Why should wires alone be held sacrosant? A man's home, under proper procedure, may be searched. A man's papers, under proper procedure, may be subpenaed. Under proper procedure, wire tapping should be permitted.

Wire tapping is everything it has been called. It is dirty business. It is sneaky. It is revolting. But so is spying. So is sabotage. So is kidnaping. So is extortion.

President Franklin D. Roosevelt stated the difficulty. How to balance the needs of law-enforcement agents for use of a method they consider essential in certain types of cases with the need for protecting citizens against the abuse of such power, he said, raises the most delicate problem in the field of democratic statesmanship.

This is a delicate problem, but it is not new. The solution is suggested by the ways other dirty businesses, like the search of a man's home and the seizure of his papers, have been dealt with.

The Federal law should permit the FBI to tap wires in a few specifically defined kinds of cases. Espionage, sabotage, kidnaping, and extortion have been suggested. The procedure should be spelled out, requiring a description of the persons suspected, the purpose of the tapping, setting a time limit, and being granted only on specific written authorization of the Attorney General.

The evidence obtained by legal wire tapping should be admissible in trials the same way evidence obtained after use of a search warrant is admissible.

Stiff penalties for wire tapping by unauthorized persons, including members of the FBI, should be set and enforced.

All courts should be instructed not to admit evidence obtained by illegal wire tapping.

Provisions such as these would at the same time give society the use of wire tapping where it is necessary and give the members of society protection against its abuse.

If, as some charge, the FBI is using wire tapping indiscriminately, this should be found out and stopped. But the investigation should be just one part of a new and searching inquiry into the subject. The best way to avoid the abuse of a power that cannot be neglected is to define precisely its permissible use.

Plan for Electoral Reform

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an article by Mr. Gould Lincoln appearing in the Washington Evening Star of February 21 on the subject of proposed electoral reform:

THE POLITICAL MILL—COUDERT PUSHES PLAN FOR ELECTORAL REFORM—SYSTEM SEEN GIVING GOP BETTER CHANCE

(By Gould Lincoln)

As a substitute for the Lodge-Gossett constitutional amendment to do away with the electoral college for the election of Presidents and Vice Presidents, Representative COUDERT, Republican, of New York, will press an amendment to the Constitution to "reform" the electoral college.

Under the present system, Presidential electors are chosen in each State by a plurality vote in a State-wide contest. Mr. COUDERT proposes to choose the Presidential electors just as Members are elected to Congress, one for each Member of the House in each congressional district, and two from each State at large as Senators are elected. To be elected President a candidate must have a majority of the total electoral vote, or the election would be thrown into a joint session of the House and Senate.

The Lodge-Gossett constitutional amendment has already passed the Senate by the necessary two-thirds vote. It awaits action by the Rules Committee of the House. Its proponents are hopeful. This amendment not only does away with the electoral college, but provides that the electoral votes of a State be divided among the Presidential candidates in proportion to the number of popular votes cast for these candidates.

SYSTEM HELD FAIRER

It provides, too, under the so-called Lucas amendment which Mr. LODGE accepted in the Senate, that unless one of the candidates receives at least 40 percent of the total electoral vote, the election shall be thrown into Congress, with all Members of the House and Senate participating and each Member having one vote. It is Senator LODGE's contention that the system he proposes, with Representative GOSSETT, of Texas, is much fairer and more representative of the popular will than the present manner of electing Presidents.

Mr. COUDERT, for his part, fears the Lodge-Gossett amendment might be "appalling in practice." It could, he insists (as does Senator TAFT, of Ohio) be a decisive step in the establishment of one-party government, because its immediate effect would be to increase the weight of the one-party, Democratic States of the South.

Senator LODGE's contention is that, under his plan, Republican voting in the South would increase greatly, breaking down to a considerable extent the one-party system prevailing in that section. This, Mr. COUDERT replies, is to build a dangerous illusion.

BETTER CHANCE FOR GOP

Mr. COUDERT, like Senator LODGE, desires to get away from the system under which the entire electoral vote of a State shall be given to a Presidential candidate, even though he has only a bare majority or a plurality of the total vote cast in that State. Under his proposal, he contends, a Republican would have a far better chance of winning a Presidential race than under the Lodge plan.

Senator LODGE, however, argues that the Coudert plan fails to do away with the electoral college and would take the election of a President even farther away from the popular vote. Senator TAFT is inclined to support the Coudert plan, but insists that there should be further study. He points out that since the State legislatures fix the boundaries of the congressional districts—and frequently resort to gerrymander tactics to strengthen one particular party—and frequently do not change for years—disproportionate results might still be obtained.

The Constitution leaves to the State legislatures the manner in which Presidential electors are to be appointed. No uniform plan existed in early elections. The three most usual methods, however, were: (1) election by legislatures, (2) election by the people in districts, (3) election by the people on a general or State-wide ticket. Only the third is now practiced. The second plan is the Coudert method and presumbaly the States could adopt it without a constitutional amendment, but would not. The Coudert amendment would make it mandatory on the States to do so.

Resolutions

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1950

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include several resolutions adopted by the stockholders of the Midwest Creameries, Inc., at their seventeenth annual meeting at South Bend, Ind., February 24, 1950. The resolutions, in part, follow:

Federal support of dairy products: We oppose the present method employed by the Government in support of dairy product prices by purchasing butter, cheese, and nonfat dry milk solids on an f. o. b. plant basis without consideration of transportation costs and distance from terminal markets. Such methods of purchase are not conducive to the orderly marketing of these products and disrupt the domestic distribution of these products resulting in the Government purchasing greater amounts of these products than is necessary. We urge that the Department of Agriculture abandon its current methods of purchase and reinstate the methods used so successfully in former years by the Dairy Products Marketing Association and the Commodity Credit Corporation. Since DPMA can operate readily on the exchanges, we urge the Secretary of Agriculture to permit it to assist in the conduct of the purchase program.

Farmers cooperative income tax exemption: We again urge that nothing be done to impair the right to income-tax exemption of bona fide farmer-owned and farmer-controlled cooperative associations that are operated on a true cooperative basis.

To this end we oppose any change in section 101 (12) of the Internal Revenue Code, the regulations promulgated under that section of the interpretations of those regulations that have been made by the Treasury Department.

American Dairy Association: We again urge support of the American Dairy Association and its program to promote and expand the sale and consumption of dairy products, and recommend that the cost of collection of funds be kept to a minimum in order to provide the highest percentage of moneys collected for direct use in advertising and promotion of dairy products.

We favor extending the check-off period for advertising purposes to cover at least 3 months instead of the usual 30-day period.

Filled dairy products: We oppose the substitution of other fats and oils for milkfat in dairy products. We also oppose the production and offering for sale of any imitation product made in semblance of, or which purports to be a dairy product.

The consuming public and the dairy industry alike must be protected from fraudulent and deceptive practices which undermine the public health and the welfare of the Nation.

Chain-store discrimination: We urge producers of dairy products to voice their opposition to proposed governmental restrictions on types of food distribution such as represented by the Great Atlantic & Pacific Tea Co., which in the past have increased consumption of food especially butter and other dairy products. Anything that is done to hinder such types of distribution will only result in less dairy products and butter being consumed.

Contagious bovine diseases: We support joint Federal-State programs for the control and eradication of Bang's disease and bovine tuberculosis, and we favor adequate appropriations to carry out these programs. The slaughter program carried out in the fight against Bang's disease has not proven entirely adequate. We have found that calfhood vaccination under proper Federal-State supervision has reduced the incidence of Bang's disease.

There is great need for information. Extensive research is paramount in controlling Bang's disease and mastitis. We therefore favor the allocation of adequate funds under the Hope-Flannigan Act for research to reduce and, if possible, to eliminate these bovine diseases.

Transportation tax: We believe that the 3 percent special excise tax on transportation which bears heavily on perishable food and particularly on the movement of milk from farm to processor can no longer be justified. We urge our member creameries and officers to press vigorously for its early repeal.

Improvement of quality: The butter industry is faced with a serious decline in the demand for butter, due in part to loss of our markets during the war when the production of butter was deliberately discouraged by the Government, and partly by the inroads of imitation dairy products. We endorse all voluntary programs to improve the quality of butter, and urge our dairy farmer members to aid in this project by the continued improvement of quality and production techniques.

Lower Mississippi Valley Flood-Control Projects Near Completion

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include an article entitled "Lower Mississippi Valley Flood-Control Projects Near Completion," by Brig. Gen. P. A. Feringa, of the Corps of Engineers, president of the Mississippi River Valley Commission, delivered before the Waterways Division, ASCE annual meeting, in January 1950, at New York. I think the subject matter included in this article is of general interest to all believers of flood control in the United States. It reads as follows:

LOWER MISSISSIPPI VALLEY FLOOD-CONTROL PROJECTS NEAR COMPLETION—WORK OF MISSISSIPPI RIVER COMMISSION SUMMARIZED

(By P. A. Feringa, M. ASCE, brigadier general, U. S. Corps of Engineers; President, Mississippi River Commission, Vicksburg, Miss.)

Functions of the Mississippi River Commission, as created by the act of Congress of June 28, 1879, were to consider and mature a plan to correct, permanently locate, and deepen the channel and protect the banks of the Mississippi River, improve it for navigation, prevent destructive floods, promote and facilitate commerce, trade, and the postal service.

The act provided that the Commission should consist of seven members: Three from the Corps of Engineers, of whom one would serve as President; one from the Coast and Geodetic Survey; and three from civil life, two of whom must be civil engineers. All members are appointed by the President with the advice and consent of the Senate. The present membership consists of Col. Ernest Graves; Col. Clark Kittrell; Rear Adm. Leo O. Colbert, Coast and Geodetic Survey; Edward Flad and DeWitt L. Pyburn, civil engineers; Albert L. Culbertson, and the writer. With the exception of Mr. Culbertson, who is not an engineer, all are members of ASCE.

WORK DEALS WITH LOWER MISSISSIPPI

Major problems to be solved were those of the river below Cairo, and while the surveys required by the act were duly completed from Lake Itasca to the Gulf, the plans and operations of the Commission, with comparatively minor exceptions, have dealt with the lower Mississippi and its alluvial valley. The actual construction work is handled in the same way as in an ordinary Corps of Engineers division. There are three districts set up within the boundaries of the Commission—Memphis, Vicksburg, and New Orleans.

The alluvial valley extends from Cape Girardeau, just above the mouth of the Ohio, to the Gulf of Mexico. It averages approximately 40 miles in width and contains approximately 20,000,000 acres, much of which represents some of the most fertile land in the Nation. The distance by river from Cairo, at the confluence of the Ohio and the Mississippi, to the Gulf, is roughly 1,000 miles.

FIVE TYPES OF FLOOD-CONTROL WORK

The flood-control problem which confronts the Commission is to take care of a design flood estimated at 2,450,000 cubic feet per second between the mouth of the Ohio and the mouth of the Arkansas and at 3,000,000 cubic feet per second below that point. The design flood was deduced by determining the most severe combination of synchronous floods of the tributaries of the Mississippi that could be expected under logically assumable hydrologic conditions. The drainage area involved includes 41 percent of the United States, or 1,240,000 square miles. The problem of flood control is met by five types of work.

1. Overbank floodways to carry flows in excess of the safe capacity of the leveed river channel. The New Madrid floodway, in Missouri, is complete and was used in 1937. The other floodways are in the State of Louisiana. The design flood, at the latitude of Angola, is 3,000,000 cubic feet per second. Design floods at various sections of the river are shown in figure 1. The safe capacity of the Mississippi River at New Orleans is 1,250,000 cubic feet per second. The Bonnet Carre floodway above New Orleans has been designed to take care of 250,000 cubic feet per second, discharging directly into Lake Pontchartrain. Thus the Mississippi River, plus the Bonnet Carre floodway, will take care of one-half of the design flood. The remainder must find its way to the Gulf of Mexico by means of the Atchafalaya Basin, including the West Atchafalaya floodway (250,000 cubic feet per second), the Atchafalaya River (650,000 cubic feet per second), and the Morganza floodway (600,000 cubic feet per second).

Bonnet Carre floodway is complete and has been used successfully on two occasions, in 1937 and in 1945. The West Atchafalaya floodway is complete and can be used if needed. The capacity of the Atchafalaya River is sufficient to take care of its share, and the Morganza floodway is under construction. It is expected that the entire Atchafalaya floodway—including the Morganza structure, the greater levees confining the flood flows, and the work below Morgan City—will be completed early in the calendar year 1953.

2. Levees, which have been and are being built to a height and cross section which will enable the Mississippi River to carry the design flood. There are 1,581 miles of Mississippi River levees. The levees will be 73 percent complete by June 1950.

3. Bank revetment, installed to hold the river in place and to prevent it from wandering as it has done in the past. Continued meander would destroy levees, with resultant need for setbacks, and would regain some of the length taken away when the cut-offs were made. A total of 425 miles of revetment will be needed, of which 199 miles will be in place by the end of the 1950 fiscal year.

4. Reservoirs, which are constructed beyond the limits of the alluvial valley on tributary river systems, such as the Ohio, the upper Mississippi, the Missouri, the White, the Arkansas, the Ouachita, the Red, and within the alluvial valley itself, on the St. Francis and the Yazoo. The design flood at Cairo was adjusted to reflect the effects of reservoirs above that point.

5. Cut-offs, designed to shorten the course of the river and increase its slope and discharge capacity, are complete.

Black-Eyed Peas or Black-Eyed Beans

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. BECKWORTH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following information in regard to black-eyed peas:

INTERSTATE COMMERCE COMMISSION,
Washington, November 23, 1949.
Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I have your letter of November 16, 1949, in which you quote from a letter addressed to you alleging billing of black-eyed peas shipped from California as black-eyed beans, which billing is claimed to result in lower rates to the advantage of California growers over Texas shippers of black-eyed peas, describing them as such and paying a higher rate.

Your informant does not state the points of shipments of black-eyed peas from Texas or the destination points of the California shipments competitive to the Texas shipments. I find that the applicable tariff rates on dried beans from California to Kansas City, Mo., St. Louis, Mo., and Chicago, Ill., as representative points, are the same as the rates on dried peas. Likewise the rates on dried beans from Marlin, Tex., to those three destination points are the same as the rates on dried peas. Therefore, it is suggested that you secure further information from your constituent with respect to the specific origin and destination points of both Texas shipments and California shipments of black-eyed peas. I shall then be able to determine whether there is any difference in the rates applicable to transportation of the shipments with which he is concerned.

For such bearing as it may have on the question, it may be added that I have received advice from a representative of the Department of Agriculture to the effect that so-called black-eyed peas are classified by the Department of Agriculture as beans. Upon receipt of the information requested above I shall make further inquiry into the matter in accordance with your request.

Very truly yours,
CHARLES D. MAHAFFIE,
Chairman.

INTERSTATE COMMERCE COMMISSION,
Washington, December 16, 1949.
Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I have your letter of December 12, 1949, with which you enclosed a letter addressed to you by George S. Buchanan, Marlin, Tex.

Mr. Buchanan discusses the description and labeling of black-eyed peas as black-eyed beans sometime in the past and suggests that the action may have been employed either to secure a lower freight rate or to have obtained more favorable consideration as to rationing or ceiling prices established under orders of the Office of Price Administration. In response to your inquiry as to whether there was an advantage enjoyed in the OPA days on freight rates, it may be said that since June 30, 1941, there has been no difference in the rail carrier rates on peas and beans destined to Middle West points and originating either in California or Texas.

In accordance with your request, Mr. Buchanan's letter is returned to you.

Very truly yours,
CHARLES D. MAHAFFIE,
Chairman.

INTERSTATE COMMERCE COMMISSION,
Washington, January 5, 1950.
Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I am returning the copy of letter addressed to you by former Chairman Mahaffie, dated December 16, 1949, on which you have noted a request as of December 30, 1949, for information as to any differences on freight rates applicable to shipments of black-eyed peas and black-eyed beans before June 30, 1941.

I have had a further check made of tariffs in effect from 1930 to the present time. That check reveals that during the entire period there was no difference in the rates applicable to shipments of dried black-eyed peas and dried beans destined to Middle West points and originating either in California or Texas.

Although your previous inquiries apparently have dealt with domestic shipments, as a matter of possible interest I may add that prior to October 26, 1943, in the case of export traffic on shipments originating in California points the rate on dried peas was 10 cents per 100 pounds higher than the rate on dried beans shipped by rail to Texas ports for export. During that period there was no difference between the rates on dried peas and dried beans from Texas origin points to Texas ports. By tariff effective October 26, 1943, the rates on dried peas and dried beans from California points to Texas ports for export were equalized and have continued to be the same.

Cordially yours,
J. M. JOHNSON, *Chairman.*

FEDERAL SECURITY AGENCY,
FOOD AND DRUG ADMINISTRATION,
Washington, D. C., November 23, 1949.
Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: We have your letter of November 16 quoting from a communication sent you by a constituent dealing with black-eyed peas.

Under the provisions of the Federal Food, Drug, and Cosmetic Act, a standard of identity for the canned product has been promulgated and this requires that the article be labeled as "black-eyed peas" or "black-eye peas." While we are aware that there are some sections of the country which have referred to the raw product as a bean, the information available to us is that consumers generally think of the product as a type of pea, and the product was standardized under its common or usual name.

We are not familiar with any differences in freight rates depending upon their classification for shipping purposes as peas or beans.

Sincerely yours,
L. D. ELLIOTT,
Associate Commissioner of Food and Drugs.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Washington, D. C., December 1, 1949.
Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in reply to your letter of November 16, 1949, addressed to the Secretary of the Army, which has been transmitted to this Department for a reply. You quote from a letter from one of your constituents relative to the practice of shipping black eyes from California classified as beans, whereas the black eyes produced in Texas are called peas.

Black eyes are classified as beans under the official United States standards for beans and have been so considered by this agency since the promulgation of the bean standards. They are, therefore, not mislabeled when shipped from California and marketed as black-eyed beans.

Sincerely yours,
F. K. WOOLLEY,
Acting Administrator.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF STAFF,
Washington, D. C., December 28, 1949.
Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This letter makes reference to your communication of recent date in which you ask whether the Department of the Army advertises for black-eyed peas or black-eyed beans when procurement is initiated for Army consumption.

I have been able to determine that when the advertisement for bids is extended, the nomenclature used is as follows: Beans, dry, type E. In accordance with Federal specifications, type E is listed as black-eyed beans. When shipment is effected, the above nomenclature is used.

I am glad to be able to secure this information for you. If I can be of further service please do not hesitate to call upon me at any time.

Sincerely yours,
C. G. BLAKENEY,
Colonel, General Staff Corps.

NAVY DEPARTMENT,
BUREAU OF SUPPLIES AND ACCOUNTS,
Washington, D. C., January 3, 1950.
Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: I wish to acknowledge receipt of your memorandum dated December 15, 1949, relative to the fact that black-eyed peas are also called black-eyed beans.

The current Federal specification shows them as black-eyed beans. However, this specification is under revision, and the new issue will show them as "Class 4, black-eyed peas (black-eyed beans)." The Navy cookbook has recipes for black-eyed peas.

These peas have been used in Navy general messes for many years, and personnel are familiar with the fact that they are sometimes called black-eyed beans. It is considered highly unlikely that bids submitted for

black-eyed peas would have been rejected because of the reference to peas.

Your interest in the Navy subsistence program is greatly appreciated.

Sincerely yours,

C. W. FOX,
Rear Admiral (SC) United States Navy, Chief of Bureau.

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND
MARKETING ADMINISTRATION,
Washington, D. C., January 4, 1950.

Hon. LINDLEY BECKWORTH.

DEAR MR. BECKWORTH: This is in reply to your letter of December 19 regarding the classification of black eyes.

Dry black-eyes are classified as beans under the United States bean standards. Many of the black eyes produced in Texas are marketed in the fresh state rather than in the dry or ripe state. Fresh or green black-eyes are generally considered as peas in the trade and do not come under the bean standards, since they only apply to dry beans. Their handling is comparable to that of other fresh vegetables, whereas the handling of black eyes in the dry state is comparable to that of other dry edible legumes.

Sincerely yours,

RALPH S. TRIGG,
Administrator.

Taxes and Medical Care

EXTENSION OF REMARKS
OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. WHITE of Idaho. Mr. Speaker, many innovations are being proposed in the sound Government policies that have been followed by the Congress in safeguarding the liberty and advancing the welfare of the individual citizen since the Nation was established. Under our Government and its legislative policies great advancement has been made in almost every line of human endeavor, notably in the science of medicine. Today we find that medical science has conquered the dread enemy of childhood, diphtheria. Our doctors have made our shores impregnable to the invasion of yellow fever and have searched out and destroyed the yellow fever germ-carrying mosquitoes. Our medical men are fast conquering dreaded tuberculosis; they have overcome in a large measure the ravages of the incurable scourge, leprosy. The magnitude of the victories of medical science is beyond the comprehension of the average layman. When we consider the advances that have been made in medicine as applied by our physicians few can fail to be impressed with the able and conclusive presentation on the subject made by that veteran statesman and great American leader, Hon. James F. Byrnes, in a recent article appearing in the March 4 issue of Collier's magazine from which I quote:

To pay his Federal taxes, the average worker today puts in about 47 days a year—close to 1 day a week. But new programs are proposed, such as the construction of plants to produce materials determined by some official to be in short supply, when such official decides private enterprise will not furnish adequate production; socialized medicine, which is certainly ultimately to cost billions; Federal aid to education; the bold plan to help the backward people throughout the world; the Columbia River Authority, and the Missouri River Authority, etc.

If all these new programs go into effect with the minimum expenditures proposed, the average worker will then have to give the pay from 67 days of his work to pay Federal taxes of all kinds. When he does this, he is saying, by implication, to the Federal Government: "Here, you take my money and buy me something with it. You know better than I do what I want." Such dependence will lead to pernicious political anemia.

What is the need for the Federal Government doing so much more than is now being done? What is the hurry? There is no crisis. Let us examine just one field in which there is a great push to expand Government activities, the field of public health. Proposals for some kind of socialization in this field are put forward as a "must"—a word that is an insult to the Congress though, unfortunately, many of its Members do not seem to realize it. How bad is the health situation at present? What are the terrible conditions that demand radical steps?

Perhaps we can get the story from news releases put out by the Federal Security Agency, of which public health is a part. Here's one that tells us, "A greater proportion of births in the United States were delivered in hospitals or institutions in 1947 than in any previous year on record. * * * Since 1935, the first year that data of this kind became available, the percentage of total births delivered in hospitals has more than doubled—rising to 84.8 percent."

And here is another release: "Maternal mortality decreased to a new low in the United States." Still another: "The infant mortality rate in 1947 was the lowest on record." And again: "Latest available figures show that the average length of life of the people of the United States is nearly 2 years above the level reached in the 3 years just before the war." And finally: "The death rate for the United States in 1948 was the lowest in the history of the country."

All of these releases appeared in 1949, giving presumably the latest figures and showing plainly—if I can read figures—that the general health conditions in the United States are excellent, and improving rapidly, I cannot think of one compelling reason to change from a health system that is giving us progressive and sensationally good results to one that is doubtful and experimental. Those who argue that conditions demand a change in our health system should argue also, if they wish to be logical, that Notre Dame should change its football system.

Regardless of how much money is appropriated for a Government bureau, you cannot get medical treatment for more people unless you have more doctors. But you cannot secure a doctor by legislation—he must be trained. Medical colleges are already working on their own to increase their faculties and their students. If the politicians will let the doctors alone, the Government will be able to continue its boasts about improved health conditions.

Some advocates of socialized medicine, who apparently doubt the strength of their own proposal, seek support by calling it a New Deal proposal. It was not President Roosevelt's proposal. Five days before the election in 1940, when Willkie was a candidate for President, I was in Indianapolis. Senator Champ Clark—now Judge Clark—telephoned me that some doctors in Chicago were charging that Roosevelt had promised to support a program of socialized medicine. When I asked the President about it, he said it was not true and he would correct the impression in a radio speech on the following day at Bethesda, Md.

F. D. R. STATES HIS POSITION

In that speech on October 31, 1940, among other things, President Roosevelt said: "Neither the American people nor their Government intend to socialize medical practice any more than they plan to socialize industry. In American life the family doctor, the general practitioner, performs a service which we rely upon and trust, as a Nation." He made the statement deliberately to reassure the voters who then, as now, feared socialized medicine and socialized industry.

So far as I know, he did not thereafter change his views.

When the present Congress closed its first session, there was a flood of appraisals of what it had done and left undone. Among those stories I saw a disturbing number of times the declaration that the Congress had failed dismally to carry out the President's program, and there followed lambasting and belittlements.

Just what do people who say things like that think the Congress is supposed to do? What is their idea of our form of government? In their minds, checks and balances appear to be harmful. If Congress must carry out whatever a President wants, why not abolish Congress? What these people seem to want is a powerful Executive, and an obedient Congress. Whatever that might give us at the start, it would end in dictatorship, in tyranny, the condition the founding fathers feared most.

If the Congress should obey, what about the courts? Shall we have a system under which the executive branch of the Government is supreme? Only men who do not like our system of government, or silly men who do not pause to think, would say that a Congress must be obedient to the President if it is to serve our country. Under the Constitution the Congress is supposed to be an equal and independent branch of Government, not a me-too adjunct of the Executive.

Full Employment—In Exchange for What?

EXTENSION OF REMARKS
OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1950

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following enlightening article on the subject of full employment by Dr. Walter E. Spahr, professor of economics at New York University:

FULL EMPLOYMENT—IN EXCHANGE FOR WHAT?
(By Walter E. Spahr, professor of economics, New York University)

Should the full-employment bill become law, the people of the United States apparently will find that something of far greater importance has happened to them than they now seem to suspect.

Although several competent analyses have been made of this bill, their net effect may be extremely limited. The sponsors of the proposal have the means by which they can smother such analyses while, at the same time, they can give wide dissemination to glittering statements and plausible propaganda in favor of the proposed program. A far-reaching propaganda machine is in operation, and it is steadily gaining momentum.

Furthermore, the proposals in the bill are presented in a manner that will tend to win approval more or less automatically and to disarm those who may not read between the lines or grasp any dangerous implications which the plan may contain. The principal device employed to accomplish this aim is the incorporation in the bill of a lengthy declaration of supposedly admirable purposes. Such material is in the nature of a preamble; and this is not law, despite the fact that it follows the enacting clause. "Legislating by preamble," a device that has been employed extensively in Washington in recent years, cannot be defended in legislative law; and it is dangerous because it is used to mislead a trusting public.

It is this preamble type of material that enters chiefly into the popular discussion of this bill and is utilized, because of its emotional appeal, in the organized propaganda now being brought to bear upon the general public and Members of Congress by certain administrative, congressional, and various other pressure groups.

But the major defects or virtues of this bill are not found in the announced purposes. They are in the mechanism designed to provide full employment. And since this mechanism involves complex questions regarding statistical measurements and intricate causal relationships in the economic world, many economists and others opposed to the socialization of our economy fear that the general public may not be in a position to weigh the factual evidence which reveals the merits or dangers in this program. Regarding many, if not most, of the basic assumptions made in the bill, some of our most experienced and reputable economists are entering vigorous denials as to their accuracy or practicability.

The bill provides for a national production and employment budget, shortened to national budget—a budget which far exceeds in complexity of concept our large and complicated Federal budget. It is to include the estimated size of the labor force and the estimated aggregate volume of investment and expenditures by private enterprises, consumers, and State, local, and Federal Governments supposedly required to produce the gross national product deemed necessary, at expected prices, to provide full employment opportunities. It is also to contain estimates of the contemplated investment and expenditures of these groups, apart from the national budget program, including such foreign investments and expenditures for exports and imports as affect the volume of the gross national product.

The President is required to transmit such a budget to Congress at the beginning of each regular session. The budget is to be applicable to the ensuing fiscal year or such longer period as he may deem appropriate. If the estimated volume of prospective investment and expenditure for any fiscal year or longer is less than the estimated volume required to assure full employment, the national budget shall provide for correction of the deficiency. The President is to set forth ways of encouraging non-Federal investment and expenditure to increase employment and, to the extent that these are thought likely to prove insufficient, he is to provide a program of Federal investment and expenditure. His recommendations are to favor the utilization of private enterprise "except where the performance of such work by some other method is necessary by special circumstances or is authorized by other provisions of law."

If, conversely, the estimated aggregate volume of investment and expenditure is more than is supposed to be required to assure full employment, the President is required to present a program designed to contract this volume.

He is also authorized to submit supplemental or revised estimates, or programs, or legislative recommendations to Congress "from time to time." He is required to review all Federal investment and expenditure quarterly to ascertain any changes supposedly needed in the volume of Federal investment and expenditure, and the rate of Federal investment and expenditure may be varied to whatever extent and in whatever manner the President may determine to be necessary for the purpose of assisting in assuring continuing full employment.

This National budget is to be prepared in the Office of the President in consultation with the members of his Cabinet and other heads of departments and establishments. In addition, there is to be a joint committee on the national budget composed of 15 Members of the Senate and 15 Members of the House who are supposed to study the budget and to report to Congress by March 1 of each year.

The bill provides that nothing in it shall be construed as calling for or authorizing the operation of plants, factories, or other productive facilities by the Federal Government, or the use of compulsory measures in the distribution of manpower, or any change in existing procedures on appropriations; or the carrying out of, or any appropriation for, any program set forth in the National budget, unless such program shall have been authorized by some law other than this bill.

The arguments that have been offered in behalf of this program are essentially those set forth in the bill's declaration of purposes. The significant considerations for the people of the United States are those raised by analysts who have studied the bill carefully and are in a position to appraise its implications with accuracy. In general, their queries and observations, thus far, follow closely the following summarization.

Serious questions arise concerning the concept of the national budget. Its reliability and value, quite apart from matters of purpose and practicability of administration, rest upon other concepts such as those of gross national product, the aggregate volume of investment and expenditure, regular and full-time employment, and so on, regarding which our statistical data are inadequate and of a questionable character. Most of these concepts are matters of dispute among economists both as to definition and as to the possibility of accurate measurement.

What, for instance, is regular and full-time employment—how many days per week must one work, how many hours per day, how many adult members of the family must work, how many holidays may there be, at what age may one begin work, and at what age may or must one retire? How can the notion of continuing full employment be applied to seasonal workers, specialized workers, migratory workers, apprentices, incompetents who are discharged, and those changing jobs? Is not the need for full employment greatest when the living standard of people is lowest, and least when their standard is highest? Does not the idea of full employment dissociate wages from productivity? Are not prosperity and productivity, rather than full employment, the major considerations?

Some of the other concepts mentioned, such as that of gross national product, involve, probably, even more difficult questions.

This bill directs the President to proceed as though our statistical data on the basic elements involved were complete and reliable or can be made available when needed. It directs him to make predictions on the basis of data known to be incomplete and unreliable. It proceeds upon an assumption that a deficit in what is supposed to be the proper amount of spending and investment can be stated with accuracy, and that this deficit can be related in a definite manner to the unemployment which has prevailed or may be predicted.

Indeed, the bill is essentially a series of assertions cut loose from realities. It states how governmental policies are to promote private enterprise, how they are to bring about the desired activity on the part of business, how they will assure full employment, how consumers' expenditures will be increased or decreased as desired, how capital outlays of business will be increased or decreased as needed, and so on, just as though assertions of this type in a law can effect the ends desired.

The bill incorporates what has come to be known as a compensatory economy program, the soundness of which has been challenged repeatedly by many of our most responsible economists. Provision is made for Government spending to take care of the deficits in the national budget. No consideration is given to the effects of taxation or borrowing on the private economy. Insofar as the theories in this bill go, taxation and borrowing might be exceedingly heavy and disturbing. No consideration is given to the possible size of the Federal debt nor to other unfortunate disturbances which the proposed Government policies and actions probably would cause. Under this plan we could have a series of deficits until the public credit collapses.

The bill, like the general run of comments on it by its proponents, seems to reveal no clear understanding of the net effects of similar Government policies in the past, as, for example, during the 1930's. When a policy, much like the one proposed, was tried in this country during those years, the economy was so disturbed that unemployment remained at a high level despite the heavy governmental expenditures. The flow of capital into new enterprises declined to a mere trickle. The velocity of bank deposits, which in general reflects people's optimism or pessimism, declined to the lowest level on record up to the time we embarked upon our armament program—to a point below that reached at the depth of the depression in July 1932. Facts of this type are ignored by the proponents of this bill. Moreover, its sponsors offer none that would warrant support for the theories on which it rests. They are asking the people of the United States to accept the bill on faith—on the basis of assertions and the declaration of purposes.

Another important consideration is whether a government can really do the things which this bill takes for granted. There are qualified persons who maintain that it is more reasonable to assume, in the light of the evidence that is available, that governments will make serious mistakes and cause maladjustments than it is to assume that they will always act with wisdom and proper foresight.

The bill takes for granted that even though a nation has been plunged into a severe war, with all the attendant serious and radical adjustments that are involved, the central government, if it will only take appropriate measures, can effect a smooth transition to a peace economy and enable the country to escape a severe postwar reaction. Many economists doubt that there is any basis in economics, or in economic history, for such an assumption. They insist that much of our thinking in the late 1920's was of this type. We thought then, they say, that if we could maintain a stable price level and continue certain other enlightened policies,

which our Government was supposed to be pursuing, we could escape a secondary and severe postwar reaction. We were soon taught the foolishness of those notions. Today we are seeing essentially similar assumptions made. The importance o a stable price level is being stressed just as in the late 1920's.

There is nothing in the proposed plan that would indicate how much Government spending is necessary to put a certain number of people to work. For instance, during the days prior to the pump-priming program of the 1930's, when the Federal budget was approximately $5,000,000,000, what was the relationship of this budget to the number of people employed? According to fairly conservative estimates, the best we can expect in the way of a normal-time postwar budget is one of, say $25,000,000,000. With a budget of five times the pre-pump-priming budgets, what would be the relationship of this extra 20 billions of Federal expenditures to the number of people that would and would not be employed?

The plan fails to recognize what qualified economists know to be the difficulties in solving the problem of unemployment by Government action: A government is a cumbersome machine and slow in launching public works. It is difficult to start these in the areas of unemployment and, therefore, labor often must be moved to distant points and perhaps be provided with special housing and other facilities. Projects, once started, are rarely stopped when the need for such employment disappears, partly because of the waste involved in the incompleted enterprises. There is the question of how to utilize the products or services for which there may be little or no demand. The supervisory bureaucracy is wasteful, expensive, politically minded, and tends to perpetuate itself and to expand its undertakings. There is a tendency to compete unfairly with private enterprises and to cause it to shrink or die, which, in turn, provides the excuse for still further expansion of Government employment activities.

Despite provision for advisory and other committees, the proposed national budget would be in control of a small group of statisticians who would devise programs of national expenditures based upon their statistical estimates. It is hardly reasonable to suppose that the 30 otherwise busy members of the joint committee of Congress would go behind the reports of the statisticians and obtain a genuine understanding of the nature and shortcomings of the raw material used in such estimates. What one can count on is that this committee and other advisory groups, Congress, and the President would take what this small group of managerial statisticians gave them, and that both Congress and the President would act upon such estimates. Otherwise, they would be defeating the chief purpose of the program. The probable consequence would be the discovery that, through the passage of this bill, we had instituted in large degree a federally managed economy with the management actually in the hands of a small group of statisticians.

Another serious question involved in the program is whether security in the form of assurance of "useful, remunerative, regular, and full-time employment" can be given to individuals by any government without at the same time sacrificing, to an undesirable degree, the freedoms which individuals must have if they are to go forward in the best possible manner. The bill does not face the fact that an individual cannot have freedom without, at the same time, incurring risks. It assumes that the people of the United States have reached a stage in which they are willing to sacrifice their guaranties of freedom to obtain what is in fact a spurious guaranty of employment. It embodies the doctrine that every person is entitled to obtain a living from the Government regardless of whether he has the ability or the willingness to produce enough to justify the pay which it is proposed that he shall have.

Just how does the Federal Government propose to see to it that the person who desires "useful, remunerative, regular, and full-time employment" is to get it? Who will decide whether the job is "useful" and what is "remunerative"? Will rates of pay differ or will they be uniform? What is a "regular" and a "full-time" job, and how is one to get it if there are no openings in the fields where one's qualifications lie? The net meaning of all these vague words—"useful, remunerative, regular, and full-time employment"—can be nothing but Government regimentation of those people who may be so unfortunate as to become the victims of the system which the bill, by its nature, apparently will institute.

The fact is that if an attempt is to be made by the Government to provide employment in accordance with the vaguely worded promises in this bill, the Government, of necessity, must determine when, where, and under what conditions the seekers of employment may work. This fact is not altered by the statement in the bill that nothing in the plan may be construed as calling for or authorizing the use of compulsory measures of any type whatever in determining the allocation or distribution of manpower. The existence of a painful amount of unemployment will supply all the compulsion that is necessary. This bill opens the way to far-reaching Government action to insure such employment as it may see fit to provide. The Government could, and probably would, enter many fields of activity that are not proper functions of Government—if we are to maintain the system of private enterprise.

Although the declaration of purposes is not law, but rather a psychological trick, the statement that one of the purposes of the plan is to contribute to the full utilization of our national resources is symptomatic of the unhealthy nature of this bill. No well-informed person could possibly expect to have or to want full utilization of our national resources. Such utilization would mean the end of all conservation and would leave little or nothing for future generations.

Despite the great concern repeatedly expressed in the bill over the preservation and fostering of free, competitive, private enterprise, the program in its essence is a monument to a striking lack of faith in the virtues and strength of private enterprise. The faith of the sponsors of this bill lies in the so-called welfare state, a fact adequately demonstrated by the declaration of purposes. And the true nature of the welfare state is a matter of grave concern to those who wish to maintain private enterprise in this country. "The slave state," says the British economist, Hayek, "always starts out as a welfare state. It promises freedom from worry, want—as many freedoms as you wish, except freedom from the state itself." This bill provides for much less, not more, freedom from the state. Indeed, some careful critics regard this program as probably the boldest attempt yet made in this country by Government planners to usher in a federally controlled peacetime economy.

Continuing full employment cannot be assured in a free society. If this bill should become law, the probable effect would be to discourage rather than encourage private enterprise and to decrease rather than increase nongovernment employment. The Federal Government will have assumed an explicit responsibility for full employment and for unemployment in this country. Presumably the best administration would be the one that would employ the most people. This could easily lead to huge Federal spending, huge bureaucracy and patronage, and finally, to national bankruptcy.

Although the bill expresses again and again an aim to encourage and to utilize private enterprise in carrying out the proposed program, escape clauses are invariably provided which would enable the President, with the cooperation of a majority in Congress, to do practically anything he pleases. In addition, there are various broad and vague provisions under which those responsible for the proposed policies could attempt almost anything in the way of instituting a federally managed economy.

The alternative to this bill does not involve doing nothing to combat unemployment—a matter of great concern to all enlightened people. There is, as qualified economists well know, an alternative that can be helpful and at the same time actually preserve and strengthen private enterprise and foster a healthy economy.

In brief, if our Government officials really desire to preserve and to encourage private enterprise and private capitalism, they should give more attention to what makes it function best and what causes the maladjustments that result in unemployment. Then they should endeavor to create the atmosphere favorable to the best functioning of the system.

Specifically, they should foster free and fair competition. They should not compete unfairly with private enterprise. They should provide the Nation with currency and fiscal systems in which the people have confidence and which facilitate rather than disturb the operation of the system of private enterprise. They should protect the weak from the strong and give careful consideration to ways to aid the needy aged and helpless without undermining their self-reliance and self-respect. They should see to it that those who handle other people's money adhere to the highest standards of ethics. They should encourage science, invention, and learning, and seek to broaden rather than to narrow the scope of individual freedom. They should regulate in the interests of peaceful settlement of disputes rather than to endeavor to produce and to direct. They should narrow rather than enlarge Government activities. They should encourage hard work, prudence, saving, and self-reliance. They should cease to cultivate the enervating notions that self-reliance is no longer a virtue, that the Government owes all citizens a job and a living, that there are distinct limits to the penalties that may attach to lack of prudence, and that there can be too much saving and that "oversaving" is a bad thing.

They should do other things of a similar nature. Some public works, if they are needed and if they can be properly conceived and executed in times of unsual unemployment, might accomplish some small benefits; but there is no basis for supposing that the benefits can ever be comparable to those assumed in this bill. Such works, when designed primarily to provide employment, besides being too expensive, rarely produce anything that leads to continuing employment. At their best, their accomplishments compare poorly with those resulting from a small fillip in the private enterprise system.

It is in these directions, rather than in more national planning of the type proposed in this bill, that our non-Socialist economists of repute believe the road to higher standards of living, greater individual freedom, and greater national well-being is to be found.

A basic question presented to the people of the United States by the full-employment bill is whether their thinking and activities are to continue in the direction of preserving and enlarging the freedom of the individual or whether they are to follow those of Socialist-Communist-authoritarian Europe.

America's Tradition of Asylum

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the HIAS in New York on March 5, 1950:

AMERICA'S TRADITION OF ASYLUM

In the face of all we know—in the face of history—how can anyone sit back, smug and complacent, and deny that one of the greatest sources of American strength is in its tradition of asylum? But I think it is one of the bitterest commentaries of our time that men of good will are forced again and again to take the position of defending the immigrant, that men of good will again and again are forced to repeat the facts, to deny the slanders and review the history of immigration in our country. As far back as 1813, the same hue and cry was set forth against the immigrants. Almost 150 years ago men were making political capital of talking about closed frontiers, limitation of opportunity, and displacement of the American worker. These were men of little faith, restricted in imagination with tight, little minds who understood neither the era in which they lived nor the era to come. This is as true today.

The United States Congress had made provision when the struggle began in 1924 to restrict immigration, for the admission of 153,000 yearly. That law stands today. For almost a decade under that law just prior to and during the chaotic war years only a fraction of that number came in. Even under the now accepted restrictive Immigration Act of 1924, thousands upon thousands—almost one million and a half—seeking asylum could have entered without a dissenting murmur had the law provided that each year's unused quota would not lapse. Had these thousands been able to come in under the law, nobody would have talked of the displacement of American workers. Nobody would have talked about housing, etc., etc. It would have been taken for granted. Mind you, I make no brief for this act, which is based on eligibility of admission rising out of national origin. If 153,000 people are to be admitted yearly, what difference does it make if they are Poles, or French, or British, or Germans? This business of racial emphasis is an evil one. It translates prejudices into law and gives official sanction to the baseless concept of racial superiors. I cannot help but face this issue honestly, but I must likewise admit that the temper of the times is such that any attempt at repeal of such concept would meet with defeat—a defeat so complete that it must surely injure such attempts when made at a more propitious time. But I pledge myself to work unceasably to eradicate racialism from our lives. I shall not rest secure until any immigration law, based upon so-called racial superiority, is wiped clean off our statute books.

To go back to the law as it exists today with the possible admission of 153,000 yearly and with the lapse of over a million and a half quota numbers in the last decade—think what sound and what fury accompanied the discussion of a displaced-persons program in the United States. The displaced-persons program, of course, is a problem apart from our general immigration problems, but it is intimately related because of the prejudices and distortions which accompanied the enactment of a law in 1948—a law which reiterated the intolerance that made its first appearance in the law with the Immigration Act of 1924.

I think it is a fair question to ask what would the United States have been without the enrichment and vitality brought to it by the immigrant. We have a vigorous and dynamic society because we have utilized and amalgamated numerous cultures, numerous skills, numerous philosophies, and the product of that amalgamation, of that fusing together, is unmistakably and characteristically now a merit. Just as families inbred through years of highly selective marriage finally disintegrate, like the royal families of Spain and the Hapsburg Empires, so a nation stops growing when refinement of blood is its only goal. This is historically true and has been demonstrated again and again through the course of mankind. For example, it has been clearly shown that the years of greatest prosperity coincided with the years of the greatest immigration waves. It has been demonstrated that the States with the largest immigration population are most prosperous, spending more per capita for education, for road construction, for health, and for other general-welfare projects than those States barren of immigration blood. James G. McDonald, former High Commissioner of Refugees under the League of Nations, described the exiles from Germany, whom we admitted as being among the political and intellectual leaders under the German Republic—Democrats, moderate Socialists, pacifists, liberal professors, journalists, Catholic priests, and Protestant pastors. So selective was the emigration that Hitler's Germany, Mussolini's Italy, and Franco's Spain became practically intellectual deserts. As a further indication of the outstanding quality of the group that sought asylum amongst us in the 10 years 1932 to 1942 alone, it should be noted that 12 were Nobel Prize winners and that at least 103 of them have attained the distinction of being listed in Who's Who in America and 220 in American Men of Science, despite the short time they have been here. The number so listed is twice as large as would be expected if the same ratio to general population characteristic of Americans were to be applied to them.

Literally hundreds of refugee scientists made substantial contributions to the success of the Allied arms. Prof. Karl Sollner, a refugee scientist at the University of Minnesota, was a coinventor of a portable device to enable shipwrecked sailors and airmen to convert sea water into drinking water. A Polish engineer, T. Janiszewski, invented a new type of portable demountable V-type deck bridge which became standard United States Army equipment. An Austrian, Alfred Schwarz, research director for an optical company, designed a synchronized shutter used by Air Force and Signal Corps photographers. Czech specialists in the glass industry brought in a number of secret processes that were utilized in plane manufacture and in plastics. Iron and steel men from the Skoda Works contributed special knowledge and skill to the manufacture of munitions. These are just typical examples of the extensive contribution made by refugees to the war effort.

Most dramatic of the new discoveries was the development of the atomic bomb, which turned into a race between German and Allied scientists. Ironically enough, Germany started the experiments, but we finished them. In this we were aided by refugee scientists, a number of whom had been expelled by the Nazis because they were Jews. Among them were Albert Einstein, who provided the mathematical equation which showed just what the relation of matter to energy is and how one can be converted into the other, and whose letter to President Roosevelt resulted in the appointment of the Advisory Committee on Uranium. Dr. Lise Meitner, who discovered with Prof. Otto Hahn the important clue to the release of atom energy, fled to Denmark where she communicated her results to Dr. O. Frisch, a physicist likewise driven from Germany, and worked with Dr. Neils Bohr, a Nobel prize winner, until the German occupation in April 1940, when she escaped to Sweden and continued her research work, the results of which were sent to the United States; Dr. Bohr, formulator of the theory on which the atomic bomb is based, who was whisked from the grasp of the Nazis in his occupied homeland, went to England and also came to the United States where he assisted in developing the atomic bomb; Prof. Rudulf Peierls and Dr. Franz Eugen Simon, two German physicists who fled to England where they participated in the British part of the program; Dr. Enrico Fermi, Italy's foremost physicist and a Nobel prize winner, a refugee to the United States, who discovered how easily a slow neutron can slip into an atom to burst its nucleus and release terrific energy and who also did much to show how the chain reaction could be controlled; and numerous refugees of other nationalities who assisted in bringing the A-bomb to perfection. As the New York Times of August 8, 1945, remarked editorially: "Though the credit for having forestalled Germany must go to the air forces that bombed German research laboratories where secret weapons were developed, we have some reason to thank Hitler and Mussolini for handicapping themselves. The Fuehrer's irrational glorification of Nordics and Il Duce's acceptance of the Nuremberg policy had the result of presenting us with some of the best physicists of Germany and Italy and of occupied countries. There must be scores of others who were not mentioned in the official announcements—engineers, technicians, chemists, physicists of distinction, all gifts of Hitler and Mussolini."

Many alien baiters and xenophobes, in the most arrogant fashion, proclaim their superiority. They alone, for example, are responsible for winning the war, so they say. They have a monopoly on patriotism. They forget the contributions of immigrants and sons of immigrants in World Wars I and II. They forget such heroes as Abe Krotoshinsky, of the famous Lost Battalion; General Rose, son of a rabbi; Don Gentile, famous flying ace, son of Italian immigrants; Meyer Levin, of Polish descent; and Colin Kelly, of Irish descent. Of the six servicemen who participated in the historic flag raising at Iwo Jima, three of the men were aliens, one a Swede, one a French Canadian, and one a Carpatho-Russian, born in Czechoslovakia. The fourth was a full-blooded Pima Indian. In 1854, Lincoln rejected the proposed endorsement of the Whigs and Know Nothings, who were the alien baiters of his day. At the time he said: "Who are native Americans? Do they not wear the breech-clout and carry the tomahawk? We pushed them (Indians) from their homes and now turn upon others not fortunate enough to come over as early as we or our forefathers. Gentlemen, your party is wrong in principle." Then he told this story.

"I had an Irishman named Patrick cultivating my garden. One morning I went over to see him and asked how he was getting along. 'Mr. Lincoln, what do you think of these Know Nothings?' he asked. I explained what they were trying to do and asked Pat why he had not been born in America. 'Faith,' he replied, 'I wanted to but my mother wouldn't let me.'"

Let me again, in the interest of clarification, make this clear. I do not hold the premise that immigrants are better than other people. Neither are they worse. They are, in short, human beings with all the failings and with all the virtues that go to make up people. But I do make the premise that the intermingling of cultures and that the applications of alien skills in a country enrich it, serving both the nation

and the immigrant. I do hold the premise that a country which bars immigrants, which holds fears of aliens, which embraces chauvinism, will bring on self-destruction. I don't mean that the country will die out. I mean self-destruction in terms of growth and progress in its economy, in its arts and sciences; in short, a country which bars its immigrants has dried up the bed of its life-giving waters.

Let us look for a moment at our displaced-persons program which goes so far to demonstrate these truths. True, the present law contains restrictions and limitations which have proved detrimental to the entire program. The displaced-persons programs of the other countries, with the exception of Israel, have been on the basis of mass "labor recruitment," with selection by the governments of these countries. These countries have the widest latitude under their respective laws and regulations providing for the selection of immigration of displaced persons. Only in the United States has the program been rigidly circumscribed by a law which includes restrictions, limitations, preferences, and priorities upon all displaced persons who seek entrance into our country. It must be remembered that these special requirements are placed on top of all other requirements which our customary immigration law provides. We require individual assurances for jobs and housing which will not displace citizens; we find a 40-percent preference for those of Baltic origin and a 30-percent preference for agricultural workers. The 40 percent allotted to nationals of the Baltic States and the 30 percent allotted to agricultural workers comprise less than 19 percent of the displaced persons in the camp and this 19 percent arbitrarily receives 40 percent and 30 percent, respectively, of all visas issued. The Displaced Persons Commission is thus placed in an impossible position where it has to withhold the granting of visas until nationals of Baltic States and agricultural workers are found to meet these percentages. And they cannot be found.

Factually, there are not enough of these two groups to meet the 40- and 30-percent categories. Those who have job and housing assurances who are neither Balts nor agricultural workers must, perforce, sit back and wait. This has made the administration of the present law a most intricate and dismaying business.

In the early days of its operation under the 1948 act, the Displaced Persons Commission tried religiously to adhere to the prescribed percentages. When it became obvious that this policy slowed down the progress of a 2-year program of admission, the Commission informed the Congress in March of 1949 that in order to comply with the requests of American sponsors filing assurances it would temporarily pay less attention to the Baltic and agricultural percentages in order to expedite the flow of displaced persons under the 1948 act. The fact that the House of Representatives had as far back as June 2, 1949, passed the Celler bill eliminating the arbitrary and discriminatory preference percentages constituted an encouragement for the Commission to continue this sound policy. A much faster and more expeditious flow of displaced persons to the United States ensued. Many of the camps in Europe were emptied; many of them were closed and other countries such as Israel, Australia, and Canada, encouraged by the progress of our program, have greatly increased the number of displaced persons they have decided to admit. The outlook for complete and final dissipation of the displaced-persons problem was excellent.

But it is now obvious that the application of these restrictions, the unworkability of which has been predicted repeatedly, is preventing the fulfillment of the intent of Congress. It may well be because of these percentage preferences that the pathetically low figure of 205,000 will not be reached with the result that the displaced person problems will continue to be with us.

Even if there were a way found to make the Displaced Persons Act of 1948 workable, there would still remain 180,000 displaced persons in Europe by the end of the year.

The solution is an obvious and simple one. The Celler bill, which, as stated above, passed the House and is now awaiting action in our Senate, increases the number of eligible displaced persons to 339,000 and removes the unworkable percentage limitations. Out of 360,000 now remaining, 260,000 have already been listed for resettlement in other countries.

Thus the passage of my bill would insure a resettlement program fully complete except for the hard core of displaced persons which contained the disabled and the sick. This hard core would then necessarily fall within a mercy program which some countries have already undertaken. All reasonable people agree that every sound reason exists for the enactment of my bill.

The increases under the present law have created no additional housing problem; they have constituted only one-three hundredth of 1 percent of the labor force; 25 percent have been placed on farms, according to the statement of the Department of Agriculture; they have created no criminal problem, according to the statement of the Department of Justice; and their social integration has been excellent, according to the Federal Security Agency Administrator. The voluntary relief organizations, which have concerned themselves with their resettlement, report that there have been no instances where it has been found necesary to place any one of them on relief rolls, nor has their resettlement been concentrated in already crowded cities. Twenty-five percent as noted have gone to rural areas, and that percentage is increasing at a rapid rate. They have brought with them occupational skills which have been in short supply. All the orphans under 16 years of age attend school full time. None of the children under 16 work. Of the immigrants admitted under the act approximately 25 percent were under the age of 18, and 84 percent of all displaced persons who arrived were under 45 years of age. Seventy-six percent of the displaced persons were in family groups.

Questionnaires concerning the resettlement program were sent out by the Judiciary Committee of the House of Representatives to the appropriate executive departments, to the 48 governors of the various States, to labor organizations, and to social welfare agencies. More than two-thirds of these various groups replied, and in no one reply was there expressed any dissatisfaction with the displaced persons. Twenty-seven governors have already replied to date, and two-thirds of them state that they could use more displaced persons. Replies coming from the midwest and southern regions of the country have asked for more displaced persons with professional skills. The National Catholic Welfare Conference in its reply states:

"Of the total number of displaced persons sponsored through War Relief Services—NCWC, 40,592, not one person is either receiving relief or is unemployed. Opportunities for more displaced persons come into this office at the rate of about 700 a week; the program's success may be judged by the continuous stream of new assurances for displaced persons. The displaced persons who have resettled in the United States have sold the program to the American people by their willingness, honesty, and devotion. The few whose resettlement has not immediately been successful are forgotten when the program is viewed as a whole."

The United Service for New Americans, Inc., reports:

"It is our feeling that the program of resettlement of displaced persons in the United States has been a real success to date and is an augury of the satisfactory integration of the entire 205,000 people who are eligible to enter the United States under the DP Act of 1948."

The Hebrew Sheltering and Immigrant Aid Society states:

"The new arrivals apparently have adjusted themselves because, to our knowledge, no DP's have had to turn to welfare authorities for financial aid. Socially, they have been law abiding—none has thus far run afoul of the law; many have become leaders of religious congregations; some have entered the artistic fields; and still others have excelled in scientific studies. The DP, generally speaking, is a conscientious, reverent, and energetic person, who wants to make good and is willing to start at the bottom. We have seen men of letters accept jobs as menials, in a spirit of tolerance and profound appreciation for the immigration opportunities afforded to them."

I cannot leave off without stating how strongly I feel about the Senate Judiciary Committee amendments to the Celler bill. These amendments were the brain child of Senator McCARRAN, of Nevada. What he has done is to take my bill and under the guise of liberalizing it, has perverted it to the use of German expellees. It is cleverly written to leave the impression that it accepts the principles of an increase in the admission of displaced persons in this country, but nothing is further from the truth.

The Celler bill is designed to deal specifically with the problem of the displaced persons camps—to look toward their quick dissolution, and to relieve the taxpayer of their burden of support for these camps. All facts point to the conclusion that the passage of my bill will achieve that result. The changes proposed by the Senate committee, despite their appearance to the contrary, would do no such thing. They leave untouched the central problem which is the elimination of the displaced persons camps. The Senate committee bill does that primarily by including in its definition of the displaced person "persons of German ethnic origin" * * * "who are expressly excluded under the constitution of the International Refugee Organization." That provision coupled with its other restrictive provision that 30 percent of the authorized visas shall be issued to persons who have been for at least 2 years at some previous time or times engaged principally in agricultural pursuits practically bars entry to those in the DP camps. The Displaced Persons Commission has testified that the agricultural restriction in and of itself has made the present act unworkable because of the difficulty in finding so high a percentage of eligible agricultural workers. There will be no difficulty in finding agricultural workers among the persons of German ethnic origin, but where does that leave the displaced person?

In addition thereto the proposed changes strengthen the provision that 50 percent of the German and Austrian quotas shall be available exclusively to persons of German ethnic origin who were born in Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, Rumania, Russia, or Yugoslavia, or areas under the control of any such countries.

Thus we see in effect a bill not for the persons in the displaced persons' camp, but for persons of German ethnic origin. In other words, the persons in the DP camps will have to compete with a heavy and overwhelming advantage in the law on the side of Germans for admission to the United States. This spells out a studied attempt to close our doors to the persons in the DP camps. It means that the American taxpayer will have

to continue maintaining these camps for an indefinite period; it means that the DP problem will remain with us to be rehashed and rehashed over and over again; and it means that the hopes of dissolving the IRO on March 31, 1951, to which the United States is so heavy a contributor, will be dashed.

In addition to the expenses borne by the United States in maintaining these camps and in contributions to the IRO, the United States will be called upon to pay for all transportation costs of those persons of German ethnic origin since these persons do not come within the jurisdiction of the IRO. The constitution of the IRO forbids the organization from paying transportation costs for persons so excluded. Let me point out that the IRO bears the costs of transportation of displaced persons within their own definition. It will be noted, of course, that the Senate Judiciary Committee has changed the definition of a displaced person which heretofore has been the definition used by the international organization. Acceptance of these provisions will mean a denial of our international obligations as well and a rift in the direction of international harmony.

I note, too, that the Senate Judiciary Committee proposes to include the word "Marxist" in addition to the word "Communist" already included in the Celler bill in its definition is many things to many men. What is a "Marxist" and who is a "Marxist" is far from being settled, and to use so vague a term legislatively is a grave error. Does a "Marxist" mean George Bernard Shaw, Clement Attlee, or Tito, or Molotov, or any or all of them?

The Celler bill at best was a compromise bill, but it does have the merit of dealing directly and centrally with the problem of the displaced person.

Let us all fervently hope that that day never dawns when we set aside forever America's great tradition of asylum.

Improving Our Elections

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Stamford (Conn.) Advocate:

IMPROVING OUR ELECTIONS

Cartoonists have long depicted our ancient electoral college system as hoary and outmoded. By and large, they have correctly popularized the notion that reforms in our Presidential elections were badly needed. The Senate last week responded to the popular appeal by voting the necessary two-thirds majority for the amendment offered by Senator HENRY CABOT LODGE, of Massachusetts.

The plan provides that the electors shall be able to reflect popular preference for a candidate by casting their ballots for a minority candidate. In other words, instead of the winner-take-all theory that has led to lop-sided electoral counts in the past, the outcome will allow candidates in a Presidential election to retain their votes in proportion to the popular ballots. In 1948, when the election was still in doubt, the Dixiecrats might have held the balance of power had one of the large States gone the other way.

Such perversions of the popular will would be obviated in the future, under the Lodge amendment. The act must still be voted and approved by two-thirds of the House and from there must be approved by 36 of the States. There is a good possibility that the twelfth amendment will be revised and the reform incorporated into our Constitution.

The plan is not the pure democratic process whereby a President would be elected by popular vote alone. But it is a good compromise. The amendment offered by Senator LUCAS, providing that no candidate can win without 40 percent of the popular vote, adds to the attractiveness of the reform. In the absence of such a plurality, the entire Congress, not just the House, elects the President. The improved electoral revision deserves the support of the House and the Connecticut Legislature, as well as all others interested in fair and equitable elections.

Mao Returns to China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Times of March 4, 1950:

MAO RETURNS TO CHINA

Mao Tze-tung, chieftain of the Chinese Communists, is now back in his native land after his extended pilgrimage to Moscow. Because of the fact that he went there to negotiate a treaty most of the emphasis upon his return has been placed, so far, on the question: What did he come back with? It is equally pertinent to ask: What did he come back to?

It is not so easy to make an appraisal of the exact situation, but plainly Mao comes back to an inflation of the same sort as that which undermined the Nationalist Government of China. The promise of $60,000,000 a year for 5 years that he received from the Russians won't help much to halt the already downward spiral of Communist currency. Apparently the policy of forced loans was not enough. The tactics used in forced rice collections and return of these loans to get moral credit apparently won't work when it comes to money.

A factor in the deteriorating economy, of course, is Nationalist bombardment and blockade. Whatever its cost in other respects, it is apparently proving to be more effective in the economic field than many persons had supposed it could have been. Chiang, who was upbraided for the lack of will to resist on the part of his armies, is showing more than a little ability to resist and to do real damage with his navy and his air force. At the moment he is forcing the Communists to lose ground economically.

This is a curious and fateful reversal of roles. It is easy to see that the effectiveness of the Chinese Communist movement derived to a very considerable extent from the fact that its attack over a long period was not on the field forces of the Nationalist Army but on the basic economy of the Government of China itself. The Communists boasted that when that viable economy had been sufficiently undermined the resistance of the Government would fall of its own weight, and events justified their boast. The situation has now swung around and it is the Communists who must try to establish and sustain a working economy for China. Their present outlook is not bright.

At the same time the character of Nationalist resistance has improved. Chiang, in resuming the presidency, is simply responding to the logic of forces and events. He has rehabilitated resistance on both Hainan and Formosa. He has at last put the real liberals and reformers into key positions. In place of some of the liberal followers of Li Tsung-jen, who came into office on the theory that it was possible to make an honorable peace with the Communists and wound up in Peiping, he has put authority into the hands of such acknowledged leaders as Wang Shih-chieh, K. C. Wu, George Yeh, C. K. Yen, and O. K. Yu. In the military field he has the services of skilled and imaginative commanders such as Chen Cheng, Hsueh Yueh, and Sun Li-jen.

Mao's return, in this light, must be viewed as something short of triumphal. He has won some of his battles in China. He may or may not have won his battle in Moscow. He still has an economic and political and military war on his hands.

Sunny and the Devil's Capsules

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Al McCready, from the American Weekly for March 5, 1950:

SUNNY AND THE DEVIL'S CAPSULES
(By Al McCready)

A spotlight picked her out, and Sunny Burnett danced, and when she was done the theater audience whistled and cheered. It happened in big cities and small ones, from one coast to the other, and people who saw that dazzling sprite in those days, in the late twenties and early thirties, still brighten up when her name comes to mind.

Other people, in the dim back rooms of drug stores and in hospital wards, remember her, too, and when they hear her name they grow abruptly silent. They knew her when her dancing days were over.

Sunny was a foundling. She was adopted by a foster mother in an Oregon town near Portland. She was such a happy little girl that soon she was "Sunny" to everyone, and she kept the name for good.

By the time she walked, she seemed to want to dance; before she was 4, she was learning ballet and tap steps in a dancing school; at 6, she was a professional, and on the stage.

Vaudeville houses dotted the country then, and when she was still in her early teens, Sunny made the 1-night stands and the longer ones of the Pantages and Orpheum circuits.

After that, there was a tour of Europe, and then, because she was really dedicated to ballet, she put aside money-making dancing for more study. She practiced several hours a day and in that period finished high school.

When the Ballet Russe de Monte Carlo visited Portland, Oreg., she danced with it in the Civic Auditorium; and she kept on afterward with the hard grind of practice; and in 1938 she starred in a musical production in the Portland Civic Theater.

"How about a cup of coffee?" a young man asked her one night after a performance. That was the way she met Ray Ward, the young foreman of a cleaning and dyeing plant. She had coffee with him in a nearby restaurant, and within the year they were married.

She had everything to live for then, she said; a husband she loved, security, and her

goal ahead, the time when she would be a ballerina.

When she fell ill of appendicitis she wasn't worried. An operation at a Portland hospital would set her right. But after the surgery she found she couldn't sleep.

She began at night to take what she thought was a harmless pill, and soon she was taking two a night, and then three or four.

Before either she or her husband realized it she became one of those unfortunates who find that sleeping pills are habit forming.

She tried to keep on dancing, she tried to keep regular hours and lead a normal life, and the efforts were pitiful. She had to have more pills. She couldn't be without them.

"I sent her to a rehabilitation hospital where they try to cure people of the dope habit," Ray Ward said recently in an interview with a representative of the American Weekly. "It was the beginning of a 10-year nightmare."

Five days after she came out of the hospital "cured" her husband found her lying in a stupor on the floor of their apartment. A partly filled bottle of sleeping pills stood on a bathroom table.

"I sent her back to the hospital," Ward said. "She was 'cured' again, and went back still again. Each time the same thing happened."

Sunny tried to free herself of the habit. She suffered, Ward said. But she couldn't force her steps past one door or another where, if she turned in, she could get a fresh supply.

Her husband began to make a round of doctors and druggists, pleading with them not to let her have any more of the barbiturates. Some agreed willingly. He said he was shocked to find others callously indifferent.

One druggist, he said, in a 2-week period filled 18 prescriptions given to Sunny by 18 different doctors.

Some doctors, he said, were not above taking advantage of the fact that she seemed to be a sleeping-pill addict. One of them, not in Portland, sent her pills by mail, c. o. d., and the price was high.

A State law restricted the sale of the pills but Sunny—as her dancing days waned and her stupors grew deeper and more frequent—managed to stay adequately supplied.

She went to one hospital after another, one clinic after another, throughout the Pacific Northwest. She was hospitalized 28 times and Ward paid out $15,000 in fees, trying to have her really cured.

It wasn't any use. There was no reason any more to call her "Sunny." She was never herself.

One day in 1944, groggy from barbiturates, she fell from the balcony of her room in a hospital and fractured her skull and spine. Surgeons took a piece of her shin bone to repair the spinal break, but she never danced again. The old hope of fame as a ballerina vanished. Sleeping pills took its place.

Twice, falling asleep in the daytime, she set fire to furniture. Once, in the night, Ward awoke to find her lying beside him, her hair aflame from a cigarette, and her pillow burning.

They talked it over, later. They agreed on a divorce. They parted friends and he paid her $150 a month. That was in 1947. Later he increased the payments and he paid hospital bills.

One evening in December 1949, after he had remarried, he met her on the street, gaunt and haggard, and he asked her how she was.

"O. K.," she said, and she walked on quickly.

A week later, Portland police headquarters reported:

"Sunny Burnet, 35, was found dead in bed in her apartment Wednesday night. The coroner's office attributes death to an overdose of sleeping pills."

Excise Taxes and Hotel Operators

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. SHAFER. Mr. Speaker, I recently addressed the Michigan Hotel Owners Association at Kalamazoo, Mich. Under leave to extend my remarks, I include a portion of that address:

Mr. Chairman, I shall discuss some problems that I believe are of particular interest to you who are in the hotel business.

You know, it was not so many years ago—most of us here can remember it—when the things that would be of interest to one group in one State were not so important, or of such great interest, to the same kind of group in another State. Our problems once were almost wholly local problems. But due to the changing times—to factors our people might have controlled, if they had wished, and to other factors that were beyond the control of any of us, in a real sense—we find that similar groups in every State are interested in similar problems.

One of the big reasons for this similarity of problems—among all business groups—has been the steady, undiminished, unparalleled growth of Federal power.

The situation has changed so rapidly in recent years that many persons, formerly alert and informed of trends in existence, find that they have overlooked important and vital factors by not being fully informed every day.

Twenty years ago decisions made in Washington were not nearly so important to your business. You innkeepers kept a few traveling Federal agents. I can remember when everybody in town would talk about it when a Federal man came through. He might have been an inspector for the post office, a Treasury agent, or a representative of the Tariff Commission. The local editor would interview every one of these Government officers, if he could get them to say anything, and record the interview in his local paper.

But today, I dare say, the owner of the smallest hotel of the smallest town represented here keeps not one or two but dozens of Federal agents every week. They do not represent just this or that agency but hundreds of Federal agencies. There are a good deal more than 2,500 different departments, establishments, agencies, bureaus, and subbureaus, with more than 2,000,000 employees. They are busy, attending to the enormous duties and responsibilities pitched into the lap of the Federal Government by an unwary people.

The problems which face us now are incomparably more complex than they have ever been before—at least those with reference to our Government. Once, an innkeeper was not, in effect, a collector of taxes for the Bureau of Internal Revenue. But that is exactly what you are now. If you don't know it, let me prove it to you.

If your hotel sells liquor or tobacco, you collect excise taxes for Uncle Sam. If your hotel has a cabaret, or a dine-and-dance place of any kind, however small, you have to collect taxes for Uncle Sam. If you put on any kind of amusements, or allow these to be put on in your hotel, you either have to collect the amusement tax, or be certain that it is collected correctly and sent to Uncle Sam.

In an unofficial capacity, you see to it that the Government collects a lot of other taxes. You are unofficial greeter for persons who have paid an excise tax on the goods that have been hauled to them through private transportation facilities, or who have paid an excise tax or their air line, bus, or railway fares. You, yourself, pay an excise tax on every light bulb your hotel uses, every match you or your employees use, all the food-warming or refrigeration equipment you have to buy for your kitchen or coffee shop, and on a wide variety of other goods and services, such as telephones in your rooms and the telegrams you send.

I often have remarked to myself that I suspect no other group of businessmen suffered so directly as did hotel men when wartime excises were imposed. But even before that, your industry was paying excises on a wide variety of commodities.

I am particularly happy to bring you a light ray of hope to lighten some of the business clouds. Congress is going to repeal some of these wartime taxes and revise others downward. I believe the House of Representatives will act first, probably in February or March, and that the Senate will drag along as usual, but will act on excises before the session is over. Senator SCOTT LUCAS (Democrat, Illinois) the majority leader, already publicly has promised the Senate that it will have a chance to vote on excise tax revisions before the session is over.

You men of the hotel industry, I believe, have one of the most graphic stories to tell Congressmen and the public of how you have been wronged through the workings of the wartime excise taxes.

Take the story of the excise tax on goods and services sold in cabarets, or dine-and-dance places maintained at many leading hotels. The Bureau of Internal Revenue collected $6,357,000 on this tax in October 1946. That indicated pretty good business, just as the war had been over for a year.

Then, the injustices of this excise tax began to become apparent.

By October 1947 receipts of the Treasury from this source fell more than $1,000,000. To be exact, receipts fell to $5,193,000. In another year, by October 1948, receipts fell off to $4,218,000. By last October 1949 receipts from this source were down to $3,565,083 and were still trending downward.

In other words, over a 3-year period, Treasury receipts from the excise taxes on cabarets were cut virtually in two. The figures show that in the fiscal year ending June 30, 1946, Uncle Sam took in $72,076,800 from this source, and in the fiscal year ending June 30, 1948, he took in only $48,856,000.

I am proud that I was among the first to agitate for removal of this—and other wartime excise taxes. I could see that these excises would act as a brake on business and would penalize the groups affected far out of proportion to what they, or any group, deserved to be penalized in peacetime. As early as 1947, I introduced legislation to repeal the excise tax on cabarets and on a wide variety of other goods and services.

I know that I reveal no secret when I say that the Republican Eightieth Congress had it on the agenda to repeal these excises, but the leadership put it over until January, 1949, in the thought that it would be easier to accomplish thoroughgoing repeal with a Republican President in the White House. This isn't the first time the Republican leadership has been overly optimistic, but I hope it proves to be the last.

At any rate, when we came back into session a year ago, the Fair Dealers were in the saddle. JOE MARTIN, the minority leader, and I decided to try for excise tax repeal, even though there had been a change in the congressional personnel. JOE MARTIN prepared a discharge petition—and my name was the first name under his on it—to force excise revision legislation on to the floor for a vote. We had 61 signers in just a few hours, but the Democrats did not want to help us. They played politics with the issue and, in fact, got two other men to start two other petitions. If all the persons who signed all the petitions had signed the Martin petition,

the House of Representatives would have acted on excise tax reforms last year.

Be all this as it may, on this particular issue, I am proud to be able to repeat my prediction that the future looks bright to you.

If I may be allowed to become a pessimist for a little while, however, I should like to draw your attention to some of the darker aspects of life. President Truman said in his opening message to Congress that the state of the Nation is good, that we are in the midst of a great prosperity, that all of us should be happy. It is true that more money is circulating around than ever. But any man who is optimistic about our Nation today, or about the future, has to be blind to certain facts of life.

As businessmen, you know that you cannot operate your establishments on a deficit basis for year after year without inviting serious consequences. You will understand me when I say, then, that we as a people must be apprehensive about our future in this Fair Deal heaven that Truman is planning.

For 20 years, except for 2, the Federal Government has been running a deficit. The deficit in this fiscal year ending June 30 will be more than $5,000,000,000, while the deficit for next year, if the President's new budget is followed, will be $5,000,000,000 more. In other words, while you get excise-tax relief this year, the long-range outlook is either for election of a Congress that will cut Federal expenses to the bone or for you to get ready to pay more taxes. There is no escaping the consequences of an economic act. We as individuals might dodge the consequences here or there by inheriting money, finding some in a cave, or otherwise having a stroke of luck. But as a people, we all must pay for the mistakes we all make.

Inevitably, an unbalanced budget has meant higher taxes. It will mean that again, and again, and again, unless somewhere along the line our people can be awakened to the dangers of our present course.

President Truman hinted that everybody should be happy. But the cold facts of his own statisticians disprove this. One-fourth of the wage earners now take in less than $2,000 a year, due to reasons of health, age, or other causes. These are family people. They are suffering more and more because of inflationary policies. They are not customers of yours because they cannot be. You can't afford to lower your prices because of policies of the Federal Government. The vicious circle is upon us. Poor people can't buy at high prices. The Government encourages high prices by high taxes. Yet, the Government pretends to be wanting to help the poor. By its methods of helping the poor, it not only hurts the poor, but it also hurts the more healthy, productive citizens. It taxes them to death.

I should like to be able to tell you that prices would come down. But I cannot in all honesty say it to anyone, rich, poor, or in-between. For years, I have been warning the people of my district to prepare for higher costs, higher prices, more of the vicious kind of inflation that men and women are bewildered when they face. Now, that kind of inflation is on you. It will get worse. It is due, of course, to the crazy-quilt financial pattern the New Deal and the Fair Deal have been following. We have been seeing our money spent by the billions in Europe, under the guise of stopping communism, while watching the Communists gobble up huge areas in Asia. Every acre of ground lost to freedom is another acre we some day may have to regain at the bloodiest kind of cost, and I can't help but believe there has been treachery in high places.

Somehow or other, you and I are going to have to get to our friends, neighbors and customers with a message of how we can restore some financial soundness to our Government operations at home and abroad. As you undoubtedly realize, I am greatly interested in seeing the Hoover Commission reforms put into effect. But I have to admit that if every one of these reforms were passed, as long as we have our present bungling administrators in the Federal Government, the money would be wasted efficiently instead of inefficiently. Trying to stop Government waste after the Fair Dealers have caused it, by voting huge appropriations in Congress, is a lot like trying to stop the Mississippi River from flooding by building a dam at New Orleans.

If we want to stop a flood on the Mississippi River, we have to stop the flow of water way up in Minnesota, Illinois, and all around by building up heavily forested areas and the dams by the hundreds, such as the Corps of Engineers has done through the years. Then, and only then, can the flood be minimized. Likewise, if we are going to stop huge Federal waste, we are going to have to get the people back in the cities and towns to quit demanding, and to quit voting for, projects that will push the total of Federal expenses far above the amount we can reasonably collect in taxes.

The job of informing and helping to educate the people in simple economics is a good job for every intelligent citizen, and most particularly for hotel men. I commend it to you.

We have tremendous problems at home and in the field of foreign affairs. Our foreign policy has been bad, terribly and tragically bad, in the past several years. Its fruits are becoming apparent to everyone. Five years ago, Stalin ruled 190,000,000 persons. Today, he rules more than 680,000,000—at least one-third of all the people on earth. If he ever gets them organized and can equip them, the disunited other two-thirds of the earth will be easy prey to him. We must begin to build now ever firmer frontiers against onrushing communism. We have waited too long and it is almost too late.

If we can get just a few of the people to see what we must do to save this country, there is still a great chance that we can move forward into a better life. Instead of more poverty through less production, we could have more prosperity through more production. Instead of creating new frictions through more taxes and higher and higher Government expenses, we could build firmly and efficiently.

I am not by nature a pessimist. I have been an optimist most of my life and hope to be again. But, as I say, the only way a man can be real optimistic today is by blinding his eyes to the cold facts of life. There is another fact that gives us hope, however; it is the fact of our still-continuing freedom of speech. As long as we can inform the people, they can awaken and we can go forward again. As long as we keep open and unhampered the communications to our friends throughout the world, outside the iron curtain, we can count on spiritual, moral, and material support. As long as man can think freely and talk freely, we can have visions of a better tomorrow.

There are many who charge us Republicans with looking back. I do not fit into that pattern. I am looking ahead. And if our people will but just see a few of the economic and political facts of life, we all can have a bigger and better and finer America, in every respect. I know that you join with me in the hope and in the prayer that that America will come to pass Let us, as individuals, do our part to see that it does come to pass.

Nothing Funny About Taxes

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I include therein a radio address delivered by me over WJR, the Good Will Station of Detroit, Mich., on Friday, March 3, 1950, on the subject of taxes:

There is nothing funny about taxes. The power to tax is the power to destroy; all of us know that.

As one of your Representatives in Congress, I have voted consistently against Federal tax increases, and against Government projects when in my opinion they added needlessly to the public debt. Even when public money was requested in behalf of my own district, I made sure that the expenditure was imperative and would return benefits in excess of the amount expended.

With this policy, I feel free to criticize and to offer suggestions concerning the tax policies pursued by the Truman administration and supported by the Democratic majority in Congress.

Indeed, those policies remind me of the story published a few days ago in a national magazine about the taxpayer who admitted to his Congressman that nothing is certain except death and taxes, but who nevertheless pointed out that death does not get worse every time Congress meets. He might have added that any further increase in taxes would make departure from this life somewhat more attractive. But, as I remarked before, there is nothing really humorous about taxes.

Because of extensive publicity by press and radio, all of us are aware that President Truman has asked Congress for about $42,500,000,000 to defray the cost of Federal Government during the fiscal year beginning next July 1. For the same reason, all of us know that the United States Treasury estimates Federal tax income—the only income the Government has—at about $37,300,000,000 for the same period. Thus deficit spending by the Federal Government next year cannot be less than $5,200,000,000. The $5,200,000,000 will be added to the present public debt of $258,400,000,000.

But this is not all. There is a whole lot more, which is being deliberately concealed from the taxpayers and the public at large. This consists of about $9,200,000,000, carried in the 1951 budget as contract authorizations. By the phrase—contract authorizations—is meant that various Government agencies, notably the Bureau of Reclamation and the Army Engineer Corps, would be authorized to make contracts, calling for total outlay of $9,200,000,000, for irrigation and electric power projects, flood control, and rivers and harbors improvements, in advance of appropriation by Congress.

If these contract authorizations are approved by Congress, then the total of Federal Government expenditures for the 1951 fiscal year will be $51,700,000,000, instead of $42,500,000,000. True, the money would not be paid out until some later date, when Congress would have to appropriate whatever sums had been obligated, but the money would be spent next year—spent in exactly the same way anyone spends when he signs a purchase contract, and installment notes, for a new automobile or anything else.

From what I have said, it becomes apparent that President Truman wants to spend, not $5,200,000,000 more than the Government will take in next year, but actually $14,400,000,000 more. Thus instead of adding $5,200,000,000 to the public debt, he would add $14,400,000,000. This would make the debt $272,800,000,000, or $3,400,000,000 more than ever before, even at the end of the most costly war ever fought in the history of the world.

President Truman has said that the 1951 budget was pared to the bone before it was sent to Congress. If this be so, then why does the budget provide for adding 24,583 new civilian employees in 37 Government departments and agencies which are not connected with national defense? Government civilian employment already is close to the wartime peak. Administration talk of efforts toward Government economy is nonsense, and a fraud upon our people.

The President and his supporters in Congress know that the Hoover Commission called for a drastic reduction in Government personnel. They know that by putting into effect even a part of the Hoover recommendations next year's Federal deficit could be wiped out. And by carrying out most of them a tax reduction equal to that made by the Republican Eightieth Congress would be made possible. But instead, the President sends to Congress a budget which would add the equivalent of an army corps to the Government's civilian payroll. At the same time, the President demands higher taxes to pay for what he calls unavoidable Government expense.

Recently the President cast the blame for this year's deficit of more than $5,000,000,000, and the prospective deficit of anywhere from $5,200,000,000 to $14,400,000,000, on the Republicans for reducing income taxes by something over $4,000,000,000 annually in 1947. Incidentally, this reduction took more than seven million low-income taxpayers off the tax rolls entirely.

But the President forgot, or ignored, the fact that the 1947 tax reduction was made at a time when a 1948 surplus of $8,500,000,000 had become a certainty. He conveniently forgot, too, that in 1947 he advanced his own tax reduction program. It would have reduced each individual's tax bill by $40, and would have made up the $3,200,000,000 revenue loss by increasing income taxes on corporations. This program would not have taken low income people off the tax rolls. Furthermore, those who saved $40 in direct tax would have paid out the same money in higher prices for everything. Higher prices because corporations, like individuals, have to pass tax costs on to the consumer if they hope to stay in business.

The most important thing forgotten, or ignored, by President Truman was that the amount of tax income increased after the income tax was reduced by the Republicans in 1947, just as it did after the $6,000,000,000 cut in excess-profits taxes on corporations was made effective in 1945. Federal tax income increased in each instance, of course, because tax relief stimulated business. Both corporations and individuals had larger incomes on which to pay taxes.

Public opinion now demands elimination, or at least drastic reduction, of wartime excise taxes on such things as freight charges, passenger fares, telegrams and telephone messages, and theater tickets—to say nothing of cosmetics, women's handbags, luggage, baby powder, and many other things of daily necessity. As a result, the administration, because of its wild and reckless spending, is engaged in a frantic search for other tax income to make up for the loss it fears with respect to this source.

Anyone would concede that the elimination of hidden taxes on these things would stimulate business sufficiently that Government tax income from other sources would more than offset the loss. Excise taxes of all kinds make up 18 cents of every tax dollar collected by the Federal Government.

Excise taxes are not the only hidden taxes with which the American people are burdened. The hidden tax burden has become heavier than that of direct income taxes. For example, the wife's new Easter bonnet will have 150 taxes on it. You paid 206 hidden taxes on your new automobile. The egg you ate for breakfast had 100 invisible taxes in its cost to you. You paid 11½ cents in hidden taxes on the package of cigarettes you bought today.

When your wife bought a 21-cent quart of milk yesterday at the grocery store 13 cents was for milk, 8 cents for taxes; she paid 25 cents in taxes on a 75-cent pound of meat. When you last bought a ton of coal—if you could get it—$5 of the price was for taxes. If you bought a Ford automobile this year, $700 of the price was for taxes. Everything you buy is loaded with hidden taxes.

In view of this situation, the President once more insists—publicly, at least—that excise tax cuts must be followed by corporate tax increases. But according to some sources within the Ways and Means Committee—the committee which writes the tax laws—the White House last week let it be understood that possibly present taxes on corporate enterprise should be reduced slightly instead of increased. This because many large industrial companies have laid aside expansion plans, and even have delayed replacements, owing to excessive tax costs and lessening demand for their products and falling prices in the buyers' market. The result, of course, is increasing unemployment.

All of these things lead to but one conclusion. Government spending at every level, except that of national defense, must be cut drastically—and now. The Hoover economy measures generally must be carried out—and now, not later. The reckless Fair Deal administration must be curbed—their worldwide WPA projects for nations which use our ECA funds and goods for political purposes instead of rehabilitating their economies, must end.

The people must rise against the Fair Deal further loading Government pay rolls for political purposes. The Communist traitors and their Socialist allies in our Government must be cleaned out and removed from the pay rolls. The Fair Deal must be prevented from establishing its welfare state program and spending this country into bankruptcy, thereby destroying our precious liberties.

With the help of public opinion, the Congress of the United States can do these things. The Congress now has an opportunity to adopt a 1951 budget of only $36,000,000,000; an alternative to the President's budget of more than $42,500,000,000. Senator HARRY FLOOD BYRD, of Virginia, its originator, points out that it would provide for none of the Fair Deal socialistic proposals, but would provide for every essential Government service and for adequate national defense. He ought to know, because he undoubtedly is the Nation's outstanding expert on Government finance. By adopting this budget, or one closely resembling it, the Congress can, and should, remove the pressure for higher and ever higher taxes; and indeed, make possible some substantial tax relief for the people.

As an American citizen, as a Member of Congress, as a Republican, I am for the lowest possible budget. I shall do all in my power to help bring about its adoption, as a step toward the ultimate preservation of the Republic.

Segregation in Schools

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1950

Mrs. DOUGLAS. Mr. Speaker, I would like to call the attention of the Members of the House to an article in the New York Herald Tribune of February 19, 1950, by Mr. Walter White, lauding the Justice Department for the work it is doing in defense of civil rights. I, too, wish to add my word of commendation.

The article follows:

SEGREGATION OF SCHOOLS—LAUDS JUSTICE DEPARTMENT FOR AIDING SOUTHERN NEGROES' SUIT

(By Walter White)

If the amicus curiae brief which has just been filed by the Justice Department is heeded by the Supreme Court the good which for more than half a century has been "interred with the bones" of the late Justice Harlan will come to life again.

Mr. Harlan, of Kentucky, was the lone dissenter against seven colleagues when he said, "We boast of the freedom enjoyed by our people above all other peoples. But it is difficult to reconcile that boast with a state of the law which, practically, puts the brand of servitude and degradation upon a large class of our fellow citizens, our equals before the law. The thin disguise of 'equal' accommodations * * * will not mislead anyone, nor atone for the wrong this day done."

The Solicitor General of the United States, Philip B. Perlman, and the Special Assistant to the Attorney General, Philip Elman, are asking the Supreme Court to put into practice the incontrovertible logic of Justice Harlan. The cases in which they intervene as friends of the Court on behalf of the Government are those of G. W. McLaurin, a graduate student preparing for a doctor's degree in education at the University of Oklahoma, and Heman Marion Sweatt, who wants to study law in Texas.

"McLaurin and Sweatt are Negroes," the brief states. "For that reason alone they have been subjected under the laws of the States in which they live to various educational restrictions not imposed on white students. McLaurin * * * is required to sit at a special desk set aside for him in the doorway of the classroom; he may use the library, but only if he takes his books to a designated desk on the mezzanine floor; he may eat in the school cafeteria, where he is served the same food as other students, but only at a different time and at a table specially set apart for his use."

As for Sweatt, of Texas, he has been barred altogether from the law school and offered instruction at a "separate" school which Texas hastily tried to set up for Negroes to escape the wrath of the courts. The United States Government has gone unequivocally on record in the present brief as saying and believing that "the fact of racial segregation is itself a manifestation of inequality and discrimination," which, if allowed to continue, will mean that "the ideals embodied in our Bill of Rights would be ridiculed as empty words, devoid of any real substance."

Those who have a vested interest for political, economic, or racial reasons in perpetuating educational segregation are already protesting lustily the action of the Justice Department in joining the fight for justice.

But the majority of students and faculty members in southern schools have demonstrated over and over again that they want the farce ended.

Heavily burdened taxpayers are waking up to the fact that it is as expesive as it is absurd to pay for two law schools, two medical schools, two dental schools, two engineering schools, two forestry schools, two graduate schools of education and two of every other kind of professional and graduate school. All this is obeisance to white supremacy. This rapidly growing awakening to the absurdity of such duplication was trenchantly expressed by the president of one of the South's largest State universities when he said recently, "We can't build a cyclotron for a single student."

Among the road blocks to the success of the efforts to preserve the status quo in the South are the swiftly expanding industrialization with new moneys for development and new and younger personnel, a growing resistance to the financing of hate movements by northern industrialists (who formerly made suckers of southerners by their divide-and-rule practices), and the phenomenal growth of the Negro and labor votes.

Consider Florida: In 1948 Governor Warren won by the narrow margin of 23,000 votes in an election in which a half million Floridans voted. In 1944 Senator CLAUDE PEPPER squeaked through by a mere 9,700 ballots. Today there are slightly more than 100,000 registered Negro voters in Florida, and other Negroes are registering at so much more active a pace than others it is conservatively estimated that no less than 125,000 Negroes will vote in the May 2 primary. To a greater or lesser degree the same trend is seen in every southern State, including Mississippi and South Carolina.

Beaten back on every front—judicial, political, economical and moral—white supremacy advocates still assert loudly and belligerently that the South will never tolerate interference with the southern pattern of segregation. Only 2 years ago they shouted the same moth-eaten threats when the Supreme Court was considering legal cases involving the so-called white Democratic primary. Today Negroes—and a considerably larger percentage of younger and more intelligent whites—are voting in all but the Klan-ridden rural areas of the South. Everyone except the most bigoted and timorous southerners believes that the same extension of true democracy will come about in graduate and professional tax-supported schools in the South.

Time marches on—even in Dixie.

Resolution of Illinois Fruit Growers Exchange

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks, I should like to insert in part a resolution adopted at the annual meeting of the Illinois Fruit Growers Exchange at Carbondale, Ill., February 28, 1950. And I want to commend the splendid citizens of my State for their clear thinking in expressing their opposition to the action of the Department of Justice in the case of the Atlantic and Pacific Tea Co., their expressed opposition to the Brannan plan, and their recommendation that wartime excise taxes be eliminated.

The resolution follows:

1. *Be it resolved,* That the Illinois Fruit Growers Exchange in this annual meeting, express our opposition to the action of the Department of Justice in the case of the Atlantic and Pacific Tea Co. and its similar actions pending or already started against other large firms, when based on the same principles as that taken against the Atlantic and Pacific Tea Co.

2. *Be it resolved,* That the Illinois Fruit Growers Exchange express its opposition to the Brannan plan and that the proper authorities be so informed.

3. *Be it resolved,* That the Illinois Fruit Growers Exchange support the Illinois fruit promotional efforts of the Illinois Fruit Council.

Connecticut State Housing

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Waterbury (Conn.) American, of March 2, 1950:

STATE HOUSING PLAN NO HELP TO THIS EX-GI

To the EDITOR OF THE AMERICAN:

In December 1949, I heard about the Connecticut State housing. It all sounded wonderful. It was for us moderate income earners. I earn $2,000 yearly on a 4-day week, and I've got a 4-month-old son. Interest would only be at 1½ percent. It just sounded too good to be true. Seeing that we live in a small three-room rent, and pay $45 monthly, this own-your-own-home plan initiated by our Governor, was just the thing.

Incidentally us GI's were required to put down only a very small down payment. So I immediately applied for this and, in about 2 months I received my certificate of eligibility. This meant I could either buy or build a home at a 1½-percent mortgage.

Along with this certificate I was sent a book. In this book it showed that on a $7,500 home $193 was required for a down payment; on an $8,000 home, a fraction higher, etc.

It also showed that taxes on any of these homes were $8 per month. I still don't know how the State arrived at this figure, but I have been told that this is an average of all cities and towns in Connecticut. Anyway, suffice it to say that this figure is at least 50 percent wrong; $16 per month would be closer, here in Waterbury.

So, armed with all this information, I went to the State's local correspondent. I immediately was told that there were no $7,500 $8,000, or $8,500 homes. Prices started at $9,000 and up. Well, making only $2,000 yearly, one can readily see that these homes were out of my means.

I asked them, what about the $7,500 homes? Their reply was that the State had no idea about what it cost to build a house.

Well, since I couldn't buy a reasonable home, I thought I would build. After a week of getting estimates, I submit the figures below for your approval:

Lumber	$2,400
Carpenter	1,200
Mason	1,775
Plumbing and heating	1,800
Electrician	300
Painter	500
Lot	800
Building permit, surveying, etc	100
Total	$8,875

Well, I can buy for $9,000 or build for $8,875. The only thing that is stopping me is that I can't afford it.

Why?

Because I am a moderate income earner. Well, now, what is a moderate income earner?

This is answered by the State housing authority itself.

They state that to qualify for this program, you have to earn less than $2,500 yearly, plus $600 for each dependent, and you must have less than $3,000 cash.

Well, since I received a certificate of eligibility, I guess I qualified.

Well, getting back to my owning a home, I found myself stymied. I read in the papers that a representative of the State Housing Authority was coming to Waterbury on Monday, February 27. So I went there, with the intention of finding out my next move. Incidentally, I wrote a letter to Governor Bowles and told him how I couldn't buy or build a home under his program. I have yet to receive an answer.

As I was saying above, I went to this meeting of the representative of the State housing. I told him of my problem. As for $7,500 homes, he said, you take that up with the local State correspondents. The $8 taxes per month was a round figure.

When I said that taxes here were twice that much, he seemed to be preoccupied with someone else.

Well, about this time I waved my certificate of eligibility at him and asked him what I should do with it. He then went on to say that I shouldn't act like this when our good Governor is trying to do something good for us.

I then reminded him that on my $2,000 yearly earnings, I was unable to take advantage of our good Governor's generosity.

To this our State representative added, "Why don't you get a part-time job? He went on to say how he did at one time. Apparently our friend is optimistic. Otherwise he would realize how conditions are in Waterbury.

But that is neither here nor there.

I have a certificate of eligibility.

What shall I do with it?

It can't buy me a house. Did our good Governor say this program was for moderate-income earners?

S. C. G.

WATERBURY, *February 28, 1950.*

The Next Coal Crisis

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. ROGERS of Florida. Mr. Speaker, one of the greatest problems facing this Congress and this country is the recurrence of the coal strikes periodically, as and when the contract between the

operators and the United Mine Workers expires. The Washington Post, in its Sunday issue of March 5, 1950, has written an excellent editorial which should be read by all Members of Congress. It appears to me that this is an appropriate time for the Congress to begin to work upon and enact legislation to prevent recurring strikes in the coal industry and to save the public from the hardship and suffering that generally results when coal cannot be produced in sufficient quantity for the welfare, health, and safety of the people of this Nation.

John L. Lewis should not be permitted to profit from collective bargaining and at the same time repudiate and shirk union responsibility in getting the union members back to work, as has just recently been done. Union responsibility should match bargaining power. I include herewith the editorial entitled "The Next Coal Crisis":

THE NEXT COAL CRISIS

The apparent agreement between the coal operators and the United Mine Workers has relieved Congress of the necessity of passing an emergency seizure bill, as requested by President Truman, and there is a strong tendency to sit back with a sigh of relief and say, "Thank goodness it is over." But that is precisely what the country has been doing for many years, with the result of encouraging new crises. If we have any capacity to learn from experience, now is the time to press for long-range legislation. For the strategy that John L. Lewis has employed so successfully is certain to be used again, and the only machinery the Government had for dealing with such crises has been left a shambles. To slump into complacency because the immediate emergency has been eased would be to invite a worse ordeal when the new contract expires.

In addition to asking for seizure powers, the President recommended that Congress set up a commission to make a thorough study of the coal industry in terms of economic, social and national security objectives. This is a step of the greatest importance. We have often pointed out that interruptions in coal output will continue until the industry finds means of stabilizing production, eliminating high-cost mines and providing steady work at wages that will not drive coal out of competition with other fuels. The industry has proved utterly incapable of diagnosing and curing its own ills. Since a steady flow of coal is vital to both economic well-being and national security, the Government is under the strongest sort of obligation to try to bring order out of the present chaos.

If the mines are to remain in private operation, moreover, some means will have to be found of averting these periodic holdups of coal consumers. Thoughtful observers have always recognized that the national emergency provisions of the Taft-Hartley Act were a weak reed on which to rely. Senator Taft himself pushed through the Senate last year a bill to permit seizure of struck plants or mines for 60 days as well as to restrain strikes by court order while efforts to settle disputes threatening the national health and safety are being made. Judge Keech's ruling that the UMW was not guilty of contempt has now made reexamination of this issue imperative.

Not much fault has been found with the court's ruling because of the weakness of the case the Department of Justice presented. Apparently the department took it for granted, because the United Mine Workers had twice before been punished for similar offenses, that the continuance of the strike itself would be sufficient to establish contempt. There is much sympathy with Judge Keech's rejection of this easy assumption. Yet if a union is able to escape all responsibility for a strike that it initiates and then fails to stop when the point of a national disaster is reached, the result will be a mockery of all law and order.

Either a union is responsible for the concerted action of its members or it is not. Logic would have demanded that if the miners were in rebellion against Mr. Lewis, as his case presented to the court indicated, he should not have represented the union in collective bargaining efforts. Instead, it is unmistakably plain that he continued to wield the power of the UMW in all matters except calling off the strike. Incidentally, he candidly recognized the strike as such in his talks with newspapermen and assumed that it would continue during "the time that we shall require to adjust the current dispute fairly." In other words, the union leaders took full advantage of the strike while washing their hands of responsibility for its continuance. No union official resigned because of repudiation of his leadership. No defiant local union was disciplined. Regardless of what the requirements for proving contempt may be, one cannot avoid the conclusion that the UMW won a notable victory by hoodwinking tactics.

Congress will have to meet this problem. If unions are not responsible enough to halt a threatened disaster which they have set in motion, Congress may have to forbid industry-wide bargaining. Mr. Lewis cannot eat his cake and have it too. It is possible, of course, that this fatal weakness in the law would not have developed if the Department of Justice had shaken the lead out of its shoes and given the courts an accurate picture of the goon squads and other union pressures that prevented the miners from going back to work. But one thing is certain: If union responsibility cannot be expanded to match bargaining power, bargaining power will have to be shrunk to match union responsibility.

Time To Wake Up

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. STEFAN. Mr. Speaker, Fred R. Zimmer edits and publishes at Hartington, Nebr., the widely read Cedar County News. Hartington is a progressive county-seat town. Cedar County, one of 24 counties of the Third Congressional District of Nebraska, is a first-rate agricultural county by any comparison. The people of Cedar County are industrious, thrifty, patriotic Americans that love their country and take an alert interest in affairs of government. In this environment and with this inspiration, Mr. Zimmer has written an editorial, Time To Wake Up, that, because of its timeliness and perception, is included in these remarks:

TIME TO WAKE UP

It is time for all Americans to wake up. It is time for all of us to do some thinking and working for ourselves. This applies to every American citizen, rich and poor, Democrat and Republican.

Do you know where the Fair Deal is taking us? Do you know what the welfare state will lead to? If you do not already know, it is time to wake up and look at the sign posts along this road down which we seem to be traveling so easily.

It is not entirely the fault of the Government in Washington. They are giving us what the vocal majority seems to be asking for. Namely, something for nothing, security without work, payments, aid, and relief.

What is all of this Government aid costing us as individuals? First of all we are paying in taxes the money which is returned to us in the form of Government aid and subsidy. Secondly, for our cradle-to-the-grave security we are giving up increasing amounts of our freedom and independence, which in years gone by the American people have prized so highly.

People have been prone to take the easy road. They have asked the Government for this and that. The Government has granted the requests, but in return they have taken more and more tax dollars, and infringed more and more upon private enterprise. The higher taxes are placing a greater burden upon individual business each year. Each year private business is faced with more and more competition from Government. Government business pays no taxes, nor does it have to operate at a profit, because the taxpayer makes up the losses. Private business cannot continue to function for long under such a program.

The ultimate result is socialism. The Government will operate everything. They will set our standard of living, and they will harness us with controls, until like the horse, we will have to obey the commands of the one holding the reins. That is not the way Americans like to live, but that is what they are heading for if they do not wake up soon and put an end to the present trend.

The Federal Government has grown more and more powerful. Today it is squeezing out the State and local governments as well as the individual. Our National Government takes such a big share of the individual income that States and local governments can no longer collect the taxes they need to carry on their functions. So, they are forced to trade some of their rights to the Federal Government for grants-in-aid to help build roads, airports, and hospitals and to help care for the poor and needy.

This puts the local and State government under the thumb of the Federal Government, just like the individual. What is even more harmful is the waste of money in the Federal-aid program. The State could get the same things done with less expense. When the Federal Government handles your tax money before they hand it back in aid they deduct the cost of handling. Handling charges for bureaucratic control come high. The red tape takes more than time; it takes money.

We must call a halt. We must stop this idea that anything we can get from the Federal Government is free. We must get away from these demands for Government aid, assistance, and security. We must get away from Government in business. We must put Government back in the business of government, and allow the people to carry on under the system of free enterprise that made America great.

It is not going to be easy getting back where we were in the twenties when Government was just "government of the people, by the people, and for the people," but if we want to continue the American way of life we must take the road back. We must break the give-me habit. We must put our shoulder to the wheel in place of holding our hand out with our eyes on Washington.

Brotherhood Week

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution from the Union Leader, Buffalo, N. Y.:

COUNCIL RESOLUTION ON COURIER EDITORIAL

Whereas the Greater Buffalo Industrial Union Council in following the principles and policies laid down by our national CIO constitution, support, completely the program of Brotherhood Week, which is 1 week set aside for all citizens of the United States to practice the holy and laudable phrase, "Love thy neighbor as thyself." We call upon our members throughout the Niagara Frontier to advocate and carry out this principle during this important week, and we also call upon all the citizens of our community to censor those who either by tongue or pen, engage in or advocate hate because of a person's race, creed, color, nationality, or station in life; and

Whereas the Buffalo Courier-Express in its leading editorial in this morning's paper, under the heading of "It's his own fault," launches a vicious and biased attack against the working people of this community and Nation and the coal miners in particular, by proposing their own program called, "Hang John Lewis Week," when their editorials should be carrying and advocating the brotherhood of man under the Fatherhood of God; and

Whereas this newspaper, operating under the sanctity of freedom of the press, allows itself through either ignorance or otherwise, on the part of its owner and editors, or through editorials, to sink into a quagmire which brands it a provocateur of violence and a purveyor and peddler of hate by its advocacy of a slogan which calls jestingly for the hanging of an individual: Now, therefore, be it

Resolved, That we, the members of the CIO who have been attacked in this editorial, carrying out the principles of Brotherhood Week, simply state "Father, forgive them, for they know not what they do," and we hereby call upon all of our members and the citizens of this community to set aside each day for the balance of this week, a time in the morning and in the evening, to pray to our Father in Heaven, asking him forgiveness for the sins which these owners and editors of this paper have committed, and we pray our Lord also, that He may lift up the minds, the hearts, and the hands of the owners and operators of this paper, out of the quagmire of hate and intolerance in which they find themselves, and we, the members of the CIO, ask the Courier-Express to impose upon itself, a penance for this sinful act which has been committed in this editorial, and that they print for the remainder of the week as their leading editorials, the Beatitudes from the Sermon on the Mount, and further, that they apprise the reading public of this community with the fact that the mine operators and managers of industry are not free from sin; and be it further

Resolved, That copies of this be sent to the Courier-Express, enclosing a copy of the Beatitudes, in the hope that this newspaper will never again desecrate the sanctity and holiness of such a laudable program as the brotherhood of man under the Fatherhood of God, by attacks upon the workers of the Nation.

We Jaywalk as the Juggernaut of Doom Bears Down

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Edward J. Meeman, editor of the Memphis Press-Scimitar:

WE JAYWALK AS THE JUGGERNAUT OF DOOM BEARS DOWN

(By Edward J. Meeman)

A man walks leisurely across the street in the middle of the block. He looks neither to the right nor the left.

He walks as men walked before the mighty locomotives we call automobiles were invented.

He does not notice, seems not to care, that one of these engines of destruction is bearing down upon him.

The automobile swerves—and the man escapes being crushed.

That is modern man.

He goes his way as if the destruction of atomic war were not bearing down upon him.

MAYBE IT WILL PASS—MAYBE

Yes, this destruction may be deflected. Stalin may pass, and his empire may be broken up by strife among those who would succeed him. Stalin himself may stop short of unloosing mutual destruction of east and west.

Maybe, only maybe.

We dare not count on getting a lucky break.

We need to do things we would never have dared to do if this awful danger did not confront us.

We have done things somewhat daring. We have made considerable military preparations with the idea of deterring the Red dictator from attacking. We have made a mutual defense pact among the Atlantic nations.

So far so good.

But not far enough. Not good enough.

WHAT NEEDS TO BE DONE

We need to strengthen the United Nations to unite the nonaggressive nations against the aggressor. Within the United Nations we need to federate the free democracies in a permanent great union, in order to get the fullest benefit of their potential power.

Some say it is impossible, that there are too many diverse interests, diverse views among the free nations.

Impossible? Look what a handful of men have done. They have welded together almost half the world, many nations of diverse languages and ancient hates, into an empire so unified that we know it is a terrible menace to us. They have done it by compulsion and propaganda.

Shall we say that the citizens of the free world cannot do as much, cannot do better, by voluntary action and by reason?

WHAT REASON TELLS US

Reason tells us that we face destruction unless chance intervenes. Will the same reason let us dare trust to chance?

To survive, we must compose the differences in the free world. What we must do, we can.

We cannot afford the easy ways of earlier, carefree days.

We cannot afford the luxury of bitter recrimination and internecine strife between labor and management, between Democrat and Republican, between white and colored, between Socialist and free enterpriser.

DARE NOT STOP TO TAUNT

We free enterprisers dare not taunt our Socialist friends, who now comprise much of our free world, with the reckless statement that "socialism is the same as communism." It isn't true. If it is true, as we liberals believe, that there is danger that socialism may eventually lead to the police state and communism, it is a danger that is remote. It will not threaten us beyond repair before the imminent danger of the physical destruction of the free world either passes by rare good luck or is averted by our intelligent and purposeful action. After the great immediate danger is over, freemen can settle—with vigorous contention if they please—the question whether freedom can stand socialism, and, if so, how much.

You can move away from socialism in a democracy, as the recent elections in New Zealand and Australia have shown.

A people once gripped by Communist tyranny can't move away from it. A civilization destroyed by atomic war cannot be revived.

IF AND WHEN IT FALLS

A man who sees a hydrogen bomb descending from the skies above his city will not, in that last moment, think that he could not have done more.

I may be that man. You may be that man.

We can summon the pure reason that lies under the layers of prejudice, self-interest, and sloth that cover our minds. We can summon the will to do what reason says must be done to save ourselves.

We do not have to jaywalk to our doom.

Alaska Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. BARTLETT. Mr. Speaker, the argument was made during the course of the Alaska statehood debate last week by some of those opposed to the measure that Alaska's population is too small to entitle it to statehood. No better reply to that argument could have been made than was given by the New York Times editorially yesterday:

STATEHOOD AND POPULATION

In attacking the bill providing for Alaska's statehood, which the House of Representatives wisely passed, some Representatives of more populous States objected to the fact that Alaska, with a population of about 100,000, would have the same Senatorial representation as New York or California, with populations exceeding 10,000,000. This argument is unsound and the House was right in disregarding it.

In our Federal form of government the representation in our bicameral Congress was designed precisely to meet the question of disparity of population in the federating units. In the lower House representation is on a population basis. In the upper House it is on a unit basis. Several States have been admitted to the Union when they had populations smaller than that of Alaska and when the disparity between their populations and other States was as great or greater.

Raising Second-Class Mail Will Reduce Volume and Revenue and Will Increase the Deficit of the Post Office Department

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. HAGEN. Mr. Speaker, during the debate on the postal increase bill, H. R. 2945, I tried to point out to the membership that the proposed increases on second-class mail would likely result in decreased revenues and increased deficits instead of increased revenues and decreased deficits as claimed by the proponents of the bill and the administration.

Just yesterday, an editorial was called to my attention which bears out my contentions and supports my views. The editorial is entitled "Revenue That Isn't There." It was published in the Minneapolis Star for February 20.

I have asked permission to include this editorial in my remarks for the benefit of the Members of the House.

The editorial follows:

REVENUE THAT ISN'T THERE

Fellow called us on the phone Saturday afternoon. "I've been thinking about that House of Representatives bill to raise postal rates," he said. So have we, we said, referring him to an editorial, Costly postal service, February 11.

"I read that," he said, "but you didn't point out all the inconsistencies in the legislation." For instance, we said.

"Well, take second-class mail—magazines, newspapers, and such." You could tell by the way he talked he had it all figured out. "The Congressmen sponsoring the House bill want to raise the rate on second-class mail so the post office will take in $15,000,000 more for handling it. Those Congressmen claim that's going to mean $15,000,000 more revenue for the Federal Government.

"They're dead wrong. It's going to work this way:

"Say a magazine or a newspaper company is supposed to pay $60,000 more for mailing its publication under the proposed new rates. The company's just going to add that $60,000 to its operating expenses and deduct that much more from the profits it has to pay taxes on. So the Government's going to get less in corporation taxes from that company and every other outfit in the publishing business that is hit by the new mail rate.

"Now there's no telling exactly how much this will amount to in the publishing business, but it's plain to see the Government's going to net a good deal less than the $15,000,000 some Congressmen think they're going to get by raising the mail rates.

"On the other hand," our caller went on, "if the Post Office Department saves $140,000,000 by cutting expenses—as the Hoover Commission showed it could do—that's a clear gain. It's like money from home."

And you know, he's dead right in everything he said.

The Hoover Proposals—Pro and Con

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Disabled American Veterans' National Commander David M. Brown, as printed in the Vet-Times, February 25, 1950:

THE HOOVER PROPOSALS—PRO AND CON

National directors of the Disabled American Veterans have recently completed an intensive study of Hoover Commission proposals for Government reorganization which would affect veterans. Results of this study conclusively prove that if such proposals were enacted into law the over-all administrative cost of the veterans' program would be greater while, at the same time, the standard of service would be lowered.

We of the DAV certainly realize that a greater number of shortcomings exist in the present program under the Veterans' Administration. However, administrative economies can be made effectively within the framework of the VA itself. When a house leaks the sensible thing to do is repair the roof, not to tear the house down.

Our directors divided the study into five parts, covering each veteran service which would be affected by the Hoover Commission proposals. These include medical activities, hospital construction, veteran preference in civil service, Government insurance, and GI loans.

The main points which are clarified by the study are listed below under the various veteran services to be affected.

REGARDING MEDICAL ACTIVITIES

1. The proposed consolidation of Government hospitals would impede the efficient handling of veterans' claims for compensation, pension, insurance, and other benefits where a physical examination is necessary. Major benefit programs are so dependent and integrated with the medical, hospital, and domiciliary care programs as to preclude their separation from the Veterans' Administration without disastrous effects on the efficient administration of veterans' benefits.

2. Hoover Commission proposals state that the present VA hospital building program serves no purpose except to make beds available for non-service-connected cases. Thousands in this category are actually service-connected but have failed to file a claim or their claim has not yet been adjudicated. Many have service-connected disabilities but are suffering from conditions where service connection is denied. Failure to treat these cases often results in the veteran becoming totally disabled and eligible for a non-service-connected pension which is far more costly than prompt treatment.

3. Approximately 55 percent of VA hospitalized patients are suffering from mental disorders and 13 percent have tuberculosis. They are indigent or will become so in the future and must be cared for by the taxpayer, whether service-connected or not.

4. Hoover Commission proposals are based on two major assumptions: (1) an armed forces draft of doctors would be necessary to replace young physicians leaving service and (2) an alarming lack of medical and surgical specialists in the armed forces. The draft of doctors has not materialized as predicted. Rather than suffering from a lack of specialists, the armed forces are confronted with the necessity of adjusting their training program because of a developing excess of specialists in most fields.

5. Hoover Commission proposals state that the Commission's recommended medical program will reduce the drain of doctors away from private practices. The present VA hospital program has brought about the greatest economy in medical manpower of any Government branch furnishing hospitalization, according to Dr. Paul R. Hawley, former chief medical director of the Veterans' Administration and member of the Hoover Commission Task Force.

6. Past bitter experiences, when veteran hospitalization was under the Public Health Service and claim records were handled by the Bureau of War Risk Insurance, clearly prove that the same inefficiency would result if the VA handled the files and the proposed medical administration handled examinations and hospitalization.

7. It is an elementary principle of the theory of administration that every change involves additional costs, because the prevailing pattern must be disrupted.

8. Last, but far from least, the proposed merger represents a vigorous stride in the direction of socialized medicine. Full utilization of all Government hospital facilities can easily be accomplished by closer cooperation and a system of liaison between agencies concerned, rather than by the drastic change recommended by the Hoover Commission.

REGARDING HOSPITAL CONSTRUCTION

1. Hoover Commission proposals recommend the transfer of hospital construction activities from the VA to the Department of the Interior. By such transfer of authority there would not be the close working relationship required between those who construct and those who design to meet the necessary medical requirements.

2. Over a period of 20 years the VA has developed highly qualified architect engineers who have, by long experience and intimate knowledge of the program, become experts in the design and supervision of new hospitals to meet the needs peculiar to the care of veteran patients. Actual construction contracts have always been awarded on the basis of competitive bidding by private concerns, with the lowest bidder receiving the contract.

3. Division of the two functions of medical care and construction of hospitals between two agencies would breed delays and render impossible the placing of responsibility.

4. The Commission's report indicates that the VA would still be required to maintain an engineering and architectural staff, while the Interior Department maintained a full staff to perform similar functions. Needless to say, this would not lead to economy nor efficiency.

5. Testifying before the Senate Committee on Expenditures in the Executive Departments, Lt. Gen. Raymond A. Wheeler, Chief of Engineers, Army, who assists in VA hospital construction, said, "It would be neither economical nor efficient to equip a new agency to perform the service the Corps of Engineers is now performing."

REGARDING VETERAN PREFERENCE IN CIVIL SERVICE

1. The Hoover Commission proposals recommend that the Civil Service Commission decentralize its examining and recruiting process. This would mean that every one of the more than 140 Government agencies conduct its own recruiting and examining programs. Instead of one central examining board doing the job, with a single staff, each

department and agency would be required to maintain a full-time staff to conduct examinations. This method would require some 2,700 additional boards and an estimated increase in cost of operation of $40,000,000 annually.

2. The Civil Service Commission would be completely destroyed as a recruiting agency. By decentralizing hiring and doing away with numerical rating of examinations, the way would be wide open for favoritism, political pressure and return to the spoils system.

3. The section of the Commission's report dealing with reduction-in-force is so filled with generalities that expert authorities in the Civil Service Commission themselves have been unable to figure out just how the plan would work. The rating process for reduction-in-force, proposed to be handled by a Committee of Examiners, would be entirely inadequate as numerical ratings would also be absent in this field. Such a system would breed jealousy, distrust, and ill-will among employees and supervisors alike.

4. Such recommendations, if put into effect, would require the virtual repeal of the Veterans Preference Act, thus rendering as impotent all protection in Federal employment now rightfully enjoyed by veterans and their dependents. Veterans would be given mere lip service since there would be no yardstick for rating examinations or setting up categories.

REGARDING GOVERNMENT INSURANCE

1. Hoover proposals which recommend transfer of insurance administration to a new Government Insurance Corporation fail to mention the tremendous cost of supplying the new corporation with a staff for related services such as legal, personnel, supply, finance, and indexing. In the present set-up, these services are furnished by units serving all of the benefit programs of the VA.

2. Adoption of this recommendation would mean the creating of a gigantic autonomous agency of the Federal Government. It would mean increased overhead and a gradual absorption of further fields. In fact, it may well be called progress in the direction of a Nation-wide socialized insurance program.

3. In all probability premium rates would be increased as insurance trust funds become burdened with costs due to deaths resulting from the extra hazards of war service. Under present legislation, Congress annually appropriates funds to cover such deaths. There is no guaranty that this will continue in the proposed program.

REGARDING GI HOME LOANS

1. Adoption of the Hoover Commission recommendation to relocate veterans' home loan guaranties in the Housing and Home Finance Agency would further divide responsibility for such administration as the VA would continue to certify the eligibility of a veteran but would not actually grant the guaranty. Such a division of an integrated operation is against all principles of sound business practices. The Hoover Commission was strangely silent regarding business loans.

2. Although the Hoover Commission states that the Veterans' Administration is inexperienced in the lending field, recent statistics reveal that veterans of World War II have purchased more than 1,694,000 homes with financing guaranties provided by the VA of $4,566,232,866. Claims paid by the VA under the guarantee for defaulted loans amounted to less than three-tenths of 1 percent of the total guaranteed. This splendid record certainly does not indicate a lack of experience in the lending field.

Equal Rights Amendment

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mrs. ST. GEORGE. Mr. Speaker, the same people who objected to woman suffrage have reappeared, even with that same old argument about the protections that women would lose when they got the vote. And above all, the lack of respect that they would receive at the hands of the chivalrous males, who, when this argument came up then, as it comes up today, seem to be a strange mixture of Sir Galahad and Sir Walter Raleigh.

Well, I get on perfectly well with the men of my family and acquaintance and I do not expect or want them to put me on a pedestal and tell me, as Galahad did, that "my strength is like the strength of 10, because my heart is pure." I have always thought that a rather priggish remark and it also gives me a great feeling of inferiority that such a supremely noble creature should look upon me with veneration because circumstances over which I have no control make it possible for me to be a mother while he is by a like set of uncontrollable fates precluded from being one.

I am also not at all anxious for any gentleman of my acquaintance to put his best coat down on the muddy ground because I have forgotten to wear my rubbers. I would also like to point out that the great Sir Walter only did this once, and there is no record that he ever did it for any woman but his Queen.

This is the great trouble with this much-vaunted protective legislation; it applies to a few women, not to the mass of women.

When we are giving women full legal rights under the Constitution we are not taking anything away from them; we are simply making them first-class citizens.

One very distinguished Senator made the startling statement that men and women are different.

There is nothing shattering in this discovery; a lot of us knew it already and are quite well pleased that it is so.

Old men are different from young men, and we have legislation that protects them, if you will, but they still have equal rights under our Constitution. There is a difference between black men and white men, but they are still equal before the law under our Constitution. There is a difference between veterans and nonveterans, and veterans get plenty of legislation that is completely protective and highly preferential, but they still are equal with their fellowmen under the Constitution.

Under the United Nations, and in many countries where universal suffrage prevails, the words occur that there shall be complete equality under the law for all persons regardless of race, creed, color, or sex. This is notably true in Soviet Russia. There is no question that if the Constitution were being written today this wording—race, creed, color, or sex—would be included.

Our Constitution was written long before woman's suffrage. It also was written when slavery still flourished and was accepted as a part of our civilization.

It is very interesting to note that the State of Georgia, before the Civil War, had some very fine protective laws to ensure the proper care and treatment of slaves and I have heard of many persons at the time of the emancipation who told heart-rending, and no doubt perfectly true, stories about old and devoted slaves who did not want their freedom and begged to be kept in the families they loved and be protected as they were in the past.

But the majority of the slaves did not feel that way and today those who wanted protection are well-nigh forgotten in the march of progress. This same thing will happen after the equal-rights amendment has been written into the Constitution. We will smile at the arguments for protection that the favored few who are protected, advance. We will laugh a little at the talk about the great biological difference and the weakness of women. Look at your insurance charts if you are worried about "the lass with the delicate air." Count up the widows of your acquaintance and you will find that the female of the species is far deadlier than the male, and also huskier.

Granted, she has not the muscular strength, but we are not living in an age of muscle. No, even Galahad with his broadsword and his strength like unto the strength of 10 could not do much against a woman holding an atom bomb.

All this amendment does is to state this very simple proposition:

SECTION 1. Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation.

SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States.

SEC. 3. This amendment shall take effect 1 year after the date of ratification.

The equal rights amendment has been a plank in the Republican platform since 1940 and in the Democratic since 1944. In 1948 it was in the platforms of the Republican, Democratic, and Progressive Parties.

It is, therefore, a matter that is entirely outside and above party politics and it seems rather cynical not to say plain dishonest, that after all these professions of policy and planks in the platforms, nothing has been done until very recently about carrying out these solemn promises.

I would like to quote from the speech of a woman attorney, Helen Elizabeth Brown, before the Lawyers Civic Association of Maryland, because she answers specifically the question that is always brought up by the opponents of the

amendment: In what way are women, under the law, inferior to men?

Men, aliens, and corporations are persons entitled to the equal protection of the laws in this country: American women are not.

It is unconstitutional to try a Negro man with a jury from which Negro men have been excluded; it is not unconstitutional to try a woman, black or white, with a jury from which women have been excluded.

It is unconstitutional to place restrictions on men's liberty to contract; it is not unconstitutional to restrict women's liberty of contract.

It is constitutional to bar women from any lawful means of earning a living; such laws as to men are unconstitutional and void.

Women may be subjected to labor restrictions; men may not.

Women may be excluded from business and the professions; men may not.

Women in business and the professions may be discriminated against; men may not.

Women may be deprived of their property without due process of law; men may not.

Now all the nonsense about seats in factories for women and maternity benefits are so much eye wash.

There is no more reason why women should not have seats if they need them than that the GI's should not have special educational advantages that are not open to ordinary civilians. There is no reason why a woman should not have maternity benefits, any more than that a veteran should not have a bonus. She is doing just as much for her country as the soldier, and in both instances they are each doing something the other could not do.

If women have the right to vote they certainly have the right to be considered equal under the Constitution.

The fight for suffrage was more intense and vehement than this one, but this amendment will be written into the Constitution in time. It is the last step on the long road of freedom for women in the United States. We want equality, not protection. We want justice, not privilege.

We are the descendants of the pioneers just as much as our men are and we want to stand beside them in the modern world as equals, ready to make our contribution to the development and prosperity of this good land which is our heritage.

Popular Support Behind Maritime Commissioner McKeough

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. O'HARA of Illinois. Mr. Speaker, for 8 years the Second Congressional District which now I have the honor to represent was brilliantly represented in this body by the Honorable Raymond S. McKeough, who as representative and the nominee of his party for United States Senator carried the torch in Illinois for democracy and progressive advance in the critical years when, under the leadership of Franklin D. Roosevelt, America was being pulled from the wreck that years of Republican reactionary government had brought about.

Our former colleague, Mr. McKeough, has continued his outstanding public service as a member of the Maritime Commission, and I am inserting in the RECORD the following editorial from the Washington Post of March 1, 1950, as reflective of the high regard in which he is held by the country and the stout support in public opinion which he enjoys in his contentions with other members of the Maritime Commission:

MARITIME SHIFT

As reports continue that the President may abolish the Maritime Commission and reconstitute it in the Department of Commerce, it is important to look at the real source of trouble in the Commission. That trouble is, purely and simply, a reluctance to administer the law as it is written. The commission majority has convinced itself that bigger shipping subsidies are desirable, and it has contrived devious ways to grant them—over the consistent objections of one commissioner, Raymond S. McKeough, and against the biting criticism of the House Executive Expenditures Committee and the Comptroller General.

We sympathize fully with the President's efforts both to hold down subsidies, and to bring them out in the open, and we support the idea of an over-all subsidy study. Once Congress has set a subsidy policy, however, the job of a regulatory body is to administer it fairly. Here it becomes apparent that the fault is not so much with the Maritime Commission structure as with the attitude of the members carrying out policy.

Unless the President is prepared to recommend the consolidation of all transportation-promotion functions in a single agency, it is hard to justify the singling out of a single commission for reorganization. That would merely serve to increase the hodgepodge in which regulatory bodies operate. Whatever may be said for a Federal department of transportation, much could be accomplished under existing law by the promulgation of a unified set of objectives for transportation agencies in a national transportation policy. Specifically, with respect to the Maritime Commission, improvement could be made by the simple means of replacing present commissioners, when their terms expire, with men whose first dedication is to the public interest.

Should There Be an Extension of Federal Standards Over State Employment Compensation Insurance Laws?

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. VORYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio interview in the American Forum of the Air over the National Broadcasting Co. system:

Chairman GRANIK. Good afternoon, ladies and gentlemen.

In his state of the Union message and in his Economic Report President Truman urged legislation improving the operation of our unemployment-compensation system and increasing its coverage and benefits. The President indicated that he sought an extension of Federal standards over State unemployment insurance laws. This has brought protests from some quarters that the President apparently feels that the States are not equal to the task of dealing with their own problem and that the Federal Government must step in.

Now, Mr. Secretary, you stated recently that you have in mind, not federalization, but merely the fixing of levels beneath which no State would be allowed to fall. What are those levels, Mr. Secretary?

Secretary TOBIN. We feel that there should be an approach toward the objective that was common at the time the act was passed by Congress in 1935—to give an unemployed worker approximately 50 percent of his wage. At the start when the bill first went into effect in the respective States it averaged about 44 percent, but there has been a gradual decline with the increase in the cost of living until today the average worker receives between 35 and 37 percent of his basic wage. There is also the feeling that unemployment compensation should be paid over a period of 23 weeks, because of the fact that some States have as low as 12 weeks, because of the fact that better than 1,500,000 workers during the year 1949 exhausted their benefit payments in respective States and then had no source of income at the termination.

Then another one of the objectives is to increase to cover all workers. At the present time the Federal law calls for compulsory insurance for all employers with eight employees or more. Many of the States have gone down to one, and ranging up to eight, but we believe that every worker in the country should be covered.

Chairman GRANIK. Senator BRICKER, what do you think about it?

Senator BRICKER. In my opinion, Mr. Granik and Secretary Tobin, the States have done an excellent job in this program which was an integral part of the social security law of 1935. This was one program that was left to the States, along with the old-age assistance program which was partly financed by the Federal Government, the Federal Government taking over the survivors and old-age benefits program with an assessment equally upon labor and management. The total cost of this program is paid by management in the various States. There are various rates of pay. There are various rates of allowances to unemployed workers. In my judgment the States have done an excellent job up to the present time. They have assumed the responsibility fully, have met local conditions which are diverse from one section of the country to another according to the industrial situation, according to the character of labor, and as to the degree of centralization of working forces.

Chairman GRANIK. Mr. Secretary?

Secretary TOBIN. If left to the States, we would have no unemployment compensation insurance law on the books today. In 1935, in order to get unemployment compensation on the books, it was necessary for the Federal Government to pass a law requiring a 1-percent payroll tax on every employer in the country on all wages up to $3,000. In the event that a State failed to pass an unemployment compensation law within a period of 2 years, that money was to flow into the Federal Treasury without benefit to either the employer or the workers in the respective States. Under this compulsion, the 48 States of the Union did pass unemployment compensation laws. So there was your very first standard. On the basis of Senator BRICKER's argument, were

he a Member of the Senate at the time, on the basis of States' rights, to be consistent he would have had to vote against the unemployment compensation law of 1935. Fortunately, all of the States did pass laws, and we now have a great protection for the unemployed worker, and I think everyone will agree that we do not want to go back to the days of WPA, back to the days when we had millions of unemployed people in the country, dependent upon the charity and the bounty of the Federal Government, the States, and local governments. I think an insurance system is far better, and if it is worth while, it should be a good one, it should be adequate to protect the average worker and adequate to protect and to buttress the economy by placing purchasing power in the hands of the American workers during unemployment.

Chairman GRANIK. Senator BRICKER.

Senator BRICKER. Secretary Tobin assumes an unfounded presumption that there would not be any unemployment compensation in the country. Some of the States had unemployment compensation, just as they had old-age assistance and pensions prior to the time of the enactment of the Social-Security law in 1935. I think Wisconsin was the first State——

Secretary TOBIN. Wisconsin was the only State, and they passed it just prior to the enactment of the Federal law.

Senator BRICKER. Legislation was introduced and being considered at the very time in various States. I want to say that in the very beginning this was a violation of the Federal relationship in the country. Federal relationship assumes that the States still have some responsibilities to their people and to their local communities. It was a compulsory, arbitrary national enactment with which I do not disagree at this time because it has worked successfully up to the present time. Even the President in his state of the Union message said that this was one of the laws which had helped in the unemployment shock of 1939.

Chairman GRANIK. He said it served to support the demand for goods in his economic review.

Senator BRICKER. He has commended it many times, and it is worthy of commendation because the States have done a good job. The State funds are not bankrupt at the present time.

Let me refer to the Labor Information Bulletin of October of this past year. After the experience that the President talked about wherein this program had been successful under State operation, this says:

"In that year there were 22 States in which benefits exceeded collections and interest, in a few States by a wide margin. However, while generalization is difficult because of the tremendous variation between the States in benefit costs, size of present reserves and tax income, very few States need to be concerned about their ability to weather even a substantial economic recession."

Let me say to you that the only two States at the present time that are in any danger at all—that they are not in any substantial danger—are the State wherein our distinguished colleague here today. Secretary Tobin, was Governor, that is, Massachusetts and the State of Rhode Island, which is of course in much worse shape than Massachusetts.

Chairman GRANIK. That is where the Attorney General is from.

Senator BRICKER. The States are in very good shape, and even last year in the unemployment crisis, they were able to increase their reserve funds, which now total about $7,000,000,000.

Secretary TOBIN. Total amount is close to $7,500,000,000 in the reserve fund of the country.

I would like to say in connection with the statement that has been made by Senator BRICKER that if unemployment compensation has made a contribution to the stabilization of the economy—and I am going to quote from Business Week in just a moment—we should have a good system. Senator, we have one State in the Union that in 1936, when it passed its law, established a $15 maximum payment. They have let that maximum payment remain for 14 years. That gives to the average worker, to the worker who is unemployed getting the maximum payment in the State, a purchasing power equal to $8.22 based on 1939 costs. I feel that we should have Federal standards, Nation-wide standards from one end to the other, minimum standards below which no State can go. We first have always required federally that all of the States in the Union have an unemployment-compensation law. Secondly, we have required that employers of eight or more have insurance coverage for their workers, and I think it is reasonable to establish minimums below which no State can go.

Let me just cite from Business Week.

Chairman GRANIK. Let's go to the Senator and then come back to you. Go ahead, Senator.

Senator BRICKER. I might say in comment upon what the Secretary has just said that in 1940 the average weekly benefit payments were $10.50; in 1949, $21.01.

Let us turn to this federalization operation that the Secretary desires in this program, and that is what it amounts to. Maybe it is not a federalization program. It is more in the nature of a nationalization program which would completely ultimately wipe out the State's position in the unemployment-compensation field.

Let us turn, though, to the old-age and survivors insurance program which is administered by the Federal Government. That in 1940 paid an average of $22; in 1948, $25. There is a 12-percent increase, while there was a 100-percent increase in the amounts paid under unemployment compensation. That 12-percent increase took place under the operation of the Federal Government when costs of living was rising practically 70 percent.

Let us turn also to the old-age pension program which has increased about 100 percent. True, the Federal Government does contribute 50 percent of that, but it is still under the complete operation of the States, subject to State law in every respect.

Chairman GRANIK. Mr. Secretary, did you want to comment on Business Week?

Secretary TOBIN. This is a copy of Business Week dated May 7, 1949. Here is the picture of the conditions in the city of Lawrence, one of the hardest-hit cities in the United States. Business Week has this to say:

"It takes a lot more to make a depression in 1949 than it did in the early 1930's."

It then goes on and says:

"But despite this, business conditions were about the same for the country as a whole."

In other words, there are 23,000 workers, according to the report, unemployed out of 57,000 workers in Lawrence.

"Unemployment compensation has proved to be an effective cushion for business as well as workers against the impact of unemployment."

Since unemployment compensation has made this contribution, not alone to the workers of America, but to the business of America, I think that we should have standards in this country—and incidentally I do not believe in federalization. I believe in a perpetuation of the Federal-State program. The one guaranty we are going to have for the preservation of the State program is to have it effective and to meet the needs of America's economy at the present time. I do not think it proper or fair to have workers in the United States receiving as low as 20 percent of their weekly wage, and that is true in altogether too many States of the Union. With the establishment of the Federal standards and an approach toward the objective of 1935 of a 50-percent payment of the loss of wage, we can be sure that there is going to be an adequate income for the average unemployed worker, and there will be a buttress to the economy that will carry us through and prevent future depressions in the United States of America.

Chairman GRANIK. Senator BRICKER?

Senator BRICKER. Secretary Tobin merely emphasizes the fight, which is 15 years old, in regard to unemployment compensation. The philosophy of the law that is to be presented is nothing new. There has been a constant battle between those who believe in the rights of the States in this field and those who want to completely nationalize the program. The proposition that is made so far is a result of a circular that was sent to the State unemployment bureaus on the 29th day of November by Mr. Goodwin, who is the head of the Unemployment Security Section in the Department of Labor. The State employment directors were asked by the 5th day of December to submit a complete report as to whether or not they approved or disapproved the suggestions that were made. I would like to know the results of that poll, and I hope that the Secretary of Labor can give them to us before this program is concluded. I do know what they did in my State. They are absolutely opposed. The director—I am advised—and I am sure correctly advised—that the Governor supports him in his position—is opposed to the Federalization, so-called, or nationalization program, because it absolutely makes a minimum of the present maximums of payments, of duration of payments, and of the qualifying requirements, and almost completely relieves all restrictions on employment. Furthermore, it emphasizes the fact that this is not a relief measure. It was originally passed for the purpose of absorbing the shock of unemployment. If it is to be a relief measure, the handing out of a dole dependent upon needs, there are other departments of both the Federal Government and the State governments that are thoroughly adequate and are at the present time charged with the responsibility of taking care of those programs.

Chairman GRANIK. Mr. Secretary, do you care to comment on that?

Secretary TOBIN. Yes, I would like to comment on it. Back in the thirties under the days of WPA, PWA, and the like, the State of Ohio received $1,100,000,000 in direct grants from the Federal Government of the United States. We don't want to see those days in America again, so I say that it is sound to have a sound insurance system that will take care of the unemployed in this Nation for a period of 26 weeks, and I further contend that we would not have had unemployment compensation in the United States if it had not been for the Federal law that practically compelled the States to enact such laws.

There was only one State in the Union in 1935 that had unemployment compensation, and that was the State of Wisconsin. It was because of the Federal standards requiring the States to establish these laws that we have them on the books today and that Business Week is able to write the wonderful story about the city of Lawrence. In the city of Lawrence workers are paid for a period of 23 weeks. They are paid a maximum of $25 a week. If we did not have unemployment compensation, certainly the merchants of Lawrence would not be as prosperous as they are today, and the retail sales in the city would not have been staying practically abreast of the rest of the United States of America.

So if unemployment compensation is a sound system for America, then let us have standards that will make it genuinely sound and let us work toward meeting the objectives that were set in 1935 of giving an un-

employed worker approximately 50 percent of his earning wage.

Chairman GRANIK. How about that level, Senator?

Senator BRICKER. I can't help but call attention to the fact of the conditions existing under State administration in the location that was cited by the Secretary and that the same conditions didn't exist in all the States. While the funds in one State were being depleted, the funds in other States were being built up at a terrific rate. We should not let the conditions of one State control a national program that has been successful up to the present time and which has, in the very words of the Secretary himself, worked so successfully.

I mentioned a moment ago that this was to be submitted to the Security Council by Mr. Goodwin, a report made on it, and subsequent legislation to be introduced as a result of that. That is the only group that I know of, the group in the Department of Labor, that are advocating anything like this. I hold in my hand the Federal-State Relations Report of the Council of State Governments, which definitely says, on page 237, that this should be left as it is, as a responsibility of the States. Thorough study was given to that. I remember the consideration that was given to it at the time. We had a committee of the Congress, the Council of State Governments, and the governors of the States. Fifteen governors, I think 10 Congressmen, and 6 Senators, met in Chicago and spent 2 days on this subject 2 years ago. That report is in Senate Document 1054, and it definitely says that:

"The Federal Government should relinquish to the States the Federal tax on employers levied to cover the administrative expenses of the State employment security programs. The States will assume the responsibility for the administration of the unemployment compensation and employment service programs."

Chairman GRANIK. What is your comment?

Senator BRICKER. I have a couple more here, after the Secretary comments on those.

Secretary TOBIN. Let him go ahead. I will comment on all of them when he finishes.

Chairman GRANIK. We have just a minute, before questions, if you want to comment here.

Secretary TOBIN. There is naturally opposition on the part of certain people to Federal standards. The selfsame arguments were offered in 1935 against the establishment of unemployment compensation as a result of a Federal law that compelled the 48 States to enact those laws. The same arguments are being advanced by Senator BRICKER now and would be logical if it is an infringement on States rights to establish minimum standards. Remember, the minimum standards are to approach 50 percent of an earner's wage up to $30 a week. In other words, if a worker earns over $60 he will not get better than 50 percent of his $60, or $30. So it is my contention that if it was sound in 1935 to write the basic law, it is sound after 14 years of experience and after giving the States an opportunity for 14 years to approach those standards, to have the Federal Government establish minimum standards for the protection of the economy and for the protection of individual workers.

Chairman GRANIK. Gentlemen, let's take some questions from our studio audience. I see Miss Penuel has a lady with a question.

Question. I should like to know why the United States Employment Service is using public funds for advertising in the newspapers and on the radio for applicants for jobs in direct competition with private employment agencies.

Secretary TOBIN. In direct competition with private employment agencies?

Question. Yes.

Secretary TOBIN. For the purpose of rendering a service to the American people. I am certain one American who feels that any government owes it to the people to help them procure jobs without the payment of a fee; and when we save individual workers from paying a week's pay or 2 weeks' pay for the purpose of procuring a job, I think we are rendering the kind of service that the Government of the United States should render to their citizens.

Chairman GRANIK. Do you want to comment on that, Senator?

Senator BRICKER. I would like to comment on that because of the attitude of the Federal Government in the administration of this law all along. I would just like to quote from one of the administrators of the unemployment-compensation fund in the States as to the attitude of the Federal Government. I don't want to get into personal recollections of the matter, because Mr. Goodwin and I had this out in Ohio years ago as far as civil service is concerned, long before you were in it, Mr. Tobin. Herschel Atkinson, who was administrator of this program in Ohio, has this to say about the relation of this program to the Federal Government and to the State governments, which is still part of our system, talking about this very thing of Federal administration and action.

"One of the most amazing statements to me when I was administrator was when a representative of Federal Security came out to Ohio and said, and I quote: 'This money is for velocity spending. This is to get spending power out in the hands of the people. We will never audit you on the payments made. If a man walks in and signs a slip, pay it to him. What do you care? We will never audit you. Get the money out. This is a spending velocity law.' Believe you me, that pressure was put on me repeatedly."

A recent article called, "Rainy Day Money, or Give It Away Show," referred to this article, the statement of Mr. Atkinson, and had this further to say:

"I have heard the same statement from administrators still in harness. They say the States which accede to such demands get more money to administer their programs, while those who do not are continually on or near a deficit spending basis."

Chairman GRANIK. Do you want to answer that?

Senator BRICKER. Let me accentuate that with one thing.

Secretary TOBIN. The Senator quoted Mr. Goodwin, who now heads the Unemployment Service. He was Regional Director of Federal Security at the time when Senator BRICKER was Governor. I asked Mr. Goodwin who is present in the audience, if he ever heard it. He was the representative in the State of Ohio. He never said it to Mr. Atkinson, and he knows no man who ever did say it.

Further than that, I have a letter from Mr. Teets, who is the president of the Interstate Conference of Employment Security Agencies of the United States, denying that statement by Atkinson, and he says he has checked with his executive board and he has checked with the other State directors, and not one of them knows of a single instance in which a Federal official ever talked that way to them.

I think it is a false indictment that is without foundation. Mr. Goodwin is right here in the audience. He was the regional director at the time, and he will contend that it never happened.

Senator BRICKER. Let me say further that the Federal administration—I have had some experience in this field, Mr. Tobin—fined the State of Ohio $1,250,000 at one time because of a quarrel between Harry Hopkins and Mr. Altmeyer and my predecessor, Governor Davey, whom I do not intend to defend here today, as I never have. As a result of that, showing the power of the Federal Government, their callous disregard of the right of workers, they withdrew from Ohio, $1,250,000 of administrative expense money, and we had to dig down in the State general revenue after I become Governor to pay it back.

That is the attitude of the Federal Government, and that is the reason that the Governors Conference, when you were a member of the Governors Conference, Secretary Tobin, in 1944 passed a resolution against federalizing and for leaving this as it is, in the hands of the States. That was reiterated at the Governors Conference in 1947 by a unanimous vote, because they don't pass any other kind of resolutions.

Secretary TOBIN. This program is not a federalization program. It leaves it still as a Federal-State program in the hands of the States, with additional standards comparable to the standards that were passed in 1935. It is not a federalized program at all.

Chairman GRANIK. May I take another question? Go ahead, sir.

Secretary TOBIN. I do want to say this in that connection. In the year 1939 the State of Ohio was perfectly willing, during the period of time that you were Governor, to accept WPA money for the feeding of the people of the State of Ohio, when a special session would not be called for the purpose of feeding them and the Government of the United States had to do it.

Senator BRICKER. We also appropriated money by the State legislature. That fight was solely on a local political basis as to whether the State would furnish all of it or the cities a part of it.

Chairman GRANIK. Let me squeeze in a question here.

Question. I would like to ask Senator BRICKER if he recalls the 1948 position of the Republican Party on the matter of unemployment compensation.

Senator BRICKER. I haven't checked the vote at all. I certainly was in favor of it at the time. We supported it in Ohio during my administration and made it work effectively.

Question. I was wondering if there were any new ideas the party would like to put on the statute books at the present time.

Senator BRICKER. New ideas have virtue only if they are constructive. There is no merit in itself in having something new. In fact, the Constitution of the United States has stood for over 150 years, and I think the people of Ohio, because it is old, have a high appraisal of their constitutional structure that provides for a Federal system of government. This isn't a federalization program at all; it is a nationalization program which takes the maximums at the present time and makes them compulsory as minimums upon every state in the Union. That is taking over; that is not cooperation. The Federal system recognizes the rights of the States, and this program doesn't in any way give the States any position, practically, except as administrative units of the Federal Government.

Chairman GRANIK. Gentlemen, we must have your summaries now. Mr. Secretary, will you summarize briefly, please?

Secretary TOBIN. Yes.

National City Bank of New York praises unemployment compensation as a contributing factor to the stabilization of our economy and the avoidance of a depression. Business Week does the same in this article in reference to the city of Lawrence. Since it is accepted as a sound principle and a help to our private-enterprise economy, then I say we should make it equally effective with minimum standards—remember, minimum standards—in the 48 States of the Union and eliminate the possibility of individual States leaving their law unchanged, taking no recognition of the increased cost of living that has occurred since this law was originally written. I say that if it was sound for the Government of the United States in 1935 to compel the States to write the law, it is sound in the year 1950 to have minimum

standards that will make it equally effective in all sections of the United States.

Chairman GRANIK. Thank you, Mr. Secretary. Senator BRICKER, your summary, please.

Senator BRICKER. Mr. Granik, I have presented here evidence in support of the Labor Information Bulletin; of two governor conferences, of one of which the distinguished Secretary of Labor was a member; of the Social Security Advisory Council to the Senate Finance Committee, which was chairmaned by the late Edward R. Stettinius, who was then chancelor of the University of Virginia; and of Sumner Slichter, who is professor of economics at Harvard University.

I have presented support for the present State-administered program from the legislative council of the council of state governments.

I have found yet no one who supports the forcing onto the States of these minimum standards which are at the present time the maximum standards of the various States of the Union. It has worked well, according to the testimony of the President and of Mr. Tobin himself, and we should not disturb a program which has met increasing costs by increasing the allowances 100 percent when the old-age and survivors insurance program under his Department has increased only about 12 percent at the same time.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. BIEMILLER. Mr. Speaker, the National St. Lawrence Project Conference has again been exposed as a front for selfish interest. In an editorial, Seaway and Selfishness, published in the distinguished independent newspaper, the Milwaukee Journal, March 4, the conference is revealed as a front for corporations who have their own reasons for fighting the much-needed seaway project. With permission to extend my remarks in the RECORD, I attach the editorial:

SEAWAY AND "SELFISHNESS"

The National St. Lawrence Project Conference has a pretty high-sounding and dignified name for an organization that confers only on ways and means to bury the proposed St. Lawrence-Great Lakes seaway and power project.

But the conference has more than a high-sounding name—it has a shotgun that is not only double-barreled but shoots in two directions.

In recent days the conference has been burdening the post office and editorial desks with antiseaway propaganda that attempts to establish these two diverse themes:

First, the seaway is pushed by iron and steel firms for the "private benefit of ore exploiters or shippers or iron and steel companies." This is an indication of selfish private interest.

Second, the seaway is being pushed by "economic planners" who are interested in promoting the welfare state and who will, one day, take over the selfish private interests that now seek an "immediate but temporary advantage."

This picture of "selfish" private enterprise and the "welfare state" advocates fighting side by side to despoil the Nation is intriguing—and a perfect example of the kinds of arguments the real selfish interests can use when facts aren't strong enough to support their stand.

The new ore discoveries in Labrador and Quebec and Venezuela are not the main arguments for the seaway—merely additional arguments. The seaway looked like a good bet long before anyone started mouthing the words "welfare state"—and was so considered by such Presidents as Hoover and Coolidge, who could hardly be called "welfare staters."

One thing must be said for the National St. Lawrence Project Conference, however. For a fight against "selfish interests" and "for the people" the organization certainly picked the right officers. As representatives of the Nebraska Stock Growers' Association, the American Mining Congress, and the Republic Coal & Coke Co., of New York, they know a "selfish interest" when they see one.

The Importance of the American School Teacher to Our American Way of Life

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. GOLDEN. Mr. Speaker, the time has come in the present session of the Eighty-first Congress for all Members who are deeply concerned about the present and future welfare of America to begin to consider the teaching profession.

For many years the American teachers, inspired by a great desire to improve the youth of this great land of ours, have continued in their profession at low and inadequate salaries. No other group in this broad land of ours is as underpaid as the teaching profession. This has approached almost a national calamity. If our best teachers are forced by poverty to abandon their profession the onward and upward march of America will be reversed and we will turn our faces back toward the Dark Ages.

The teachers in every school in America—rural, village, city, and township—can and do inspire their pupils with all the power that they possess. They teach them while they are in their youth, and in a receptive state of mind how to work and play and how to share with others. They can and do inspire them with the great freedoms of America that has enabled this Nation to reach the pinnacle of power and happiness in the history of the world. They put in the minds and hearts of their pupils ambitions to accomplish much in this world. If we properly support our school teachers in this divine undertaking of theirs, we can build a greater America out of the future generations that pass through their hands daily.

All great uplifting movements start in the little school units of the United States. Each school teacher has his share in building the soul, mind and power of America. It is literally true that they hold the future destiny of this great Nation in the hollow of their hands. All other professions stem from the product of the teaching profession.

These patriotic men and women, who have molded the lives of our young people, if we will wake up in America and pay them adequately, will do more to prepare the following generations of American citizenship to take their part in the world and to bless all mankind than any other profession. They have worked for generations on disgracefully low salaries mostly without complaint but they cannot do the impossible. Living standards have greatly increased as well as the cost of living and there is no other group in America that has been so consistently underpaid.

Most of them have remained in this great profession because they love it. Tens of thousands of them are looking to the men selected by the people of America to pass adequate laws so they they can be properly paid. All good citizens should resolve that this shall be done and we should devote enough of our national wealth to support them adequately in their great endeavor. It is within the power of the teaching profession of America to bring up our young men and women possessed with the qualifications to solve our national problems and the problems of our States, counties, and cities.

In the dawn of this great scientific age, if we improve equally over the United States the educational opportunities of every American child, America will continue to grow and be a blessing to all mankind. These teachers can develop not only industrial skills of their pupils but they can sow the seeds in the minds, hearts and souls of young America the finer qualities of life so that in addition to being able to create great wealth, our people in the future can grasp the great beauties and happiness that is the divine purpose of mankind.

Today and for years past millions of American children, with sturdy bodies and bright and capable minds, have been allowed to remain in ignorance and have never been able to exercise and enjoy their latent powers and abilities that their creator endowed them with.

One is reminded of Gray's Elegy in a Country Churchyard, when this great poet sat silently gazing upon the little headstones and footstones at the graves of the country people and when he said:

Full many a gem of purest ray serene
The dark unfathom'd caves of ocean bear;
Full many a flower is born to blush unseen,
And waste its sweetness on the desert air.

We no longer want the youth of America to be wasted. We should form a national standpoint as well as a State and local standpoint, burst asunder the bonds of ignorance. We should adequately and generously support our teachers and pay them well, and we should build and equip our schools knowing that they are the ground sills of the American way of life.

When Jesus Christ was on this earth He had three great professions. He was a minister, He was a physician, and He was a teacher. When He choose his 12 apostles, He trained them and sent them forth to teach the peoples of the world. Throughout 20 centuries His teachings and the teachings of His chosen teachers have rung down the centuries to uplift and bless all mankind.

The teachers of America are in need of our support and while we serve the great people of our land, let us give to them the full measure of what they deserve.

For the practical businessmen of our Nation, who know that we must keep this Nation solvent, let me say this:

Three hundred million dollars for Federal aid to public schools will all be spent here at home. Salaries of teachers have been so low for so many years that this supplemental and increased pay will immediately be placed in the current money circulation almost 100 percent. Each monthly salary check to the teachers will be spent for food, clothing, household furniture, books, and every other kind of daily necessities of life and will pass along from one businessman to another in commerce and turn over many times each year.

Millions of pupils who will acquire better education through this supplemental fund will become larger earners to create more wealth here in the United States. Thousands of these pupils who would otherwise remain ignorant and become charges upon society, not earning and contributing enough to pay their own way in our American way of society will be moved up across the productive profit line where they can pay their own way and beneath which line many of them have lived for so long.

Our national income will be substantially and permanently increased. More taxes will be paid into the Federal Treasury all along the line. It will be a good investment, it will pay immediate economic dividends to the entire United States and to all of its individual citizens. This Federal aid-to-public-school bill will also add substantially to our cultural, spiritual, and educational uplift.

For all these foregoing reasons I urge my colleagues to enact into law a good bill providing for Federal aid to our public schools.

Sermon on Manganese

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. BARING. Mr. Speaker, I should like to take the time of the House for a few minutes in order to preach a short sermon on the subject of manganese.

As the president of the American Manganese Producers Association told the Public Lands Committee not long ago, manganese is the "starch" which stiffens steel—no adequate substitute has been found for it and none is immediately in prospect. Without manganese, no matter how much steel we have the capacity to produce, we cannot make munitions.

In the last issue of that eminent trade paper, The Engineering and Mining Journal, Mr. Norwood B. Melcher of the United States Bureau of Mines, states:

The critical shortage of manganese ore evident at the close of 1948 was intensified in the first quarter of 1949 by a virtual embargo on exports of manganese ore to the United States.

Yet I understand, Mr. Speaker, that if and when the O'Mahoney bill, S. 2105, comes to this floor, there may be made on the part of the Government agencies an attempt to amend it to prevent manganese producers from benefiting from its provisions. This is just a rumor which has reached me, but if true, how serious are its implications may be seen from the following quotations from the same article by Mr. Melcher:

Speaking of the plans of the Government to attain a satisfactory balance between total domestic requirements and supplies, most of the programs begun in 1949 will not be effective for several years, but some that were already under way January 1, 1949, showed substantial results by the second half.

Completion of a program begun in 1948 to supply railroad cars to the Union of South Africa resulted in a substantial increase in exports to the United States in 1949. Shipments were expected to exceed 300,000 short tons compared with only 217,000 tons in 1948. Similary shipments from India are expected to nearly double the 1948 total of 216,000 short tons. India was the largest single supplier to the United States in 1949, furnishing 27 percent in the first 10 months. Exports from the Gold Coast also increased in 1949, reaching 330,000 short tons of ore. In addition, imports of ferromanganese made from the Gold Coast ore were received from Norway and Canada equivalent to about 120,000 tons of ore. Thus, in terms of ore equivalent, Gold Coast was the largest source in 1949, furnishing about 450,000 short tons.

Inadequate transportation facilities in Brazil held the 1949 shipments of ore to about the 1948 level of 144,000 tons. Cuba and Mexico each shipped about 4 percent of the 1949 total, and small shipments (3 percent in all) were made from Angola, Belgian Congo, Chile, France, French Morocco, the Philippines, Portuguese Asia (Goa), United Kingdom, and Liberia. Imports of manganese ore during the first 10 months totaled 1,201,240 short tons; of this 61,319 tons was battery grade.

Now, Mr. Speaker, this is all well and good, and I am delighted that we are getting all possible manganese from all possible sources. I do not think the total imports come anywhere near our requirements if you take into consideration stock piling as well. But note, after the detailed information on foreign supply, that the domestic situation is dismissed with these words:

Domestic production of manganese ore in 1949 dropped off slightly from that of the previous year, due largely to mechanical problems, and is estimated at 115,000 short tons.

Is it mechanical problems, or price, that really is the difficulty, Mr. Speaker? I hear of no programs to supply railroad cars, or anything else, to manganese producers in Nevada or elsewhere in the United States. I introduced a bill some time ago which would have authorized the payment of up to 50 percent over the foreign price under stock-piling contracts, but that bill reposes in the Armed Services Committee unheard. As a matter of fact, I believe the Bureau of Federal Supply has sufficient authority to pay almost any price for domestic manganese for stock piling. Let them announce that a sufficient price will be paid and I dare say the increase in domestic production would surprise them. If, instead of applying all possible stimulation, there really is a scheme afoot to remove manganese from S. 2105, it is altogether a shameful thing and I shall resist such a move as far as it may be within my power to do so.

The moral of this sermon, Mr. Speaker, is, paraphrasing the old saw about charity beginning at home, that manganese production should begin at home where neither the wind, waves, shortage of shipping, snorkel submarines, or enemy seizure of foreign sources of supply can cut our supply lines. The quicker we realize this elementary truth about manganese and other strategic and critical minerals the better prepared we shall be should the misfortune of another war develop. I should be most unhappy, Mr. Speaker, were I to think that future historians might look back at these United States as we do at the Roman Empire and say, "sic transit gloria mundi." Let us not speculate with our future; let us be prudent now, rather than sorry later.

Henry McLemore's Column

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Henry McLemore, newspaper columnist, in the Washington Star of February 28, 1950:

McLEMORE CALLS ON NATION TO WAKE UP

(By Henry McLemore)

To read the newspapers and listen to the radio is to wonder why the United States of America is called the United States of America.

At the moment the States seem to be about as united as Ingrid and Dr. Lindstrom. A much better name, for the time being, at least, would be the Disunited States of America.

Just read the headlines and subheads, and listen to the radio announcers who, truth to tell, do little more than read the headlines and the subheads out loud.

"Miners Stiffen as Coal Famine Brings Show-down.

"Dixie Battle Plans Drawn Against FEPC.

"New Block Hit in Talk on Phone Strikes.

"GOP Blocks Plan for Spy Ring Inquiry.

"Probers Told Reds Control Progressives."

SO WHAT TO DO?

What sort of reading is that for a country which is faced with destruction by an enemy which makes no bones about what it would like to do? Russia, I'm talking about. If Russia lets us know how much it hates us in public, just how much more do you figure Russia hates us in private? About ten-thousandfold, I'd say.

So what do the so-called United States do? Fight night and day among each other, group against group, bloc against bloc, majority against minority, party against party, statesman against statesman, politician against politician, neighbor against neighbor,

It seems to me, silly as I am, that now is the time, if there ever was a time, for this country to pull together. If a coal strike affects steel and steel affects the building of the materials of preparedness against war, then there should be no coal strikes. The same goes for all the other strikes and for all the other hold-outs against unity.

LET US WAKE UP

I have said this before but I want to say it again. There seems to be a widespread belief in this country that there is a relatively small group of men willing and anxious to die for their country; a group who, as doughfoots, wants to freeze and shiver and get slugs in their bellies; a group who, as flyers, wants to streak to death or injury in the skies; a group who, as sailors, wants to freeze in the oceans of the earth.

There are no such men. Even the wildest-eyed kid finds war a little too much to stand and prays to get home. But unless this country starts working as a unit, faces the common danger with a united front, a few million poor devils are going to have to pay the price for the selfishness or stupidity or both of millions and millions of others. The next Pearl Harbor will be a dilly. Most of the major brains in the country have prophesied that. It won't be a handful of bombers coming over, but a terrific, all-out thrust that will make front-line combatants of even babes in their cribs.

The Taft-Hartley Act Should Be Repealed

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following article which appeared in the Collinsville Herald, Collinsville, Ill., on Friday, March 3, 1950:

THE TAFT-HARTLEY LAW IS DEAD—JUDGE KEECH FINDS UMWA NOT GUILTY OF VIOLATING ORDER BECAUSE MINERS REFUSED TO WORK

Adopting the legal theory developed by James O. Monroe, publisher of the Collinsville Herald, in an address to the House Labor Committee in Washington a year ago, Judge Richmond B. Keech in the Federal district court in Washington Thursday afternoon held that the United Mine Workers Union was not guilty of contempt of his no-strike injunction order because of the refusal of the coal miners to return to work at the direction of the union officials.

Monroe in his address to the Congressmen had predicted that at some future time there would be a strike where the dissatisfied men would refuse to follow the orders of their officials who would be acting under duress of a court injunction. That was what happened following Judge Keech's order of 10 days ago to the UMW officials. Union President John L. Lewis issued an order to the men to return to work, but they failed to do so.

Judge Keech's finding that the union is not guilty of contempt because of the failure of the miners to resume work ends the court proceeding. It demonstrates what Monroe has said from the beginning, that the injunctive process would be unavailing to prevent or to end a strike. It means that the Taft-Hartley law is virtually dead. Monroe predicted Thursday that the law now would be either repealed or radically revised.

Following is the portion of Monroe's statement to the House Labor Committee discussing the futility of the Taft-Hartley law as a strike-breaking measure:

"The greatest error on the part of those who framed the Taft-Hartley law was that they acted as if they regarded the union and its officers as being the controlling agents over the union members, a doctrine specifically stated by Judge Goldsborough, saying, 'as long as a union is functioning as a union, it must be held responsible for the mass action of its members.'

"Union officials are regarded by the members as leaders and not as dictators nor as being empowered to determine policies and to bind the men to them. In the Typographical Union, to which I belong, no action can be taken, including the election of officers, without a referendum of the membership, both in the locals and in the International, and strikes are entered upon only by a vote of the membership affected. I understand that this is true in the Mine Workers, who are the largest industrial group in my city, and in most other unions. Labor unions are not corporations, which elect directors and officers who manage the business for a year or some other stated period and who during that period can commit the stockholders to policies and obligations. 'Labor czars' are no more potent than 'political bosses.'

"This fallacious thinking, which Judge Goldsborough first expressed, is at the bottom, so it seems to me, of the provisions in the present law which seek to prevent strikes by court injunctions against only the union and its officials, and which seek to direct union activity by requiring officials to take a non-Communist oath. And this thinking, and the legislation which it fostered, leads inevitably to the practical difficulties of establishing industrial peace by them. For men who recognize their officials as leaders, and not as dictators, cannot be expected to respect and accept and follow a law, first, which affronts their instincts, second, which thwarts established practices in the settling of disputes with management, and third and most important, which lays its impact solely on the union and its officials and which suggests no coercion and imposes no penalties upon the men themselves, either as individual citizens in the commonwealth or as members of the union.

"The more practical question, it seems to me, is, regardless of the theoretical responsibility of the union, whether or not members are under any responsibility too, and therefore will respect the orders of the union, particularly when the union orders are in contravention of the union's policy and are, moreover, delivered under duress of a court order. Neither the union laws nor the statute nor the court order suggests any such eventuality. So far as I can discern any inhibition in the law, the men can strike as quickly and as long as they please. And, again being practical, no matter how crippling a court order may be to the union, nothing is achieved for industrial resumption unless the men go back to work. One may say that the men have some responsibility to obey the orders of the officers, but the law does not say so, and Judge Goldsborough did not say so; and even if both said so, there is no penalty on the men if they refuse—which makes the law well nigh a nullity.

"As yet there has been no real test of the capacity of the injunction against unions to stop a paralyzing strike. I know that it will be said at once that John L. Lewis called off the miners' strike last April. But it must be remembered also that at the same time he got what he wanted in the welfare fund which was at issue. The longshoremen's strike last November on the two coasts was not ended by the order to the men to go back to work, but by the settlement, while they were still idle, of the disputed matters. I do not want to be taken as an inciter to strikes or to defiance of the Government by workers, but I predict that under the present law there will be strikes where the men will not follow the orders of the officials who give them under injunction. And I suggest to you that in such event you will have left the Nation helpless."

Democratic Party Responsibility for the Rise of Russia—John B. Chapple

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. O'KONSKI. Mr. Speaker, we have had thousands of Lincoln Day and Washington Day speeches throughout the Nation. Most of them sounded silly and missed the boat completely. The most outstanding speech in the Nation in my opinion was delivered by a small-town editor, John B. Chapple, of Ashland, Wis. I might add that this is the same John B. Chapple who won the Republican nomination for United States Senator in 1932. He won that nomination on a platform of anticommunism—the first public figure in America to see the light in 1932 as he sees it now in 1950.

Americans will take pride in reading this speech. That is why I ask that it be inserted in the RECORD so that 70,000 copies will go all over the Nation.

His address follows:

[From the Ashland (Wis.) Daily Press of February 25, 1950]

Friends of Ontonagon, we have been pioneers, your ancestors and mine, from the days when the first white man came to this Lake Superior shore, on to the time that our Nation was founded with a Declaration of Independence proclaiming human rights and human dignity to all the world, and on down to the time of our First World War.

That period of the First World War proved to be one of the great turning points in world history.

While we of America were busy in a war which we hoped would end war, in a war to make the world safe for democracy, a philosophy that was the exact opposite of what we were fighting for, the exact opposite of ours, a poisonous philosophy that had been spawned in Germany, gained support in Russia during the revolutions in which first the Czar and then representative government were overthrown—and there was let loose upon the world a philosophy of government the exact opposite of everything we believe in—a philosophy that denied God, that denied the sacredness of the human family, that denied honor and honesty and everything that America for 300 years has stood for—yes, a philosophy that denied, and still does deny, everything that the Ten Commandments have stood for down through the ages, and stand for today.

For a few brief years after World War I, this Communist philosophy of the denial of God and the denial of human rights, this overturning of the philosophy of human brotherhood for a philosophy of hate and treachery, was held at bay by America.

Then, in the confusion and paralysis of the depression that was the aftermath of that First World War, there came into power in

America a man and a party that gave the official recognition of the United States to a philosophy that is the deadliest enemy that America ever had or ever could have—not only gave official recognition to the Communist power of Soviet Russia, but has aided and abetted it until it is sweeping over much of the world and has actually become the world's greatest power, relegating America to second place.

Those who did this knew what they were doing when they did it.

They knew that for 15 years since the Communist revolution in Russia its leaders had flaunted the words of Karl Marx in the faces of the world that "religion is the opium of the people."

They knew the words of Lenin, predecessor of Stalin, that "children must be taught to hate their parents if they are not Communists. If they are, then the child need not respect them; need no longer worry about them."

They knew Lenin's advice to his Communists to "practice trickery, employ cunning, to sometimes even overlook or conceal the truth" in carrying on their work.

They knew the words of Mejinsky who had said, "As long as there are idiots to take our signature seriously, and to put their trust in it, we must promise everything that is being asked, and as much as one likes, if we can only get something tangible in exchange."

They were acquainted with the words of Lenin when he said: "Down with love of one's neighbors. What we need is hatred. We must know how to hate; only thus shall we conquer the universe."

They knew all these things; everyone in America knew them. They knew it when they did it.

And in the short space of 18 years since the Democratic Party went into power in America and made the deal with Soviet Russian communism which has finally produced today's world crisis in which every heart is secretly filled with terror about the future, the Democratic Party has written the blackest and most tragic chapter in American history.

The story of Nero fiddling while Rome burned has a ghastly parallel today in President Truman's bewilderment as Russia takes away from us control of the world.

This is Brotherhood Week, and from the White House President Truman issued the following splendid statement. I quote:

"Respect for human dignity is the central issue in the world struggle today.

"America is dedicated to the conviction that all people are entitled by the gift of God to equal rights and freedoms even though they may differ in religious persuasion, in social and political views or in racial origin. Our greatness is and will be measured by the degree of our recognition of this fundamental truth.

"Millions of people in our world are living in slavery. They are subject to the iron rule of despots who make the state supreme and who constantly violate God-given human rights. Free people everywhere are horrified to witness the subjugation of their fellow human beings by the totalitarian states. No group is being spared. Protestants, Jews, Catholics, Orthodox, are being crushed into submission. Statesmen of democratic spirit, and writers, teachers, and scientists of independent mind are being destroyed. The conscience of the free world is appalled by their shocking martyrdom."

That is the end of the quotation.

Ladies, and gentlemen, President Truman wrote the truth when he wrote these words. But what he failed to add is this:

If America is done for in the days to come, it is because the Democratic Party got control in 1932, and in the unbelievably short space of 18 years, nurtured and supported with billions of dollars of our own heart's blood a country whose leaders are the sworn enemies of human rights and freedom, and everything we believe in, and who are succeeding at their task of taking the world away from America, and away from those who believe that the Ten Commandments are the foundation of civilization.

In the incredibly short period of 12 years, the Russian empire has increased its population from 180,000,000 to 800,000,000 people.

Here is what Soviet Russia has been able to incorporate into its empire in that time:

Eastern Germany, Poland, Czechoslovakia, Albania, Bulgaria, Rumania, Hungary, Lithuania, Estonia, Latvia, Karelia (part of Finland). This brings the Russian empire in Europe to the Elbe River on the west; to the Adriatic Sea on the southwest; close to the Aegean, with only a narrow strip of Greece, as a barrier, on the south. The present position of the Russian empire in Europe makes the Scandinavian peninsula indefensible.

This embraces 800,000,000 human beings, one-third of the total population of the earth.

In January 1945 Moscow ruled 190,000,000 human beings.

In June 1948 Moscow ruled 450,000,000 human beings.

By November 1949 Moscow ruled over 800,000,000 human beings.

The total human population of the earth is about 2,500,000,000.

Moscow rules one-third of the human race.

And here is the latest chapter:

At 10:18 this morning, over the United Press leased wire in the Daily Press office, came this bulletin:

"WASHINGTON.—The State Department announced it has broken diplomatic relations with Bulgaria. The Bulgarian delegation was ordered from Washington. Bulgaria accused the United States Minister at Sofia of conspiring against the so-called People's Republic of Bulgaria—the front name for Soviet Russia."

The Democratic Party over the past 18 years has built up this enemy of America, and now the situation is desperate.

I need scarcely remind you how every evil force in America was concentrated behind the Democratic Party in 1932. All the millions of dollars of the whiskey trust were dumped into that campaign. Every evil political power of the big cities was turned loose. The shell-shocked people of America, struggling through a depression caused by World War I, cracked under the strain and turned the reins of government over to what turned out to be the world forces of evil. Proof of this came in the quick recognition of Communist Russia.

An evil force took control in America at that time that reversed the direction of our Government and sent us spinning down hill.

A blind, stupid foreign policy failed to give any encouragement to the Republican postwar government of Germany that was struggling to get onto its feet after World War I, and by this lack of support actually helped Hitler rise to power.

Instead of doing something to help stabilize postwar Germany and keep a maniac named Hitler out of power, the Democratic Party of the United States turned its attention to Soviet Russia, which it officially recognized in 1933, creating an even greater peril to America than Hitler, as time has proved.

Out of the Democratic Party's blindness, Hitler, who had already proclaimed his attack upon the Jews, was actually allowed to rise to power.

And in that same fateful year of 1933, right after taking power in America, the Democratic Party officially recognized Communist Russia and put that nation on its feet later with billions of dollars of American money, and Communist Russia's agents, spies, and criminals were brought into this country with the encouragement and connivance of the Democratic Party until the whole bloodstream of our Government was poisoned with enemies not only of our Nation but of every ideal of decency that we believe in. The Democratic Party and the Democratic Party alone is guilty of this act which historians of the future will doubtless classify as treason to our country.

President Truman's statement Thursday that he is standing on his order not to release the secret loyalty files in the present investigation into Communist influences within the State Department speaks for itself.

This same Democratic Party let loose in the labor relations of our country the same venom and hatred that the Communists proclaim openly is their weapon. Who gave birth and political preferment and untold power to John L. Lewis, who sponsored him and nurtured him in the belief that he has the right to bring hunger and suffering upon millions of innocent people instead of seeking to settle labor controversies with the assistance of sane government and civilized mediation of differences, of which human beings who are made in the image of God are capable? Who is responsible for stirring up and encouraging in human hearts every evil trait—suspicion of their fellow men, envy, malice, violence? This must be laid squarely at the door of the Democratic Party.

Who has tried for political reasons to break the spirit of the American people, to make pioneers like our fathers and ourselves dependent upon Government, regimented under Government regulations so that we begin to feel like helpless pawns of Government?

Who created this world power of Communist Russia that is spilling over Europe today, that is taking over China, that is at bay with us over Germany, that greedily eyes India and Africa, and that eventually plans to strangle us and crush the life out of the kind of an America that we know and have fought and worked for? Who has sold America out to Russia? The Democratic Party must take the full and complete responsibility.

Today the release of George Sokolsky, the columnist, for February 21 came to my desk. Sokolsky is the son of an American rabbi. He edited a newspaper in Russia and later worked in China and is a man of world-wide vision and in my opinion the greatest columnist in America today.

Under the title, "Let's Face It," he wrote these words that throw the situation sharply into focus. He writes:

"I was sitting in a train in conversation with a man. Our conversation grew increasingly gloomier. He hoped that everything I said was untrue, unfounded, nonsense. And the reason? He did not want his grandchildren to have to live in the kind of world that seemed inevitable from our conversation.

"Of course, he and I are not designing the next historic period. It was designed for us at Yalta. We have to get that into our heads. It was designed principally at Yalta, with side arrangements at Quebec, Tehran, Moscow and other places. There three men formed a design—an historical design of tremendous dimensions. If these men thought badly, as they undoubtedly did, we shall spend many decades getting out of their arrangements. The chain process that is started by an historic mistake is rarely arrested except by war or revolution.

"The point is that history deals with people—not with lands or boundaries or treaties, but with living, working, hoping, aspiring people. Politicians often forget that. They shove 50,000,000 souls here and 100,000,000 there. They smash a system of government and substitute another. They end a war and start another. They waste productivity and starve a hitherto productive race.

And when they have done their work and die, the heritage they leave may be, for a century, little more than blood and sweat and tears.

"It is important for us in this decade to understand precisely where we are. In 1938, we were annoyed with the Japanese and we were very angry with Hitler and Mussolini. Then came the European war, which should have been localized but was not. It became, instead, world-wide, involved us to the extent that we took it over, became the leader of one side, defeated the enemy, and found a changed world, in which the smaller of our two principal allies came out the victor and simultaneously our enemy.

"It took us a long time to understand what had happened. Could it be that those smart men who knew everything—Roosevelt, Churchill, Harry Hopkins, Hull, Stettinius, Byrnes, George Marshall, Henry Morgenthau, Dean Acheson, Alger Hiss, Owen Lattimore—could it be that they were all wrong?

"The answer of history is clearly that they were wrong. That has nothing to do with whether you like them or not; whether you are a Republican or a Democrat, a Liberal or a Conservative. None of this makes any difference, because the historic fact is that World War II was won by the Russians, and we lost it. The Russians got the spoils, and we got the expenses. They moved into first position.

"So now we have to get out of that. And as Americans we face some very tough problems.

"This is what we face:

"1. The possibility of direct attack on our soil;

"2. The possibility of economic and political isolation;

"3. The danger that the cost of safeguarding ourselves from 1 and 2 may so damage our national economy as to imperil the life which has made us the great Nation that we are;

"4. The preservation, in spite of 1, 2, and 3, of the liberties of our people, without which it hardly matters whether we succeed at all. In a word, we must not lose our freedoms no matter what else we have to do.

"So that is what World War II has produced for us. And it would not be so difficult if we did not have among us pro-Russians, pro-Britishers, internationalists, and just plain ostriches who refuse to face up with the brutal facts of history. Maybe if we could deal with this strictly as Americans, we could do something vital about it."

That is the end of the George Sokolsky quotation.

Let me repeat part of his final sentence:

"If we could only deal with this situation as Americans," he writes.

Ladies and gentlemen, there is only one party in America today that can deal with this suitation as Americans.

Here we stand—at bay with the forces of evil. Twenty years ago none of us thought these forces would ever gain the power they hold today. They hold that power because of the most ghastly conspiracy against the welfare of America that can be found in our American history.

And all the Democratic Party can do in this situation is to try to cover up.

Anything goes in America today, under the guidance of these Democratic misleaders. It is the bread and circuses period of the decline and fall of the Roman empire, all over again, only this time we in America are the victims. Our whole social structure is falling to pieces under the misrule of the Democratic Party and its evil philosophers. They have even talked of giving the atom bomb and the H-bomb to Russia to complete our destruction.

I don't propose to allow any administration or any party to protect the forces destroying the ideals of my children, mislead them, and then send them off to war to pay with their blood once more for Democratic Party folly in world affairs.

Men and women of Ontonagon, the sands of time for the Democratic Party are running out. They have built up the only enemy that America ever had in all its history that has become actually stronger than America itself. They have committed the unpardonable sin—sin against their mother country—yes, that conceivably may even mean the death of our Nation and the ideals we have known since the founding of America.

In this situation, it is a question of do or die. The Republican leadership in America must tear the control of our Nation out of the hands of its present evil Democratic leadership, or die with it.

In the words of Washington, we must once again raise a standard to which the wise and honest may repair. As he said in that earlier crisis, the event is in the hands of God—and the Democratic Party and its alliance with godlessness over the world are stacked against us.

In this crisis we have a terrific responsibility.

As we move forward in this crisis, let us tell the American people in clear words what it is that we as Republicans seek for all Americans.

Not the freedom of the anarchist, where anything goes, but the freedom of a life in which human beings may respect themselves and have reasonable hope for their children.

Not the freedom of the enemies of God and of the moral foundations of family life to destroy our civilization, but the exalted freedom of a government that protects family life, that recognizes the family as the foundation stone of human society, that protects the ideal of marriage, that protects motherhood, that protects children, that protects each family in its right to adequate food and housing, and its right to be safeguarded from such degrading influences as the commercialization of the Ingrid Bergman-Rosselini affair. We must tell the people of America that in time of stress and strain our ideal is that the American family not only is most certainly entitled to protection from hunger and want by the Nation, but that our higher goal is the freedom to work our own destiny under a system that gives the family a chance to survive as a family, and is not choked and strangled by a government that is riding the Nation to death until our economy cannot produce what people need. We must assure the people that we demand the constant improvement in the distribution of what we all produce, so that we need not resort to the criminal democratic practice of destroying food or hiring people not to produce it while other people are still hungry.

We must make clear to the American people that if a thing is good and sound and wholesome for the welfare of the American family, then the Republican Party is for it and will fight for it, and that it is the only truly American party today.

The Republican Party does not go along with or protect any power based on a philosophy that religion is the opium of the people, or that children should hate their parents if they are not Communists, or that we should practice trickery, employ cunning, and sometimes even overlook or conceal the truth, or that as long as there are idiots to take signatures seriously, to promise everything that is asked, or a philosophy that says, "Down with love of one's neighbors—what we need is hatred."

We have an appointment with destiny right now to rescue the American people from terror and despair.

It is indeed time, as Washington so clearly phrased it in that earlier crisis, to raise a standard to which the wise and honest can repair. Once again, as he said, the event is in the hands of God.

Automotive Excise Taxes

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. HAGEN. Mr. Speaker, under permission to extend my remarks, I am pleased to include the following from Mr. Lou Hosking, general manager, Minnesota Motor Transport Association, 2453 University Avenue, St. Paul, Minn.

Mr. Hosking is an outstanding authority on all phases of motortruck transportation. He has carefully and earnestly considered the automotive excise taxes from every viewpoint and their ultimate effect not only on the motor-transport owner and operator but likewise on businesses and the consuming public.

In order that the Members of the House may have the benefit of the Minnesota Motor Transport Association views as presented by Mr. Hosking, under leave previously granted, I am inserting the letter herewith:

MINNESOTA MOTOR
TRANSPORT ASSOCIATION,
St. Paul, Minn., February 23, 1950.

Representative HAROLD C. HAGEN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HAGEN: The proposed repeal of certain excise taxes, now before Congress, is of vital importance to Minnesota truck operators; and, in ultimate effect, to the thousands of businesses in our State which they serve.

I would like to enlist your vigorous support in equalizing this burden which far outweighs any monetary gains which may accrue to the Government from its continuance.

Specifically, we urge the outright repeal of the 3-percent tax on the transportation of freight and a cut-back of additional highway-use taxes to prewar levels. Even a prewar level on these taxes is not justified but your problem and that of Congress in sustaining a reasonable tax level cannot be disregarded. We are fully cognizant of it.

I firmly believe that the present 3-percent freight-transportation tax is a depressing assessment which indirectly hits the pocketbook of every man, woman, and child buying any commodity, and I further believe that a cut-back to prewar levels of other highway-use taxes would boost, rather than harm, our economic well-being. The percentage of all income paid for transportation charges on all commodities is very high—more than most people realize—and if lowering of these highway-user taxes will in effect encourage lower transportation rates, or sustain a stronger transportation system to render dollar-saving transportation, then the loss in revenue to the Federal Government will more than be offset by additional net dollars to every constituent of yours in Minnesota.

We ask that the 5-percent tax on new trucks and trailers be cut back to the 2½-percent level which prevailed before the war; that the tax on truck parts and accessories be cut back to the 2½-percent which prevailed before the war; that the tax on tires and tubes be cut by 50 percent, thus restoring prewar levels; that the tax on lubricating oil be cut by 25 percent which would restore them to the levels prevailing before the war.

We further recommend that the present Federal tax on gasoline be cut from 1½ cents to the 1-cent level which prevailed before the war.

Our association members are in highway-freight transportation. They are direct servants of the people. The freight they handle is in their possession only temporarily. Any corrective measure which will facilitate their operations is of direct and immediate benefit to the consumer.

In this connection, I must state that no other form of transportation pays the excise taxes that our members do. These motor-freight carriers are subject to corporate taxes, income taxes, and all of the other types of taxes that business or individuals in general are subject to. Yet, in addition, they must pay a special levy on their equipment, maintenance parts, and many of their major items of operating expense such as gasoline, lubricating oil, and tires. It is unfair.

There is no pretense in the excise tax that the proceeds are for highway purposes. To that extent it is a penalty to truck transportation. No other forms of freight transportation are subject to such excise taxes. They thus are placed in a privileged category and enjoy an unearned advantage.

Since the ultimate benefactors to repeal of the 3 percent transportation tax, and, to an equal extent, a cut-back on other highway-user excise taxes are your constituents and our customers, it behooves us to fight for this enactment of excise-tax repeals. We do not speak of luxuries, of items which one can do without. These taxes are on services and items which are a vital key to one's economic well-being.

I would like very much, dear Congressman, to have you actively work for this program, and would like to know if it would be possible for you personally to appear before the House committee which is considering the reductions and present our views. It will be difficult, if not impossible, for us to make this appearance in Washington. We would be very happy to hear from you.

Thank you very much.

Very truly yours,

LOU HOSKING,
General Manager.

Address of Very Rev. Vincent J. Flynn

EXTENSION OF REMARKS
OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Very Rev. Vincent J. Flynn, president of the College of St. Thomas, St. Paul, Minn., and president of the Association of American Colleges, Cincinnati, Ohio, January 10, 1950:

Ladies and gentlemen, it is a pleasure and an honor to speak to you as president of the Association of American Colleges. I am proud of the association; I am proud to have been its president during the past year.

First of all, I am proud of being president of the association for a personal reason. Quite naturally it is gratifying to me to feel that I have the esteem and friendship of my colleagues. It is naturally a matter of some satisfaction, that, after having been on the board for 3 years, my fellow college presidents would ask me to be their president. But apart from this personal satisfaction, which I, being human, have no desire to suppress, there is another consideration involved of far greater importance.

I take pleasure in being a member of this organization because to me it seems to furnish an example of the unity and harmony so badly lacking in our Nation, and in the world at large. In our deliberations, there are, of course, differences of opinion, but I know of no similar organization where there is less friction and more fundamental good will than our own; and I think it a tribute to the fair-mindedness of the membership of the association, which is predominantly Protestant, that they should have chosen for their president a priest of the Catholic Church.

Man is by nature one. That is the teaching of any theology that I know of, and sociology, as well; that is to say, human beings are essentially the same. This does not mean, of course, that all are alike in every respect; in fact, it is part of the mystery and fascination of life that no two human beings are alike in all respects. But when we say that all men were created equal, we mean that men in their very essence are the same, regardless of race, color, or creed. Christianity teaches that we were all created by the same Father, all redeemed by His Son, and that we all have a common destiny.

Until recent years, this concept of the oneness of man, although admitted speculatively, had not been brought into the realm of practical political thinking. A little over a century ago, Tennyson, dipping into the future, saw a vision of "the Parliament of man, the federation of the world." The first faint realization of his dream was, of course, the League of Nations. Today, with the extraordinarily rapid development of transportation and communication, as well as the discovery of new means of destruction, there is a more urgent clamor than ever before for world unification of some sort. We have our United Nations organization, struggling bravely to maintain its existence, in the face of enormous difficulties; we have the World Federalists, who wish to go a step further; because of our recognition of the mutual interdependence of nations, we in the United States are trying to help Europe get back on its feet. It is becoming increasingly clear that the problems of one nation are the problems of all; that, in fact, we are our brothers' keepers.

To achieve world unity is, of course, a colossal task. The difficulties are all too obvious. But this is no excuse for abandoning the attempt.

If world unity is a good thing, obviously unity within a nation is a good thing, and likewise within the separate political and social units of the nation—the various States or Territories, the counties, the cities, the families. Anything which sets a man's heart against his brother is wrong; anything that binds him to his brother in charity is good; and because I believe that the Association of American Colleges falls into the second category, I think that it is good.

Now it would be, indeed, an extremely optimistic person who would expect perfect harmony among all men for any length of time. But that does not lessen, in my opinion, the moral obligation of mankind to strive for this goal. And there is always the possibility of a certain amount of success. Even the most pessimistic would admit that.

If we are to have any success in achieving unity and harmony among men, we shall need first to discover what it is that divides and separates them. To me it seems that the answer lies in the very nature of man as he exists today. Briefly, man, as we know him, is an imperfect creature both in his intellect and in his will. Men disagree because in many matters the truth is by no means immediately evident; its discovery is often a long, tedious process. Men differ in intellectual powers, as well as in the cultivation of those powers. Only God is all-wise; only He comprehends truth in its fullness. And men disagree because of an exaggerated selfishness in their hearts. Most of us, according to Aristotle, follow our senses rather than our reason in competing for "wealth, honors, and bodily pleasures." It is the exceptional man, says Aristotle, who is truly a lover of self, in desiring that he should always "act justly, temperately, or in accordance with any of the other virtues," and in general in trying "to secure for himself the honorable course." And from the imperfect understanding of an issue by an imperfect intellect, and from an inclination toward an irrational selfishness, come the deforming passions of fear, of anger, of hatred, of the desire for revenge.

These are the things, in my opinion, which divide and separate man from man.

The next question is, what kind of unity do we want, and how can we achieve it?

I think that we may as well face the fact that we are not likely soon to get the whole race, or our whole Nation, or our whole city, to agree on anything. Ideally, of course, if we accept the theistic position, we should all have the same faith. But actually we live in a world filled with Buddhists, Mohammedans, Shintoists, Jews, and so forth, not to speak of the various Christian bodies. All believe in some sort of Supreme Being, all have some sort of moral code. If we are ever to have one world, or anything like it, we must, I think, first accept the fact of diversity, and secondly, we must tackle the problem with charity as our basic attitude. We shall need, to be sure, our experts in politics, economics, and sociology, but all of our technicians will avail us nothing unless we work together in a spirit of mutual love. Let me explain what I mean.

When I use the word "charity" or "love" as existing between man and man, I mean that one has a desire for the total good of the other. Life, as someone has said, consists in a series of relationships with other persons. The relationships are not between ideas; they are between human beings. Now, it is quite possible for me to love a man while hating his ideas. According to the precept of Christ, we must therefore love even our enemies, and do good to those that hate us. We need not agree with the ideas of our enemies, or with the things that they do. But we must wish their well-being in time and in eternity, and be willing to do anything within reason to help them attain it. And the reason for this is the unity of the race—we are all children of the one Father. Until the leaven of this idea somehow permeates the mass of men, or at least their leaders, international unity will have, I fear, very little chance.

The same is true, I believe, with regard to national unity, State unity, civic unity, and even family unity. You may begin at the top or the bottom of the scale, but you will find no real unity in a body of men without charity. Differences and disagreements will exist, even in the best of families. But I appeal to your experience: where love is present, agreement can usually be reached—at least in the field of action, if not in that of opinion. Where love is not present, no unity is likely. There may be uniformity, or conformity, enforced by the police. Totalitarian states try to reach unity through this method. But is it a method repugnant to all that we Americans cherish.

Since ours is a national organization, let us look for a moment at the present state of our Nation, from the point of view of national unity. We find here in America persons of the most widely diverse ancestry, representing all, I daresay, of the races of men, and holding various political and religious beliefs. Whether we wish it or not, this diversity is going to continue for a

long time. Can there be any harmony in this pentecostal population?

I think that there can be. During the war, Americans exhibited a high degree of unity indeed. The political parties got together on a bi-partisan program; labor and capital buried their differences; Army and Navy chaplains of different faiths worked side by side, and there was comparative peace between their various coreligionists. But now that the emergency—that particular emergency, the threat of utter destruction—has passed, we are demonstrating to the world that as a people we can quarrel among ourselves as lustily as the next.

While I deplore any unseemly disputes, of course, in the realms of politics and economics, I am not nearly so troubled by them as I am by those in the realm of religion. And here the situation is none too good. In recent years there has been a resurgence of bad feeling between Protestants and Catholics in the United States. Without attempting to fix the blame, we can all agree, I am sure, that the fact is highly regrettable. It is regrettable because, as I have already said, anything that sets brother against brother is regrettable; and it is especially regrettable because it gives scandal to the unbeliever, who like ourselves—according to Christian teaching—has been made to the image and likeness of God. But is he likely to abandon his unbelief and join our ranks when he sees us quarreling like heathens? Woe to him by whom scandal cometh. Which Christianity? is the question the puzzled pagan asks when we invite him to accept the faith of Christ. By this shall all men know that you are my disciples, if you have love one for another.

Now what can we possibly do to keep the peace between persons of different religious faiths? Shall we fight it out with firearms? Few, I hope, wish that solution. Shall we send missionaries to each other? In a sense, we are always doing precisely that. By our lives (God forgive us) as well as by our words, we are trying to persuade others of the correctness of our views. But what if we cannot? Must we then accuse each other of bad faith? Hardly. The Christian believes that it is only God Himself who can scrutinize the secrets of the human heart; for that matter, any man of sense will agree that he cannot with certainty know the motives of another.

What program then shall we recommend? The program that men of good will have always followed; the program that even civilized pagans have followed, at least to a degree. We shall not go about picking quarrels about doctrinal differences, but we shall try to cooperate with each other in matters that affect the common good. I do not mean that doctrinal differences are unimportant. They are important, unless truth is unimportant. But we must accept the fact that, for the present at least, we must live in a world of many religious faiths. The question is, How can we live and work together without compromising our integrity?

One answer is that we are already doing it, both in America and abroad. For years it has been common to see Catholics and Protestants working side by side in matters of civic and community concern—the Red Cross, the Community Chests, school boards, city improvement committees, and so forth. Similarly we find both banded together for their common good in labor unions, in the National Association of Manufacturers, in business houses, in the various associations of professional men. For centuries, this has been true among men devoted to the fine arts, and for almost as long, I should say, among scholars.

Let me give you an instance from my own experience. Some years ago I had the privilege of spending 15 months in various libraries in England, France, Italy, Germany, Austria, and Belgium. At Oxford, Cambridge, and the British Museum, I was treated with the same courtesy as I found at the Vatican library. And similarly in the libraries of France, Germany, Belgium, and Austria, when I seldom knew whether I was speaking to a devout Catholic, a devout Protestant, a Jew, a free-thinking agnostic, or a professed atheist. And when I was at the Vatican I learned that the building had recently been repaired by the Carnegie Foundation for International Peace, because the members of the foundation had regarded the library as promoting peace—scholars from all lands use it—and that money from the same source was being provided to pay for a new card catalog. And this fact is also instructive: when I was about to leave London for Rome, I was given a letter of introduction to an official in the Vatican library by a Jewish scholar from the University of Heidelberg, who happened to be working in the British Museum at the time, and no one, either at the museum or at the Vatican, thought it odd. Of course I could probably have got into the Vatican library through other channels; but the point is that my friend in London had a friend at the Vatican, and he wished me to receive special attention. Furthermore, when I mentioned to the officials at the Vatican the names of two of my friends at the University of Chicago (where I received my degree), Prof. Charles H. Beeson and B. L. Ullman, I was treated with added respect: Mr. Ullman had been for years a correspondent of the then Pope, Pius XI, when the latter was librarian at Milan, and later in the Vatican; Mr. Beeson, under whom I had studied, was recognized abroad as one of the two or three leading paleographers in America.

But, it may be pointed out, our present-day religious quarrels are due, not so much to doctrinal differences, as to the feeling of one body that its interests are being threatened by another, or a fear that they may be threatened in the future. To be specific, some Protestants in the United States fear that if Catholics ever became strong enough to do so, they would deny freedom of worship to persons of other religious faiths. And some Catholics have a paralyzing fear of certain Protestant organizations.

Now there is historical reason for fear, I admit, in both instances. For various reasons, civil liberties have not developed throughout the world as they have in the United States. But, to my mind, the important question is this: Are we in this country likely to follow exactly the same pattern in human relations as that which has been followed elsewhere?

Personally, I do not think so. I believe that most of the Protestants I know have no desire to curb my freedom of worship. And I trust that most of the Catholics I know are equally fair.

American history, I believe, supports the view that we are, in truth, a freedom-loving people, and that we are steadily making advances in the domain of human rights. Our forefathers came to this country, not to think alike in political and religious matters, but to live peaceably with their own convictions. No matter what has happened elsewhere, I believe that we in America have developed, and that we can in the future further develop, so strongly our understanding of the rights of the individual conscience that no fear in this regard need be felt by anyone. I feel that we Americans can learn to live together in peace. If we are to look at the matter realistically, the cross-currents of interest—political, economic, and social—are so diverse in America that people here are not, in the main, arrayed for or against each other chiefly on religious grounds. And I doubt, too, whether, in the foreseeable future, any responsible religious body would wish to enslave another. For that would mean that the majority of Americans would be reversing their thinking completely; and it takes a long time indeed for people to make such a shift. And the mere fact that we Americans are gradually getting to know each other better helps the situation enormously: it is usually the stranger whom we dislike and mistrust.

Another reason for optimism in this matter, I think, is the development in some quarters of a new approach to the question of religious differences. Whereas some persons have begun the discussion by declaring that error had no rights, others have been pointing out that rights inhere in persons, not in abstractions; and that all persons, even those in error in their thinking, have rights; and that, furthermore, we must be extremely careful of the rights of the individual conscience even when it is in error. Reduced to practical terms, this means that for every person his conscience is the guide which he must follow, even though he be objectively in error. For example, if a college instructor's conscience tells him—however erroneously—that he must liquidate the president of the institution, then he is morally bound to do so. Certain inconveniences, to be sure, result from this doctrine; but it is still sound, according to my theological friends. The doctrine of the rights of the erroneous conscience is, of course, recognized in the prevalent attitude toward conscientious objectors to military service; most people regard the position of the objectors as erroneous, but still respect their right to act according to their own convictions. The same doctrine underlies the legislation in some churches, among them my own, which forbids members to baptize a person against his will, even though these churches regard the person in objective error if he does not wish to be baptized.

There are, to be sure, people in this country who would impose an artificial harmony upon us by trying to make us all agree upon everything. As a step toward this idealistic condition, they would do away with the private educational institutions. They would say, for example, that it is wrong for the Lutherans, the Baptists, the Catholics, and other religious denominations to have their own colleges; they hold that such a condition makes for division among our people. But if I understand my history correctly, the early settlers came to America so that they might believe as they saw fit, in matters political, economic, religious, and otherwise. And since they themselves founded church colleges, I think that they would most heartily applaud our having colleges today maintained by the different denominations.

Why do I speak about these matters to college administrators? Because I think that they are relatively free from the prejudices which militate against our national unity; because I think that they have been foremost in the fight for a true unity, a unity based on understanding and sympathy, not force; because I think that by virtue of their position they can do more than any body of men of like size to promote this idea of unity; because I think that they have given an admirable example, in this association especially, of the patient forbearance and of the Christian charity which must underlie all our efforts to effect peace and harmony among Americans and among all the peoples of the earth.

Nero Was a Piker

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. BROWN of Ohio. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the

RECORD, I include therein a very thought-provoking editorial from the February 24 issue of the Dayton Press, of Dayton, Ohio:

NERO WAS A PIKER

Deep in the wilderness of Siberia some fifty-odd miles from the village of Aleksandrovskoe, buried far down in the bowels of the earth behind masonry walls 30 feet thick, thousands of scientists labor diligently to build up their stock pile of uranium bombs—which they were not supposed to know how to make for another 5 years. And they are not far afield in the processing of the hydrogen bomb, in the mastery of guided missiles, in the art of making war by bacteriology. Already these grim men of death have given Stalin formidable fleets of long-range submarines armed with apparatus for lobbing A-bombs into our coastal cities from spots far below the horizon.

The men of the Politburo are realists. They hold in their hands the fate of two billion human beings. They would risk anything—even the complete destruction of the world—to gain their ends.

On the other side of the world from them the leader of a great nation pushes away his $100 dinner plate, climbs slowly to his feet and launches into his old tirade against special interests. He twists the opposition party for having no platform and with the cocky assurance born of smug victories predicts the overwhelming defeat of the enemy at the 1950 election, and the eventual passage of his hand-out program which would make all of his people wards of the Government. And the next day the men in the Kremlin applaud, for they know that as long as minds are occupied with trivia there is nothing to fear.

Nero was a piker.

Half the world goes hungry to bed. Children whimper in their sleep and strong men stare vacantly into darkness in the direction of that other land across the seas where millions of bushels of potatoes rot in storage bins or are shoveled to hogs too fat to grunt their thanks; where billions of dried eggs and oceans of powdered milk distract Government men from their plans to grant renewed subsidies to bring greater production of potatoes and eggs and milk.

Hungry children, of course, know no better, and even strong men may be forgiven if they cannot understand the ultimate sin of wasting food while millions are hungry, or the spectacle of a strong Nation dissipating its good will.

Nero was a piker.

War threatens and there is no peace at home. Half a million coal miners are in open rebellion against their Government, for they flout the orders of the high courts and thumb their noses at executives who by their inept handling of the emergency have given encouragement to anarchy. A Nation-wide telephone strike is at hand and one of the great unions of the country is making plans to sabotage communications by "jamming" the switchboards of the Nation.

With criminal disregard of facts, the Secretary of the National Defense blurts out that if this country were attacked at 4 a. m. it would be fighting back at 5 a. m. Without coal, Mr. Secretary, and telephones? A few well-planted A-bombs would paralyze the Nation. There would be no time to get the miners back under ground, to haul fuel to the far stretches of the country, to make the weapons of war we should have to have. It would be a short war.

Congress indulges in an oratorical binge; the President furrows his brow over the details of his socialistic program. The people must have their beer and their television and their movie scandals. And nobody has told them their ship is without a competent helmsman, that bureaucracy is a bloodsucker, that statism, socialism, and communism are one and the same.

Nero was, indeed, a piker.

A Proposed Law To Destroy Small Business—S. 1008

EXTENSION OF REMARKS
OF
HON. RAYMOND W. KARST
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. KARST. Mr. Speaker, on March 1 this body voted to appoint new conferees for S. 1008. The House also voted to table the Carroll amendments which a year ago it had voted to make a vital part of S. 1008, if enacted into law. If this measure is finally passed by the Congress without the Carroll amendments it will become, in my opinion, one of the most destructive measures ever passed by Congress. It will give big business a free hand to destroy small business through the method of price discrimination which the Robinson-Patman Act sought to prevent. It will also give big business, whose plants are largely concentrated in the northeastern part of the United States with an overflow into the Middle West, a free hand to destroy the industrial development of the South and West which occurred during the late war. Finally it will put monopolists beyond reach of existing antitrust laws—give them a legal green light in the future to finish their efforts of three-quarters of a century to monopolize industry.

I cannot understand how anyone who believes that small business is entitled to fair play in markets, who believes in the right of the South and West to grow industrially, who is opposed to monopoly in trade could have voted to table the Carroll amendments. Yet I am sure that a good many of my colleagues voted that way last Tuesday because they did not understand the real purposes of this bill. In the debate which preceded the vote of the tabling of the Carroll amendments I listened to many inaccurate statements made about this bill by those advocating its passage minus the Carroll amendments. I think such misstatements were an important factor in obtaining the votes necessary to table those amendments—and today I feel it imperative to point some of them out. I call your attention to the inaccurate representations of my colleague from Pennsylvania. Because of the great popularity and prestige of the gentleman in our body his misstatements undoubtedly influenced many members who otherwise might have voted differently. I like the gentleman and admire him, too, but on a measure as crucial as S. 1008 I feel it my duty to challenge them.

From its inception S. 1008 has been represented as simply a measure to clarify existing antitrust laws, so as to make it clear that individual sellers acting independently can quote or sell at delivered prices and can absorb freight. It has been claimed that the necessity for such clarification was caused by the obiter dicta remarks of one Justice of the United State Supreme Court when this Court convicted the cement industry of using a basing-point system to eliminate competition among producers of cement in violation of existing antitrust laws.

This was the beginning of the smoke screen behind which the true purposes of S. 1008 were skillfully hidden. The obiter dicta remarks of the Justice—and I have read them carefully—do not say that sellers cannot absorb freight in quoting or selling at delivered prices. All the Justice said was that the issue of whether a seller acting independently could or could not abosorb freight had not been determined by the Court in the Cement case. But the proponents of S. 1008 seized upon this obiter dicta, claiming either that the highest Court in the Cement case had actually declared that freight absorption under the existing antitrust laws by sellers acting independently was illegal or that it left the whole matter in a state of confusion. Obviously the Court had not declared freight absorption illegal where sellers acted independently. It had only ruled freight absorption out where sellers, as in the cement industry, had acted in concert to use freight absorption so as to eliminate competition in the industry. The cry, that the obiter dicta remarks of the Justice had left uncertain the whole status of whether sellers acting independently could absorb freight under existing antitrust laws, was calculated and without substance.

The Federal Trade Commission had brought the suit against the cement industry. Its former chairman, Robert E. Freer, testified before a Senate committee that, in his opinion, the existing antitrust laws did not prohibit freight absorption by sellers acting independently. Mr. Walter Wooden, associate general counsel of the Commission and the Commission's prosecuting attorney in the Cement case, also testified before a congressional committee that this was also his opinion—that the Commission had never brought a case against sellers who were acting independently in absorbing freight. Mr. Everett McIntyre, Chief of the Commission's Division of Monopoly Trials, who assisted Mr. Wooden in the prosecution of the Cement case, also testified before a congressional committee that this was his opinion, too. In response to questions put to it by counsel for the interstate and Foreign Commerce Committee of the Senate, the Federal Trade Commission itself on February 10, 1949, stated to the committee its opinion that freight absorption by sellers acting independently was not illegal under existing antitrust laws. It reaffirmed this position in a letter to the Interstate and Foreign Commerce Committee of the Senate on March 1, 1949. It further affirmed the same position in a letter to Senator ESTES KEFAUVER as late as January 18, 1950. Now the Federal Trade Commission is charged with the enforcement of the antitrust laws by Congress and it had given businessmen ample assurance that sellers acting independently would not be prosecuted if they absorbed freight in quoting or selling at delivered prices. In the face of the Commission's repeated assurances, there was no confusion about the whole matter. Yet the proponents of S. 1008 have gone on claiming that there is, and that clarification of existing antitrust law is necessary.

But in his remarks to the House on March 1, the gentleman from Pennsylvania stated to this body that the obiter dicta remarks of the Supreme Court Justice had been picked up by the district court judge in the Rigid Steel Conduit case of the Federal Trade Commission and cited as the law, and that because of this, S. 1008 was necessary. The plain inference was that the District Court had interpreted the obiter dicta of the Supreme Court Justice in the Cement case to mean that sellers acting independently could not absorb freight in quoting or selling at delivered prices—a situation which, if true, would have justified a bill to give sellers acting independently the legal right, under the antitrust laws, to absorb freight in quoting or selling at delivered prices.

I am first surprised that my learned friend from Pennsylvania should not know that the Rigid Steel Conduit case was never heard in any district court of the land. Cases of the Federal Trade Commission go directly to a circuit court of appeals, and it was the Circuit Court of Appeals for the Seventh Circuit which passed upon the Rigid Steel Conduit case. I ask the gentleman from Pennsylvania to bring in the judges' opinion in that case and show this body any such construction of the obiter dicta remarks referred to. The fact is that the Judges did not cite the obiter dicta remarks of the Supreme Court Justice in the Cement case as law. At no time in the trial of the Rigid Steel Conduit case did either the Federal Trade Commission or the judges contend that freight absorption by sellers acting independently was illegal under the existing antitrust laws. When the Federal Trade Commission wrote the order in this case, the defendants petitioned the Commission to amend the order so that the right of sellers acting independently to absorb freight would be spelled out. The Commission rejected the petition stating that the order as drawn did not prohibit such action and went on record again that the Commission considered that existing antitrust law allowed this right.

My esteemed colleague from Pennsylvania also on March 1 sought to convey to the Members of this body that extensive hearings had been held on S. 1008 and that, when the bill was considered by the full Committee on the Judiciary of the House, Mr. WRIGHT PATMAN was accorded the privilege of testifying on it.

We who are opposed to S. 1008 have insisted that on this bill no adequate public hearings have ever been held—and we are absolutely correct in that claim. On the Senate side, it is true that extensive hearings were held by the Interstate and Foreign Commerce Committee on a bill by Senator CAPEHART, of Indiana, in the Eightieth Congress. It is also true that in the Eighty-first Congress, this Senate Committee held hearings on a bill by Senator JOHNSON of Colorado. There were thus public hearings on both the Capehart bill and the Johnson bill. But S. 1008 is neither the Capehart bill nor the Johnson bill, differing in essential details from both. On the Senate side, S. 1008 was submitted as a substitute for the Johnson bill on the floor of the Senate. The bill was passed without any public hearings whatsoever on it. On the House side there were no adequate public hearings on this measure.

The subcommittee of the House Judiciary Committee held an open hearing in the sense that the witnesses could be heard by the public. But the fact is that they permitted only two witnesses to appear. Both of these witnesses were representatives of Government and favored passage of the bill. They refused to permit representatives of small business organizations and farm groups to testify at this hearing in opposition to the bill. From the standpoint of an adequate public hearing on this bill, the hearing of the subcommittee on it was a farce. When the subcommittee reported the bill to the full Judiciary Committee the chairman held executive sessions and also refused to allow representatives of small-business organizations and farm groups to appear in opposition to the measure. On the House side, therefore, small business was completely denied an opportunity to be heard at any hearing held on this bill, though small business claims that the bill is designed to destroy small business.

During the executive sessions of the full House Judiciary Committee, the gentleman from Pennsylvania says that Mr. PATMAN testified. Even if Mr. PATMAN had testified, both the hearings of the subcommittee and the full committee on this bill would have been ridiculously inadequate. But when he says Mr. PATMAN testified, I am informed by the gentleman from Texas that this is not an accurate statement. The gentleman from Texas [Mr. PATMAN] says he appeared before the full committee in executive session to protest the inadequacy of the hearings held on the bill on the House side and to urge that adequate public hearings be held before reporting the measure to the House. While Mr. PATMAN was there the committee asked him some questions about the bill and Mr. PATMAN naturally replied. But had Mr. PATMAN been testifying, he would have come prepared to make a full statement on the measure and not simply to reply impromptu to questions asked him. In my opinion the gentleman from Pennsylvania misled the House when he sought to convey the impression that adequate public hearings had been held on S. 1008 and that Mr. PATMAN had testified before the House Judiciary Committee on it.

No, gentlemen, the argument of those advocating S. 1008 that it is needed to clarify existing antitrust law so that sellers will be in no doubt that they can legally absorb freight in quoting or selling at delivered prices is shabby subterfuge. It is clear to me that the repeated statements of the Federal Trade Commission ought to be enough to convince any seller that he already has such a right under existing law. But if the proponents of S. 1008 were really sincere about it being necessary to clarify existing law they could have submitted a bill containing only one sentence to accomplish that objective. The truth is that the clarification argument is only a smoke screen to hide the real and destructive purposes of the bill.

My colleague from Pennsylvania is correct when he told the House that S. 1008 does not seek to make basing point pricing systems legal in defiance of the decision of the Supreme Court in the Cement case. But he did not tell the House that the bill provides another pricing system which is made unreachable by the antitrust laws and which can be used fully as effectively as basing-point systems to suppress price competition in business—the single zone pricing system.

Nor did the distinguished gentleman from Pennsylvania disclose to the House that the bill would in effect wipe the Robinson-Patman Act off the statute books. To the contrary he strove also to confuse and becloud this ominous issue. He told the House that the Kefauver amendments—later strengthened by the Carroll amendments—were intended to legislate the rule of the circuit court of appeals in the Standard Oil of Indiana case. Nothing could be further from the facts.

Under the old Clayton law passed in 1914 price discrimination was forbidden in trade. But this prohibition could not be enforced because of another provision in the Clayton Act. This provision tolerated price discrimination where businessmen were meeting competition. The result of this second provision was that the first was reduced to an empty gesture. The Robinson-Patman Act in 1937 sought to close this fatal loophole in the old Clayton Act. It provided that discriminatory prices could not be defended on the ground of meeting competition if there was an injury to competition from such prices. In the Standard Oil case referred to, the FTC charged the oil company with giving discriminatory prices to certain of its buyers. The company defended on the ground that it was only meeting competition. The court ruled that this defense was no longer admissible under the Robinson-Patman Act and since the discriminatory prices given had injured competition the company was guilty. Now the Kefauver amendments were put into S. 1008 to prevent the bill from undoing by legislation the decision of the circuit court of appeals. Without such amendments the plain purpose of the bill was to restore the fatal loophole in the Clayton law which permitted price discriminators to get by with such discriminations on the ground that they were meeting competition irrespective of whether competition had in fact been injured. The Kefauver amendments consequently sought only to preserve existing antitrust law—and not as said to "legislate the rule of the circuit court of appeals in the Standard Oil of Indiana case."

I sincerely hope that my colleagues will take account of the inaccurate statements of the gentleman from Pennsylvania made in this body on March 1, so that when S. 1008 comes back to the floor from the conferees they will then either vote it down or restore to it the Carroll amendments.

Message of Luis Muñoz Marín, Governor of Puerto Rico, to the Seventeenth Legislature

EXTENSION OF REMARKS
OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 6 (legislative day of Wednesday, February 22), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD the message delivered by Luis Muñoz Marín, Governor of Puerto Rico, to the seventeenth legislature, on February 23, 1950.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

MESSAGE OF LUIS MUÑOZ MARÍN, GOVERNOR OF PUERTO RICO, TO THE SEVENTEENTH LEGISLATURE AT ITS SECOND REGULAR SESSION

Members of the Legislature:

In my message of last year I spoke to you of the sense of proportion and scale of priorities which should be kept in mind when considering the great and difficult task in which the people and the government are engaged. We have all made a great effort to act according to those norms in the year which has just come to an end. It is such a decisive matter for Puerto Rico that we act each day with greater precision on the basis of this understanding, that I believe it worth while to examine the subject more closely at this time.

The economic goal of Puerto Rico is to increase production as effectively as possible so that the greater number of Puerto Ricans that there are each year will have fewer days of unemployment, a higher standard of living, and depend less and less each day on aid and privileges which are not the result of their own productive activities. It goes without saying that this economic objective is not only desirable in itself but is also a basis and means for a more tangible justice among men and a broader possibility for the enjoyment of cultural and spiritual values. However just is the justice accomplished with insufficient means, it still falls desperately short in its practical results. The human spirit, besieged by the claims of material existence, is not as free as it should be.

The aim of production must also be to bring about a balance between importation and exportation. During the war Puerto Rico accumulated a favorable liquid balance of $260,000,000 because its exports to the continental United States exceeded in this amount its imports from the continent, which were greatly reduced due to wartime restrictions. When the war ended, and normal shipping conditions were reestablished, and emergency restrictions eliminated, Puerto Rico began to import more than it exported. Nevertheless, many millions of dollars come into Puerto Rico in other forms than that resulting from export trade, such as for example, the payments to veterans, the expenditures of the Army and Navy and civil Federal agencies, Federal aid for highways, public health, and vocational education. These forms of income compensate in great measure for the lack of balance in trade, but do not eliminate it. In 1948, for example, imports amounted to $170,000,000 more than exports, but since $128,000,000 came into the island from the noncommercial sources above mentioned, the unfavorable trade balance that year was only forty-two million. After substracting the $42,000,000, a favorable accumulated balance of $191,000,000 remained. For 1949 it is calculated that the discrepancy amounted to $22,000,000, leaving an accumulated balance of one hundred and sixty-nine million. Nevertheless, this debt of the economy of the United States to the economy of Puerto Rico is gradually being reduced, and if the unfavorable balance of trade is not corrected within a certain number of years, the debt will disappear completely and a real unfavorable balance will accumulate against Puerto Rico. This situation may be aggravated by the fact that the expenditures of the Army and Navy are being reduced, and that the rights to various types of payments to veterans are being exhausted. An increase in production is necessary to counteract this situation as well as to reduce unemployment, and to continue raising the standard of living and to support the many thousands of new inhabitants in Puerto Rico every year. It is necessary, furthermore, in order to make Puerto Rico less and less in need of Federal aid and Federal expenditures which do not depend on our efforts or our will. It is to achieve all these objectives that we must continue up the steep road along which we have begun to climb.

The struggle to achieve this economic objective we have called the battle of production. This is a battle which is being fought not only by a government responsible to the people but by the people themselves of all economic classes, who are those who gave the Government the order to fight.

To fight this battle and win it, it is not enough to have the will to win which the people of Puerto Rico have so patently developed, and which has given so much sympathy and prestige to their efforts in the eyes of those on the outside who observe and aid us. Nor does the forward march of technical development suffice, nor the skills of the workers, nor the know-how in all branches of production and marketing: even if we had all these things, and we do have some of them and are acquiring others, still one thing would be lacking. This is the stern and unflinching willingness to sustain a clear concept of priorities in regard to all the things we want to do and which have to be done to improve the living conditions of the people. A great deal of clear thinking is necessary if we are to make a conscientious choice among a thousand important things, which cannot be done at the same time, either with the funds at our disposal during 1 year or over a period of years, and to decide which of these important things ought to occupy first place on the priority list, and which of these important things must unhappily be left in the thousandth place.

We have striven toward this goal, but we must strive harder with every passing day.

Naturally, in a country with abundant natural resources, with a population which is sufficient, but not extreme in proportion to its resources, where it is necessary merely to maintain a situation which has already been achieved, the force with which this concept of priority must be applied may be much less than it has been in a community like Puerto Rico, where the natural resources are scarce, where the density of the population constitutes a problem, and where a great many matters must be attended to before we reach, after a stiff uphill climb, the plateau on which we may devote ourselves to the mere maintainance of a favorable situation already achieved.

The basic dilemma of priorities is that it involves choosing between great services which the people greatly need, and the great productive effort which the people greatly need, in order to develop and maintain those same services, and all the other aspects of a better life. Out of increased production come the means for giving better service to the people, while only a few services may result indirectly in an aid to greater production, and others, worth while in themselves from a humanitarian standpoint, result in no aid whatever to production.

Our tendency, as men who have been deeply identified with the great suffering stoically borne by the masses of our people, is to extend to them the services they need and which they so nobly deserve until we have spent the last cent available for such services. But if we allow ourselves to be carried away on the tide of this very human and decent tendency, we shall never be able truly and permanently to save our people from those same sufferings that so deeply move the heart, and will run the risk that our sentiments will tell us to employ all of our means on temporary relief, only to find ourselves powerless later on to effect a complete and permanent cure. The poverty-stricken farmer must exercise great will power not to assuage the hunger of his children with the grain he has with which to sow his fields. If he does not exercise his will power, greater still and more irreparable will be his hunger later on, but if he does exercise it, the crop he reaps will reward his sacrifice.

The fundamental decision which the people of Puerto Rico have to make, and on which will depend multiple minor details, in harmony with that decision is how to divide their present income between the amounts which are to be devoted, on the one hand, to consumption—by private citizens—and to services—by the Government—and, on the other hand, the amounts which are going to be devoted to improving and encouraging, and cooperating with, the increase in production.

That is to say, the dilemma lies between investing and spending. The more that is spent, the less there is to invest. The less that is invested, the less there is to spend later on. The more that is invested, the more there is to spend later on. Spending is the easier alternative, and furthermore, the results of spending, though more temporary, are more immediately visible. Therefore we must exercise our will power in order to invest as much as possible and spend as little as possible, since this is the way to put an end to the present situation, to enable our people to free themselves from want as quickly as possible, and achieve a modest degree of prosperity and security.

In pointing out the priority which investing should have over spending, I refer not only to the fundamental policies of the Government, but also to policies which ought to take root in the whole community of Puerto Rico. At the most humble level, some grain for the furrow, not all for the loaf. On a higher level, fewer useless luxuries, more concentration of capital in the furrow of dynamic production. Naturally it is true that at the lowest level there is sometimes not a single grain for the furrow which is not needed for the minimum diet, while on the higher levels there is a considerable amount spent on all kinds of luxury items, which might be converted into productive investment.

The work of government, as far as priorities are concerned, is divided in three parts: First, the creation of production, or direct inducements of production; second, services which contribute indirectly but basically to production; and third, services of unquestionable human value which nevertheless do not contribute, except very indirectly, to production. Among those services which, without being production or direct encouragement of production, are nevertheless necessary to productivity, are education, health, especially preventive medicine, pure water supplies, highways, and industrial, commercial, and agricultural research and experimentation. It is evident that an industrial civilization cannot reach a high point of efficiency and competitive opportunity in a community which bears a heavy

burden of illiteracy, deficient general and technical education, and bad health. Such services are therefore desirable, not only for the human values implicit in them, but also be ause they form an essential part of the economic development toward which we are struggling in the battle of production. Of course, if one wishes to stretch the interpretation, there will always be arguments to prove that almost any service should have priority because it is connected in some remote way with production. But not to artfully search for such far-fetched interpretations is part of the self-discipline that the situation requires.

This brings us to a great dilemma as to what our taxing policy should be in regard to (1) stimulating prior investments in industries and crops necessary for winning the battle of production, and (2) providing those public services which are not only humanly desirable but which form an inseparable part of the productive efficiency of the country. The greatest inducement to private investment in production is a tax rate which in general is low, and for this reason attractive to industries. I realize that this is better than a high rate with total exemption for certain new industries. We are trying to find a way to establish such a system, at the same time honoring all legal obligations contracted with new industries which have been established under the tax-exemption law. But it is not easy to find, in the case of Puerto Rico, a system which, in addition to being attractive to investors, will produce sufficient income to enable the Government to pay for such public services as education, health, experimentation, and research, without which the industrialization resulting from the investments would not be really effective.

We are struggling with this difficult problem, and in examining it closely we see the possibility of a system of taxation which, without special exemptions, would fall lightly on those who increase production, and which would give us the funds necessary for the services inherent to production by imposing heavier tax burdens on those activities which are not closely allied to boosting production. The treasurer of Puerto Rico has made some recommendations in this respect, but we are still not in possession of sufficient knowledge of the problem to attack it at its roots.

I know that the people of Puerto Rico have made up their minds to free themselves from extreme poverty and insecurity. I know also that they are willing to make the sacrifice that this implies. I know that we are willing to tighten our belts during these first years of our economic development, if we can see clearly that this is leading us, slowly but surely, to overcome once and for all the difficult situation of our people. I also wish to point out that if the spirit of sacrifice is to be found in all, even in those for whom their poverty makes it more burdensome, the example must be set by those who, because of their superior economic position, find the sacrifice less difficult. I am also fully aware of the responsibility which this places on our shoulders—yours, legislators, and mine. It is up to us to see that this sacrifice is not in vain. Every dollar invested, instead of spent, represents a renunciation of human needs for pursuit of a hope. It is for us to defend that hope so that its fulfillment will not come to naught.

At this point I must inform you that although the economy of Puerto Rico is saving and investing between thirty-five and fifty million dollars a year, this investment is much less than we need. Our studies reveal that no less than $80,000,000, probably $100,000,000, is what the Puerto Rican economy, private as well as public, ought to save and invest each year if our expansion is to carry us to the goal within a period of time that is not too long for even the most robust stoicism and the most vigorous hope. Our economy must eliminate that difference on the basis of greater investments, and we should count not only on those which may come in from outside, but also on those which are the fruits of a sober understanding of the situation of an attitude of the people based on that understanding, and of legislation which gives courageous recognition to these realities and takes the necessary steps to deal with them.

The Government of Puerto Rico has contracted an obligation with the people who have entrusted it with the struggle to solve their difficult problem of existence. This implies that we carefully examine the balance between what it is necessary to invest and what must be spent, in the light of our fundamental obligation to increase the productivity of Puerto Rico. This obligation which the Government has in regard to expenditures of public funds, should similarly be a matter of conscience and foresightedness for private citizens in making expenditures on their own initiative.

In striking a just balance between what the Government should invest in increasing production, directly or indirectly, and what it should spend on giving services which do not in themselves increase production, let us carry forward each day in greater harmony our established practice whereby both the executive and legislative branches are at the same time motor and brakes, rather than dividing the functions so that one branch will be the motor and the other the brakes. In other words, I should not be the one to propose an attractive but secondary baseball park, and you the ones who have to remind me that the productivity effort comes first. Nor should the roles be reversed; rather should we both feel the responsibility of creative risk and conscientious sacrifice, although we may come to different conclusions. Both you and I, all of us, must realize what it means to think in terms of a government of the poor and for the poor.

A government of the poor and for the poor is not a government which invests little or spends little on legitimate services. That might be perhaps a government of the rich for the rich, who, because they were rich, would be unwilling to contribute of what they had, and would not need to have others contribute to what they had. A government of the poor for the poor is a government which should use all its economic powers, without haggling, but within a strict and careful system of priorities, to raise the country's level of production as rapidly as possible to the point at which extreme poverty and insecurity will disappear from the life of man.

The idea which I wish to drive home to you and to the people of Puerto Rico is that of emphasis, of point of view, of what must be attended to first, of priorities of action. Each one must collaborate, thinking independently, to make clearer in the minds of all what the true priorities are in each case, in consonance with the common goal. What I ask of you is that we strive together and that together we keep vigil so that in deciding on each expenditure or public investment, and on the encouragement to be given to private investment, we conscientiously apply the criterion of what will help most to end—to end once and for all, and not just mitigate in part—the extreme poverty of our people.

Fellow citizens of the legislature: my most hearfelt recognition for the noble collaboration I have received from you during our first year of government, both in the attention with which you have received my recommendations, and in the criticisms and improvements of them by means of which you have so effectively contributed to the good work of our government.

Respectfully submitted,

LUIS MUÑOZ MARÍN,
Governor.

LA FORTALEZA, *February 23, 1950.*

Joint Committee on Nonessential Federal Expenditures

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. WILLIAMS. Mr. President, I wish to have printed in the Appendix of the RECORD several editorial and news comments about the so-called Byrd Joint Committee on Reduction of Nonessential Federal Expenditures.

First, I ask unanimous consent to have printed the broadcast of February 25, 1950, by Mr. Albert L. Warner, over the facilities of the American Broadcasting Co., dealing with the recent proposal of the junior Senator from Minnesota [Mr. HUMPHREY] to abolish the Byrd Joint Committee on Reduction of Nonessential Federal Expenditures. This broadcast analyzes the very splendid achievements of the Byrd committee, and concludes that the spendthrifts will have a difficult time to abolish the small counterweight of one committee which sturdily stands up to emphasize economy and efficiency and that Senator BYRD is not likely to be silenced that easily, nor will he be alone in the fight.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

THIS WEEK IN WASHINGTON

(Broadcast by Albert L. Warner over ABC February 25)

This week President Truman and Senator HARRY F. BYRD, the Virginia Democrat, continued their battle over Federal expenditures. The Senator said the President was the principle obstacle to budget balancing. The President said the Senator's statement was all political.

There is a lively suspicion at the Capitol that this feuding led a supporter of the White House, Senator HUBERT HUMPHREY, Democrat of Minnesota, to aim a blow of his own at his stalwart conservative colleague from Virginia.

Senator HUMPHREY took the Senate floor to demand that the Joint Congressional Committee on Reduction of Nonessential Government Expenditures be abolished. Senator BYRD is the chairman of that committee. "It serves no useful purpose," said Senator HUMPHREY, "it is used only as a publicity medium. It deals only in generalities and wastes public funds rather than conserving them."

Senator HUMPHREY said the Byrd committee had spent over $100,000 in appropriated funds, plus $250,000 worth of time and effort of the executive branch of the Government

in compiling data, plus undetermined money for printing.

Now, when you go to the record for the facts about the Byrd Joint Committee on Reduction of Nonessential Federal Expenditures, you find it has been in existence 9 years. During two of those years it did not get a cent of appropriations.

Senator BYRD's own staff contributed their time, keeping it going. But over the 9 years the committee has received appropriations totaling $127,000. That's at the rate of about $14,000 a year—as inexpensive a committee as could be found anywhere in Congress or the Nation's Capital.

The committee was set up to put Federal revenue and expenditures in perspective and to work for efficiency and economy. It has held hearings on 35 subjects, issued 25 formal reports, and made 53 major recommendations. The committee calculates that these have resulted in savings of $1,000,000 for every $17.50 spent by the committee.

A year ago the Byrd committee centered attention on the top-heavy number of civilian employees in the Military Establishment. The charge must have had merit even in the eyes of the Truman administration, because Defense Secretary Louis Johnson has been reducing the number ever since and declaring that the reduction is of no harm to his department and has even increased efficiency.

A regular monthly release from the Byrd committee gives the number of employees in each department and agency compared with preceding months.

The committee put into effect and required a system of accurate reporting on this subject by the executive agencies. But how this compilation of data could be considered an unnecessary expense is almost beyond comprehension. If there were no Byrd committee in existence the head of any department ought to be insisting that he have figures on his desk to show how many people are working for him at the end of every month.

Maybe there's a broader question at stake. Congress is weighted toward the spending side. Every congressional district has local projects to advance. Even chambers of commerce which often verbally cry for economy are behind those projects. In every district group pressures for this and that program involving expenditures are forceful and constant. The administrative agencies have the staffs to make out strong cases for the expansion of their activities.

It may be that many of the large Federal expenditures are good and that large executive staffs are necessary to carry out the functions voted by Congress, although Senator PAUL DOUGLAS, Democrat, of Illinois, has said that you don't have to be a spendthrift to be a liberal.

But with all these dominant influences already operating on one side of Congress, it is now proposed to abolish the small counterweight of one committee which sturdily stands up to emphasize economy and efficiency. Senator BYRD is not likely to be silenced that easily, nor will he be alone in the fight.

Mr. WILLIAMS. Mr. President, I next ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Valuable Publicity Medium," which appeared in the Washington Evening Star on Monday, February 27, 1950.

This editorial strongly defends the Byrd Joint Committee on Reduction of Nonessential Federal Expenditures, and points out how the committee has had a restraining effect on Federal departments and agencies.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VALUABLE "PUBLICITY MEDIUM"

Senator HUMPHREY, Democrat, of Minnesota, wants to abolish the Byrd Joint Committee on Reduction of Nonessential Federal Expenditures on the ground that it is "used only as a publicity medium." But a lot of people who are more worried about Federal spending than Senator HUMPHREY seems to be will contend that the committee's publicity activities are a very good reason for continuing it in existence.

It is true that Senator BYRD and his colleagues of the joint group have publicized freely and often the inefficiencies and extravagances of the Government. The committee has kept the spotlight focused on the growing size of the executive establishment, a trend that is all the more disturbing in view of the fact that the war emergency ended nearly 5 years ago. It is hard to measure the benefits of this publicity in specific terms. There is good cause to believe, however, that the watchdog role of the Byrd committee has had a restraining effect not only on the departments and independent agencies but on Congress as well.

To those who regard governmental retrenchment and thrift as old-fashioned and unnecessary, the joint committee's frequent reports on Federal expansion and spending are understandably irritating. That, in itself, is as good an argument as any for making certain that the committee keeps up the good work. The relatively small cost of maintaining this congressional "publicity medium" is a profitable investment, the returns on which, in terms of administrative savings, can be large indeed.

Mr. WILLIAMS. Mr. President, I now ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Never Say Senator HUMPHREY Is Opposed to All Retrenchment," from a recent issue of the Baltimore Sun.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEVER SAY SENATOR HUMPHREY IS OPPOSED TO ALL RETRENCHMENT

Senator HUMPHREY, of Minnesota, a standout even among the left-wing democracy as a talker and a spender, is mad at Senator BYRD. What troubles him particularly is the Byrd Joint Committee on the Reduction of Nonessential Federal Expenditures. And guess what Senator HUMPHREY objects to in the joint committee? Its expenditures in 9 years of $100,000 for expenses. This, says the junior gentleman from Minnesota, is the "No. 1 example of waste and extravagance."

In other words, Senator HUMPHREY stands for one retrenchment: He wants to economize on devices aimed at economy.

Pennsylvania Flood Control and Rivers and Harbors Projects

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the testimony I gave before the Civil Functions Subcommittee of the Senate Committee on Appropriations on behalf of Pennsylvania flood control and rivers and harbors projects.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

I have always enjoyed these appearances I've made, through the years before your committee to ask for sufficient appropriations to carry on flood control and rivers and harbors projects in Pennsylvania and nearby States effectively.

These flood control and rivers and harbors projects represent gains which may prove themselves at any time, perhaps tomorrow if the spring rains begin. They represent positive increases in the amount of revenue gained from our income-tax laws. They forestall what has always been, in my mind, Government expenditure which should have been avoided—appropriation of emergency funds for the relief of flood-stricken area. These emergency expenditures offer no long-range relief—no steps which could prevent another flood tomorrow, or next week, or next year.

We have heard a great deal of debate in the Senate these past few weeks on conditions brought about by lack of water in the far West—and possible remedies. And not too long ago newspapers throughout the country headlined the story of the water shortage in the metropolitan New York area and those shaveless Thursdays.

But the water problem is an old story to those of us in Pennsylvania. Our problem, throughout the history of the Keystone State—so important to the industrial production of this country—has been to control the waters we do have. We have too much water—or at least too much water in the wrong places. As I have previously told this committee, there's hardly an area of Pennsylvania whose residents are not acutely aware of problems arising from our waterways. We have several outstanding ports and harbors in Pennsylvania, and the economy of the entire State rests upon continued efficient operation of those ports. At the same time, Pennsylvania has many areas which are extremely vulnerable to floods which cause severe hardship and dislocation as well as a substantial amount of real suffering and even loss of life.

Your committee has a long history of recognizing the importance of those projects in Pennsylvania. I have always felt, after completing such testimony as I am giving today, that the people in Pennsylvania are indeed fortunate that the men who are on the Appropriations Committee have shown a real understanding of the worth-whileness of flood-control and rivers and harbors projects. One could easily understand the temptation felt by your committee to make these projects the "whipping boy" and to thereby present to Congress and to the people of the country a more economy-minded budget. But as I have said so many times in the past, such economy is false economy. It represents saving $1 today and throwing away $2 tomorrow. Consistently, your committee has rejected this temptation. Consistently, you have provided at least minimum funds, have overcome attempts to cut to a foolhardy sum the amount appropriated for civil functions projects. Let me say at this time the people of Pennsylvania are sincerely grateful for these past actions. The volume of mail I receive asking me to thank you for such affirmative and responsible actions is just one indication of their gratitude.

The Corps of Army Engineers have done in the past—and shall, I know, continue to do—a remarkable job in giving our country the

maximum in flood-control protection and rivers and harbors improvement at the minimum cost. They want to accomplish the most possible for all the country.

That's why I am convinced the amounts recommended by the engineers and adjusted by the Bureau of the Budget should be completely appropriated, with no cuts. These recommendations are not the result of guesswork; they are based on the studied judgment of men especially trained in this highly technical, complex work. Careful consideration was given to fiscal requirements of the projects now under way. The estimates provide for a minimum rate of progress consistent with logical construction programing and timing of the various features of the individual projects.

And, of course, any proposed figures of the engineers were subjected to the careful scrutiny of the Budget Bureau. No, the amounts finally listed in the budget are not high—far from it. It would probably be much more accurate to say that in many cases they represent the very barest minimum needs.

I honestly feel that any reduction in the estimates before you will inevitably result in increased costs to the Federal Government. The engineers have pointed out that such increased costs might be direct and tangible—such as those associated with the closing down of a contract due to insufficient funds. Intangible increased costs are also involved. Consider the increased contingency factors in future Government contracts to protect the contractor against losses resulting from the necessity of operating major equipment at a rate below that necessary for efficient operation.

At this point, what Maj. Gen. Lewis A. Pick, Chief of the Engineers, told the House committee considering these same appropriations bears repeating. He pointed out that "Longer construction periods require additional costs for inspection and supervision over the extended construction period." Eventually, we must do the job anyway. And to stretch out and delay work from year to year only succeeds in pyramiding the eventual costs involved. That, obviously, is not economy. It is the worst type of short-sightedness.

I would now like to go into just a little detail on the various projects which most directly affect Pennsylvania. First let me discuss flood-control projects.

1. Conemaugh Reservoir: The total cost of this project is $44,200,000. Of this amount, $26,715,000 has already been appropriated. The 1951 budget calls for $9,000,000, which will put the project within about a year of completion.

The importance of this Pittsburgh area in the industrial production picture of our country hardly need be emphasized at this time. Any cut-off in production in this area because of flood conditions is bound to have an immediate effect throughout the 48 States. Perhaps the fact that the Pittsburgh district alone outproduces each of 36 States will present a more graphic picture of what I'm saying here.

Unfortunately, such a flood is more than a it-could-happen-here affair. It has happened here, many times, with the St. Patrick's Day flood of 1936 the most disastrous one in recent years. That flood alone caused $120,000,000 worth of damages in just the Pittsburgh area.

That flood, let me point out, did not merely hit the pocketbook of the individual factory owners, or factory workers, or businessmen in this area. That flood also resulted in greatly decreased revenue for our Government. Western Pennsylvania alone paid more income tax to the United States Treasury in 1949 than 40 States.

This reservoir is on the stream which caused the great damage in 1936. It is the key dam in the whole flood-control project around the Pittsburgh district, and will do as much for Pittsburgh and the whole Ohio Valley in providing defense against future floods as all of the existing reservoirs combined now accomplish in flood protection for that area.

2. Sunbury: The total estimated Federal cost of the Sunbury diking system is $7,300,000. Of this, $5,856,000 has been appropriated to date, and the Engineers are asking for $1,200,000 to make their work 96 percent complete. The money will be used for flood walls, pumping stations and interceptor sewers. I know it is always particularly satisfying to me—and it must be to you also—to see that a project has finally been completed. Incomplete protection, no matter what amount has been expended, just does not do the job if and when a community finds itself facing flood waters.

3. East Branch Clarion Reservoir: The total estimated Federal cost of this reservoir is $9,612,000. To date, $5,388,600 has been appropriated, and this year's budget calls for an additional $2,000,000. This dam is one of the major protections against floods for Johnsonburg, Ridgeway, and the upper Clarion Valley.

Work on this reservoir has reached the point where any interruption, even for a year, would prove very costly. The closure is to be effected shortly. And unless work is continued, the portion of the dam already constructed will have to be protected—this is an earth dam and such dams must be completed once they are started.

4. York: The $90,100 requested for fiscal year 1951 will complete this $5,100,000 project. There was no appropriation for construction in 1950. This modest sum will be used to rebuild a local wall built by local interests.

5. Williamsport: The total estimated Federal cost of this project is $17,000,000. Of this, $9,344,000 has been appropriated, and this year's budget provides for an additional $1,200,000. This project illustrates perfectly what I mean by saying flood control projects can prove their value in dollars and cents. The Williamsport flood-protection program was first authorized by Congress in 1936. Since that time—only 14 years—Williamsport has had two floods—one in March 1946, and another in May 1946—which caused damages totaling more than the total cost of this project.

And the Williamsport story, too, indicates the weakness in the argument of those who would have us go ahead with construction at a slow rate to drag out the costs of the projects. Ten years after the project was authorized, the partial construction that had been accomplished did not help in the least to hold back the flood waters.

Fortunately for the people of Williamsport, the engineers have made considerable progress on the project since 1946 and by November of last year, the work had approached the stage of providing the proposed degree of protection for the central portion of Williamsport, bounded by Lycoming Creek, the west branch of Susquehanna and Miller's Run.

The congressional action authorizing the Williamsport project provided that the works should be maintained and operated upon completion by a local cooperating agency in accordance with Army regulations. The city government has already taken preliminary steps to handle this responsibility.

We must not assume that just because one section of the Williamsport project is completed, we can let the other portions go for a few years. As I told this committee last year, the flood wall around Williamsport proper could well divert stream flow in high water into the Newberry section and wash out railroad lines and threaten a great many residences.

These then are the budget amounts for construction work of flood-control projects in Pennsylvania. They should, in my opinion, all be approved.

MAINTENANCE

In addition to appropriations for construction work in flood controls, the engineers have asked for funds to maintain the projects already in operation. I do not see how anyone can oppose these appropriations—nothing would be more ridiculous than to appropriate millions of dollars to build these projects and then to refuse to appropriate the funds to maintain them. I therefore ask this committee to approve the $60,000 requested for the Tionesta Reservoir; $60,000 for the Crooked Creek Reservoir; $33,500 for the Mahoning Creek Reservoir; $40,000 for the Loyalhanna Reservoir; $60,000 for the Youghiogheny Reservoir; $15,000 for the Johnstown project; $8,000 for the Punxsutawney project completed this year; and $18,000 for the York project, which includes the care of 180 flood gates.

PLANNING

There's still another phase to the engineers' work in flood control. That, of course, is the planning work that must be done for projects already authorized by Congress. As you know, people who live in areas constantly threatened by floods find it difficult to understand why it takes so long for actual work to begin, even after a project has been authorized. They have the right to expect that Congress will appropriate enough funds to permit the engineers to go ahead drawing up plans, plans which when translated into actual construction will mean great savings in property damages and even in loss of lives.

The following amounts have been requested by the engineers for planning funds in Pennsylvania—$30,000 for the Allegheny River Reservoir; $50,000 for the Allentown project; $50,000 for the Bear Creek Reservoir; $10,000 for Johnsonburg; $25,000 for Prompton Reservoir; $50,000 for Shenango River; $30,000 for Swoyersville and Forty Fort, and $40,000 for Uniontown. I urge the committee to appropriate the full budget amount and give the people in areas affected by these projects the assurance they are not being forgotten.

RIVERS AND HARBORS PROJECTS

At this point, I would like to take up certain rivers and harbors projects. Unfortunately, it is always a bit more difficult to get people enthusiastic about this type of work. News of a flood can always make the headlines, but discovery that a harbor vitally important to the economic welfare of our country is rapidly filling up and may soon become useless can only get into one of the back pages.

The fact of the matter is—those projects do have an intimate tie-up with the economic well-being of our country. Reduction in funds for navigation improvements and maintenance can seriously affect our industrial and commercial state of health.

1. Morgantown lock and dam, Monongahela River: This project involved a total estimated Federal cost of $8,850,000. Of this amount $5,800,000 has already been appropriated and this year's budget calls for $2,000,000, which will make the project 88 percent complete.

Though located in West Virginia, this project is of great importance to Pittsburgh and to the steel and coal industries of western Pennsylvania. The new construction will replace two older, hand-operated locks which are no longer adequate to handle the volume of business activity in the Morgantown area, greatly expanded during the war years.

2. Schuylkill River, above Fairmount Dam: The engineers justify this $52,000,000 project—only $17,000,000 of which is to come

from the Federal Government, with the remainder from State and local interests—on the basis of savings to Government in maintenance dredging of navigation channels in Delaware and Schuylkill Rivers, reduction of flood hazards, and betterment of quality of water for domestic and industrial uses. As a life-long Philadelphian, who has been greatly concerned over the tremendous waste of water potential because of the filthy condition of the Schuylkill, and as a Member of Congress who has watched the Federal Government expend thousands of dollars in dredging navigation channels of these rivers, I can personally testify to the accuracy of the engineers' claims. That's why I so welcomed the opportunity of sponsoring the original enabling legislation in the Seventy-ninth Congress.

Already we can begin to see the results of work on this project. In one section the stream is now carrying less than one-tenth of 1 percent of the solid matter it carried 2 years ago.

Of the $4,000,000 asked for this year $215,000 will be used for completion of disposal areas for Plymouth and Flat Rock pools, $1,000,000 for dredging Plymouth pool and partially dredging Flat Rock pool, and $2,785,000 for the Darby Creek disposal area and partial dredging of the Fairmount pool.

If waste material is allowed to remain on the bottom of the stream—as has been the case all those many years—any agitation of the stream during floods moves it down into existing channels below dams, where it has to be dredged out.

3. Ohio River lock and dam construction: Of total estimated Federal cost of this all-important project, $111,621,000 has already been appropriated. This year's budget calls for an additional $500,000, the money to be used to extend guide walls on two of the locks.

As you undoubtedly know, the Ohio River is probably the heaviest-used river in the United States. The two locks in question are ones where tows of considerable size come loaded out of Pittsburgh with heavy, bulky iron products and the like. The construction work has been scheduled because of the considerable difficulty encountered here in recent years.

4. Ohio River, open-channel work: This project involves a total Federal expenditure of $21,114,000. To date, $15,589,600 has been appropriated and this year's budget sets aside an additional $250,250. There is no overlapping between the Ohio River lock and dam construction and this open-channel work. Here the engineers are concerned with channel dredging between the locks and dams and in the pools—with dredging and widening channels in constricted areas, with lengthening turns and with taking out bars. Though the work done is similar in character to regular maintenance work on the Ohio, the engineers will operate here in previously untouched areas.

In regard to both of these Ohio River projects, let me reemphasize that the Ohio River might well be the most important waterway in our country. It moves through highly populated cities like Pittsburgh, Cincinnati, Louisville, Wheeling—cities which are really the heart of this country's industrial production.

The barge traffic alone on the Ohio last year totaled 6,600,000,000 ton-miles. When we compare this with the annual average of 8,000,000,000 ton-miles during the 5 years preceding the war, we can see clearly why locks and dams 40 or more years old could not handle the increased traffic unless we complete the job of making the Ohio River a modern waterway.

5. Lock 2, Monongahela River: The total estimated Federal cost of this project is $15,090,000. The $3,780,000 requested this year will make the project 73 percent completed.

The lock involved in this construction work is practically within the city limits of Pittsburgh. With this money, the riverward lock will be completed and the landward lock initiated. The old lock being replaced is completely inadequate to do the job.

MAINTENANCE AND OPERATION OF RIVERS AND HARBORS PROJECTS

This completes the list of new construction work on rivers and harbors in Pennsylvania. As for the money requested for maintenance and operation of such projects, what I've just said about such appropriations for flood-control projects is equally true for these projects. There is simply no point in permitting a harbor to fill up after we've spent much clearing it out.

I, therefore, request the full budget amount for the Monongahela River—$89,300 for maintenance dredging in the pools formed by the dams and $1,011,500 for operation and care of existing locks and dams; Allegheny River—$33,500 for maintenance dredging and $343,700 for operation and care of locks and dams; Youghiogheny River—$20,000 for maintenance dredging in the 9-foot channel between the mouth of the river and McKeesport; Ohio River lock and dam construction and open-channel work—$8,835,700 for maintenance; Schuylkill River—$1,000,000 to maintain dredging necessary to provide adequate facilities for the large commerce, amounting in 1948 to about 15,000,000 tons; Erie Harbor—$67,000 for dredging to maintain the 25- and 26-foot depths in channel entrances and the harbor itself, ranging in depth from 18 to 23 feet.

I would like to go into a bit more detail on the maintenance funds for the Delaware River, particularly that portion between Philadelphia and the sea. The budget amount for this portion is $3,248,000. There seems to be considerable doubt whether even this amount will do the trick in dredging this important harbor to its authorized 40-foot depth, and the engineers are now preparing a report for me on the present situation. We are faced here with the problem of a harbor allowed to shoal up, during the war years, to a depth considerably less than its authorized one.

I also recommend that the engineers be appropriated the $200,000 needed to maintain dredging in that section of the Delaware between Philadelphia and Trenton.

PRELIMINARY SURVEYS

The engineers should also be allowed $2,000,000 requested for examinations and surveys—surveys so essential if we are to have an up-to-date assessment of conditions of our waterways.

SPECIAL REQUESTS

The Senate as yet has had no opportunity to vote on the omnibus civil-functions bill which has been delayed in committee for so long. But chances now seem good for a vote on these projects in the near future.

In view of this, I would like to request that the Appropriations Committee authorize planning funds for certain of these projects. If such action is not taken now, these projects—all of them really needed—will face another year of postponement.

Dyberry Reservoir for the Lackawaxen River is one such project, and $50,000 in planning funds are needed. This is the companion reservoir to the Prompton Reservoir for which Congress appropriated planning funds last year. Originally the two reservoirs were slated to be constructed simultaneously, but the House cut Dyberry out of its 1948 omnibus bill.

The Bradford flood-control project, also in the Senate omnibus bill now pending, has a long history of delays. Right after a preliminary survey was completed by the engineers in 1947, a flood hit Bradford, a major one. And 1948 brought still another flood. Because of these floods, the engineers were forced to resurvey the area, and the project could not be included in any authorization bill until this present one. Surely, though, these two floods in this important crude-oil production area are the best sort of proof that Congress must act now. Furthermore, the State which is to contribute a substantial sum to the project cannot act until Congress actually appropriates money. About $50,000 is needed for planning funds for the Bradford project.

I further request that $100,000 be appropriated for planning funds to make further improvements in the Monongahela. Though the work involved here would be done in West Virginia, it would have an important beneficial effect on the entire steel-producing section, of which Pittsburgh is the heart.

A few last words. We in Congress know the long legislative road these projects must travel from the time their need is first acutely felt until they are completed. There's the investigating by the Representative and Senator before he decides to introduce the necessary bill, the preliminary survey by the engineers, the congressional authorization, the detailed planning by the engineers, and finally the appropriations which must be fought for over a period of years. I remain convinced that any project which could not prove itself, in terms of saving of lives, or of property, or as a necessary defense or industrial measure, simply would not be a topic of conversation this morning. These projects are needed, and needed now.

Rabbi Nachum David Herman

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. HELLER. Mr. Speaker, today marks the observance of the sixty-seventh anniversary of the Hebron Yeshivah and its National Youth Rehabilitation Center of Jerusalem. This anniversary is being celebrated this month by all freedom-loving people who believe that the foundation of democracy is allegiance to God.

This morning, at the opening of the session, Rabbi Nachum David Herman, American chairman of the anniversary committee, delivered the invocation. May I say a few words about my distinguished friend and spiritual leader. Rabbi Herman was born and bred in New York City. He graduated from Hebron Yeshivah in Jerusalem, and thereafter did postgraduate work at the Fountain of the Great in Jerusalem. He is presently rabbi of the Congregation Tifereth Israel, Bedford Avenue and Clymer Street, Brooklyn, the largest orthodox synagogue in America.

Rabbi Herman was appointed by the chief rabbi of Israel, Dr. Isaac Herzog, as chairman of the anniversary committee, and in conjunction with this hign

honor bestowed upon him, Rabbi Herman is now preparing a manuscript depicting 20 centuries of Jewish history evolving around the study of the Torah and religious observance which sustained the Jews in every corner of the world, despite the tidal waves of anti-Semitism which uprooted them, stymied civilization and cast a blot upon our generation, a blot that has yet to be erased before the supreme bench of justice.

Our democracy under God is an amalgamation of minorities, each contributing its share of culture, making our Nation truly representative of harmonious living and a challenge to bigots and rabble rousers who would want us divided.

Executive Council of the American Federation of Labor Supports Point 4

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. JAVITS. Mr. Speaker, following is a declaration on point 4 adopted by the executive council of the American Federation of Labor at its recent meeting and transmitted to me by Chairman Matthew Woll of the International Labor Relations Committee, A. F. of L. It is an eloquent statement of labor's determination to give all-out support in the struggle for free institutions and individual liberty now going on in the world:

DECLARATION ON POINT 4 ADOPTED BY THE EXECUTIVE COUNCIL, A. F. OF L.

After giving careful consideration to the report of Assistant Secretary of State Willard Thorp on point 4, the executive council of the American Federation of Labor declares:

1. We reaffirm our support of the guiding lines and policies elaborated in the comprehensive resolution adopted by our sixty-eighth convention held at St. Paul in October 1949 dealing with President Truman's point 4 program.

2. In view of the disaster which has befallen the great Chinese people through the overrunning of their country by the Russian-directed military forces and fifth column operating under the orders of the Cominform, the executive council underscores the great urgency of speeding up the application of point-4 policies in the non-Communist areas and countries of Asia.

3. In line with our convention declaration, we urge our Government to aid the Republic of India in overcoming its immediate food difficulties, in developing public education, and in the improvement of her public health. We also urge American initiative in the World Bank for a loan to speed the development of an agricultural extension service in India. Vigorous and generous application of point 4 in Formosa, where encouraging economic achievements have already been obtained through the Joint Commission on Rural Reconstruction, will not only further improve the economic and social conditions on this very important island of resistance to Communist totalitarianism in China. It will also dramatize to the people of occupied China and to freedom-loving people everywhere that America has not turned its back on the struggle for liberty and national independence in this vast Asiatic country with which our Nation has always had the friendliest relations.

4. We canont reaffirm too strongly our convention resolution which emphasizes that labor must have adequate representation in the formulation and application of specific plans and policies and that technical aid to underdeveloped areas in Asia and elsewhere should include provisions for the transmission of bona fide free-trade union, cooperative, and farmers' know-how which will enable the workers and peasants of Asia to build effective, democratic unions and self-help organizations. This will permit the toiling folks of Asia not only to secure their material betterment but also to enhance their appreciation of their dignity as human beings on a basis of equality with all other races and peoples on other continents. American aid to such moral and spiritual enhancement will far outweigh in importance and lasting value the generous dollar aid we have been providing for the conquest of poverty and tyranny and for overcoming the threat of war.

5. The successes attained to date through the ERP, in raising the levels of production in the countries aided, only underline the necessity of preparing now for the time when the Marshall plan as such will end. It is clear that in the interest of developing a sound and balanced economy in the free part of the world, the democratic nations must lose no time in combining the various measures taken under ERP and point 4. There can be no effective integration of the economy of democratic Europe unless its economic life becomes more closely related with that of Africa, the Western Hemisphere, and the democratic countries and areas of Asia. More and more western Europe should be able to find markets for its manufactured products in the under-developed countries. Given this common outlet, the various European national economies, which are competitive in many respects, would tend to integrate more easily. In return, these underdeveloped areas could provide western Europe with the raw materials which it needs for its manufacturing industries. By following such a policy, we would be able to eliminate any attempts to expand business relations with Russian-dominated areas and thus to prevent the feeling of appeasement generated by business-as-usual tactics. This business-as-usual attitude might prove catastrophic to the democratic cause in the event of German heavy industry producing for the Chinese market. The present Russian baby blockade of Berlin and the Communists' accelerated national unity campaign in Germany are no doubt part of the Kremlin's over-all strategy for wearing out and drawing Germany into Moscow's military economic orbit. Thereby, Russia hopes to conquer Europe and Asia.

6. The urgency of gradually combining the basic features of ERP and point 4 is made all the more imperative by the fact that the increased productive capacities of Europe and America are operating in a much-reduced trade area. Totalitarian communism has torn out of the world market nearly half the population and about one-quarter of the area of the entire globe. Because Russia and its satellites in Europe and Asia have militarized their economies and are gearing themselves solely for aggressive warfare, very little trade in the normal and peaceful sense of the word is possible for them.

7. In view of this critical situation, all efforts and energies of the democratic world should be bent toward raising the productive capacities of the free peoples and toward increasing the possibilities for mass consumption by improving their purchasing power and living standards. There is no other way of counteracting the effects of Russia's disruption of the world market. There is no better way of demonstrating the moral and material superiority, and assuring the triumph, of the democratic over the totalitarian Communist world than by our creating and expanding those conditions of life and labor which will enable many additional millions of people to attain more liberty, greater material well-being, and spiritual happiness.

Civil Liberties and the "War Bride" Case

EXTENSION OF REMARKS
OF
HON. F. D. ROOSEVELT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. ROOSEVELT. Mr. Speaker, I should like to call to the attention of the House an editorial in the New York Times of last Saturday, March 4. This distinguished newspaper has done a notable public service in emphasizing the grave questions of civil liberties in the present procedure by which the Attorney General may exclude arriving aliens without a hearing. Two other outstanding newspapers, the St. Louis Post-Dispatch and the New York Post, have done an equally fine job of alerting the Government and the public about this issue.

Naturally, I can have no informed opinion about the merits of the case of Ellen Knauff. My concern in this matter is with the civil-liberties problem, which I believe is serious and immediate. I may say that the American Civil Liberties Union and the Association of Immigration and Nationality Lawyers share this view. The bill referred to in the New York Times editorial which follows is H. R. 7476, to provide that aliens who have arrived in the United States shall not be excluded without a hearing:

THE CASE OF THE WAR BRIDE

The still-current case of the war bride who was denied admission to this country without a hearing may yet serve a notable purpose. It may yet result in bringing about a change in one remarkably un-American aspect of our immigration procedures.

The right—if one can call it that—of the Department of Justice to exercise the formidable power of barring aliens without explaining why stems from wartime regulations still in force. But we believe—and we are confident that most Americans believe—that irrespective of a man's citizenship as well as of his race, creed, or color, he should be informed of charges against him and should have the opportunity of answering them. In fact, denial of this simple proposition comes perilously close to falling into a pattern of thought characteristic of the police state.

This whole issue has been dramatized in recent weeks by the case of Mrs. Ellen Knauff. A few weeks ago the Supreme Court held that even though she was the war bride of an American citizen, she could be permanently barred from the United States without a hearing. But in an eloquent dissent, on which we commented at the time, Justice Jackson noted that not even a court can find out why the girl is excluded. She may or may not have been the victim of the malevolent, the misinformed, the meddlesome, and the corrupt. So far as the official record goes, neither she nor anyone outside

the Justice Department can know. About to be deported, she was actually aboard ship this week when a last-minute habeas corpus proceeding gave her a respite at least until Monday.

Meanwhile, Representative F. D. ROOSEVELT has introduced legislation—since the Justice Department has shown strange reluctance to modify its own procedure—that would guarantee to aliens the right of every free man, i. e., the right to have a hearing, even if a secret one. We think it most important that the record of the United States be set straight on this issue, and that there be reaffirmed without equivocation the fundamental American belief in fair play—especially toward the weakest and the most defenseless.

Farm Housing

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. BURNSIDE. Mr. Speaker, I do not think enough publicity has been given to the provisions of the Housing Act of 1949 which relate to farm housing. The fact that farm housing was included in the Housing Act proves that the Eighty-first Congress has the interests of farmers at heart. I think more people should realize what this act does.

Under leave to extend my remarks in the RECORD, I include here a brief summary of the farm housing provisions of the Housing Act of 1949, as explained in a supplemental report of the Committee on Banking and Currency:

The title authorizes the Secretary of Agriculture to extend through the Farmers' Home Administration three types of financial assistance to owners of farms to enable them to construct or repair dwellings and other buildings on their farms to provide them, their tenants, lessees, share croppers, and laborers with decent, safe, and sanitary living conditions and adequate farm buildings:

1. Loans up to 33 years at not to exceed 4 percent interest. The loans would not require a first mortgage on the farm property and could be secured by the farmer's equity in the farm.

2. Similiar loans, supplemented by annual contributions applied as a partial credit on interest and principal payments, to the owners of farms which are not presently self-sustaining but which, through a satisfactory program of enlargement, improvement, or adjusted farm practices, can be made self-sustaining within a period of not to exceed 10 years. The annual contributions could not be made available to a farm owner after the farm is made self-sustaining or, in any event, for more than 10 years.

3. Loans and grants for minor improvements and minimum repairs to farm dwellings and other farm buildings on farms which, in the opinion of the Secretary of Agriculture, cannot be made self-sustaining. The amount available in such cases would be limited to $1,000 for any one farm or dwelling or building owned by one individual, and not in excess of $2,000 in the aggregate to any one individual, and the grant portion with respect to any one dwelling or building could not exceed $500.

Loans are to be refinanced through cooperative or other responsible private credit sources whenever feasible.

Relation Between the Transportation Industry and National Defense

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. HELLER. Mr. Speaker, I was privileged on March 3, 1950, on the invitation of Brig. Gen. Paul F. Yount, president of the New York chapter, National Defense Transportation Association and commanding general of the New York port of embarkation, to speak before their group at the Statler Hotel, New York City, on the relation between the transportation industry and national defense. Under leave to extend my remarks, I append herewith my speech:

At the outset, I wish to thank General Yount for the kind invitation he, as president of the New York chapter of the National Defense Transportation Association, has extended to me to speak before this fine gathering of men and women who are keenly interested in the transportation industry and its relation to national defense. It is indeed an honor and a privilege, which I very deeply appreciate.

The Elder Count von Moltke, as most of the distinguished military gentlemen present here this evening will undoubtedly agree, was considered one of the greatest strategists of the latter half of the nineteenth century, and was proclaimed the creator of the modern method of directing armies in the field.

Even in his day, as it was in the time of Caesar, and as it is in ours, the question of properly expending the moneys allotted for his war machine was a perplexing one.

When the question was put to von Moltke as to how an allocated sum of money should be expended, he stated quite firmly and clearly, that he would rather have another railway than all the fortifications in the world. Thus, the father of modern strategy made it evident that transportation plays a paramount and vital role to be reckoned with when one considers national defense. And in these days, that subject—national defense—must be carefully considered.

However, to sing the praises of the importance of transportation to this assemblage is, I am sure, as superfluous as informing a young mother that she has an exceptionally beautiful and intelligent child. She knows it, just as you members of the National Defense Transportation Association are convinced that transportation, whether it be by sea, by land, or by air, is as important to the commerce of war as it is to the commerce of peace. And you know it—otherwise you would not be here—that your work and development now is essential to success in any future emergency.

The problems of transportation are basically similar, and the underlying principles are omnipresent whenever the law of supply and demand operates. Though the press of traffic is always greater in war than in any preceding period of peace, the fundamental principles established by democratic competition in time of peace are put to enthusiastic utility by the military in time of war.

It is in these days of cold, uneasy peace that we prepare, not only in the obvious manner of training reserve manpower, or intensifying mobilization plans for industry, but in the not so obvious method whereby vigorous and free peacetime competition tests the ingenuity of our people and develops tremendously effective operational and economic techniques.

Take an example which you all know, in the field of motor transport. By the interchangeability of truck bodies, a 1½-ton chassis can be paired with the standard cargo truck body, or a dump truck body, whichever is needed most. Another example of a highly developed peacetime technique exploited to great advantage by our Military Establishment in the past conflict was the development and the simplification in numbering of interchangeable spare parts.

It is in the countless numbers of such prosaic but businesslike methods that there was developed so many wonderous and amazing instruments of destruction, as if by magic, in the time that followed Pearl Harbor.

Since, as I have said, the problems of transportation are basically similar in war and peace, and the underlying principles are the same, it behooves us all to encourage, protect, and foster the needs for the transportation industry.

Since a healthy, well-nourished, and thriving transportation industry, as of right now, is a most important must to a strong and adequate transportation system in time of hostilities, you well may ask, "What, then, is being done by your Congress in the field of transportation legislation?" I am glad to report that much is being done. So much, in fact, that one could easily say that the subject of transportation with all of its wide ramifications—though perhaps not such a spectacular subject as, say, atomic development, is certainly of such importance as to occupy a great deal of the time of those who help guide the destiny of this Nation, as your elected Representatives.

I propose this evening to present the evidence of the awareness of Congress of the fundamental tie-up between the transportation industry and national defense. Presently on the agenda are bills covering each of the three major fields of transportation: Air, land, and water. I would like to discuss some pending developments in all three fields and highlight those that I consider extremely significant.

From the air viewpoint, analysis of some seven proposed items of legislation reveals that the bill entitled "The Air Merchant Marine Act of 1949" is of a far-reaching importance as the title would indicate. This act is patterned, as one would suspect, on the tried and tested Merchant Marine Act of 1936. Its purpose is to insure a number of cargo aircraft adequate to meet the potential commercial requirements of our Nation and to integrate that need with a number equal to meet our military reserve requirements.

This will be accomplished by the creation of the Aircraft Development Corporation, within the Department of the Air Force, which will be administered by that agency but which will exercise its function independently of the Secretary of the Air Force. It is proposed that this Corporation be initially capitalized at $100,000,000. Its function will be to survey, study, and report to the Congress the potential commercial and military reserve requirements for cargo aircraft. So long as the number of cargo aircraft is inadequate to meet the needs of commercial cargo requirements and the military reserve, it will be the duty of the Corporation to purchase from manufacturers within the United States the number of cargo aircraft necessary to meet these needs. The planes so purchased will be leased by the Corporation to citizens engaged in the transportation of commodities in air commerce, provided, among other things, that 75 percent of the personnel employed by the lessee in connection with operation of leased cargo aircraft shall be members of the Reserve components of the armed forces. Quite naturally, such organizations will be susceptible to instant assimilation within the Air Force in time of emergency. So much for air.

In the field of water transportation, before discussing the aspects of pending legislation, I'd like first to make a distinction: the national policy on inland waterways and coastwise shipping is as much a matter of national defense as is our policy with respect to our interocean water shipping. However, in the case of the former, our problem is mainly one of integration, whereas with the latter, our problem is one of competition with foreign-flag shipping.

One might say that the difference which lies between our inland waterway policy and our ocean policy is like that difference existing between tactics and strategy; one is a problem of detail, and is local; the other is a problem of large scale, and is of worldwide scope.

But we cannot overlook the importance of the domestic scene in favor of the immediate international distractions. I well remember when opponents of the program to modernize the New York State Barge Canal (historically known as the Erie Canal), stated that putting money into such an enterprise was about as useful a project as building an ice house in the Arctic Circle. However, in the trying days of the war just past, it more than proved its worth; an unceasing 24-hour train of barges, tankers, tugs, and supply craft of all varieties moved on that modernized canal.

That lesson, I hope, has been well taught. Our inland waterways cannot be forgotten. They are necessary adjuncts of our national defense. At the present time there is pending a bill pertaining to the Inland Waterways Corporation which will carry out the announced congressional policy to continue the transportation services of the Corporation until, among other provisions, "there shall have been completed in the rivers where the Corporation operates, navigable channels as authorized by Congress, adequate for reasonably dependable and regular transportation service" * * * and * * * "terminal facilities shall have been provided on such rivers reasonably adequate for joint rail and water service."

So today, insofar as the national defense picture is concerned, there is certainly not found lacking consideration of the practicability of exploiting the natural assistance of our inland waters.

But now how about shipping on the high seas and our transportation policies in relation to our ships which ply the oceans engaged in world commerce? What is being done to strengthen national defense in this connection? A bill has been introduced which is of sweeping importance to industry as well as to the national defense concept, which would amend the Merchant Marine Act. This bill proposes to further promote the development and maintenance of the American merchant marine. It is of such sweeping significance it might be well to consider it rather fully.

As you know, the Merchant Marine Act of 1936 was the basis for the development of our merchant marine, privately owned and operated by our citizens, but available as auxiliary to the armed forces in time of national emergency.

The establishment of such a merchant marine assists immeasurably in the development and advancement of the know-how necessary for the construction of modern ships and provide for their operation so that there might always be available an auxiliary force in the event of an emergency such as has arisen twice in the past generation.

Under our system of free enterprise constant effort is made to avoid Government subsidy to specific industries. The need for an adequate and well-balanced merchant marine has always been well recognized, and in these troubled times it has been essential and desirable to foster and bolster such a merchant marine with Government aid when necessary. Due to existing economic conditions in the other maritime nations, it is essential to provide some form of Government assistance which will aid in offsetting the unequal advantage held by competitor nations with their lower standards.

Our military leaders have repeatedly attested to the necessity for the continued development of the merchant marine. Therefore, in order to avoid wasteful expenditure of colossal sums and to conserve precious time in a future emergency, it is clearer now than ever that we should foster as strong a merchant-marine development policy as we do for the other branches of the Government concerned with national defense and security.

Without going into all the intricate details of the proposed amendment to our Merchant Marine Act, I would like to point out one or two phases of it. First, let us touch on the subject of "construction-differential subsidy," with which the act is principally concerned. First, the term itself. What does the term "construction-differential subsidy" mean? We've all noticed that term in the newspapers, and of late, since discussion of the proposed amendment, its use has become increasingly prevalent, and rightly so, since around that phrase is the nub of contention.

Well, we all know that subsidy means to aid or promote a private enterprise with public money. What about this "construction differential"? It can best be explained by illustration. For example, the X Steamship Co. wants to build a ship. The lowest bid for construction is twenty million. But they won't have to pay that twenty million, for the Maritime Commission has ascertained and determined that the vessel would cost only fifteen million if built in a foreign port. Therefore, that's all the X Steamship Co. pays. The Government pays the difference. That is an illustration of how "construction-differential subsidy" works. In my opinion this is a small price to pay for insurance for the future. In case of another emergency, when we need the ship, it will be there, and this may well serve to prevent future Bataans or Corregidors.

Now the old act (that is the one presently in effect) provides for the granting of the "construction-differential subsidy" upon operation of the vessel so aided, on specific essential services, routes, or lines in the foreign commerce of the United States. The new bill proposes to maintain the subsidy, but to eliminate the restriction by extending such provisions to vessels to be constructed for the inland waterways and intercoastal trades, and removing the requirement that vessels receiving "construction-differential subsidies" be operated on certain essential trade routes. This will serve to encourage the creation of liner services to many places not presently served with correspondingly beneficial effect on foreign commerce to those places, as well as to ourselves.

This amendment will eliminate the provision which prohibits operating differential subsidy contractors, or any of their affiliates, subsidiaries, or associated firms from engaging in the domestic, intercoastal or coastwise service without the written permission of the Maritime Commission.

As I mentioned previously, there are other details. However, the expansion of the subsidies for the shipping industry is the most significant aspect of the proposed amendment to the Merchant Marine Act, and the controversy over its execution has created a great deal of congressional interest. So far, it appears that the Treasury Department and the Bureau of the Budget have signaled their opposition to it. It is endorsed by the Maritime Commission, and the Departments of Defense and Navy are expected to back up the Commission.

Thus far I have discussed piecemeal and in a fragmentary way certain items of pending legislation pertaining to the transportation industry which concerns national defense.

But in my mind, the most momentous item of legislation pertaining to national defense and transportation, I have yet left untouched. In prefacing this subject, I would like to quote to you a paragraph from Edward Hungerford's excellent book, Transport for War. In his discussion of the men in the transportation industry, whom we know as the many-numbered brethren of Casey Jones, Mr. Hungerford says, "in the last analysis, a railroad is a far-flung army, a well-organized and long-standing army of men and locomotives and trains, all working in unison. Its men long since were trained in discipline and in organized effort just as are the soldiers of any well-trained army. They are on an unceasing lookout for emergency or disaster: flood, holocaust, washed-out bridge. Any of these things can come to pass in a day's work. The railroaders are trained to meet them. In the present emergency (he was referring to World War II, of course) the armed forces of the United States found this railroad army already trained and seasoned, quite ready to do their bidding and work side by side with them." My point in quoting this to you is not only to indicate my agreement with every word of it, but to go further and state that it is not only the men of the railways, but those of the highways, the airways, and the shipping lanes as well who, in the last analysis, are a far-flung complement, an organized and long-standing army of men, working in unison, men long since trained in discipline and in organized effort just as are the soldiers of any well-trained army.

And what's more, I have cited this passage and added my comments to emphasize the fact that factually and psychologically, there is a great natural unity and affinity between the industry of transportation and the problem of national defense.

I would like to quote again, this time from an equally excellent and scholarly source, the fine joint achievement of Professors Johnson, Huebner, and Wilson, in their comprehensive work on the subject of transportation. "It is a mistake," they say, "to consider the various types of transportation and carriers as separate and isolated business enterprises. They are not * * * They may serve international, national, sectional, or local areas. Essentially, however, they are parts of a transportation system, the integration and coordination of which constitutes one of the most important economic problems of recent times."

Again I agree with the learned authors, and again I would like to go further and state that not only is the integration and coordination of transportation one of the most important economic problems—it is one of the most important problems from the standpoint of national defense. Accordingly, there has been presented before the Senate and House identical bills for the establishment of a Department of Transportation. This proposes a Secretary of Transportation who will have the following already established governmental agencies assigned to his department:

The Interstate Commerce Commission.

The United States Maritime Commission.

The Civil Aeronautics Authority, the Civil Aeronautics Board, the Office of the Administrator of Civil Aeronautics, the Weather Bureau, the Inland Waterways Corporation; and most important, the Office of Defense Transportation.

So, ladies and gentlemen, you see at long last the development of a focal point—a long needed heart and soul—for the transportation industry: One general, high-level administrative authority for the coordination of the national transportation system, and the establishment of a national transportation policy which will be, as it must be, a bulwark to our national defense.

Of course, with the possible establishment of this Department of Transportation, there will be by no means an infringement upon

the continuance of private ownership and operation.

Today, the keynote in Government is the same as it was in 1787—unification. It is nothing new. The Latin phrase, "E Pluribus Unum"—"One out of many"—is as basically sound as the coins upon which that phrase is engraved.

Unity is the keynote; for in unity there is strength. Besides, there is a diminishing distinction between the civilian and the soldier, and there is a necessity not only for unification of the Military Establishment for the purpose of national defense, but a unification of the armed forces with industry, including the transportation industry, for that same purpose.

It is foolish to keep up the nineteenth century distinctions between the soldier and the civilian when we live in a world which is manufacturing missiles of destruction that do not know, and are incapable of knowing, any such difference. These weapons are cold bloodedly indifferent as to who, or what, is to be its victim.

And whether we like it or not, we must face the cold fact, that in the case of another conflict, it will not be some far-off beachhead with a foreign-sounding name which will be the target for the night. There will be no strange, fantastic name like Biak, Morotai, Wadke. There will be names of places familiar to our ears, like Seattle, like Chicago, like New York.

Gentlemen, you have a responsibility when you walk out of this fine hotel this evening and breathe the free, fresh air. For it is up to you, in or out of the armed forces, as someone connected with the dynamic transportation industry through which, and by which, the lifeblood of the Nation flows in either tranquil or contentious times.

As that individual it is not only your patriotic duty, it is your very personal, moral duty to the principles which you carry within yourself, to think and act to integrate and affiliate your particular transportation endeavor with national defense.

And you can do it, gentlemen, whether it be in the crating of boxes for domestic shipment or in the planning for the sailing of a fleet to the far-flung reaches of the earth. If you think your task is really too insignificant I'd like to remind you of a fable we all learned in childhood which we are now too prone to forget:

"Because of the nail, the shoe was lost,
"Because of the shoe, the horse was lost,
"Because of the horse, the rider was lost,
"Because of the rider, the cause was lost."

I want to thank you for your kind indulgence, and to publicly acknowledge a debt of gratitude to my dear friend, Col. Norman Gold, who is responsible for stimulating my interest in the problems of transportation. Up to a few months ago my love was social legislation. I'm afraid from now on I may be accused of being a little fickle.

Highways and Civilization

EXTENSION OF REMARKS
OF
HON. WILLIAM M. WHITTINGTON
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the forty-seventh annual meeting of the American Road Builders' Association, March 6, 1950, at Cincinnati, Ohio, to wit:

HIGHWAYS AND CIVILIZATION

Civilizations have always advanced as highways have been constructed. A country or a community without roads is a country or a community which has never developed. Highways and progress have always gone hand in hand.

MOST IMPORTANT ROAD

The highest road in the world is in the Peruvian Andes. The longest is the old Silk Road in central Asia. The finest is the Appian Way. The most heavily traveled is between New York and Philadelphia. But the most important road in all the world is the road that passes by one's own door.

ANCIENT ROADS

There are records of the existence of roads in Europe, Asia, and Africa as early as 3000 B. C. At first they were used for the transportation of precious stones and spices. They were also used for policing and collecting taxes from subject peoples.

The Amber roads, as the name suggests, were first used for the transportation of amber and metals, and later on for furs and tin. These roads extended north and south as well as east and west in Europe.

The Lapis Lazuli road led from the Lapis mines in northeastern Afghanistan across south Persia and then northward to the Mediterranean ports. Lapis lazuli were precious stones used by the ancients for decoration.

One of the great Silk roads led from China to the Mediterranean ports. Another of the Silk roads led from east central China across Burma into India. It was over these routes that the products of China were first introduced to Europe.

The famous Tin Road led from Cornwall in England to the shore where tin was carried by ships to Denmark. The Tin Road then followed the amber roads to the Mediterranean area.

ROMAN ROADS

The earliest roads about which definite construction facts are known are those of ancient Rome. The oldest and most celebrated Roman road for the grandeur of its work was the Appian Way and it was built in 312 B. C. Roman roads are outstanding in engineering and construction. Many of them still remain to form the foundation of modern roads. They were the arteries by which the culture of that day was introduced to the barbarian lands of France, Spain, and England. Between 300 B. C. and 400 A. D. approximately 50,000 miles of Roman roads were constructed. Ethlyn Miller Hardwick, in these lines, tells of the greatness of Roman roads:

"Great roads the Romans built that men might meet
And walls to keep strong men apart, secure,
Now centuries are gone, and in defeat
The walls are fallen, but the roads endure."

FRENCH ROADS

France started a national system of roads in 1597. Adequate drainage was provided. These roads were surfaced with broken rock.

ENGLISH ROADS

John L. MacAdam, the distinguished Englishman, in the eighteenth century utilized scientific principles in the construction of roads. MacAdam emphasized surfacing and drainage. Macadamized roads are named for him.

AMERICAN ROADS

The roads of the United States are most significant to us. They are responsible for the development of the motor vehicle and for the industrial and agricultural progress of our country. Thomas Jefferson early recognized the importance of roads. He stated that it was much more rational to spend public money for roads than for waging war. George Washington, in 1785, in a letter to Patrick Henry, said that the convenience of the country required that roads leading from one public place to another should be straightened and established by law.

WILDERNESS ROAD

The development of the United States west of the Alleghenies did not begin until the Wilderness Road was opened in 1795. Prior to that time there was no road westward to accommodate vehicles. With the opening of the Wilderness Road mountains were crossed and exploration westward began. Pioneers opened the trails. The Army followed close behind constructing forts to protect against Indian raids.

GREAT TRAILS OF THE WEST

The great trails of the West provided for the explorations which began early in the nineteenth century. The travels of the pioneers are among the most thrilling annals in American history. They followed the Santa Fe, the Overland, and the Oregon Trails. They settled for the United States the great domains of the West. These trails were remarkable. They were the principal routes of travel. One of them—the Oregon Trail—has been described as the most remarkable route known to history. No transit located a foot of it. No level established its grades. No engineer built any bridges or surveyed the mountain passes. The general quality of the 2,000 miles of the Oregon Trail was most remarkable.

THE GALLATIN PLAN

As the United States expanded from the Atlantic seaboard across the Alleghenies, the need for roads was emphasized. In 1808, Albert Gallatin, Secretary of the Treasury, formulated a comprehensive plan in which he recommended the construction of a continuous turnpike to provide for travel from Maine to Georgia which would unite the major seaports along the Atlantic coast. He also recommended roads across the Alleghenies between the Atlantic Ocean and the great western rivers. The plan was never adopted because of sectional differences and on account of its alleged unconstitutionality.

CUMBERLAND OR NATIONAL ROAD

In response to the need for transportation in the first quarter of the nineteenth century, Congress appropriated funds for a number of road projects. As early as 1806 appropriations were made for the Cumberland, or National Road. Maintenance of the road depended upon the collection of tolls, but there was violent opposition to tolls then as now. In 1822 President Monroe vetoed a bill to provide for the collection of tolls to maintain the Cumberland Road. The road extended to Wheeling and then across Ohio, Indiana, Illinois, to St. Louis.

TOLLS THEN AND NOW

The veto message of President Monroe in which he refused to approve the collection of tolls on a road for which Congress had made appropriations inaugurated the policy against the collection of tolls on Federal roads for which Federal aid is provided. The Cumberland Road was also known as the National Road. For some 40 years Congress made appropriations from time to time for the Cumberland Road, and in a few instances, for other roads for military and mail purposes. Travel was by coach, by canal, and by boat. With the advent of the railroad prior to the War Between the States, and with the expansion of railroads following that war, appropriations for Federal roads were discontinued.

Then followed the era in which the railroads were constructed. The stage coach was supplanted by the passenger coach. Finally the steamboat was also supplanted by the passenger train. River traffic disappeared with the beginning of the twentieth century.

The early roads of the United States were the roads of hope. They led the pioneers to

new lands. They were the means of opening up new lands and extending civilization.

ONE HUNDRED YEARS

For almost 100 years there was no Federal participation in road construction or maintenance. The highways were built and maintained by States and counties, and the streets were constructed by municipalities.

With the advent of the automobile, at the beginning of the twentieth century, better roads became imperative. Appropriations for experiments were made, and in 1912 Congress made a modest appropriation to construct a few roads as examples for State and local road building. Federal appropriations for roads, which were only small for 25 years and disappeared for more than 75 years, became a necessity when the motor vehicle was perfected. As Herbert Spencer well said: "Progress, therefore, is not an accident, but a necessity." Good roads became imperative. The United States was growing and developing. As Whittier said:

"And, step by step, since time began
I see the steady gain of man."

FEDERAL AID ROAD ACT OF 1916

The Federal Aid Act of 1916 was the beginning of the present system of Federal aid. It was amended in 1921. The Federal Aid Highway Act of 1921 made provision for Federal aid for primary roads. It was the beginning of the Federal-aid primary system. The States designated a highway system and a definite formula was adopted for the allocation of Federal aid. Construction costs were on a 50-50 basis. Authorizations have been passed for 2-year periods since.

EXPANSION

In 1934 and in the Hayden-Cartwright Act of 1936 the policy of Federal aid was expanded and extended to embrace secondary roads. States were required to match Federal funds. Provision was made for the elimination of railway grade crossings. As the production of motor cars increased highway construction increased. It was stepped up materially in the 1930's and particularly during the depression of that decade.

During World War II, except in aid of the war effort, construction was materially reduced. In many cases it was delayed.

FEDERAL AID HIGHWAY ACT OF 1944

Before the end of hostilities, in 1944, Congress made provision for the expansion of Federal aid for highways. The act of 1944 was the most constructive highway act ever passed by the Congress. It continued aid for primary roads. It extended aid for secondary roads. It provided for the elimination of railway grade crossings. It extended aid to urban areas. It set the pace, not only for Federal aid, but for State and local construction. For the first time authorizations were provided for 3 years.

DELAY

On account of the increased cost of construction and the scarcity of material construction was delayed. The act was amended to extend the time in which States could match Federal funds.

The 1944 act provided for annual appropriations of $500,000,000 and provided also for on interstate system of approximately 40,000 miles.

FEDERAL AID HIGHWAY ACT OF 1948

The Federal Aid Highway Act of 1948 authorized appropriations of $450,000,000 for each of the two fiscal years, 1950 and 1951.

AUTHORIZATION BILL

The House Committee on Public Works is conducting hearings on an Authorization Act for the fiscal years 1952 and 1953. It is well to keep in mind the needs and the problems for highway construction, as in all human endeavors, we will go backward if we do not go forward.

THE HIGHWAY SYSTEM

There are in the United States today over 3,300,000 miles of highway, roads, and streets. Three million miles are in the rural areas. Over 300,000 miles are in the urban areas. Federal aid is being extended to 636,037 miles of roads today. The primary system in rural areas is 219,588 miles. The secondary system is 398,488 miles. Urban roads total 18,000 miles. The interstate highway system is included in the primary and urban roads. It embraces 37,800 miles.

In the State system of highways there are 349,929 miles. The city streets contain 316,537 miles. Since 1921, 95,793 miles of the Federal-aid highway system have been reconstructed and improvements have been made on the entire system since 1921 aggregating 237,025 miles. In addition to the various Federal-aid systems there are 72,000 miles of roads under Government control in the national parks, forests, and reservations.

OBSOLESCENCE

The average life of a Federal-aid road is 30 years. Obsolescence is multiplying. Twelve thousand miles of primary roads must be reconstructed annually and 30,000 miles of secondary roads must be reconstructed annually. Roads wear out.

REGISTRATIONS

For 1949 the estimated registrations of automobiles, busses, and trucks aggregate 43,800,000 vehicles, an increase of more than 35 percent since 1940. The vehicle miles of traffic in 1949 aggregated 418,800,000,000 miles, an increase of more than 38 percent since 1940.

LOADS AND SIZES

The average load carried by trucks in 1948 was 38 percent higher than in 1941 and 73 percent higher than in 1936. Actual loads of 18,000 pounds were found on an average of 13 out of every 1,000 vehicles in 1936 and on 93 out of every 1,000 vehicles in 1948, a 615-percent increase. There has been a tenfold increase in larger loads of 22,000 pounds and more since 1936. Not only are the loads larger but many of the trucks resemble boxcars and many of the trailers look like pullmans. Roads are being destroyed and a danger is being promoted on the highways.

RURAL AND URBAN AREAS

One-half of the traffic is in the rural areas and one-half in the urban areas. More and better streets, as well as more and better roads, are needed.

NEW CONSTRUCTION

There were 20,000 miles of new construction in highways in 1948, but the production in that year of automobiles, busses, and trucks, placed bumper to bumper, aggregated 20,000 miles.

INCREASED COSTS

There has been an increase in the costs of construction from 1940 to 1949 of approximately 123½ percent. The increase since 1945 has been 48 percent. At the same time, there was an increase of approximately 3,000 miles in new construction in 1949 over 1948. However, the work done in 1949 just about equals the work done in 1936 because the dollar buys less due to increased costs, although the authorizations are larger.

INTERSTATE IMPROVEMENTS

The interstate system improvements for the fiscal year 1949 account for 30 percent of the total amounts programed for primary and urban roads. Twenty-three percent of the primary funds and 46 percent of the urban funds were for interstate improvements.

TRAFFIC AND POPULATION

The population is increasing and the traffic is multiplying. If I were asked the most important problem confronting the United States today I would answer that there must be more highways. The roads must be wider and straight. Safety must be promoted.

SAFETY

I am gratified to report that safety has been promoted, and while deaths and injuries are still entirely too numerous there were fewer in 1949 than in 1948.

FEDERAL-AID HIGHWAYS ARE SELF-LIQUIDATING

For the fiscal year 1949 the Government collected $1,326,054,091 in highway-user taxes, of which $503,648,471 were derived from the 1½-cent Federal gasoline tax. The policy of Federal aid for highways is self-liquidating.

STATE FUNDS

State and local revenues available for road construction have not kept pace with the increased costs of construction in the past 10 years. Funds are being diverted. Highway police and administration, as well as highway maintenance, take a large percentage of State funds. It is imperative that the States make provision for matching Federal funds.

STATE AND COUNTY DISTRIBUTION

There is need for better farm-to-market roads. It is well to keep in mind, however, that in many States a disproportionate part of funds for roads are spent in the construction of local roads. The cost has been shifted to the highway users. In Ohio, for instance, rural road agencies received in 1946 $30,850,000 from the State and spent $35,953,000 for the construction and maintenance of local roads. This means that in Ohio the State provided the equivalent of almost 86 percent of the local-road expenditures. In Michigan the ratio is 96 percent. The States generally are providing for local roads, for these roads are State and local problems.

BETTER ROAD EQUIPMENT

While the costs of construction have increased, a better type of road is being built. The country is indebted to American road builders for a revolution in road construction. The improvements in road building enabled the United States to do many things in World War II that never had been dreamed of. As a result of improved machinery airfields were constructed, army and navy bases located and roads opened more speedily than ever before.

THE PACE

While Federal aid contributes to the construction of approximately 15 percent of all highways, roads, and streets annually, it sets the pace for construction. Improvements are being made as a result of the experiments carried on in the laboratory of the Bureau of Public Roads. Foundations are being stabilized. Soil studies are contributing to a better type of road. The experiments are resulting in a more economical local road. The Bureau of Public Roads is taking the lead for better road construction.

THE FUTURE

There is a $250,000,000,000 economy in the United States today. Production is essential to the progress of the Nation. The Federal Government is profoundly interested in highway construction. Employment is provided for millions. The Joint Committee on the Economic Report estimates that the cost of correcting the present deficiencies of roads, streets, and highways in the United States amounts to over $41,000,000,000. The largest single need is $23,000,000,000 for modernizing State highway systems and their urban extensions. The remainder of the $41,000,000,000 reflects the need of city and village streets and local roads. For the expanding population and for the progress of the Nation production must be increased and production without transportation is impossible.

NEXT STEPS

The authorizations for Federal-aid highways must be increased over previous au-

thorizations for the next two fiscal years. The program must be expanded. There are many steps to take. I mention but a few:

1. There should be an increase in the Federal contribution to the interstate system. The increase should be fixed and definite for all of the States. The Federal contribution can well be increased from 50 to 75 percent as the national defense is involved in the interstate system.

2. The Federal contribution should be increased as soon as practicable for four-lane divided highways with controlled access extending for 10 miles from all larger urban areas. Those who use the roads pay for them. One-half of the traffic is in the cities. Four-lane highways are in the interest of the public.

3. While it may be difficult for the Federal Government at present to provide a larger amount for rural roads, I believe that the next step in solving the rural road problem is for the United States to assist in providing adequate engineering administration of local roads. There is need to get the farmers out of the mud, but there is also a great need to protect the revenues of the taxpayers. We cannot protect our revenues without adequate engineering talent.

4. Express highways and adequate arterial roads in the cities are imperative. Traffic is being impeded. Progress is being delayed.

5. Many of the State laws for acquiring rights-of-way are antiquated. The statutes were passed for horse-and-buggy days. They are outmoded and outdated. Rights-of-way are expensive and additional assistance must be provided.

6. I cannot overlook in the sixth place the need for express highways in populous areas. New Jersey and New York are taking the lead in the construction of such highways. Their lead must be followed by other States. The Federal Government must cooperate.

The Federal-Aid Highway Act of 1950 should not only set the pace for the highway needs of the present but provide for the highway needs of the future as well. The policy of Federal aid has been tested. It should be continued and expanded to provide for the multiplying needs of a $250,000,000,000 national economy.

BUILDING CIVILIZATION

I have stressed the building of roads and I have mentioned the improved machinery for better road construction. I began by saying that highways and civilizations have always gone hand in hand. We cannot build roads unless we build men. We cannot grow and prosper as a government unless men grow. An enlightened citizenship will mean a better civilization. Science and invention are important, but the progress of humanity, after all, is based upon the moral law. The material is important, but the spiritual is more important. An enduring civilization is based upon faith, justice, and righteousness.

COMPLACENCY

After the sacrifice of war we are prone to become complacent. We are inclined to be soft. We turn from the sacrifices of war to the pleasures of an uncertain peace. We are prone to substitute complacency for sacrifice. The men and women who have left their impress on human history have been those who gave in sacrifice and in unselfishness.

STRONG AMERICA

Our civilization cannot advance unless America is strong. The strength of America is not in the atom bomb nor in the hydrogen bomb, but the strength of America is in the spirit of the people of the United States. We must profit by the lessons of history. It would be most unfortunate for the United States to place its confidence in any bomb or in any power. Civilization would not advance for men would not grow. Our plans must be sound. Our Government must be stable. Our faith must be abiding in man, country, and God. If we placed our dependence upon any weapon we would relax, we would not be vigilant, we would lose our liberty.

We must not substitute selfishness for service. In the frontier days the greedy merchants could not resist the lush prices offered by Indians for guns and ammunition and often they sold their personal guns and belts to the Indians and when they did they sold their own scalps as well.

I repeat, we must profit by history. The French placed their confidence in the Maginot line rather than in the strengthening of their Government, and France lost. She was easily overrun and conquered in World War II.

Science is essential to the advancement of civilization but morality is more essential. The spirit is more important. I do not underestimate the effect of the atom bomb but I recall that at the conclusion of the First World War poisonous gases were being brought into play and it was announced that their use in the next war would mean the destruction of civilization. But the scientists who compounded the poisonous gases were confined to no one country and at the beginning of World War II all nations had supplies of poisonous gases but not one country made use of them.

Already the Russians have split the atom. The scientists who invented the atom can discover and perfect a defense against the atom.

OPPORTUNITY

As the most powerful Nation, and as the wealthiest people, with unparalleled natural resources and with undeveloped scientific frontiers, there has come to the United States the greatest opportunity for growth and development of our civilization that was ever enjoyed by any Nation in history. If we utilize inventions, discoveries, science, and knowledge for building and not destroying civilization, the people of the United States in the next 25 years will not only maintain, but will extend and expand, the highest standard of living that was ever before enjoyed by man.

OUR GENERATION

I would like for our generation to be constructive. The individual, like the Government, that does not grow will die. Democracy is not only a growing but it is a dynamic faith. We are concerned in these uncertain days of peace about national security. If we build our civilization on a solid foundation the future is secure. The great men and women of history have not sought an easy place. They have not been satified with personal security. They have taken the risk. They have sacrificed. We must be patriotic. We must be prepared to sacrifice for our ideals and for our country if our civilization is to endure and to advance. We must walk upright, with our feet on the ground, with our eyes toward the stars. We must be "guided by the stars and not by the lights of each passing ship."

On the walls of the magnificent building of the Chamber of Commerce of the United States in the city of Washington are carved the thoughts of Daniel Webster, uttered by him more than 100 years ago, which our generation should adopt, as we build and improve our civilization:

"Let us develop the resources of the land, call forth its powers, build up its institutions, promote all its great interests, to see whether we also, in our day and generation, may not perform something worthy to be remembered."

Development of Peat Resources

REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. MARSHALL. Mr. Speaker, I have introduced H. R. 7330 to encourage the development of our peat resources. I think it is imperative that the Members of the House be informed on the progress made in the utilization of peat; particularly in Russia and Great Britain.

I think the following translations of Russian newspaper accounts and government reports on peat development merit our attention. With our great untapped peat resources, this progress is open to us in the interest of our national economy, national defense, and national security.

[From Pravda of July 6, 1947]

Moscow, Leningrad, Gorki, Yaroslavl, Ivanovo, and a number of other industrial centers met their needs for electric power to a large degree from stations operating on peat as a fuel. Peat is also used for municipal heating, and the textile industry has heavy demands for it. The season for peat extraction is half over. The production plan is being fulfilled but the process of peat drying is not being carried out satisfactorily. Poorly dried peat cannot be used. Several electric power stations met difficulties at the beginning of this year due to lack of fuel in spite of the fact that hundreds of thousands of tons of peat lay in the fields not far away, but was not in condition to be used.

[From Pravda of April 23, 1948]

THE TEMPOS OF PEAT PROCUREMENT MUST BE SPEEDED

During the * * * months it will be necessary to stockpile millions of tons of peat for the national economy of our country. The chief consumers of peat are our power plants. The Soviet Union occupies the first place in the world in regard to the amount of power generated by plants run on peat. Besides being used by power plants peat is also largely utilized by the textile, light, glass, and other branches of industry. The municipalities of many of our cities are using peat to heat hospitals, schools, and homes.

The Soviet Government is paying great attention to the peat industry, its technical servicing, the mechanization of its labor processes, and to the betterment of the housing and living conditions of workers employed by the peat industry, and it demands a similar attitude toward this matter on the part of local organizations * * *.

Vladimir Ilyich Lenin, who believed in the great importance of the peat industry as a foundation for electrification, was the initiator of its mechanization. This branch of industry is utilizing at present the latest technical means. In particular, peat is obtained by the hydraulic method. This year much machinery of new design is going to be utilized, * * * excavators, and others.

Last year's plan was not fulfilled, and this year's plan likewise is endangered. Work of monumental proportions remains to be done this year, such as building 55,000 square meters of new living space for the peat industry workers.

The seasonal character of the peat industry demands a planned approach to actual

mass propaganda work. Every man and woman worker of the industry must be made to understand how important to the state is the work they perform.

A new method of handling peat, developed this season in the Ural peat fields, U. S. S. R., utilizes a combination of dredge and electric spreading machine. The foreign press describes each unit as being composed of one four-row, multiscoop excavator and two electric spreading machines. The peat moss is processed by the dredge after which the electrical machines form it into briquettes and spread them over the field.

The unit, designed by the Institute of Mechanization of Peat Production, has a reported capacity of 200 cubic meters of peat moss an hour, which is 10 to 12 times the capacity of the dredges alone. The new method requires only about one-third of the electric power and one-fifth the manpower used in the elevator system of peat excavation and an improved quality of product is claimed.

Eleven of these machines have been built by Sverdlovsk Glavenergozapchasti and 19 by a special workshop of the Monetny peat enterprise. During the peat season this year, 45 dredges and 26 electrical spreading machines have been in operation on the peat fields on the Sverdlovsk oblast.

Production of a peat sucking portable crane is being started by the Works Collective of the Ivanovo Peat Machinery building plant which planned in the third quarter of 1945 to build three of these machines each weighing 27 tons. In addition to beginning the production of the new peat sucking portable crane and a universal peat excavator, this plant's pledge for 1945 was to treble the 1944 output of peat equipment, including cranes, peat loaders, peat suction pumps, and spare parts.

(Based on items in Trud, October 11; Izvestia, July 27; and Pravda, July 28, 1945.)

[From Trud, September 12, 1946]

A newly built plant in the city of Sverdlovsk, the Urals, is now producing electric-powered combines for the Soviet peat industry. These combines press peat mixture into briquettes and spread the briquettes over the field to dry. The capacity of the combines is 200 cubic meters of peat pulp per hour.

The plant will build 40 of these combines a year.

[From U. S. S. R. Information Bulletin of July 30, 1947]

Workers of the Peat Institute of the Byelorussian Academy of Sciences, under the direction of Professor Klimov and Engineer Chudnovsky, have developed a method for the complex utilization of peat as fuel for power stations and as raw material for synthetic gasoline.

In the new process the peat is treated chemically and transformed into gaseous form before being sent to the power station. The power station thus receives excellent gaseous fuel, and what remains of the peat after gasification is used to make synthetic gasoline.

The process of complex utilization of peat reduces the cost of synthetic-gasoline production by 18 percent and reduces the peat consumption in power stations by 30 to 35 percent.

UTILIZATION OF PEAT—ACTUAL AND POSSIBLE

Fuel: Lump peat, peat briquettes, powdered peat, peat fuel oils, gas, gasoline, kerosene.

Chemicals: Ammonia, paraffin, wax, methyl alcohol, acetic acid, asphalt, phenol, peat tar, cresols, lysol, furfural.

Agriculture: Fertilizers (composts, peat ashes), litter (moss) mulch, food yeast.

Medicine: Surgical dressings (sphagnum).

Metallurgy: For smelting pig iron in blast furnace and cupolas.

Paper industry: Peat used in the manufacture of paper.

Construction: Base for artificial wood (torfite), bricks, or as a filler for clay bricks, for insulation.

Miscellaneous: Lubricating oils, in the manufacture of varnishes and dyes, in cosmetics, benzine, antiscale solution for boilers, textile and building industries.

Experiments showed that in the processing of peat by artificial dehydration, the following byproducts can be obtained for every ton of finished peat product:

Ethyl alcohol of 94.5 percent, 6–10 liters.
Fodder yeast (pressed), 25–35 kilograms.
Dry ice (carbon dioxide), 20–30 kilograms.
Furfurol, 1.5–3.0 kilograms.
Methyl alcohol, 0.8–1.0 kilogram.
Acetic acid, 1.0–1.1 kilograms.

Because of the fact that the above chemicals represent byproducts of the processing of peat, their cost of manufacture is less than that involved in regular production.

The manufacturing processes for ethyl alcohol and yeast have been developed and checked in practice; the processes for the manufacture of dry ice, furfurol, etc., have undergone only laboratory experimentation.

Alcohol is obtained by the following process:

The liquid obtained during the steaming of the peat flows into a container. It is then pumped into a sediment tank where it is freed of all peat particles. This is followed by neutralization with peat ash or lime while, after this, it is filtered in "Prokska" filters and heated (or cooled) to 30 degrees centigrade.

Yeast for the fermentation of the liquid obtained from peat in the autoclaves is made in the Linder apparatus, in a mother-liquor vat, and in a fermenting tank. Fermentation of the liquid is done by repeated use of the ferment (20 times). After fermentation, the liquid is distilled and rectified in a distillation apparatus with cooling coils. The alcohol produced in this manner is 94.5 percent by weight.

In addition to alcohol, the distilling wash and liquid from steamed peat can yield fodder yeast by a process similar to the manufacture of alcohol. However, a special culture of yeast produces pressed yeast with high sugar content.

As can be seen from the foregoing, the processes of manufacturing alcohol and yeast are similar to the usual alcohol and yeast production processes.

It has been determined that the capital investment in one liter of alcohol amounts to 4 rubles and the production cost is 1 ruble, 50 kopecks. The investment in one kilogram of pressed yeast amounts to 40 kopecks and the estimated production cost is 30 kopecks. (M. I. Sarmatov, V. Y. Patsulo, and G. N. Sizov, the Floating Peat Plant, Peat Industry, No. 4, July–August 1945.)

Water gas can be obtained from peat semicoke. Composition of the water gas obtained from peat semicoke is as follows:

Ammonia also can be obtained from peat. According to the Soviet newspaper For Industrialization of October 11, 1946, there were in the U. S. S. R. "in process of construction a number of peat-chemical plants in which a large number of products were to be made, including ammonia." (S. A. Tsurupov, The Peat Institute and Its Problems in 1946. The Peat Industry, No. 2, 1946 (summary)).

The institute has at present 1,400 students, which is more than before the war. Beginning with 1945, 400 students will be accepted annually and at least 200 to 250 engineers will graduate. In the next 3 to 4 years the number of students in the institute is expected to rise to at least 2,000. For more than 2 years the institute has had a preparatory section.

The U. S. S. R. has two-thirds of the world's peat preserves, the industrial reserves of peat in the country occupy the second place among other combustible mined fuel. In electric stations it forms 50 and sometimes almost 100 percent of the fuel supply, yet the country has only 700 to 800 engineers specializing in peat. This naturally impedes technical progress in that branch of industry.

The institute has now been granted the right to educate engineers for the peat industry in six specialties and from 1945 on has commenced educating engineers in three faculties—technological, mechanical, and building faculties. The institute can, therefore, henceforth provide the peat industry with specialists in all the main branches necessary for its development. It remains to organize faculties for the chemical and thermic treatment of peat. A chemistry section has already been organized with prominent specialists in the gasifying and chemical treatment of peat, but a special faculty for the education of engineers specializing in these branches will be opened later in the year.

As regards scientific work, the institute has been working mainly on theoretic problems connected with the development of the peat industry and new technological schemes and methods.

(These reports are taken from the legislative Reference Service of the Library of Congress TP 360 on Peat Industry of the Soviet Union.)

[From the Department of Scientific and Industrial Research report, The Winning, Harvesting, and Utilization of Peat, published by His Majesty's Stationery Office 1948]

UTILIZATION OF PEAT

The principal uses for peat at the present time in Great Britain are as a fuel for domestic purposes, as peat-moss litter in agriculture, and as a soil ameliorant in horticulture. In other countries peat has found use industrially as a fuel for power generation by burning under steam boilers or gasification in producers. It has also been used industrially for the production of peat coke which was used as a producer fuel and for metallurgical purposes. Various other methods for the utilization of peat, e. g., as a heat-insulating and packing material, in the manufacture of paper and textiles, for coal-gas purification, for the production of alcohol, etc., have been exploited commercially.

Peat is a very free-burning fuel which requires only a very low draught to maintain a satisfactory rate of combustion. In a modern well-type, open-hearth fireplace this can frequently be arranged by keeping closed the regulator admitting air under the fire, but it is sometimes necessary in addition to cover partially the bottom of the grate by means of a sheet of metal or tiles. There are now on the market in Eire a number of appliances which will burn peat satisfactorily.

USE AS INDUSTRIAL FUEL FOR STEAM GENERATION

There are two main methods in which peat can be used industrially for steam-raising purposes. These are:

(a) Burning to complete combustion under boilers, either in the form of air-dried blocks or coarse powder (milled peat) or as a dried pulverized fuel.

(b) Complete gasification in producers, with or without recovery of by-products, followed by combustion of the gas in gas-fired steam boilers.

The use of peat fuel for steam raising at electricity generating stations has been developed on a large scale in the U. S. S. R. with

apparently a considerable degree of success. The peat is obtained partly by the hydropeat process. In the northern and central districts of the U. S. S. R. where climatic conditions are not favorable for this process, the use of milled peat as a fuel has been developed. In 1933 approximately 30 percent of the power stations in operation in the U. S. S. R. were burning peat fuel, these stations having a capacity of over 1,000,000 kilowatts. Under the second 5-year plan it was proposed to increase this capacity to nearly 4,000,000 kilowatts. Larger power stations, each having a capacity of between 100,000 and 200,000 kilowatts, have been built at Shatura (Moscow), Dubrovka (near Leningrad and at Balakna in the Gorki (Gorgres station). At these stations hydropeat or machine-formed air-dried peat is burned under water-tube boilers fitted with a special type of grate, known as the Makarev shaft-chain grate. This grate is a combination of gas producer and chain grate. The peat is fed from bunkers into a shaft through which preheated air is passed. The more volatile constituents of the peat pass through suitable openings into the main combustion chamber, and peat reaching the bottom of the shaft discharges onto the chain grate. The most satisfactory results have been obtained in this system when using peat containing about 30 percent of moisture.

An alternative method by which peat can be used in solid form for steam-raising purposes is to burn it in a pulverized fuel system. In Sweden pulverized peat from a works at Visianda has been used for locomotive firing on certain sections of the state railway. The results of tests have been published and indicate that the method adopted was satisfactory. Using peat having a calorific value of 7,740 B. t. u. per pound, 4.7 pounds of steam per pound of peat were produced.

Utilization of peat for purposes other than as a fuel: Agricultural and horticultural uses, extraction of wax from peat, production of alcohol from peat, other uses for peat.

Peat has been used for a large variety of other purposes, but these have been on a very small scale only and are not likely to be extended.

Fibrous, cotton-grass peat has been used in the manufacture of building materials, paper, millboard, and textiles.

Raw milled peat has been successfully used as an absorbent in filter beds and sewage beds, and it has found application in the manufacture of filters for reducing the hardness of water. The absorbent power of peat has also been utilized in medicine, the peat being used as a filling for surgical dressing.

Estimates made indicate that approximately 1,000,000,000 tons of air-dried peat could be made available by the development of peat reserves in this country.

Owing to the shortage of coal in Eire, especially during the war years, the production of peat has been stimulated. Information received indicates that about 5,000,000 tons of air-dried peat are now won anually, mainly by hand-winning methods.

Mr. Speaker, according to the Bureau of Mines, Minerals Yearbook of 1948, Florida, New Jersey, Ohio, Michigan, Illinois, California, Pennsylvania, Connecticut, Iowa, Minnesota, Wisconsin, Georgia, Indiana, Colorado, Alabama, Texas, Maine, Washington, and Massachusetts have rather large deposits of peat.

We have to ask the question why it was needed that "imports of moss peat continued to increase totaling 91,073 short tons in 1948, an increase of 16 percent over the 1939 prewar figure?"

Broadcast by Hon. Francis J. Myers, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD No. 21 in the biweekly series of broadcasts I am making.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

TEXT OF TRANSCRIPTION BY HON. FRANCIS J. MYERS OVER PENNSYLVANIA RADIO STATIONS, WEEK END OF MARCH 3–5, INCLUSIVE

(No. 21 in biweekly series)

The potato, which in the years since the war has grown hotter and hotter, finally got dumped on the Senate floor 10 days or so ago, and for a few days a regular battle royal ensued.

It was the decision to destroy some $50,000,000 worth of the 1949 potato crop purchased by the Government under our price-support program that really got the potato talk going recently. Most of the talk has been confined to the absurdity of using 50,000,000 tax dollars for unjustifiable destruction—and as a result, we haven't heard much about the events leading up to the potato surplus.

So, for a bit, I want to give you some potato history, as it were, because I don't believe that by and large many people are aware of the basic problem which the potato surplus reflects.

Back during the war period, our farmers had a tremendous job thrown at them—the job of feeding not only our own people and our fighting men—but in addition, our farmers undertook the task of feeding millions of others all over the world.

It was in the war period also that the tremendous quantities of cotton, wool, wheat, and a number of other storable agricultural commodities which the Government had previously purchased and put in storage really came in handy. The Government, as you may recall, had bought and stored these commodities to help our farmers keep their incomes from sagging badly in years that our production exceeded our national demand.

As I've already indicated, these stored surpluses came in handy during the war, and, as a matter of fact, the Government was able to sell its stored wheat, cotton, wool, and so forth, at a profit and we emerged from the war with our entire price-support program over the previous years having not only paid for itself, but, in fact, the Government actually made money through having bought and stored surpluses in bumper-crop years and selling them later when we weren't producing enough to meet demand.

But, as you can appreciate, not every farm product can be stored without spoiling, and when we were faced with the job of feeding people in the war areas, we just didn't have a sufficient supply of perishable foods such as vegetables, butter, and so on. Faced with this difficult problem, the Congress came up with a program designed to encourage farmers in increasing their production of these commodities, and potatoes happened to be one of the foods that we were short on. So that's how the problem started.

That wartime potato baby has grown up to be a giant. Potatoes can't be stored, and despite the fact that commercial alcohol can be obtained from a potato, we simply don't have a sufficient demand for industrial alcohol to use all our potato surplus for this purpose. I might add here that the Russians use the potato for a concoction known as vodka, though, as yet, I haven't heard anyone suggest seriously that we put our potato surplus to that kind of use.

Now in the farm bill, adopted by the Congress last fall, a provision was made which permitted the distribution of surplus perishable foods owned by the Government to charitable and welfare agencies, free of charge. The bill, however, did not provide that the Government would pay the freight on these surpluses from the point of storage to the welfare groups who needed them. Fortunately, some of our present surpluses are stored close enough to communities that need the food for relief purposes, but the truth of the matter is that our surplus of potatoes is far larger than needed for welfare purposes. I might add that some surplus powdered milk and dried eggs have also been distributed to charitable organizations as a consequence of the so-called welfare section of last year's farm bill.

But the free distribution of perishable surpluses is a far cry from a real solution to the problem. The fundamental difficulty is the fact that potato production is now far too large to meet any conceivable needs, and the only real answer is to be found through cutting back our production until it is again within reasonable limits. As matters now stand, this can't be done by reducing the number of acres we are planting. This was actually done with the crop in 1949, and yet we turned out more potatoes than ever, simply because many farmers moved the rows closer together, and thus got higher yields per acre. Practices of this sort are disastrous, because they result literally in mining the land—in robbing it of its productive value—and ultimately, of course, in destroying the power of the land to grow food.

Now there are basically two ways to handle the potato problem: first, to withdraw price supports altogether; and secondly, to withdraw potato supports unless farmers agree to cut back on their production.

The first possibility must be rejected. Both the Democratic and Republican parties have adopted as part of their national platforms the promise that price supports of some kind are necessary to help stabilize farm income * * * and for some time it has been part of our Nation's policy to support the foundations of our farm economy against the calamities it has suffered in the past.

Those of us who can remember back into the twenties and early thirties recall with painful clarity that the stock-market crash of 1929 was not the first danger signal which warned us the depression was on the way. From the middle twenties on, the bottom had dropped steadily out from under farm income, and the farmer's situation was desperate long before the Wall Street bubble burst. Mortgage foreclosures on farms were a commonplace by 1929, and most of our farmers had virtually ceased to be consumers of the industrial goods they had previously purchased. Naturally, as farm income dropped, this had a serious effect on our banks, particularly those in rural areas, and it had a big influence on our factory output because industry after industry lost important segments of its market.

The tide that swept in ever-worsening depression conditions on our farms was not reversed until the first of our basic farm laws put in an appearance in 1933. Since 1933, the farmer has been able to improve his position steadily. Today Federal conservation programs play an essential role in saving our valuable topsoil and enriching the food we

eat. Programs developed under the Farmers Home Administration and its parent agencies created in the middle thirties have been of enormous assistance in helping farmers to obtain long-term loans for making needed repairs on their farm buildings and other improvements necessary to get farms on a paying basis. Other Nation-wide programs, enacted by the Congress over the past 16 or 17 years have, taken together, performed yeoman service in making it possible for the farmer to get back on his feet as a self-sustaining and independent businessman and producer * * * and these national programs depend heavily for their success upon the basic principle of farm-income support.

So we cannot afford, as a matter of national policy, to throw the farmer to the wolves and pitch ourselves once more into the national calamity of a withering farm income by abandoning the farmer altogether.

On the other hand, we cannot afford to underwrite, through Government purchase, limitless and wholly unusable over-production.

About 10 days ago, just as the first of the 1950 crop of potatoes was being planted, Senator SCOTT LUCAS, of Illinois, the majority leader of the Senate, came up with an amendment which would have solved the potato problem. His amendment—which I supported and which was backed by other administration leaders in the Senate—would have cut back the size of the 1950 potato crop to fit our needs by proposing to withdraw price supports for potatoes on the coming crop unless farmers would accept production-quota control.

Quota controls would simply mean that the Secretary of Agriculture would be called upon to establish a potato production goal for 1950 on which the Government would support prices at a reasonable level. This production goal would represent our total foreseeable needs for potatoes in the coming year. Thereafter, when the farmers voted to accept quota controls, a fair share of the potato production would be allocated among them, and once the production target had been established and agreed to by the farmers, a fine would be levied on any farmers who refused to cooperate and insisted upon marketing potatoes grown in excess of the production quota.

The administration amendment to solve the potato problem was overthrown in the Senate by a Republican-led revolt, in which some Democratic Senators joined, which insisted that we should continue our present potato policy for at least another year. The net result is simply that this time next year we will have another bumper crop of potatoes bought up by the Government—and once more, in all likelihood, we will be forced to destroy a large share of the quantity we buy.

So a small majority of the Senate refused to settle the potato problem in terms of the 1950 crop—though the Senate later agreed to apply the Lucas amendment to the 1951 crop. In short, the Senate was willing to accept the Lucas proposal as workable a year from now, but would not apply it to the 1950 crop.

I don't get this kind of thinking at all. If the Lucas amendment is the answer—as the Senate seems to agree that it is—it should be used now, and I did everything I could to get it adopted for this year. I feel that the Senate made a disastrous mistake in rejecting the administration proposal—and I feel that the entire health and well-being of our farm economy is seriously threatened by this failure to handle the hot potato.

We had another explosion in the Senate on Saturday, February 25, when the Senate Appropriations Committee voted against authorizing funds needed to administer the Rent Control Act between now and the time the present law is due to expire on the 1st of July of this year.

You'll recall that the Eighty-first Congress made some repairs last spring in the rent-control law adopted by the Eightieth Congress, and we extended the law for 15 months—or until July 1, 1950. It was estimated that $21,000,000 would be needed to administer the law during the fiscal year which began last July, but the Congress last session voted only $17,500,000 of this amount with the understanding that the balance of $3,500,000 would be approved early in 1950. It was this $3,500,000 which the Appropriations Committee refused to approve a week ago.

The action of the Senate Appropriations Committee is not final, however, and very shortly I expect to see the matter brought before the Senate. I feel we must go through with the promise made by the Congress last year in agreeing to continue rent control until July 1. We expect a big fight on this in the Senate, but I intend to do everything I can to see that the needed $3,500,000 are made available to carry out the law for the next 4 months. I don't believe it is proper to kill off a law through the expedient of refusing funds needed to administer a law the Congress has already declared to be national policy.

I also feel strongly that it will be necessary to extend rent controls for at least another year. As I've said repeatedly in the past, rent control is messy business, and it is utterly impossible to have any kind of rent-control law that doesn't put some limitations on somebody, somewhere. On the other hand, it cannot be denied that critical housing shortages continue to exist in many localities in Pennsylvania.

I think this can be proved by the fact that most communities and States have not decontrolled their rents, although the Federal law adopted last year permitted local decontrol when people in any area felt controls were no longer needed.

And from the experience of communities that have prematurely voted to decontrol rents before the shortage was licked, we have seen that there are still landlords—not many, but a few landlords who ruin things for everyone—who will indulge in rent gouging when they know their tenants can find no other place to live.

The Senate Banking and Currency Committee will hold extensive hearings on the subject of continuing rent control beyond July 1 of this year to determine if it is still necessary in view of changes that may take place before the present law runs out.

I do believe that these congressional hearing on extending rent control for another year will produce facts which will show clearly that the controls must go on for a time longer. And if the facts do show conclusively that rent control must be continued, you may be sure that I shall do everything in my power to see that the law is extended.

Statement of Army and Navy Union, United States of America, on Armed Preparedness

REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, we have all been very much interested in having our civilian population instructed as to what can be done to cope with the atomic bomb for the protection of the civilian population and also what can be done against communism.

I am including as part of my remarks a release from the Army and Navy Union, United States of America, dated March 5, at their request. It reads as follows:

Whereas the President's Own Garrison, No. 104, Army and Navy Union, United States of America, is vitally interested in national civil defense and in being heard in connection with the various phases thereof; and

Whereas the possibility of an enemy attack upon our cities with the terrible devastation that would result therefrom, is now fully realized: Now, therefore, be it

Resolved, That the civil defense planning against such attack upon our cities, both from within and without, be accelerated; be it further

Resolved, That the vital part to be played by all means of communication in the control of the civil population in the event of such emergency or attack be recognized; and that the civil defense planning recognize the great value of radio broadcasting through warnings and instructions to the civil population of our cities by established broadcasting stations and through the use of transportation broadcasting such as in use on trains, buses and streetcars; be it further

Resolved, That it be recommended to United States Attorney George Morris Fay that his office investigate the actions and motives behind the actions of any who would interfere with communications systems essential to the national defense, since such interference might endanger thousands of lives in the event of an attack on cities of our Nation; be it further

Resolved, That copies of this resolution be sent to the Department of Defense, the District Commissioners of the District of Columbia, the Public Utilities Commission of the District of Columbia, Members of Congress and the press; be it further

Resolved, That our national headquarters, departments and other posts be informed of the adoption of this resolution and that such headquarters, departments and posts be requested to adopt this resolution; be it further

Resolved, That the New York Journal American be congratulated for its special story of February 27 portraying effects of atomic attacks upon our cities.

The above resolution was passed at the regular meeting of the President's Own Garrison, No. 104, Army and Navy Union, United States of America, held Monday evening, February 27, 1950, and distributed for the Sunday press of March 5, 1950.

By order of Commander Bladen.

Trade and Tariff Agreements

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. BUTLER. Mr. President, I ask consent to have printed in the Appendix of the RECORD the text of the address of

King George VI to the British House of Parliament, as it appeared in last night's Star. I call particular attention to the point in the address where the King said:

You will be asked to approve orders making certain changes in the customs tariff arising from agreements which my government concluded last summer at the meeting at Annecy, at which the governments of the Commonwealth were represented.

It is evident that in Great Britain, as in most other countries, the legislative body approves trade agreements negotiated by the executive branch. I believe the United States is one of the very few countries in which the legislative branch has no say whatever in approving or disapproving these trade agreements.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF KING'S ADDRESS

My Lords and members of the House of Commons, I am proud to recognize that my people, by a sustained endeavor, have increased industrial and agricultural production, and thereby helped our country forward to greater prosperity. In this task they have been greatly assisted by the help and cooperation of the governments and peoples of other parts of the Commonwealth.

The world shortage of dollars, in which this country has shared, has again been eased by generous help from the United States of America and Canada. Renewed efforts will, however, be required to secure a balance in the country's overseas trade and, in particular, to increase earnings in North America.

My government will maintain their wholehearted support of the organization for European Economic Cooperation, through which it is hoped to work out a new European payments scheme.

PLEASED BY COLOMBO PARLEY

I look forward with great pleasure to the visit of the President of the French Republic and Mme. Auriol.

My government in the United Kingdom warmly welcomed the opportunity provided by the recent meeting of Commonwealth Ministers in Colombo for a valuable exchange of views on foreign affairs.

In accordance with the recommendations of the meeting, my ministers look forward to cooperating with other Commonwealth governments in south and southeast Asia.

My government welcomes the inauguration of the 27th of December last of the Republic of the United States of Indonesia as an independent sovereign state, with whom diplomatic relations have been established.

On the 6th January my government accorded recognition to the central people's government of the People's Republic of China.

On the 7th of February my government granted recognition to the States of Viet Nam, Laos, and Cambodia, as associate states within the French Union.

SUPPORT PLEDGED TO UN

My government will continue to give full support to the United Nations, for it is only through an effective system of security that world peace can be assured. In particular, they will use their utmost endeavors, through the United Nations, to assist in finding a durable solution to the tremendous problem of atomic energy so that international agreement for adequate control and supervision of the production of atomic energy may be secured.

My government will do their utmost to insure the success of the Council of Europe.

The formation of a federal German government has made possible a progressive transfer of responsibility from the western Allies to the Germans. As a result my government has been able to make substantial reductions in the cost of their administration of Germany.

My ministers will maintain the closest relations with the other powers signatory to the North Atlantic and Brussells Treaties, and play their due part, in collaboration with the other powers, in strengthening common means of defense. My government will continue to take all necessary steps to insure that my armed forces are ready to meet their responsibilities in all parts of the world and the new Organization of Civil Defense will be developed.

COLONIAL DEVELOPMENT

My government is actively promoting the economic and social development of the colonial territories, and the Colonial Development Corp. is proving a useful instrument to this end.

Members of the House of Commons, the estimates for the public services will be laid before you in due course.

You will be asked to approve orders making certain changes in the customs tariff arising from agreements which my government concluded last summer at the meeting at Annecy, at which the governments of the Commonwealth were represented.

My lords and members of the House of Commons, the economic difficulties of this country have emphasized the need for renewed effort to expand the production of food from our own soil, and my government will continue to take all practical steps to encourage our agricultural population to increase output by every efficient means and to make better use of marginal land. The improvement of water supplies, particularly in rural areas, will continue to occupy the attention of my ministers and preparatory steps will be taken with a view to the introduction of legislation as soon as circumstances permit.

LIMITED LEGISLATIVE PROGRAM

In view of the restricted time available and the heavy volume of financial business to be transacted, my government propose only a limited program of legislation for the present session. Nevertheless, should other measures prove in their view to be immediately necessary for the maintenance of full employment and the national well-being, my minister will not hesitate to submit them to Parliament, even though they may seem likely to prove contentious.

A bill will be laid before you to amend the law relating to allotments in England and Wales and in Scotland.

A bill will be laid before you to amend the medical acts so as to raise the standard of medicinal education and to modify the constitution and disciplinary procedure of the general medical council. Legislation will also be introduced to vary the constitution of the central midwives boards and to make other alterations in the law relating to midwives.

A measure will be laid before you to provide a uniform code for regulating the breaking-up of streets by public utility undertakings; also a measure to empower highway authorities to place and maintain cattle grids in highways.

You will be invited to pass a bill to regulate and improve the living conditions of the crews of fishing trawlers.

You will be asked to approve legislation giving further encouragement to the transfer of industrial undertakings to the development areas.

The Senate and the Displaced-Persons Bill

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "The Senate and the Displaced-Persons Bill—The Truth Behind America's Shame," by Rabbi Richard C. Hertz, of Chicago. The speech has been edited in accordance with the rules of the United States Senate, because, in my personal judgment, in its original form it contained certain comments which I thought violated the rules of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SENATE AND THE DP BILL—THE TRUTH BEHIND AMERICA'S SHAME

Text: "And if a stranger sojourn with thee in your land, ye shall not do him wrong. The stranger that sojourneth with you shall be unto you as the home-born, and thou shalt love him as thyself; for ye were strangers in the land of Egypt." (Leviticus 19: 33–34.)

Last Saturday night the United States Senate, eager to finish its busy calendar and get home to mend political fences, permitted a horrible travesty of American idealism to be perpetrated by a handful of obstructionist Senators. By a vote of 36–30 it decided to return the DP bill (known officially as H. R. 4567) to the Senate Judiciary Committee for further consideration, which was a polite way of killing it for this session.

There is a story behind this shameful and unworthy act of the Senate that ought to be made known. This morning I propose to tell something about the present law of the land known as the DP Act of 1943, how it came to be law, why it isn't working as well as it ought; what happened to the DP bill, who opposed it, what their tactics were, and why the bill failed. I am deeply aroused over this because I believe we Americans have a duty to perform and a responsibility to discharge.

Furthermore, I speak to this question this morning because religion must always be concerned with kindness, generosity, and humanitarianism, with "one law for the stranger and the home-born," and when these are thwarted, as they were this week, the pulpit must speak out with its eternal message—before it is too late.

I

To find some clues for understanding the whole problem let's go back into a little American history. This country's traditional immigration policy has clearly established the principle of offering asylum for the oppressed. That has always been one of our most cherished political doctrines. Leaders of all parties and all periods have consistently supported it. By virtue of that doctrine America has become synonymous with freedom, with opportunity for pioneer men and women to share with their sturdy children in the development of a great continent.

All of us are immigrants or descendants of immigrants. Only the Indians are true natives. And to the Indians, the Pilgrims in their day seemed like undesirable aliens. We are a nation of immigrants, as Louis Adamic has described us. Thirty-five million newcomers have spilled themselves over

a new continent; they grubbed and lugged and heaved and dug, until this modern democratic Republic was created.

The history of immigration to the United States of America can be divided into four periods: (1) The colonial period, from the initial white settlement to 1783, was a period when immigration was considered essential to the future development of the Colonies. Lord Baltimore and William Penn engaged in gigantic real-estate operations. They needed manpower. They brought over all the immigrants they could—with bounties, prizes, and inducements. (2) There followed a period of "free immigration" from 1783 to 1830, when the entry of people was totally unregulated. (3) From 1830 to 1882, the States controlled their own immigration policies, each according to its own interests and views. States' rights ruled supreme. (4) From 1882 to the present time, during which Federal controls of immigration have operated.

In 1921 the United States drastically changed its immigration policy. Until then almost any person in good physical and mental health and of sound moral character could enter. After World War I widespread demand for restriction of mass migrations set in. It was a time of narrow isolationism: we abandoned the League of Nations, we tolerated KKK, we listened to Henry Ford. In 1924 the Johnston Act was passed which became our basic immigration statute: the number of immigrants who could enter the United States in any year was limited by quota to 153,000. The quota system became law.

What are the arguments of the narrow nationalists who oppose any liberalizing of our immigration restrictions? Mostly they appeal to fear; fear of the foreigner, fear of his manners and customs, fear of job competition, fear of his political ideology, fear of contamination from aliens, fear of letting down the bars recently set up. * * *

I read through hundreds of pages of the CONGRESSIONAL RECORD this week. Over and over again in long-winded speeches, Senators said the same thing. What an insight one gets into our legislative process by reading the CONGRESSIONAL RECORD.

The truth is that immigrants do not merely take jobs; they creat jobs for others. They don't merely receive wages; they spend wages and increase the demand for goods and services. They stimulate rather than drag upon the economic life of the country. They start new enterprises, develop new markets, introduce new processes. Immigrants become new buyers, new consumers. They often bring skills in critically needed categories, like tailors, doctors, nurses, carpenters, shoemakers.

The other great fear of little men who oppose bringing DP's to America is that they bring with them subversive doctrines that will infect this country with communism. But the law is clear on this point, and no one advocates its change: the law stipulates that "aliens entertaining or advocating views inimical to organized government or who are anarchists will not be admitted." Let the law be enforced. No one is pleading for special privileges for the Communists. Let the FBI do its job. Let the courts do their job. Liberals ask only for justice, decency, and humanitarianism for the stranger.

Some reactionary special interests who have not quite gotten over their prewar isolationism take the position that until homes are found for all Americans, until our unemployment problem is solved, until the foreigners legally and illegally here are assimilated, until we are sure those already here do not imperil our way of life and our national security, there should be no further immigration permitted. But they forget that we have not finished the war against Hitler until we have provided homes and hope for the first and most pitiful victims of Hitler. The war is not over and neither is the peace won. We have only an armistice, an armed truce. The cold war now being waged with the Soviet Union is largely a battle of power politics and propaganda. How can we gain allies among different nations of the world if we cannot show them that democracy is superior to communism? How can we give other countries this assurance when we preach one thing and practice another?

II

Then we come to the pitiful plight of the war's aftermath—the DP's—those 800,000 Poles, Lithuanian, Latvians, Estonians, Ukrainian Yugoslavs and stateless people who still languish in concentration camps, fed and maintained by the International Refugee Organization which incidentally is supported chiefly from American taxes.

The question is: What is to become of them?

Three alternatives must be dismissed at once. They cannot be repatriated to their homes behind the iron curtain. They cannot be sent to Germany, a country still nazified and now being renazified under the very noses of the Allies. They cannot be maintained indefinitely in the assembly centers with no hope of a future. A fourth alternative is inescapable: they must be resettled in free countries where they can strike new roots and build new productive lives for themselves and their children.

Nearly 30 countries began accepting DP's before our Congress passed the DP Act of 1948. When that bill finally came to the White House, President Truman saw at once that it was poorly drawn and discriminated against the very people whom he wanted to see helped: the DP's themselves. He reluctantly signed the bill because the Eightieth Congress had already adjourned; to veto the bill would have meant no law at all. Its provisions were unfair, discriminatory, and un-American.

It was no surprise then that the Displaced Persons Act of 1948 is not operating as a success. To show you how poorly the Displaced Persons Act has been working, just look at the statistics for its first year of operation.

Under the terms of the law, 100,000 might have entered the United States in its first year of operation which ended June 30, 1949. Actually only 39,734 entered. Of these 20,182 were dependents—over half the number; 9,470 were wives and 10,712 were children. In a nation of 60,000,000 jobs, some Senators are worried about less than 20,000 wage-earners upsetting the whole American economy!

Why, you may ask, has the Displaced Persons Act of 1948 not worked out more successfully? Why must it be amended?

In the first place, the "cut-off" date is too early. By the "cut-off" date is meant the date after which displaced persons are not eligible for the benefits of the act. The "cut-off" date was set as December 22, 1945, but many DP's fled from behind the iron curtain into Allied zones after December 22, 1945. Consequently, they could not qualify for visas under the terms of the Displaced Persons Act of 1948.

In the second place, the act stipulated that 30 percent had to be agriculturalists. If that figure was not met, the entire number of visas issued had to be lowered proportionately. But most DP's are not farm folk. They are artisans and workmen, professional people, or just wives and children. This has caused another bottleneck, slowing down the processing of DP's.

In the third place, 40 percent had to come from territories annexed by Soviet Union—Eastern Poland and Baltic countries. But when a man is torn from his roots and roams about Europe, his citizenship papers, his birth certificate, his personal records, are frequently lost or destroyed. This stipulation has been another bottleneck thwarting the administration of the Displaced Persons Act of 1948 requiring amendment.

Congressman CELLER, of New York, introduced a bill which immediately became known as the DP bill (H. R. 4567). This bill proposed that the date of eligibility for DP's be changed from the discriminatory date of December 22, 1945—the date which arbitrarily excluded all deserving DP's who had fled into Allied zones after that date to a new date, January 1, 1949. The new date would give opportunity to recent political refugees—especially Catholics and Jews—who had fled from Poland, Hungary, and other iron-curtain countries.

Secondly, the bill would increase the number of DP's to be admitted to the United States from 204,000 in 2 years to 339,000 in 3 years—an increase of 134,000.

Thirdly, the bill eliminates the discriminatory features of the Displaced Persons Act of 1948 in that 30 percent had to be agriculturalists, and 40 percent had to come from territories recently annexed by the Soviet Union. These two features have been the principal bottlenecks of the present act.

And fourthly, the bill provides for special screening to be sure that Communists and Fascists are barred from coming to the United States.

Actually then, H. R. 4567 is merely a bill to liberalize an existing statute—an amendment of the Displaced Persons Act of 1948, so that the bottlenecks and administrative headaches might be removed and the law made more workable.

In the course of debate, Senator IVES, Republican, of New York, declared:

"Somehow many people seem to have acquired the erroneous idea that the United States already has taken a large share of the DP's in Europe. Nothing could be further from the truth. Actually, this country has accepted only about 15 percent of all the DP's. * * * Of the 604,000 DP's resettled, the United States has accepted only 84,000, of whom 44,000 had been admitted * * * prior to the enactment of the Displaced Persons Act of 1948. * * * Compare these figures to the 123,000 persons taken by war-torn little Israel * * * and the 99,000 persons taken in by bombed-out Britain, herself in the throes of serious domestic problems." (CONGRESSIONAL RECORD, 81st Cong., 1st sess., October 15, 1949, p. 14676.)

Two Senators were careful to note the moral obligation of the United States in the course of the debate. Senator SALTONSTALL, Republican, of Massachusetts, declared:

"It is my desire to see the United States fully live up to its responsibility as the greatest power in the world today. Helping in times of distress is a great characteristic of our Nation. The displaced persons are the aftermath of war. Other countries have helped to a far greater degree in proportion to their ability than have we to find them homes." (CONGRESSIONAL RECORD, 81st Cong., 1st sess., October 15, 1949, p. 14677.)

And Senator MORSE, Republican, of Oregon, went on to say:

"We are dealing here with a great moral obligation. * * * It (the bill) asks the United States to take only a fair share of these people, on the basis of terms and conditions which are reasonable. * * * By the passage of this bill, I think we shall give great reassurance to the peoples all over this world that we do practice our ideals. * * * Once again America has a tendency to talk in terms of personal liberty and freedom and protecting the dignity of the individual, but frequently (she) falls short of putting those ideals into practice. * * * The passage of this bill will be an irrefutable answer to those who are seeking to spread that sort of propaganda against my country." (CONGRESSIONAL RECORD, 81st Cong., 1st sess., October 14, 1949, p. 14547.)

IV

Late Saturday night—October 15, 1949—the final vote came: 36 Senators voted to recommit the bill to the Judiciary Committee

with orders to report back on the bill by January 25, 1950; 30 Senators voted against this "no-action this session" way of killing the bill; 30 Senators did not vote at all. They were absent at the time of voting.

When you analyze the Senate voting record, one fact immediately strikes you in the face. It was the absentees who beat the DP's.

Senator McCARRAN, Democrat, of Nevada, chairman of the immigration subcommittee had refused to let the bill come to the Senate floor. Only a bi-partisan motion to force the bill out of committee, led by Senator LUCAS, Democrat of Illinois, and Senator TAFT, Republican of Ohio, both great friends of the DP bill, brought the measure to the floor of the Senate for debate. But by then it was too late. The Senate was anxious to go home—impatient with long sessions. The bill would have passed with a clear majority had it been scheduled earlier in the session.

Senator McCARRAN waited until the end of the session before deciding to go to Europe. He cabled the Senate he had made a great discovery. Some DP's did not have bona fide passports. Now isn't that a terrible thing? What did the distinguished Senator from Nevada think those poor devils have been doing for passports all these years, waiting for his little inspection trip? They had passports all right. They were passports to nowhere.

So Senator McCARRAN asked the Senate to wait for his return before voting. But the Senate wanted to go home. They wanted to settle up their unfinished business. So a "gentleman's agreement" developed to force a vote when many Senators had left town for the weekend, because they thought a filibuster was on and there would be no vote until Monday. Late in the session Saturday night, with 30 Senators off the floor, a vote was called. The result, 36 voted for recommitment, 30 against it. That means: 36 Senators voted against the DP's, 30 for them. DP's must languish in concentration camps still longer before the American Senate finds it convenient to voting them life, liberty, and a chance to pursue happiness.

Passing or defeating this bill is not going to make much difference in the American economy. But it is going to make a great deal of difference to the thousands of Nazi and Communist victims in Europe. Even more important, it is going to make a great deal of difference to the honor and conscience of the United States, which of all countries in the world can best afford to provide a haven for those who have suffered religious and political persecutions * * * for the very kind of people who have done so much to help make this country the great nation that it is. (New York Times, October 14, 1949.)

A moral duty was missed, said the New York Times, "a moral disaster in which the convenience of absent Senators has been permitted to outweigh the misery and the heartbreaks of thousands of refugees in Europe to whom the bill meant new life and hope." (October 18, 1949.)

V

The decision of the Senate is not final—just postponed. There is something for each of us to do.

What, then, can each of us do?

1. Tell Senator LUCAS, Democrat, of Illinois, and Senator DOUGLAS, Democrat, of Illinois, who are now home from Washington, that we citizens of Illinois are proud of the gallant fight which they put up for decency and humanitarianism. Encourage them to go on fighting for an American principle. It is awfully easy for a Senator to get the idea that the folks back home do not appreciate the abuse he takes when he fights for a great cause. People take for granted the fine things a Senator does. But when he makes a single mistake he hears plenty. So tell Senator PAUL DOUGLAS and Senator SCOTT LUCAS that the people support the stand they have taken.

2. If you have never been a letter writer before, start writing a letter right now, as soon as you get home from Temple, to the editors of each of our four metropolitan newspapers. The "letters to the editor" printed on the editorial page represent a cross-section of the people's opinions; sometimes they even influence the thinking of editorial writers. Write and tell our local papers in a short, simple way just what I have been saying this morning—that it is scandalous for the Senate to desert those DP's; that America has a responsibility to show peoples of the world that we practice the humanitarianism we prescribe for others.

3. Have any convention you attend or business organization you belong to pass a resolution and send it to all 96 Members of the Senate.

4. Support the effort of the Citizens' Committee on Displaced Persons, 308 Lexington Avenue, New York, N. Y., led by Earl G. Harrison, former United States Commissioner of Immigration. This is the organization that is working night and day to mobilize public support for the forgotten DP's.

All this must be done now. The Senate has adjourned until January. The Judiciary Committee, to which the displaced persons bill was remanded, was ordered to report back on the bill by January 25. Let the members of that committee know that we, the people, demand justice and decency for those whom a few Senators have talked to death.

VI

One final thing I want to make clear. Most of the 800,000 DP's in Europe are not Jews. Only a small proportion, less than 20 percent, are Jews. And among the so-called hard-core category of DP's—the old, the sick, the infirm, the handicapped—less than 5 percent are Jews.

But Jews know what it means to have no home. Our own tragic experience in the thirties and forties has taught our people a profound sympathy for any human being who is displaced from his home and from those he loves. Our religion has taught us for 3,000 years to pour out our hearts and our treasure to the stranger * * * to treat him as our very own.

I raise my voice as a rabbi, not alone for the fractional proportion who are my people, but for all the DP's—Catholics, Lutherans, Calvinists, even those who have lost their faith. They are human beings. They are children of God. They are my brethren, and I must be my brother's keeper. Judaism teaches me that. "One law shall there be for the stranger and the home-born; thou shalt love him as thyself * * * for once ye were strangers in the land of Egypt." (Leviticus 19: 33–34.)

It is a terrible responsibility to be an American these days. The traditions of the United States as a land of opportunity and sanctuary for the oppressed have not been forgotten by those thousands of DP's who look desperately to America. We are the only country with the resources, the space, the traditions, the potentialities.

What is more, we will live much more comfortably with ourselves if we bestir ourselves to do something for others. Let us at least keep our self-respect by striving to prove worthy of the inscription guarding the entrance to New York Harbor. Let all America reverberate with Emma Lazarus' motto on the Statue of Liberty:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse to your teeming shore,
Send these, the homeless, the tempest-tossed to me,
I lift my lamp beside the golden door."

The Coal Strike

EXTENSION OF REMARKS
OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Evidence of Contempt," from the Washington Post of March 7, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EVIDENCE OF CONTEMPT

Though the coal strike is over, the basic question that it raised is far from being settled. That question is whether the Government can compel a union which is endangering the national health and safety to end its strike. We had supposed that this issue was settled by the rulings of the higher courts in similar cases. But Judge Keech found the miners not to be in contempt. The Department of Justice, he said, had not proved beyond a reasonable doubt that the union was responsible for continuation of the strike. This caused us to believe that the Department had been negligent in not submitting the kind of evidence that would have been convincing, for the fact of contempt seemed to be indisputable.

We had felt, specifically, that the case could have been buttressed by evidence of goon squads at work to keep men out of the mines and various other acts in defiance of the court's order. It has been brought to our attention, however, that evidence of this type might have confirmed the UMW's contention that continuation of the strike was due wholly to the action of individual miners, and there was no evidence of secret communication between the UMW and the locals counteracting Mr. Lewis' return-to-work order. In these circumstances the Government felt—and on reconsideration we now feel—that the most convincing evidence of contempt was to be found in the fact that 370,000 miners continued their strike and the UMW continued to take advantage of that strike in bargaining with the operators. Certainly if the courts are going to disregard such evidence and rely upon verbal instructions by union headquarters, which obviously do not convey the real wishes of the union officials, protection of the national health and safety by means of injunction may well prove impossible.

For this reason it is of the utmost importance that this legal issue be settled. The Department of Justice has appealed Judge Keech's ruling to the United States Court of Appeals for the District of Columbia. We hope that the court will find it feasible to rule on the law involved in spite of the wind-up of the strike; for it the present state of confusion were left unresolved, Congress and the courts would be at a great disadvantage in dealing with any similar national emergencies that might arise.

There is some reason for believing that Judge Keech misunderstood the ruling of the court of appeals in the case that grew out of the 1948 strike. In that instance Mr. Lewis had failed to order the miners back to work on April 5 when the temporary restraining order was served on the union. He gave no instructions to the miners until April 12, when the dispute concerning the welfare fund was settled. The Court of Appeals did

say, in upholding the conviction for contempt, that "if Lewis had sent on April 5 telegrams of a directory or advisory nature, similar to those he sent on April 12, neither he nor the union would have been guilty of contempt of the court's order." But this has to be read in the light of the fact that Mr. Lewis' order of April 12 had the effect of sending the miners back to their jobs. In the present instance Mr. Lewis went through the motions of ordering the men back and the miners, knowing he was under compulsion, respected his wishes instead of his word. Certainly this relieved Mr. Lewis from any charge of contempt; but should it free the union from contempt when the totality of its membership was openly defying the court's order?

In the previous case the court of appeals noted: "The evidence is overwhelming that the walk-out was concerted." The evidence of concerted action was even more overwhelming last week. Should the courts decide to ignore such evidence and rely upon some overt act of contempt upon the part of union officials, they would be issuing a general invitation to lawlessness and irresponsibility on the part of big national unions. It is difficult to believe that the last word from the courts will be so out of keeping with the realities of present-day union practices.

L'Affaire Coca-Cola

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "L'Affaire Coca-Cola" from last night's Evening Star. It is apparent from this editorial that the French are not at all anxious to reciprocate the many favors the United States has done for their nation. On this particular occasion the proposal to ban Coca-Cola did not quite succeed; but we have no assurance, of course, that the proposed ban will not be made after our gifts under the Marshall plan have come to an end.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

L'AFFAIRE COCA-COLA

The old adage that politics makes strange bedfellows has just been vividly illustrated by an action of the French National Assembly. There, an oddly matched bloc of conservative Popular Republicans and Communists, hitherto unable to agree on anything, united to bar Coca-Cola from France.

As may be imagined, the reasons behind this singular combine are very different. The Popular Republicans responded to pressure from the great French wine-growing interests, which are among their most powerful backers. It would seem that far too many Frenchmen are neglecting the traditional vin ordinaire. So the wine growers are up in arms. Their propaganda attracted the attention of the Communist high command, which saw a golden opportunity to use the issue as another stick to belabor Uncle Sam. So France is deluged with Communist warnings against the "coca-colonization of France," denounced as a pernicious economic invasion of the country and as a vehicle of United States imperialism. The French consumer is pictured as soon to be made "cocacolique," with the aid of lurid advertising techniques. All this, despite the fact that sales of Coca-Cola involve no loss of dollar credits to France, since the concentrate is made at a factory in French Morocco, while distribution is entirely in French hands.

Nevertheless, the measure as passed by the Assembly would effectively ban the beverage from France. Ostensibly this rests on grounds of health, albeit it is not specifically mentioned in the bill, for that would openly violate trade agreements by discriminating against an established United States product.

Problems of the United States in the Present War

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Gen. William J. Donovan on the occasion of the presentation to him of the Alexander Hamilton award by Columbia University on February 16, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Soviet Union has completed the conquest of China and this has been given formal approval by the 30-year peace treaty.

Throughout the Far East this marks a defeat for the United States.

This victory now makes Russia the dominant power in Asia as well as in Europe.

There may be disagreement whether this breach of the former balance of power in Asia has already gone so far that it threatens our security. But there can be no difference of opinion that the balance of power on which formal peace depends will be hopelessly upset if the Russians carry out their projected extension of the Chinese conquest to Indochina, Hong Kong, the Philippines, Siam, Malaya, Indonesia, and Burma. This was the path by which the Japanese before them got all the way to India.

I visited all these countries, except Burma and Korea, and also visited Japan. During my trip the Russians boldly announced that they were going to try for just such an extension of their continental conquest. They made that announcement by recognizing the Communist revolutionary parties as the government of French Indochina. Within a week the Western Powers had to accept the challenge. The British, the French, and ourselves recognized the opposition government of Bao Dai. In Asia it is completely appreciated that the Russians have declared a subversive war on the rest of non-Communist Asia and ourselves. I wonder if the significance of that choosing up of sides has really come home to us here in the United States.

In the face of this Russian declaration of further conquest beyond China, with the Russians having demonstrated that they do know how to wage this kind of war, the non-Communist Asiatics wonder if the poet Shelley does describe us, if we indeed are "An ineffectual angel beating in the void his luminous wings in vain."

They want to be on our side if we're safe to be with, if we can be relied upon to stick with them when the going gets bad.

What is there we can do to justify their reliance upon us? What are the elements in that area that we can pull together for the sake of the people there as well as for our peace and security? As a line of departure I accept the statement of the Secretary of State that "It is hardly necessary for me to say that an attack on the Philippines could not and would not be tolerated by the United States, but I hasten to add that no one perceives the imminence of any such attack." Let us see how, even at this late day, this defense could be accomplished.

Southeast Asia stretches from the subcontinent of India to the Australia subcontinent. In the center of this great south Asian triangle lies the spreading culture of southeast Asia—on the Indochinese peninsula, on Burma, Siam, and Malaya. On the triangle at its base are the archipelagoes of Indonesia and the Philippines.

Within this triangle live almost 600,000,000 people or about 25 percent of humanity.

The first thing we have to do is to recognize that the theater is one theater—Burma, India, Siam, Indochina, Manila, Malaya, Formosa, Korea, Japan.

That it is all one in spite of the differences that lie between. That it is one in which victories won, time gained, or material salvaged, in Indochina or Formosa may greatly help in an intelligent defense of the Philippines or in the reconstruction of Burma or Indonesia.

When we look at our map and wipe out of our minds the wartime artificial separation into theaters of operation, we see that the western Pacific is a strategic unit of which the Philippines are an integral part.

There is disorder to the point of chaos in Burma. Yet it is the bulwark before India and only speedy political and economic reform can save it from Soviet exploitation. In Indochina the Soviet has picked Ho Chi-Minh, to do there what they used Mao to do in China proper. In Malaya the British are contending against a campaign of ambush and assassination by the Malayan Communist Party.

Japan and its associated islands 1,600 miles from the Philippines give it protection from the north and Formosa almost halfway between must be denied to enemy occupation by National China until next June at least.

Indonesia is the master key for the defense of the Philippines because with Malaya it forms a protective shield against the south and that shield is given depth by Australia only 300 miles south of it. Strategically, southeast Asia is of more than local interest. Whoever controls the Straits of Malacca and Singapore dominates a sea route comparable in importance with the Panama Canal. Indonesia is an island gate between the Pacific and the Indian Ocean. In 1942 Japan took the islands and broke out of the Pacific to extend its operations as far west as Ceylon. The Indian Ocean may well be the warm water target that Russia has always sought.

The American naval and air bases in the Philippines are only a thousand miles from Saigon in French Indochina.

Indonesia is the most important of the southeast Asian countries that have emerged from colonial status into nationhood. An archipelago stretching nearly 4,000 miles, or one-seventh of the way around the earth, and having some 750,000 square miles of land area and a population of 75,000,000.

It is probably the most westernized of the far-eastern countries. Its economic, financial, and even its transport system are based upon western models. It is even by modern standards rich in resources, and is fully able to repay any loans advanced to it for reconstruction and capital expenditures.

Its top leadership is anti-Communist by conviction. Although on lower levels, there is needed experience in organization and administration, the Government in control is about the best that could be obtained. The four or five leading men are competent and honest. They seek United States technical advice both of an industrial and military nature. If we could meet this request for aid as well as counsel, our position would gain strength from the fact that for the last 2 years we have carried out a policy there, consistent, definite, and to a degree successful.

In addition our ambassadors in the vital countries of India, Siam, and Indonesia are men of training, experience, and understanding. They already have the respect and friendship of those countries to which they are accredited.

There is general agreement among those whose opinion should be given weight that Russia has a program in southeast Asia and that the timetable for that program has been stepped up in an endeavor to take full advantage of the momentum from their speedy victories in China.

The urgency requires leadership now. It requires a leader, whether you call him a supreme commander or a high commissioner with the authority, the experience, and the ability to deal with political as well as military problems. He should be vested with the discretion to deal with those problems on the spot and should be located in the theater close enough to see it at first hand, yet not so close as to lose his perspective.

The cooperation of the British, the French, and the Dutch would be eagerly given, and they know our leadership is needed. The establishment of such leadership would be welcomed by the people of the countries concerned and would allay their present fear that we would abandon them.

We must make clear to them that having picked our friends we will stay with them to the finish whatever the consequence.

We have a precedent for this action.

In June 1948 Russia, in the Berlin blockade, employed a menacing and dangerous tactic to test the will of the western Allies and to stop the European recovery program at the outset.

General Clay met the challenge with boldness and resolution. The dramatic success of Operation Vittles, which maintained Berlin's food supply despite the seizure of the city, caught the Soviets flatfooted with surprise.

General Clay saw that, if the Soviets intended war, war could not be avoided by a retreat from Berlin. On the contrary, it would mean that we would be driven progressively to weaker positions. He saw, too, that if Russia was bluffing, that the moment had come to call the bluff or to surrender the initiative he had won.

The courageous and common-sense action of General Clay in that crisis is a guide and an example for us all.

We have shown our great desire for peace with Russia and our willingness to settle differences. But we have learned that up to now, at least, agreement with the Russians is a hopeless illusion.

We now see that what happens in Berlin or in Peking has its repercussions in every area of the world where our country and the Soviet Union face each other. It is a war of subversion on a global scale, in which Russia is trying to whipsaw us from one side of the world to the other.

We must win now the war in which we find ourselves. It is a war which on many fronts Russia has been waging and winning. A war that we can lose without a shot being fired. A war that if we win may make impossible a shooting war. We can neither buy our way out nor appease our way out. Our strength must be found in ourselves—in our decision and in our resolution.

The Government Potato Program

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "United States Farm Program Must Be Rewritten," by George Minot, which was published in the Boston Herald on March 5, 1950. This is one of the most timely articles of its kind that I have seen, and it should interest the Members of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES FARM PROGRAM MUST BE REWRITTEN—$6,000,000,000 WILL BE TIED UP IN SURPLUSES A YEAR FROM NOW

(By George Minot)

It is about time the American farmer was taken off the political auction block. And it is long past the time when the American taxpayer should demand that the whole vast program of private supports be reviewed. The Irish potato, on which we have spent upward of half a billion dollars in 5 years of price support, is only a tiny part of a terrific mess.

Secretary Brannan has been talking about dumping the potatoes or selling them for a penny a bag as if that would solve the whole matter. Pretty soon he will try the same tactics with 200,000,000 dozen dried eggs and $27,000,000 worth of dried milk. Senator LUCAS wants to remove all price supports from potatoes unless the Maine farmers accept rigid production control. Somebody should ask him how he feels about a similar program for corn and wheat that are raised in his State of Illinois. He sings a different tune on that.

Right now the Department of Agriculture has more than three and a half billion dollars' worth of surplus commodities it cannot get rid of. It is little wonder that there is overwhelming resentment against the farm program. It hits the public's pocketbook in two ways. It takes tax dollars to buy up and dump unneeded surpluses. In doing this it holds consumer prices higher than their natural levels.

SUPPORT PROGRAM CAN'T BE STOPPED

The farmers will tell you, on the other hand, and they are upheld by economists, that if the support program is abandoned or trimmed too sharply, it will result in a depression that will engulf the Nation. That's probably correct.

Let's look at some of the surpluses on hand the value of which adds up to $3,345,129,317:

Tobacco	pounds	367,258,290
Cotton	bales	6,036,588
Wheat	bushels	465,226,944
Linseed oil	pounds	394,827,620
Flaxseed	bushels	13,943,222
Corn	do	510,654,685
Dried eggs	dozen	210,000,000
Butter	pounds	96,260,088
Wool	do	69,403,900
Dry beans	hundredweight	4,850,795
Barley	bushels	24,626,019
Dried milk	pounds	215,799,300
Cheese	do	22,900,000

Other items in the surplus list have a value of $314,000,000.

It doesn't end there, because the perishables have to be stored in commercial cold storage and dry storage warehouses all through the dairy farm belt from New York to Minnesota. The Government—that is you—has to pay the storage costs, and they are not inconsiderable.

For instance, for butter it is 35 cents per 100 pounds for the first month, and 15 cents per hundred every month thereafter. What it amounts to here is that the price of the butter is advancing about a cent a pound for the first 6 months, and a little less than a cent more for every 6 months thereafter.

EASTERNERS HURT

The day is fast approaching when the Department of Agriculture is going to be faced with proposals for the wholesale destruction of much of the $3,500,000,000 worth of commodities listed above.

To complicate the situation, the House passed a bill the other day to add from 1,000,000 to 2,000,000 acres to this year's cotton crop and added an unspecified number of acres to this year's peanut crop. The cotton and peanut farmers were helped in this action by representatives of the wheat and corn areas, with the implied understanding that their request for increased acreage on both wheat and corn will be supported by the cotton and peanut representatives.

The Senate followed suit by adding acreage to cotton, wheat, and peanuts.

These are the people in Congress who really are murdering the eastern farmer. Take the poultryman. He is going to be forced out of business or into bankruptcy because he cannot possibly pay the artifically high costs for commercial feeds resulting directly from the Government's high support program.

The eastern dairy farmer is just beginning to feel the pinch. His situation is going to be exactly like the poultryman's unless something is done to rectify the inequalities under the support law as it now exists.

FARM PICTURE BLACK

There are a couple of other items that make the farm picture look black.

First, Americans are not eating as much as they used to. They have cut down their appetites significantly in the last couple of years. The answer is supposed to be that they have so many other things on which to spend their money nowadays—automobiles, television sets, refrigerators, and homes—that they just are not spending as much as they used to for the things they eat.

Secondly, the value of the food commodities we ship overseas is expected to drop between half a billion and a billion dollars this year.

Export, principally under the ECA programs, has provided a big outlet for three main money crops raised by United States farmers—wheat, cotton, and tobacco. During the 1948–49 crop year we shipped out half a billion bushels of wheat, almost as many pounds of tobacco and 4,750,000 bales of cotton. Each of these will drop significantly this year, primarily because of good weather and big crops overseas.

In the ECA countries alone, it is said, farm production is now at 90 percent of the prewar level. And on a long-range basis, these European countries are devoting a constantly larger part of their manufacturing capacity to the production of fertilizers and trucks and farm machinery. This means they will need less and less from us.

SPUD SURPLUS

At home, it seems obvious that there will be another surplus of potatoes. In fact, the Government already is buying early-grown 1950 crop spuds to carry out price guaranties.

Then it is obvious that although the Government has more than $100,000,000 worth of surplus eggs and dried milk, which it is

trying to give away for relief use, even larger purchases of these items, as well as of butter, will be necessary this year.

There is also the probability that the Government will have to buy large quantities of pork this year to support hog prices. This would be taking supplies of meat away from consumers—with their own tax money—at a time when the Government is trying to get more and more meat onto the market.

Finally, in the darkening farm outlook there is almost certain to be an accumulation of additional surpluses on this year's crops of cotton, wheat, corn, and peanuts, which the Government will be obliged under the law to buy up and take off the market.

A MILE APART

The Associated Press estimates that the Government may have more than $6,000,000,000 tied up in surpluses a year from now, and that its postwar losses on perishable products may total upward of a billion dollars.

Thus when you take into account such developments as a rising public debt, Mr. Truman's pleadings for higher taxes and heavy expenditures for national defense, it becomes obvious that something must be done about the billions we are spending on the farmers. But almost everybody is a mile apart when they start to talk about what should be done.

For a starter, a good-sized slash in the cost of Government and a reduction in taxes would be the best kind of Federal aid the American farmer could get.

Control of Monopoly

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. WILEY. Mr. President, one of the very fine organizations of which I am proud to be a member is the Wisconsin Grange—a vital element of the National Grange movement. In the March 1950 issue of the National Grange Monthly there is a splendid editorial comment by the distinguished master of the National Grange, Mr. Albert S. Goss. The theme of his comment is "Control of Monopoly"—a matter of crucial historic significance in the background of the early Grange movement and a matter of interest to every farmer, every laboring man, every businessman, every housewife, in the United States.

Albert Goss is one of the finest spokesman in our Nation on matters affecting the national welfare and particularly American agriculture. The members of the Grange, as well as the members of other vital farm organizations look to him as one of the real statesmen in American life, and Members of the Congress respect his wise counsel and judgment.

Time after time he has testified, with other distinguished farm leaders, on crucial issues affecting agriculture, and his suggestions have been of invaluable aid in the actual writing of farm bills.

He has commented on this crucial issue of monopoly. He wisely points out that monopolistic control in any hands—whether it is the hands of labor or of business or of Government—is harmful. Through the years I, too, have commented on this issue, for the fight against monopoly is a never ending fight.

I ask unanimous consent that the text of this splendid editorial from the National Grange Monthly be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MONOPOLY CONTROL

Twenty years ago in 1929 agriculture employed 10,500,000 persons. By 1949 employment had shrunk to 8,000,000 persons, but the physical volume of agriculture output had increased 42 percent.

This tremendous increase in agricultural production efficiency is due principally to mechanization, improved seed and breeding stock, improved insecticide and fungicides, and improved farm practices generally.

Who benefits from such increased efficiency? The answer is that in a free economy, everyone benefits, if we define a free economy as one in which the government protects its citizens from both physical and economic aggression (Guide Post No. 3), so that they are free to develop their own talents in their own way, so long as they do not impose on others.

If someone held a monopoly in the automobile industry, or any other major industry so he could charge whatever the public would pay, the economic wealth created in a few major industries would soon be concentrated in a few hands. In such circumstances the benefits of technological improvements would result in a concentration of wealth and poverty such as America has never known. The farmers were the first to detect this danger with the rapid expansion of industry during the early days of the Grange, and to call for control of monopoly. It became the great issue around which the Grange was built three generations ago, and resulted in the enactment of the Sherman antitrust law, the only such law among the major nations of the whole world. Effective competition resulted in the advantages of invention, discovery, and technological improvement being gradually but steadily passed on to all our people, through a constant lowering of production costs and selling prices and a consequent rise in the standard of living. The results are many and noteworthy. Four only are noted: (1) In a few brief generations America has jumped from a third- or fourth-rate power to the wealthiest and most powerful nation on earth; (2) among the great nations America has the largest middle-class group of any nation on earth; (3) Americans enjoy a better living standard than any other nation on earth; (4) Americans spend a smaller percent of their income for food than any other nation on earth, and eat better.

Turn anywhere else in all the world and we find that control of many of the essential sources of wealth lie in the hands of a comparatively few. There is a wide income gap between the working people and a small property-owning group. In most countries few of the workers are ever able to bridge that gap. They had no automobiles, electric refrigerators, telephones, or many of the conveniences which we commonly own and class as necessities, and very little hope of ever getting any. With a limited property-owning group, protected by varying degrees of perfectly legal monopolies and cartels, it is little wonder that they turn to socialism and communism as a means of bettering their position. They have never had experience with the American way and know nothing about it. The strange thing is that so many people in this country, where we have kept reasonable control over the abuse of monopoly, should turn to the remedies which so many European countries have tried to apply to their monopolistic abuses rather than applying more of our own remedy which has produced such good results.

Although the results of monopoly control have been good here in America, there is still room for much improvement. In time of the recent shortage of supplies, competition broke down in many instances and the public paid through the nose. We have not yet learned to apply voluntary controls effectively in such circumstances, and our efforts at Government price control in many instances only served to aggravate a bad situation. Also, in an effort to grant labor equality in bargaining position, we have set up the possibility of labor monopolies quite as threatening as industrial monopoly.

Despite these shortcomings, we are way ahead of the rest of the world in dealing with this problem, and very clearly the answer is not to abandon the course we have chosen in favor of Government monopoly, but rather to search out and remedy the shortcomings in our method so that the benefits of our great productive capacity will redound to all in lower costs and continually improved living standards from the bottom up.

Repeal of Wartime Excise Taxes

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Capital Press, of Salem, Oreg., written by the editor thereof, Mr. Henry M. Hanzen. The editorials deal with the problem of excise taxes, and the editor takes the position which the junior Senator from Oregon has taken for some years in the Senate, namely, that wartime excise taxes should be repealed.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

HOLDS TOP HAND

(By Henry M. Hanzen)

Canada is booming.

So declares a high Canadian official.

He attributes the boom to Canada's repeal of a number of wartime excise taxes and the slashing of others.

Said this official:

"This tax program has already given the people more money to spend.

"Business is booming.

"From every side we get reports of increased business—increased income.

"We have avoided the business slump and the increase in unemployment the United States experienced recently.

"We are tremendously optimistic.

"We are sure now that the revenue flowing from the increase in business and our national income will more than offset the immediate loss of revenue from the tax cuts."

Canada has repealed the tax on transportation, amusements, telegraph and telephone messages.

It has cut the tax on jewelry, cosmetics, furs, luggage, handbags, fountain pens, cigarette lighters, and similar commodities.

Americans are still paying these wartime excise taxes.

They pay a tax of 15 percent on transportation, 20 percent on amusements, 20 percent on jewelry, 20 percent on cosmetics, 20 percent on luggage, handbags, fountain pens, cigarette lighters, and similar commodities.

In his message to Congress President Truman recommends that these excise taxes be reduced.

He declared the most serious inequities exist in these taxes, adding that were they cut it would help business.

But in his message the President made the cut in these excise taxes contingent on Congress increasing corporation, gift, and estate taxes to recoup the loss in revenue.

The President also took occasion to denounce tax loopholes which allow some groups to escape paying their fair share of the tax burden.

He cited the oil operators as one group and the moving-picture operators as another, pronouncing the tax evasions of both as shocking.

He demanded that these loopholes be closed by Congress and other tax reforms be made.

While Congress generally is agreeable to slashing excise taxes, the Republicans and Dixiecrats are balking on any increase in corporation, gift, and estate taxes.

Consequently the message will likely precipitate a tug of war between the Executive and the conservative Members of Congress.

The President, however, would appear to hold the top hand.

He has the veto power, and there are probably enough administration men to sustain it.

With this veto power he may be able to force through his tax program.

All the excise taxes the President recommends be cut were imposed during the war.

Primarily their purpose was to discourage civilian buying and save raw materials and labor for war work.

The war ended several years ago, and it is time now that the consumers were given a break.

CARNIVAL OF TAXES

(By Henry M. Hanzen)

The Tax Foundation, a private research organization, has been probing into hidden taxes.

It found plenty.

It found 151 taxes hidden in a loaf of bread, and 100 inside the shell of an egg.

It found similar taxes hidden in everything else we eat—every bite of food.

That is the principal reason why food prices are so high.

The Tax Foundation further found 116 taxes woven into a suit of clothes—found them woven to a greater or less extent into everything else a man wears, everything a woman wears, everything children wear.

That is the principal reason why wearing apparel is so high.

The Tax Foundation further found that Uncle Sam collects $210,688,165 annually on jewelry, $33,969,241 on cosmetics and toilet articles, $82,607,133 on luggage, $61,946,247 on furs.

That is the principal reason why so-called luxury articles for women are so high.

The Tax Foundation further found that there are between 700 and 1,000 hidden taxes in a new house.

That is the principal reason why the dream houses of GI couples are so high.

The Tax Foundation further found that Uncle Sam collects annually $2,247,000,000 in taxes on liquor.

That single item is larger than the total revenue for the Federal Government for the year 1933.

We pay hidden taxes on everything we eat, everything we drink, everything we wear, everything we use, every business transaction.

Altogether these hidden taxes total annually the giant sum of $7,600,000,000.

Combined with direct taxes these taxes comprise the Federal budget for this fiscal year, $42,400,000,000.

It is estimated that this budget represents $1 in taxes out of every $6 earned in the country.

Yet the Government will be $5,100,000,000 short.

How is all this money spent?

It is spent for foreign aid, defense, aid to veterans, social programs, development of natural resources, aid to farmers, public works, housing, education, labor programs, general government, interest on the public debt.

How much of it is wasted?

Billions.

The nonpartisan Hoover Commission, whose recommendations for the overhauling of the Federal Government has the blessing of President Truman, estimates the waste at a minimum of three billions.

Every State, county and municipal government is also permeated with waste.

We are living in a carnival of taxes, and waste of public funds.

It is time to call a halt on this colossal waste of the money of the taxpayers.

How Propaganda Works

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "KERR Denies His Gas Plan To Bring Increase," from the Tulsa Tribune, Tulsa, Okla., March 2, 1950. The article is a factual news story which gives some interesting background on the techniques employed to influence public opinion.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KERR DENIES HIS GAS PLAN TO BRING INCREASE

(By Malvina Stephenson)

WASHINGTON, March 2.—The battle over natural-gas regulation continued to rage on the national scene today, following a radio interview in which Senator ROBERT S. KERR denied that his pending legislation would bring increased gas rates to the American consumer.

On a radio program here with Columnist Marquis Childs, Senator KERR pointed out that Southwest independents are selling gas under long-term contracts already fixed for years to come. His legislation "assuring independents continued freedom from Federal regulation does not disturb a single contract," according to KERR.

"All of the present supply was secured by the consuming market without the independent producer ever having been regulated by the Federal Government," KERR said.

"The best interests of the consumer in the future will be served as it has in the past by the independent producers being free to sell to them without regulation or restriction. The amendments do not change in any way the jurisdiction or power of the Commission."

The frontal attack against the Kerr legislation is being led by the National Institute of Municipal Law Officers, with various other interested forces joining in the fray. The institute passed a resolution opposing the legislation at its convention in Kansas City last December, but officials here said City Attorney Bob Davidson, of Tulsa, voted against that resolution.

Individual members of the National Conference of Mayors are getting in their licks, but the organization as yet has taken no formal stand. Paul V. Betters, executive secretary, while not acting formally in the absence of an organization resolution, is assisting members in getting the opposition information.

The American Municipal Association, the general organization for all city officials, met last fall, but its publicity spokesman here said no resolution on the subject was even presented.

Charles H. Rhyne, Washington representative of the institute, spokesman for the critics of the Kerr bill, is getting convenient data from experts he doesn't identify. Rhyne, himself, appears unfamiliar with the subject. He did not know about the activities of State corporation commissions. He could offer no substantiation for his contention that the Kerr legislation would mean a 5-cent increase per 1,000 cubic feet, but said the estimate came from experts in certain cities.

The opposition to the legislation is faring well enough in the public battle of words, partly because handy generalizations are easy to make and technical legislation hard to get across to the public.

Name-calling, personal attacks, such as Rhyne launched on Kerr, always attract more attention and are difficult to combat when an issue is painted as a battle against the vested interests. That alone lures certain politicians into the fray. They see themselves riding as knights in shining armor in defense of the American consumer—and to political glory. The controversy over the gas legislation is snowballing on the national scene, and the climax will be reached when it is fought out on the floor of the Senate probably next week.

Proposed Peace Conference Between the United States and Russia

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Door Is Still Open," published in the Portland Oregonian for February 15, 1950. The editorial was sent to me by Joseph R. McCready, of Forest Grove, Oreg.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DOOR IS STILL OPEN

Scarcely have the statements of Secretary of State Acheson and President Truman ceased from reverberation—to the effect that it is useless to direct a peace appeal to the Kremlin—than the State Department issues an invitation to the Russians to resume discussions of atomic energy at a hearing in the United Nations.

The sticking point remains, we assume, with Russia pinheadedly blocking the American and UN proposal of international control and inspection. But the situation is too potentially cataclysmic for impatient treatment. The surly suspicion of the Kremlin must be reduced, if humanly possible, by attrition through reassurance and reason. Mankind isn't gaming for marbles, but for survival. One hopes, and prayerfully, that the Russians will agree to a resumption of the talks.

It must occur to any logical analyst that Russians may in truth be as worried about the atomic energy dilemma as we are, and to mask their dread are resorting to brag and bluster. They are fools if they aren't scared out of their best felt boots. We are admittedly frightened, not of the potential enemy alone, but of the hideous choice we might have to make. That is why we grasp eagerly at the straw—if such it is—of resuming discussions. And that is why we read with intense gratification that favorable talk is current in Russia.

Said the attorney general of Great Britain, Sir Hartley Shawcross, of the deadlock that must be broken, if it is breakable, "I do not believe war is inevitable; I believe statesmanship can still avoid it." For our conduct in the promotion of peace we are accountable to ourselves, as the Kremlin is for its own. We must not weary of endeavor, through appealing to the Russians by every moral means, lest civilization should blunder into radioactive oblivion, dragging all life with it. The theoretical prospect beggars the fancy of Dante. If sustained patience is any insurance against it, let us cultivate the virtue as never before, for humanity's sake.

The Coal Strike

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article relative to the settlement of the coal strike, written by Mr. Arthur Krock, and published in the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Arthur Krock)

WASHINGTON, March 4.—A great many people, including some of the strongest party supporters of President Truman's program as well as its Republican and Democratic opponents in Congress, apparently are united in the conviction that he mishandled the crisis over the Nation's soft-coal supply in a manner which was certain to lead to his request for power to seize the mines, and an intervening or ultimate settlement largely in the miners' favor. Many competent observers have been saying all along that this was John L. Lewis' objective from the end of the miners' contract period last July.

Hence, the President is under fire on three serious charges: (1) He delayed coming to grips with the plain threat in the coal fields to national health and safety until it was a reality; (2) he refrained so long from making use of the Taft-Hartley injunction procedures that the miners took this as encouragement to flout the law for which Mr. Truman showed such obvious distaste, which he had attacked as a slave labor act and sought to repeal; and (3) his tactics not only made inevitable his request for Government seizure, and the ultimate triumph of Mr. Lewis, but forced another national step toward nationalization (in this instance of the mines), which is a basic tenet of socialism.

RECALL TRUMAN STATEMENT

And his critics go on to say this drift and this result were the work of a President who said only recently that he "hasn't a drop of Marxist or Socialist blood" in him.

There is documentation for these harsh charges, though to prove them to the popular majority and make them endure as a political liability of Mr. Truman and his administration is the task which will first confront his critics in the congressional campaign of 1950. By the time the voters come to decision on Democratic candidates he favors for election in November, events may have blunted some or all of the accusations or the topic may be submerged in far graver ones.

Nevertheless, it is already plain that Mr. Truman and his administration are to be made the general issue in the 1950 elections—he, his Democratic opponents and the Republicans agree on that—and his handling of the coal situation in 1949–50 is certain to be a part of the issue. Among its facets these will appear:

1. The President has long denounced the Taft-Hartley Act as a slave-labor law, designed to put workers into involuntary servitude, and has constantly striven to repeal it, as he promised the voters in 1948 he would do. Insofar as this could undermine public acceptance of a law Mr. Truman was sworn to enforce, it has done so.

LAW PROVED TO BE WEAK

2. But when the President finally brought himself to invoke the law in an effort to suspend the coal strike, the virtually unanimous refusal of the miners to respect its enforcement by the courts showed that, instead of being an instrument of enslavement, it is too weak. Also, the miners' disregard of this and of the court injunction which grew out of the corollary effort to suspend the strike that was made by the General Counsel of the National Labor Relations Board calls for reconsideration by Congress of the bans it declined to legislate against industry-wide bargaining and against strikes at the sources of essential national supplies.

3. In every respect, therefore, the President was wrong about the kind of labor legislation which is needed and dilatory in making use of what there is.

At this writing, it seems that there will be powerful arguments against the President, his administration, and those Democrats who have supported and will defend them. If the items do not add up to a major political liability which could be liquidated by the election of another Congress opposed to the Fair Deal, then the President's opposition will have missed the boat again, or subsequent events will minimize what now appears to be the political peril of the administration, or the popular majority will show itself still disposed to support Mr. Truman on balance.

Administration Democrats who have been shying away from strong defense of the President's course, were beginning to take heart today, however, with the claim that the seizure message forced the operators to make a "fair" settlement. But numerous Democrats will not take that line—its accuracy is open to doubt. And most Republicans are seizing on the issue with avidity.

The President, in his message to Congress Friday asking for power to seize the mines temporarily, suggested the outline of the campaign answer he will make to the accusations. It is in general a declaration of faith in collective bargaining as the proper means to settle industrial disputes without Government intervention and in the propriety of his course first in delaying and then in using seizure as a settlement club. In detail, it makes the point that the coal industry is sick from causes which no administrative acts or policies can eradicate until a commission of inquiry can find the root of the trouble and a "solution of the basic difficulties."

SEEMING BASIS OF MESSAGE

In other words, the message seemed to be saying this:

"No law now existing or proposed, and no men entrusted with law enforcement, are capable of solving the problems of the coal industry as they now are or as they have been evaluated. Until the trouble is found and the remedy prescribed and taken, the only thing to do is to try to make collective bargaining work and assume that it will up to the twelfth hour and beyond."

The question is, Will that be an effective shield from the political attacks?

Importance of Soil Conservation

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article entitled "Wake Up America," by Melvin O. Steen, of the Missouri Conservation Commission.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WAKE UP, AMERICA

(By Melvin O. Steen, Missouri Conservation Commission)

If you would know the true story of Americans, their wildlife and their land, look first to history. On its pages you will find that story revealed in the critical light of historical fact. To better understand this story, however, it is necessary to first scan the history of other men and their land. It is necessary to look at yesterday as well as at today.

Look at history, and you will see nation after nation march across its pages, to rise and flourish on the rape of a fertile land, and to pass on into national decay or oblivion with the depletion of that fertility. Look at history, America. When you do, you will see that civilized man has always misused the land. You will see many unproductive scars on old Mother Earth, lands that once housed and fed great nations. Look at the history of any nation that has ever tilled the soil, and you will see that man is not worthy of his stewardship of the land. He always despoils the land, and the degree of his destruction can be measured in terms of his tenure plus his so-called civilization.

When the source of man's sustenance and material glory will no longer sustain his way of life, he does one of two things: He sinks into individual and national decay, or he takes, by force of arms, more fertile land from some other nation. That is history.

Van Loon defines history in this short but tremendously significant sentence: "History is the story of a hungry animal in search of food." But man is not possessed of physical hunger alone. His hunger engulfs the whole array of human desire, and he uses the land to satiate that hunger without much regard for the future. Man's philosophy with respect to the land is "rip it off the hills; gouge it out of the soil; get it into the bank in one

generation if possible." His slogan is, "To hell with tomorrow, I want mine today."

These are searing words, but they are not my words. I only quote from history. These are not my words; these words are written on the sands of time; they are scrawled across the pages of history, that "story of a hungry animal in search of food."

So much for yesterday; now let us look at today.

You are young and you are strong, America. You are progressive, you are wise. Your way of life is different; your ideals are high; you will not do these things, you say. Let us look at the record, at your history.

You are young, America. This land has been under your control some 300 years, more or less. For about 100 years you have used it intensively. Tonnage yields to feed the world has been your goal. You have produced, but at a price. You have produced, but you have also ruined, partially or completely, more than half the fertile topsoil you possessed. It took the Chinese 10 times as long to do as much to China.

You are strong, America. But may I remind you that your way of life, your institutions, and your society are builded on, sustained by, and no better than the land on which you live. I remind you that adequate nutrition requires more than mere bulk, that nutrition is a qualitative as well as a quantitative thing. I remind you that your hillbilly is a hillbilly because he grows his food on hillbilly land. In the light of present-day knowledge there can be little doubt that the true hillbilly is what he is because of malnutrition; qualitative malnutrition that dulls his mind, saps his strength, and smothers his ambition. This American is already in the process of degeneration. Do you not see him rave, and burn, and hack, and gouge the impoverished soil on which he lives, further depleting its ability to sustain and nourish him? Can you not see the vicious circle in which he lives, a circle that moves relentlessly around and around, a circle from which but few escape. Must I remind you that there are other groups within our society which suffer a like fate? What are your "Tobacco Road" and "Grapes of Wrath" if they are not symbols of this truth.

These are searing words, America, but they are taken from history—your history.

You are progressive, America. When your land fails to produce the tonnage you desire you fix things up with chemical fertilizers. But you pay no attention to the warnings of scientists whose long experience in tilling the soil leads them to say that chemical fertilization is only a delusion, a stop-gap, a tonnage producer that does not restore essential, life-giving elements inherent in a fertile soil.

You are wise, America. When your overworked corn lands lost much of their fertility and their ability to produce, you came forth with hybrid corn. Your corn yields skyrocketed, and you are still congratulating yourself on your ingenuity. But you fail to take note of one significant thing. You overlook that fact that history will record hybrid corn as being that corn which had the ability to take fertility out of the soil twice as fast as any corn that man had ever grown before.

The truth is that your own land-use history records you as the greatest spendthrift of all time. You have developed bigger, better, and faster ways of using up soil fertility than has any nation in all the world. You are the champion playboy of all history, and your extravagance is exceeded only by your disregard of the consequences.

"And what," you may well ask, "has all this to do with wildlife?" Simply this, that nature makes no distinction between wild and tame life insofar as soil fertility is concerned. In Old Mother Nature's book nutrition is nutrition, and life is life. It makes no difference whether that life be wild or tame.

It is true, however, that misuse of the land is a two-edged sword insofar as wildlife is concerned. It reduces protective cover as well as fertility. Adequate protective cover and adequate nutrition are the two big essentials of wildlife production, and both these essentials are impaired by misuse of the land.

At the present time prices of farm products are very high and the economic incentitive to squeeze every last pound of production out of the land is great. The immediate effect is to increase erosion and reduce wildlife, but the long time effect is to reduce land fertility; and hence, all production.

The simple truth is that man cannot reduce soil fertility without all life suffering the consequences. That truth is supported by evidence which grows steadily in volume and significance. This evidence puts the emphasis on qualitative rather than quantitative nutrition. Soil fertility determines the quality and contents of foodstuffs, and the quality and contents of foodstuffs affects all life. The evidence is overwhelming. When insane men are made sane through the avenue of nutrition alone, one can no longer doubt that quality counts. Some day foodstuffs will be valued on the basis of quality, not quantity. When that day comes we may have the economic incentive that will save our soil. Until we do, we must save the land by any means we can.

The simple truth is that the growth, vigor, survival, and reproduction of all life is wedded to the land by unbreakable bonds. The truth is that America should maintain, without impairment, the fertility of all her lands. To do otherwise is unthinkable, and must eventually lead to disaster. It is not wildlife alone that hangs in this balance. It is America herself that is at stake.

If this be true, what are we doing to maintain the fertility of our land? Let us look at the record. Let us look at history—today's history.

As individuals we are doing relatively little. Here and there an individual has learned that he can maintain the fertility of his farm and make more money in the long run than if he misused his land. But that individual is relatively rare. The masses know nothing of this. In fact, the masses, including the vast majority of those who till the land, know little or nothing of the true significance of land fertility and the real dangers of land abuse.

As a Nation, we have done very little to save our agricultural lands. Our most effective governmental actions have been the establishment of the Soil Conservation Service, and the initiation of benefit payments to American farmers for soil-conserving practices. But neither of these came by any united design or desire of the American people. The first came into being largely because of the inspired leadership and dogged persistence of a single American citizen. The second does not have even that background. Benefit payments for soil-conserving practices in America came into being by chance—they were initiated because the Supreme Court of the United States said we could not pay public money to American farmers for plowing under crops and killing little pigs. Thus was born America's national efforts to save her soil.

If this is not enough to convince you that America does not know the score, look to the seat of your government, look to Washington. There you will see your government appropriating $45,000,000 to the Soil Conservation Service to finance their work of holding America's water where it falls and her soil where it lies, and, at the same time appropriating $185,000,000 to the War Department with which to make down payments on dams designed to stop the water that doesn't linger where it falls and the soil that doesn't stay where it lies.

Forty-five million dollars to the doctors who feverishly strive to sew up your severed and gushing arteries, America—and frankly admit that they are waging a losing fight—$45,000,000 to the doctors who feverishly strive to suture your severed and gushing arteries, and four times that sum to the tinsmiths who beat out buckets with which you propose to preserve your life's blood.

That is not—as some may assume—an indictment of tinsmiths. It is an indictment of you, America, you, who entertains and tolerates such a twisted, distorted, cockeyed concept of national values and national needs.

If you are not yet convinced that America doesn't know the truth, look again to Washington. There you will see many of your leaders and representatives sponsoring a movement to slash, by one-third, the appropriation for soil conservation benefit payments. You will see the scalpels poised and ready to cut the heart and backbone out of America's effort to save her land. These men contend that you cannot afford to pay for saving the soil, that you have other and better things to do with public money. You can afford, it seems, $11,000,000,000 plus for national defense, but you cannot afford $300,000,000 to save the very thing you propose to defend. You can afford to subsidize navigation, aviation, hydroelectric development, flood control, and other special interest groups, but you cannot afford to subsidize the saving of the land, in which every living American has a stake, as do all the generations yet unborn.

You can afford to mobilize American manhood into armies that you count by the millions, to equip them with implements of destruction that stagger the imagination, you can afford navies that swarm the seven seas, you can afford aircraft that figuratively—and literally—blot out the sun, you can afford $200,000,000,000 in the prosecution of a single war, you can afford barrels—nay, rivers, of American blood; all this, and more, you can afford to save America from danger from without, but a little lip service, and a token gesture here and there is all you can afford to save America from disaster within.

America, you go the way all men have gone. You are a living symbol of the truth, that history repeats itself. ("A hungry animal in search of food.") You are not young, you are not strong, you are not wise, you only dream these things. You live an old, deceitful dream, that blinds your eyes against the truth, that leads you down disaster's road. You have one chance and only one. Wake up. Shake off this dream. Wake up. Shake off this spell, that you may see that you may take a better road.

Let's Stop Wallowing in Fear

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Let's Stop Wallowing in Fear," which appeared in the Evening Star of Washington, D. C., on March 4, 1950.

Today we have too many prophets of doom and too few prophets of peace; too many who arise each morning to predict a day of fear and too few who arise to look for the road to peace.

These are difficult days, but we should recognize that we cannot find a way to solve our problems by wringing our hands and crying, "There is no hope."

There is hope—if only we have sense enough to recognize it. I commend the editorial, and urge all Members of Congress to read it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S STOP WALLOWING IN FEAR

The other day, in his new role of private citizen, David E. Lilienthal had some decidedly sensible things to say about the foolishness of constantly harping on the frightful possibilities of A-bombs and H-bombs. The possibilities undoubtedly are terrible, and they need to be kept in mind, but he has taken the very sound view that the calamity howlers are not rendering a real service either to the Nation or the world when they keep on howling as if they wanted to give everybody a nervous break-down.

Of course, as the recently retired Chairman of our Atomic Energy Commission, Mr. Lilienthal has more than enough grim information to persuade him to concede that today's actual and potential weapons of mass destruction make the annihilation of mankind at least theoretically conceivable. He is willing to concede, too, that the subject demands a great deal of public study and discussion. But what he does not concede is that the study and discussion should be dominated by end of the worlders who seem to take a morbid delight in the extravagant and sensational picturing of the horrors of atom warfare.

In other words, what Mr. Lilienthal is against, what he is fed up with, is the more flamboyant of the scare-the-dopes school of experts who feel that the people (the "dopes") can be alerted to the dangerous nature of our time only if they are ceaselessly bombarded with all sorts of frightening talk—such as talk about how 500 tons of heavy hydrogen might be used to wipe out all life on this planet, or about how the seat of our National Government should be established in some city other than Washington, or about how 60,000,000 Americans should be dispersed from our urban centers. As Mr. Lilienthal has put it, speculation about the end of man adds up to a kind of neurotic wallowing in the hazards of atomic warfare, and suggestions for the drastic decentralization of our cities, or for a gigantic dispersal of our population, amount to nothing but a lot of high intellectual nonsense, because the thing can't be done and it won't be done.

More than that, as Mr. Lilienthal has rightly declared, such talk, far from alerting people, can have the opposite effect. For the average human being has the altogether healthy trait of not wanting to be afraid. He ceases to be agitated by the cry of "Wolf! Wolf!" when it is repeated too often, and he tends to grow more and more bored these days by the endless succession of lurid doomsday speeches. He refuses to crawl in under the covers and quiver in his bed. He wants his life to be reasonably enjoyable. The frightening words begin to pall on him, the tocsin ringers and the atomic Paul Reveres become increasingly tiresome, and he gets progressively less and less interested in them until he forgets about the whole business and turns his attention away from the calamitous to the pleasant.

Thus, instead of awakening the American people, the "scare-the-dopes school," by overdoing things, bids fair to bore them to the point of indifference or fill them with the feeling that the atom leaves them pretty much helpless and hopeless. Quite obviously, that is a poor way to promote national security or sound public thinking. Nothing could be more sterile. In Mr. Lilienthal's words, "To face the dangers of a very tough world, what we need is not to be overwhelmed by them but to understand them, and then with courage and resolution and patience face up to them and see them through."

It is good to have this said by a man like Mr. Lilienthal. Within recent weeks, the Cassandras have been filling the American atmosphere with just too many high thin cries of woe. We need to get back to our traditional language of hope, self-confidence, and affirr tion. The atomic speech makers—scientists, legislators, and all others vocal on the subject—would do well to stop shouting about the end of the world and take a calmer, more level-headed view of the immediate realities. We have had too much wallowing in fear. It is a spectacle that can win no respect for us in Russia or anywhere else.

No Victory for FEPC

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of February 24, 1950:

NO VICTORY FOR FEPC

Under existing circumstances, passage of a fair-employment-practices bill by the House yesterday represents no real victory for those who sincerely desire fair-employment-practices legislation. The original administration bill has been so diluted that very little is left of it but an expression of good intentions. Thus, almost exactly 5 years after FEPC first emerged from a House committee, after conventions of both parties had endorsed it in principle, but after every parliamentary device known to man had been employed to scuttle it, the net result is that virtually no advance has been made toward establishing FEPC as an effective arm of the Federal Government.

If circumstances had been different, something might have been said in favor of the basic provisions of the bill that the House finally did approve. In essence, it establishes a Fair Employment Practices Commission to assist State and local agencies to combat job discrimination against minorities, but the assistance would be through investigation, recommendation, and persuasion without power of enforcement. In view of Southern feelings, this might not have been a bad way, as a starter, to bring the Federal Government into the picture. It would have clearly established Federal policy on discrimination, and this approach to an admittedly touchy subject might have been a wise first step.

But such legislation cannot be looked at as if it were in a vacuum. The unhappy fact is that the opposition to FEPC has shown that it will not compromise; it will not retreat an inch; on this issue it will not pay any attention either to the party platforms or, for that matter, to the spirit of the American democracy. It has engaged in a long and bitter parliamentary struggle to prevent any action at all on an FEPC bill; and when these tactics failed, it cynically supported a toothless measure that, in view of all that has gone before, no one now expects to be taken seriously. The whole affair has become a mockery of responsible legislative practice; and the prospective filibuster awaiting FEPC in the Senate only adds to the hollowness of the entire procedure.

Community Development in Arkansas

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What This Town Needs," by Norman Kuhne, published in the Nation's Business for February 1950, which is an excellent article on community development in the State of Arkansas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT THIS TOWN NEEDS

(By Norman Kuhne)

Scarcely a day goes by in any community without some resident telling anyone willing to listen something like this:

"Now what our town needs is * * *."

"The trouble with this town is * * *."

"We're never going to get anywhere in this town until * * *."

Forget the chronic complainers. Usually such statements preface constructive suggestions by citizens eager to make their home towns better places to live.

Civic leaders everywhere have sought to translate this latent desire for progress into ways to build better communities. A plan which does just that marks its second anniversary in Arkansas this month. It's a joint enterprise of private industry, business associations, and State government called the community development clinic program. Working hand in hand to build better home towns in the Wonder State are the Arkansas Economic Council-State Chamber of Commerce, the Arkansas Power & Light Co., the State government's resources and development commission, and some 100 local chambers of commerce.

In numerous towns and cities people have learned what they can accomplish by accepting the responsibility of good citizenship. The community clinic program promises to become a vital force in other places, with several States, cities, and even foreign countries having investigated the plan with a view to adopting it.

The Arkansas program has aroused such interest because it can be adapted to meet the needs of the most, as well as the least, advanced community. Such clinics can stimulate multi-million-dollar projects like airports and public buildings or modest improvements like neighborhood playgrounds. They can insure the developed area against civic complacency and the underdeveloped against stagnation.

Fort Smith, a bustling city of 50,000 in western Arkansas, for years had been pursuing an active development program through its chamber of commerce and other organizations. But this community, like many others, had come to depend on a small group of old reliables willing to work. And businessmen never were sure the projects they sponsored were those with widest popular support.

A community clinic transfused new blood into the Fort Smith program. It disclosed the names of several hundred persons willing to work, many of them already active on various committees. What's more, civic leaders know their present program includes projects considered most important, which makes it truly a community undertaking.

Fort Smith's clinic high lighted the need for new streets. Many older thoroughfares,

paved with brick, were breaking up. After the clinic, a group of citizens persuaded the city council to adopt ordinances permitting the formation of street-improvement districts. A delegation called on the county judge who controls State-aid highway funds. He agreed to release $115,000 provided the city would raise $57,000. Householders whose properties are on the streets to be repaved will put up the balance. Eight street improvement districts are being created and work will begin this spring.

Favorable action on a $650,000 bond issue for school improvements also is credited to the clinic by Arthur Murphy, Fort Smith chamber manager, as are a dozen other projects.

Throughout Arkansas, cities and towns are erecting public buildings, beautifying highway approaches, establishing parks and playgrounds, constructing youth centers, building farm-to-market roads, providing off-street parking facilities, extending water and sewer mains and doing numerous other things toward a higher standard of living and greater human comfort.

In many communities local residents say they've moved ahead faster in the 2 years the clinic program has been operating than in any previous decade. And the accomplishments have been things the home-town folks considered of first importance.

To see how a community clinic works, let's examine one I attended at Dardanelle, a town of 2,000 in west central Arkansas.

At 9 a. m. 56 Dardanelle businessmen, farmers, housewives, and workingmen met in the American Legion club room on the town's main thoroughfare. They were greeted by Warren McGuire, a grocer and president of the local chamber of commerce, who explained the purpose of the meeting. Then McGuire introduced I. J. Steed, chief planning officer of the Arkansas Resources and Development Commission, to lead discussion.

Steed explained the basic needs of any community. His was no high-flown lecture, It was the conversation of a man reared on an Arkansas farm, just like many of his listeners.

He discussed practical industries, up-to-date stores and service establishments, market facilities for farmers, accommodations and attractions for tourists. He stressed the social factors: schools, libraries, churches, recreational facilities, art and music. Then there were the physical factors: condition of streets and sidewalks, municipal services, appearance of public buildings and grounds, look of private homes, vacant lots, and highway approaches.

By talking about things that apply to any town, Steed established a yardstick for Dardanelle—one with which the townspeople themselves could measure the standing of their own community.

He distributed 5- by 8-inch cards on which was space for the writer to jot down the things he thought Dardanelle needed. Each person was asked to sign his name and address and signify if he were willing to work on a committee that might be created to carry out the projects in which he was most interested.

The meeting lasted a little more than an hour and, at 10:30, a second group arrived for a similar session. This group, too, represented a cross section of community interests. In the course of a 2-day clinic, Steed held 14 meetings with groups ranging in size from 30 to 60, including one with the high school senior class and another with a delegation of colored citizens who account for about 20 percent of the local population.

In all, 487 townspeople filled out cards. About half said they would work for the projects suggested. Such suggestions ranged from street and sidewalk paving, which would entail a sizable bond issue, to cleaning up a river-bank dump which would require an afternoon's work by volunteers. There were lofty proposals like one calling for the construction of a local library to supplement the county bookmobile service. There were homely ones like that advocating "wet toilets" in the outlying sections.

His brief case full of suggestions, Steed returned to Little Rock to prepare a report. The cards were tabulated and the project most frequently suggested became No. 1, and on down the line.

After listing desired improvements in tabular form, the report took up what the people said they wanted. One man mentioned the need of a traffic light at a highway intersection. The report noted the specific corner. Another man proposed repaving an intersection on a back street and the report listed that. An appendix named those attending the clinic, their chief interest, their willingness to work on a committee.

Mimeographed copies of the report were returned to the Dardanelle chamber's board of directors for action. At this writing it's still too early to tell how the community will follow through on the proposed program but, if experience elsewhere is any guide, results will show.

The fact that large numbers of people turn out to discuss local problems and suggest their own course of action has awakened a civic consciousness that formerly lay dormant in many Arkansas communities. In a dozen towns I visited, business leaders said that their clinic had generated enough interest in local projects to insure favorable action on bond issues that otherwise might have failed.

Typical was a $165,000 sewage-disposal plant and sewer-main extension project in Bentonville, a city of 3,500 in the northwest corner of the State. The issue had been hanging fire for several years and was coming up for a vote, with the outlook none too favorable. But after a community clinic, held a week before the election in April 1948, the picture changed.

People began to talk it up. Businessmen like Arthur Smith, president of the bank; Clayton Little, deputy prosecuting attorney; Terry Peel, realtor; Roy Stewart, steel fabricator; and J. C. Knott got on the phone and kept their lines busy telling associates to get out and vote. Others made a block-by-block canvass.

When the ballots were counted, the bond issue carried by a vote of 368 to 227. According to Bruce Williams, manager of the Bentonville Chamber of Commerce, the vote would have been adverse but for the civic enthusiasm generated by the clinic.

Other communities, too, credit the clinic with providing the margin between success and failure of local projects. Trumann businessmen say there is no doubt but that their clinic assured approval of a $100,000 bond issue for school improvement and was a material factor in raising $70,000 by public subscription for the same purpose.

In Arkadelphia the clinic indicated great interest in sewer improvement, resulting in a city-wide vote to spend $200,000 on the project. Perhaps it was action like this which prompted George S. Dews, manager of the Arkadelphia Chamber of Commerce, to say:

"In 17 years' service in this office I have never known as much interest or as many people at one time being interested in civic improvement to the extent that they will say what they want and then work unselfishly to see that it is well done."

Wesley Gordon, Fayetteville chamber manager, says a clinic gave the needed impetus for a $1,000,000 waterworks for that city.

Fayetteville is an example of how a chamber of commerce uses its clinic report. Copies went to all civic groups and their cooperation was enlisted. One contemplated project was a better park. A park committee composed of representatives of various civic organizations was established. With an ante of $400 contributed by members, the chamber raised $1,500 by public subscriptions to provide park rest rooms. The Rotary Club, Lions Club, American Legion post, and Women's Civic Club each financed the construction of a concrete tennis court. In all, civic groups contributed $15,000 for park improvements and persuaded the city council to put up $20,000 for a swimming pool.

Elsewhere the story is similar. In Montecello, the clinic disclosed the need for more street markers. The Veterans of Foreign Wars donated them. At Mount Ida, the P. T. A. contributed $700 to modernize school rest rooms. In Newport, a private citizen donated a library building. In Warren, the Junior Guild equipped an office for the health department. At England, the Heritage Club installed new traffic lights.

Some suggestions made at clinics require action by private industry—and industry has acted. At the De Queen Clinic, several people spoke about a rough railroad grade crossing. A railroad employee was in the audience. Within 48 hours a repair crew was at work. At Osceola, several persons suggested a more convenient location for the bus station. The bus company met their desire. Bentonville people disliked the way an unsightly junk yard at one approach to the city impressed visitors. After the clinic, a city beautification committee was established with the junk yard proprietor as a member. Shortly an attractive showroom for new cars replaced the junk yard.

Through the stimulus of these clinics people are coming more and more to grips with such fundamental issues as: How can we balance our economy, diversify our agriculture, extend our trade area, stabilize employment, improve local government, get away from dependence on Washington? By starting a search for answers to questions like these, the program can produce far-reaching results.

The community-clinic program is a post-war development in Arkansas that owes its existence in part to chance and part to design. When the war ended, C. Hamilton Moses, president of the Arkansas Power & Light Co., and some of his staff went to New York to get financing for an expansion program. In a meeting with a committee of underwriters, their credit standing was questioned, principally because they did business in Arkansas—considered by some a backward State.

Meanwhile several Arkansas cities were trying to woo industries. More than one chamber secretary was told by an industrial prospect to make another call after his city had better schools, more paved streets, greater fire protection, and the like.

These frank statements did much to awaken State business leaders to the need for greater civic improvement. Moses called a meeting of the Arkansas Economic Council-State Chamber of Commerce which he headed. What to do about a program that would help cities and towns to progress?

As an experiment, several community planning experts were called in from other States to survey various cities and make recommendations. They did a competent job but when they pointed the finger of scorn at local conditions, townspeople got their backs up. It became clear that any future program must originate within the community itself.

Group meetings were decided to get people thinking about local development projects. A man familiar with community problems generally would lead discussions. As long as he was from Arkansas he would be accepted. As a nonresident of the community where the clinic was held, he couldn't be charged with playing up his own pet project at the expense of some other. The resources and development commission and the economic council each had a man and the power company had two who filled the bill. They were loaned to the new program.

Cards for recording suggestions were printed. A written report embodying the wishes of the people would become the basis for action.

A number of businessmen from Pine Bluff, a city of 35,000, had taken part in the initial planning. They were interested in revitalizing their own chamber of commerce by giving it specific jobs to tackle. Pine Bluff was selected as the guinea pig.

The clinic produced immediate action. The discussion made it possible to separate the practical from the financially impossible projects. A projected municipal auditorium was sidetracked in favor of a new sewage-disposal system. Four neighborhood playgrounds were established, a new school built, an industrial foundation revitalized, and a fund-raising campaign for a $25,000 youth center was stimulated.

Since that trial run in Pine Bluff in February 1948, more than 100 clinics have been held in communities ranging in population from Fort Smith's 50,000 to villages like Mount Ida which boasts 900 "during school hours."

Trial and error perfected the technique. Experience showed early that a series of small group meetings produced more results than one or two mass sessions. Discussion leader and participants profited by the informality of small meetings. They aroused more interest, provoked more questions.

Detailed discussion of local wants proved more satisfactory than general summarization. During the clinic at Paris a student suggested beautification of highway approaches by planting redbud trees. When the report spelled out that suggestion, local garden clubs went to work and planted 5,000 redbuds. A similar suggestion from another clinic, lumped in as one more tally for "city beautification" was lost.

Simply holding a clinic won't solve all a community's ills. Follow-up on work programs still is weak in some places. Lack of revenue has stymied other ambitious projects in small villages. But the village with a surplus of ingenuity can overcome a shortage of dollars.

Folks in Waldron, a town of 2,000 in the Ouachita Mountains area, were loyal followers of their winning high-school football team. They thought nothing of driving 100 miles to attend one of its games.

But when visitors came to Waldron, residents were always a little shame-faced about the home athletic field.

After a clinic in February 1949, the school board was persuaded to buy an 8-acre tract near the city limits for $2,500. That left the treasury low, so 1 acre fronting on a main road was sold to the county for $1,500 to provide space for a highway-equipment garage. Then Waldron had 7 acres of raw land, a far cry from the athletic field it wanted.

But townspeople turned to. Volunteers graded and sodded the site. Others erected a fence, put up bleachers, installed lights for night games.

The mayor swung a shovel, the banker a hammer, the merchant wielded a paint brush. Now there's a gridiron, baseball diamond, rodeo arena, shower, and locker rooms. The athletic field still is no Yale Bowl, but it's one that would do credit to any community of 2,000.

In larger communities the program has brought coordinated action by local organizations. In Hot Springs nearly every civic group was promoting a municipal auditorium, yet each unaware of the others' progress. After the clinic, a central committee was established and now much of the work preliminary to construction has been completed.

Many projects suggested involve engineering, legal, financial, or other complicated problems. When that's the case, the community can call on any one of the three State-wide sponsoring agencies for technical assistance and get it. A fair association needed a landscape architect to lay out its cattle show grounds. A city needed an engineer to help on a water-supply project. Another needed help on a revenue problem. According to Hamilton Moses, there are about 1,000 industry members in the economic council whose personnel are available to help communities work out their local problems. Also on tap are experts of the State government and the power company. Between them they've been able to handle every request for assistance.

Arkansas leaders believe their plan can be adapted to meet the requirements of other States and communities. What if there's no State development agency? The extension services of many colleges and universities are prepared to help with development programs and so are State chambers of commerce. What if the power company doesn't cooperate? Try the industrial department of a railroad. In any State there is some business group that will help the community that wants to help itself.

Now and then you'll meet a man who labels the clinic program "something the power company cooked up" or "just a chamber of commerce stunt." There's no denying that a rising standard of living and rising sales of electric power go hand in hand or that chambers of commerce are eager for local development. But it's also a fact that the sponsoring agencies have shown the same interest in communities served by other utilities—in farm communities served by rural electrification cooperatives as those on A. P. & L. lines—and in communities where there is no local chamber, clinics have been held under the auspices of organizations such as the American Legion Auxiliary, the town's planning association, the junior chamber of commerce, and the Rotary Club, as well as various other civic-minded groups.

The community clinic program literally is changing the face of Arkansas. Around the town squares and along main streets men and women are talking about ways of equalizing property assessment so that local tax yields can be increased. The question one hears is: "How can we do it ourselves?" and not "Whom can we get to do it for us?" New attitudes on governmental relationships are being developed. There's more to it than reaffirmation of the doctrine of State's rights. It's also a practical matter of dollars and cents.

The city of Siloam Springs found by financing the construction of a new hospital locally it got a better job for $82,500 less than it could have by participating in a Federal-grant project.

Perhaps the lesson that Arkansas is learning from the program is best summed up by the statement of W. L. Fulmer, past president of the chamber of commerce at Booneville, who said:

"A development from within is more to be desired than an invasion from without. The benefits are more lasting and of greater value in the long pull."

The people down in Arkansas are thinking of the long pull.

Tribute to Ernest L. Kurth

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Wednesday, February 22), 1950

Mr. CONNALLY. Mr. President, on December 14, 1949, at Lufkin, Tex., there was given by the citizens of Lufkin and Angelina County a testimonial in honor of their most prominent citizen, Ernest L. Kurth.

Theretofore, Mr. Kurth had been officially proclaimed "Man of the South" by the magazine Dixie Business. He was selected over a number of other eminent and distinguished personages as the man of greatest achievement in the South for 1949.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Man of the South for 1949," which was printed in the magazine Dixie Business, describing the testimonial to Mr. Kurth.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAN OF THE SOUTH FOR 1949

(By Col. Hubert F. Lee, Stone Mountain, Ga.)

The longest and most impressive testimonial ever held for a living American took place in the piney woods of east Texas at Lufkin, on December 14, when Ernest L. Kurth was officially proclaimed Man of the South of the Year 1949 by the editor of Dixie Business.

Many of the 5,000 who voted him the top honor in the annual Dixie business advisory poll were on hand to pay personal tribute to the man of greatest achievement in all the South for 1949.

Letters and telegrams from most of the South's 50 foremost business leaders named this summer by Dixie Business were among the hundreds received by Ernest Kurth in a genuine demonstration of sportsmanship that is one of the fine characteristics of the leaders of the South. Ernest Kurth was one of the South's foremost 50 and was named for the top honor when he received the greatest number of votes in letters, cards, and telegrams ever read by the edior of Dixie Business since the annual "South's hall of fame for the living" movement began.

And every man and woman who took part in the great Kurth day celebration had their own reasons for wanting to honor Ernest Kurth.

Newspaper publishers of the South saw in him the man who made their dreams come true when he became the first to mass-produce newsprint at his Southland Paper Mills in January 1940.

His friends in the lumber industry honored him for the years of leadership as head of the Angelina County Lumber Co., and his pioneering in perpetual reforestation.

The people of Lufkin and Angelina County, who put on the great event, hailed him as the man who transformed a small lumber town into the fifth largest industrial stronghold in the biggest State in the Nation.

* * * * *

For years there have been loud cries of the need for conservation of the trees of the South and Ernest Kurth has been a "tree-farmer" since he learned the art following his father through the piney woods from which they farmed timber for use in the great Angelina County Lumber Co. mill.

The Memorial Hospital at Lufkin is the first built for workers of a community by its industrial leaders and Ernest Kurth was first in making this possible.

* * * * *

The Kurth Day celebration was sponsored by the Angelina County Chamber of Commerce and in some way or other it seemed that everyone in Lufkin, Herty, Keltys, and Angelina County had some sort of part.

* * * * *

"Ernest L. Kurth accepted his honors Wednesday night before more than 900

southerners who came here to tell him why he was chosen.

Newspaper publishers, businessmen, Government, and civic leaders were in the crowd that heard Kurth described as a leader among the men who had the vision to bring industry to the South, as a great businessman who carved an east Texas career that reaches far outside the State.

Kurth appeared on the verge of tears.

He called Kurth Day one of the greatest markers of my life. But he said the honors really were bestowed upon every man and woman in Angelina County.

Time magazine devoted a column and a half in the December 26 issue in Business and Finance department:

"Mr. East Texas"

"In Lufkin, Tex.—population 22,500—one cold night last week, 900 citizens jammed into the high school gymnasium. There, over a roast beef dinner, they listened to some famed Texans—including United States Senators TOM CONNALLY and LYNDON JOHNSON—praise a fellow Texan in terms extravagant even for the Lone Star State. Said ex-Governor William P. Hobby: 'He is the kingfish of free enterprise.' Added Governor Allan Shivers: 'He is Mr. East Texas.'

"The 'Kingfish' is big—6 feet, 200 pounds—shy, pink-cheeked Ernest L. Kurth, 64, a jack of all trades—lumber, insurance, banking, theaters, construction, utilities, machinery—and master of them all as well. Kurth's dozen-odd enterprises employ 3,250, indirectly support 50 percent of Lufkin's population. But the Kurth achievement that most east Texans boast about, and the one that is of prime importance to the southern economy, is newsprint. Set up only 9 years ago as the South's first newsprint producer, Kurth's $18,000,000 Southland Paper Mills, Inc., last week was rolling out enough newsprint—132,718 tons last year—to supply some 70 percent of southern newspapers, and was grossing $15,000,000 a year."

A score of newspaper correspondents covered the Kurth Day celebration and as many news photographers. Paramount News had a cameraman. Television equipment was set up.

To Texans it was the top news story of 1949.

Isthmian Canals and Atomic Defense

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. MARTIN of Iowa. Mr. Speaker, the report of the Governor of the Panama Canal under Public Law 280, Seventy-ninth Congress, recommending the construction of a new Panama Canal at sea level was transmitted to the Congress by the President on December 1, 1947, without comment or recommendation.

The plan urged in the Governor's report contemplates changing the physical form of the present canal from the eminently successful high-level lake-lock type to a sea-level lock design, a project of great magnitude, whose primary premises of security and national defense, as well as estimates of cost, have been challenged by eminent authorities. Extensive discussions about many of the vital issues may be found in the sources given in the bibliographical list on the Isthmian Canal Policy of the United States, published in the CONGRESSIONAL RECORD of August 25, 1949, in an extension of remarks by Representative CLARK W. THOMPSON, of Texas, chairman of the special subcommittee now investigating the matter of financial operation of the Panama Canal under House Resolution 44, Eighty-first Congress.

Among the most outstanding papers listed in this bibliography is the authoritative presentation by former Representative Willis W. Bradley, of California, entitled "What of the Panama Canal?"—CONGRESSIONAL RECORD, Eightieth Congress, second session, April 22, 1948, volume 94, part 10, Appendix, page A2449. This contribution by Captain Bradley—perhaps the most comprehensive statement on its subject in congressional history—affords a deep insight into the basic facts of the current discussions as to the future of the Panama Canal—from the viewpoints of both ship-transit operations and national defense. He emphasizes the overwhelming opinion of leading atomic experts that no canal—regardless of location or type—can withstand an actual atomic attack.

In my studies of the national defense and national security aspects of the proposed sea-level project I have observed that among its principal advocates have been certain members of the Corps of Engineers of the Army who have urged it as being mandatory because of the atomic bomb. It is noteworthy, therefore, that some of the authors of the very able articles on the atomic bomb—upon which both Captain Bradley and I have based our opinions—are also members of the Corps.

A recent contribution with respect to atomic defense, published in the November–December 1949 issue of the Military Engineer, volume XLI, No. 284, page 417, is a technical paper by Lt. Col. Richard D. Wolfe, also of the Corps of Engineers of the Army.

Colonel Wolfe, in his presentation of the subject, does not specifically mention the Panama Canal, or interoceanic waterways; but he does supply a most constructive approach to the problem of atomic defense, with special attention to the bomb as a radioactive contamination weapon. His statements thus add to our understanding of the Isthmian defense problems, and tend to produce sounder thinking and planning for a more effective national security.

Thus, support is further given the previous deductions I have unfailingly derived from the writings of many atomic-warfare authorities, namely, that the defense of any type of canal—at Panama, or elsewhere—like the defense of the ports, highways, rivers, railroads, locks, dams, reservoirs, and public utilities and vital production plants in the United States, is an over-all governmental responsibility. This defense depends on the combination of our industrial capacity and the active might of our armed forces, equipped with the most powerful modern weapons and protective devices, rather than merely on passive defense features which may be embodied in the designs of canal construction, and which would constitute, in effect, another Maginot line.

It is obvious, therefore, that the expenditure of vast sums and the utilization of great stores of strategic resources in the construction of projects—such as the so-called sea-level canal at Panama, with the virtual scrapping of the existing Canal; or the building of a canal at another site—would divert funds from other more urgently needed defense projects, situated in the United States, thereby affecting, in a most serious and adverse way, our "national security."

The Isthmian Canal question most certainly is one which must not be taken lightly by the Congress; but it should receive the most careful consideration, with the advice of the best-informed technical authorities, of wholly independent character.

The utter fallacy of the contention that a sea-level canal will prove invulnerable to atomic attack is completely shattered in that the H—or hydrogen—bomb, now to be made by our Government, is declared by scientists to be infinitely more powerful and devastating than the existing A-bomb—perhaps a thousand times more so. In my former discussions of this subject I have sought to call attention to the fact that the atomic bomb was yet in its infancy—though powerful enough to destroy any type of canal, if permitted to strike—and that soon scientific development will leave it far behind. Such is the case already. The official proponents of the sea-level project were, therefore, either wholly lacking in vision in failing to realize that the atomic bomb was only in its initial stage—though deadly enough, at that—or, else, they undertook, through the avowal of a false premise, to mislead the American Congress and people, and to frighten them into acceptance—in the name of security and protection—of a vast "boondoggling" enterprise of astronomical costs and uncertain value—a veritable Tower of Babel in reverse. Thus it has come to pass that the H-bomb—before it is actually made—has destroyed the sea-level canal—before it is built. Indeed, a paradox; but a very gratifying one for the American taxpayer and shipowner.

All of which, as I believe, emphasizes the urgent need for the enactment of legislation providing for the creation of an Interoceanic Canals Commission, of independent and broad-gauged membership—and charged with the duty of making a full and complete study of all the problems involved in the various proposals urged—both at Panama and elsewhere—and the submission of a comprehensive report in the premises. In addition to the all-important engineering features to be determined, there are very grave treaty questions to be considered, and such a body could make a comprehensive study of every factor that must be taken into final account; and make a report, thus grounded, for the information and guidance of the President and Congress.

To make Colonel Wolfe's timely discussion more readily available in the technical literature that is now accumulating, under leave granted, I am ex-

tending my remarks by inclusion therewith of the full text of his paper:

ATOMIC DEFENSE—A CONSTRUCTIVE APPROACH

(By Richard D. Wolfe, lieutenant colonel, Corps of Engineers)

Since the advent of the atomic bomb, many articles have appeared in the public press and elsewhere concerning the terrifying after-effects of the radioactive contamination produced by the explosion. Unfortunately, much of this writing has been in thoroughly alarmist vein, implying or stating in so many words that nothing can be done immediately to minimize the effects of this contamination or subsequently to remove it. These exaggerated "scare-head" statements have frequently been in error as to fact. More important, in best Sunday supplement style, they have often presented ideas by implication and facts by conjecture, all of which are calculated to produce the impression that the radioactive after-effects of atomic explosion are always present, always horrible beyond imagination, and impossible to do anything about.

This is a negative attitude which is completely inconsistent with our national character as a vigorous people who can tackle a practical, finite problem, however complex, with ingenuity and with improvisation if necessary, to arrive at a workable solution. The correction of the unfortunate impression which the "nothing-can-be-done" school of thought has attempted to create in the public mind is the subject at present of an educational campaign sponsored by the Atomic Energy Commission, the Armed Forces Special Weapons Project, and other agencies.

THE BOMB AS A BLAST WEAPON

No attempt is here made to minimize the immediate blast effect of the bomb as an explosive weapon. But as pointed out in a recent issue[1] the bomb is a finite weapon which differs in intensity but not essentially in quality from other weapons. Its immediate effect as an explosion on matériel and personnel in the worst case could be reproduced by high explosives; high explosives used in conjunction with chemical warfare agents could in turn reproduce the contamination effect if numbers of casualties rather than type of injuries are used as a criterion of effectiveness. The defense against the explosive effects lies in dispersion, in placing a few key installations underground, and in preventing the enemy from delivering the weapon in one's own neighborhood.[2] If it be argued that this constitutes no real defense, then equally there is no defense against mass strategic bombing as practiced by this country and its allies in the war just concluded.

Considering the bomb as essentially a large-scale blast producer (in which role it utilizes its destructive power most efficiently), it creates maximum physical damage when exploded in the air fairly high over the target, as was done at Hiroshima and Nagasaki. In this case, in which it acts predominantly as a high explosive, any direct radioactive effects are practically instantaneous with the explosion and cause not more than 10 to 15 percent of personnel injuries. The radioactive byproducts of the explosion boil up immediately in the cloud of hot gases and are dissipated to infinite dilution in the upper atmosphere. Residual contamination on the ground is minimal or nonexistent.

THE BOMB AS A CONTAMINATION WEAPON

When the bomb is exploded beneath the surface of water or earth, it does become in some measure a new weapon.[3] In this case the only practical evidence we have to go on is the Baker test (underwater explosion) at Bikini. From the data of this test and by analogy to underwater or underground conventional explosions, the surface damage produced will be much less than in the case of the air burst. There will also be damage from the subsurface shock wave to ships and utilities in an area roughly equal to that damaged by an air burst. The additional new aspect is that the water or earth thrown up by the explosion contains a fair proportion of the radioactive byproducts of the explosion and will probably be distributed over an area approximately equal to that suffering maximum damage in the case of the air burst. The comparison between the air burst and the subsurface burst reveals the following facts: (a) The air burst produces immediate destruction or damage to matériel and, in the absence of forewarning, to personnel in an area, say, 3 miles in diameter. (b) The subsurface burst produces immediate destruction or damage in a smaller area (say, 1 mile in diameter) and, in addition, covers the 3-mile-diameter area with radioactive contamination which does no material damage but which is potentially dangerous or lethal to animal life.

It is evident, therefore, that the only new feature of the bomb as a contamination weapon is that it differs in quality from the bomb as a blast weapon. The extent of physical damage to structures in the subsurface explosion is less, whereas the number of personnel casualties in the area in the worst case is probably no more than with the air burst. Herein lies the fallacy in the claim that the underwater or underground burst is a more dangerous and destructive weapon than the air burst; on the one hand, the damage done by the air burst inside the 3-mile diameter is immediate and is effective in destroying both material things and living creatures; on the other hand, the immediate damage from the subsurface burst is much smaller in area and the potential danger from contamination which extends to the 3-mile diameter applies only to living things, is not instantaneous, and therefore permits action to be taken in mitigation of the hazard.

Three factors permit reduction of casualties in this doughnut-shaped area lying outside the radius of the heavy physical damage and inside the radius of radioactive contamination. The first is the fact that the contamination falls from the air in the form of rain or dust, or both, in a matter of say 5 minutes after the explosion occurs, and thus is restricted initially to external surfaces of buildings and to ground areas. Now the dangerous radiations emitted from the contamination are dissipated by distance, and by the shielding afforded by any solid material such as earth, or the walls or roof of a building. Thus, if the populace can be trained to remain indoors in the center portions of structures, as far from outer walls and roof as the building permits (preferably in basements), being careful to wash off any contamination which they may have acquired by contact with the outdoors, casualties can be considerably reduced. The populace must be further convinced that it must remain in such protective isolation, whatever the inconvenience, for at least 4 days, as explained below.

The second factor, which in reality makes the first effective as a measure of protection, is the fact that the radioactivity in the contamination dies out quite rapidly as an inverse exponential function of time following the explosion, such that within approximately 4 days movement can be permitted in the area by properly equipped working parties for limited periods of time. This permits the third defensive phase to become active, that is, evacuation of personnel, together with decontamination.

DECONTAMINATION

The statement has frequently been made (often by supposed authorities on the subject) that decontamination is impossible, or at best impracticable.[3,4] This echoes the negative do-nothing approach mentioned above. The statement is untrue both in fact and in implication. Much has been learned concerning practical methods of decontamination, and research now in progress at the Naval Radiological Defense Laboratory and elsewhere gives promise of even better methods than are now known.

However effective these methods may become, it should be realized at the outset that they will always be expensive in manhours and materials; sufficiently so as to preclude anything approaching complete decontamination of areas and structures immediately following an underwater or underground burst. Initially, decontamination efforts will probably be limited to those predetermined approach ways, areas, and structures whose reoccupation and continued use are vital to prosecution of the war effort. After evacuation of personnel, other areas must be blocked off and isolated for the time being. Later on, the decision can be made whether it is cheaper to decontaminate, to replace the structures and facilities in a new area, or to delay for a period of months until reduction of radioactivity by decay has reduced both the personnel hazard and the difficulty of decontamination.

Practical field decontamination to date has largely been concerned with the decontamination of ships following the atomic bomb tests at Bikini in 1946. The methods used are successful in removing contamination, although they are considered to be inordinately time-consuming and expensive. Ships have nevertheless been completely cleared for normal usage as a result of decontamination performed by the San Francisco Naval Shipyard in conjunction with the Naval Radiological Defense Laboratory. In general, the results indicate that any ship, no matter how badly contaminated, can be successfully decontaminated by present methods provided the ship itself is sufficiently valuable to warrant the time and expense involved, together with replacement of such equipment as cordage, wooden decking, et cetera.

RESEARCH FOR ATOMIC DEFENSE

Much of the work done by the agencies of the Manhattan Engineer District and later by the Atomic Energy Commission has contributed valuable information toward defensive measures. However, since their aims have been primarily toward development of offensive nuclear weapons and the development of nuclear power, none of these agencies has pursued an integrated program aimed at the defensive aspects of the problem. In fact, the only agency in the Nation, service or civilian, which is actively prosecuting a broad research and development program pointed toward defense against the various forms of radiological warfare is the Naval Radiological Defense Laboratory (NRDL) at the San Francisco Naval Shipyard.

* * * * *

The present research program of the laboratory embraces four principal fields of endeavor: (1) Studies on the contamination and decontamination of land installations, ships, and aircraft; (2) Evaluation, test, and development of radiation detecting instruments including portable and semiportable

[1] Industrial Vulnerability to Bombing, Maj. Gen. C. F. Robinson, the Military Engineer, January-February 1949.

[2] Nuclear Weapons, Lt. Col. A. W. Betts, the Military Engineer, March-April 1949

survey instruments and such laboratory-type instruments as are necessary in prosecuting the work; (3) Investigation of individual and collective protective devices to determine their ability to safeguard personnel against inhalation and ingestion of radioactive material; (4) Investigations in the medical and biological field with a view to determining the nature of radiation sickness and the means of early diagnosis of radiation damage, together with prognosis as to probable effects on the efficiency of the individual and his life expectancy.

Put in another way, the first job of the NRDL and of the National Military Establishment to implement radiological defense is to provide for the immediate and continuing safety of personnel. This involves determining allowable limits for each type of radiation under varying operational situations. Following that, instruments must be provided to indicate what kind of radiation is present and how much there is. The next step is to provide diagnostic procedures to determine the imminence of radiation damage, to establish criteria for its detection and estimation of its seriousness either in the immediate postirradiation period or distant future. A very important auxiliary job related to the latter is the one of working toward an understanding of the mechanisms of radiation damage, so that treatment of it can be provided on a more rational basis than is now possible.

The second principal task is the discovery and development of expeditious and economical means of removal and disposal of radioactive contamination, meanwhile providing protection for personnel engaged in this operation to insure that they are not overexposed in the process.

* * * * *

As stated earlier, one of the principal efforts of the laboratory is the field of decontamination studies, for which the burden of research falls on the chemistry branch and its chief, and also on the engineering applications branch. The mission of the chemistry branch and, in part, of the engineering applications branch is to find a practical means of decontaminating structures, ships, or aircraft which have become contaminated by radioactive materials as a result of some form of radiological warfare, and to investigate practical means for eliminating or minimizing initial contamination.

Depending on the time intervals after the blast (assuming an atomic bomb detonation), the contamination may consist of a mixture of part or all of some 50 elements which have been rendered radioactive by the explosion, plus unexploded material from the bomb itself. This contamination is deposited initially on surfaces by "falling-out" from the radioactive cloud, or is contained in water or earth thrown up by an underwater burst. In general, the contamination is found to be associated almost entirely with the external surface of the area on which it lands. Thus, there are three general methods toward decontamination, or toward preventing contamination. The first consists of surface removal methods. In this category are the successful methods used to date in decontamination of ships. In crudest form they include paint removal by caustic solutions, and such brute-force methods as sandblasting and scraping to remove paint and part of the surface of the material. The second approach is that of decontamination without affecting character or quality of the surface; this method includes the use of chemical solutions to dissolve the contaminants and to carry them away. The third method involves the means of preventing contamination, including such devices as the interposition of a water film on the surface, which mechanically impedes the attachment of contamination to the surface itself. Obviously, there is great variation in the relative contaminability of various surfaces. Naturally, rough or porous materials will tend to hold contamination to a much greater degree than hard smooth surfaces.

PLANNING, ORGANIZATION, TRAINING

As with all research, progress tends to be slow and laborious. Nevertheless it is hoped that within approximately 1 year practical, expeditious, and relatively economical means of decontaminating structures and areas will have been reached. This time limit applies to the fundamental technique as developed in the laboratory. Following this step, engineering development must take place and procurement must be instituted in order to make the benefits of these discoveries available for practical use by services in the field. In addition, personnel must be trained in the techniques of such decontamination work and in the use of the equipment developed. Organization must, therefore, be set up within the current organizations of Naval, Army, and Air Force units, all in coordination with similar plans for civil defense.

It is obvious that a great deal of thought and action must go into the job of preparing the military services and the civilian population to act both as organizations and as individuals, according to precepts outlined earlier, in order to minimize casualties as a result of radiological warfare. A start has been made in this direction, both by the military services and by the Office of Civil Defense Planning. The scope of the task is broad, however; probably it will be of the same magnitude as the effort expended in producing the atomic bomb itself. It will not be solved by shoestring operations, splinter efforts, or by the part-time consideration of planning staffs, whether civilian or military. It requires an energetic, coordinated, integrated effort which has the support of an educated populace as well as of governmental and military agencies, backed by sufficient funds to implement a firm program. Such a program of organization, procurement of equipment, and training in its use will not be accomplished overnight nor in a period of a few weeks or months. The program will require vigorous prosecution if it is to be done in 1 or 2 years.

But the problem is finite, and far from impossible of execution. It is probably no more difficult of solution than the tremendously complex planning and training which was performed in preparation for any of the large amphibious operations of World War II, or in preparing the very effective organization of the British citizenry to cope with the air attacks in the blitz of 1940 and after. Finally, it is a job which must be done, and the earlier the better for our peace of mind and protection as a nation—at least until international control of atomic energy becomes a reality and the threat of war is much less than it appears to be at present.

Big Government Is in Your County, Too

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Country Gentleman for March, 1950:

BIG GOVERNMENT IS IN YOUR COUNTY, TOO

(By John Strohm)

Twenty-five of the best farmers in De Kalb County, Ill., were asked this question: "What would be your rough guess as to the number of Federal farm agency employees—either part or full time—in De Kalb County in 1949?"

Their average guess was 56 Federal hired hands in their midst. And 21 of the 25 farmers went on to say this was too many.

They were flabbergasted when told the right answer was more than three times their guess. For 178 men and women were working for the Federal Government in De Kalb County last year—just to tell farmers what they should do, what they can do, and, in some instances, what they cannot do.

These 178 persons put in part or full time and were paid from $3 a day up to $5,350 a year. They worked only on the various Federal farm service programs inside that one county. One hundred and twenty-three of them actually live right in the county; 55 of them live outside the county but regularly visit as part of their duties. Jobholders in State, regional, and national bureaus who influence but never see De Kalb County were not counted.

Uncle Sam spent $86,065.60 in tax money to bring their services to the county's 2,500 farmers. This does not include the Federal portion of salaries received by the 55 workers who live outside the county and made occasional visits.

"This 'free advice' is costing too much!" exploded one amazed farmer when shown these figures.

It took 65 De Kalb men and 5 girls a total of 590 days to sign up, check performance, figure up results, and pay out $35.01 apiece to farmers who cooperated in the Government's PMA program. These farmers were paid to spread limestone, spray weeds and plow under clover—practices that 96 percent of those surveyed said they'd done anyway.

The Soil Conservation Service's bill was $14,040 for offering technical advice to 95 farmers—3.8 percent of those in the county. That's a cost of about $147.68 each. One "cooperator" admitted: "Oh, I just signed up to get their soil map—I'm not following the rotation they set up for my farm."

Farmers get free advice on crop rotation from at least three different Government agencies, in some instances five, and yet more than 100 De Kalb County farmers have put up $40 apiece to hire their own farm-management consultant.

Youth leaders, paid in part with Federal funds, head up 4-H Club work and Future Farmers—overlapping youth groups whose members frequently belong to both. Yet, two-thirds of the farm boys and girls are reached by neither. Two 4-H leaders receive a total of $2,940 Federal funds, while 23 teachers, who spend a portion of their time leading Future Farmers and Future Homemaker groups, get $14,780 of their pay from the Federal Government.

De Kalb County farmers have been increasingly worried about big Government. Many of them have heard about the Hoover Report and how the cost of Federal Government has skyrocketed from 4 to 40 billion dollars in the last 20 years—how we used to hire 600,000 Federal workers, and now have 2,100,000 on the pay roll—how the average American works about 65 days a year to pay Federal taxes alone.

But few realize big Government is not all in Washington. Few had stopped to analyze the numbers of Federal-hired farm hands under their very noses at the county level.

"I've been disturbed by this growing feeling to let Government do it—but this is worse than anything I ever dreamed of," was

the shocked comment of a prominent cattle feeder who saw this report. "No matter how good a job these agencies are doing for us, someday, if this continues, we'll wake up and find our freedom gone."

"Never even knew my township PMA committeemen got $8 a day," exclaimed one surprised farmer. "Maybe we should have just one for a township instead of three."

"Why should we get paid at all?" asked Fred Willrett, township committeeman for many years. "School board members don't get paid. We'd better think before it's too late—we've got to have the guts to cut down some of these Government programs."

"And what bothers me," said E. E. Houghtby, "is that we collect these taxes, send them to Washington, but only get a few dollars back. It's like a De Kalb County farmer giving himself a blood transfusion from one arm into the other—and spilling a couple of quarts of blood in the process."

De Kalb farmers have a practical stake in the Federal tax dollar. Most of them paid an income tax last year of between $800 and $3,000 in this unusually good county in northern Illinois. They recognize the merits of many of the farm education and action programs, but are beginning to question the conflicts and duplications as well as the costs.

The Production and Marketing Administration ("That's the old AAA dressed up" explained the county chairman) will pay farmers $1.30 a ton for spreading limestone within certain limits—no soil test required. "I've had to tell some farmers they were spreading too much limestone—that they would probably be doing more harm than good," recalls W. C. Mummert, former De Kalb County farm adviser, or county agent.

"The PMA will pay for plowing down clover or sweetclover, but not alfalfa. I've rotated with alfalfa since 1901 and I know this crop is worth much more to De Kalb County than clover," reports Henry Parke, pioneer farm and livestock leader. "It doesn't make sense that we can't adapt ourselves to local conditions, but Washington told them they can't do it, so our State and local PMA committees are helpless."

De Kalb County, a fertile, level prairie, got $53,700 from PMA for soil-building practices in 1948. Morgan County, Ill., with 14 percent of its land too eroded for crops, 7 percent so eroded it can be used only in grassland, and 32 percent needing terraces and contouring—Morgan County got only $38,000.

"The PMA is geared to 15 years ago when they had to bribe farmers a bit to get them started on conservation practices," asserted a veteran farm leader. Harney King, county PMA committeeman, admitted that lots of farmers would follow soil-building practices without payment, so the program really was a device to give a farmer extra income.

"But why have a big organization to give away $35 to a farmer?" asked a big-fisted, ruddy-cheeked grain farmer. "I have to drive 17 miles to De Kalb to sign up for the program. I come into the county office in the winter with receipted bills for fertilizer. If I've done some contour farming, an $8-a-day Government hired hand comes over to inspect the job. The girls in the AAA office fuss over my report (in between reading their magazines and talking about what they did on their dates the night before). The reports are sent to Decatur, where some more job holders check them during their busy 5-day week. And I finally get a check—and I understand it costs our Government $5 just to write a check. Sounds like a pretty expensive way to hand out $35."

Farmers are uneasy about the big corn surplus. The realize something must be done. They're not sure PMA's current acreage reduction will do it. "Why, the last time we had corn-acreage controls, the AAA field man himself showed us how we could substitute Atlas sorgo, which takes more out of the soil than corn, and which gave us more forage than corn," said one brow-furrowed veteran of those threadbare thirties. Nine out of ten farmers interviewed thought they could raise almost as much corn with their 1950 acreage cut by planting thicker, adding more fertilizer, using their best ground.

Congress says the Extension Service shall carry out all educational programs in farming. Yet in De Kalb County, the Soil Conservation Service is primarily educational and spends three times as much as Extension. Two full-time men with salaries totaling $7,760, plus 6 others who work part-time in De Kalb County, and drive 5 Government cars, offer farmer cooperators soil maps which most farmers want, plus advice, mainly on rotation, which many do not follow.

Although technical help on laying out contours, strip cropping, and terraces is included in their program, the SCS admittedly soft-pedals these because a few farmers want to do them. Yet, leave out such things, leave out the map, and you have much the same program which the Extension Service has been preaching for 30 years.

"We show farmers how turning under the third crop of alfalfa-brome will put $100 worth of soil nutrients into the soil," said the SCS soils man. But the PMA in the office downstairs has not been able to pay farmers for turning under alfalfa—just clover, sweetclover, and rye.

Fred Willrett, speaking as a director of the De Kalb County soil conservation district, believes the SCS is doing an extremely valuable job, but frets at the slow pace. "We have only 95 plans in operation after 3 years—and we have 250 applications we haven't been able to get to."

"We really need another man to follow up the plans we've already laid out," asserted the SCS conservationist's aid.

There are three lending agencies in De Kalb County using interest-free Federal funds. Farmers get Commodity Credit Corporation price-support loans, administered by PMA, through the local banks or PCA. The local Production Credit Association lent 125 farmers about $1,350,000 in 1948. Although it has set its goal to be a completely farmer-owned credit agency, it still has $90,000 Federal money which it can keep as long as it wants to without paying interest. For each $100 a farmer borrows, he gets $95 cash and a $5 share of stock which makes the interest rate really higher than the current 5½ percent. Local banks now charge from 4 to 5 percent for cattle-feeding loans. Farmers generally feel that the PCA has brought lower rates from private banks.

"Yes, farmers can now borrow money for less at the private banks," admitted Ben McNeely, cattle feeder. "But Production Credit will give you a bigger and longer loan on a bunch of feeder cattle. I could get a $10,000 loan on a $10,000 bunch of cattle by giving a chattel mortgage on them and a crib of corn—the bank won't do that."

De Kalb County bankers quickly say: "We won't, because the same Government that says PCA can, tells us we can't."

PCA boosters say they have the confidence of the farmer—a sort of across-the-backfence way of doing business which the farmer likes. "Another thing which makes our position attractive—we catch all the traffic that goes into the PMA and Farm Bureau offices," said Martin Donnelly, PCA fieldman. (Their office is right inside the front door of the building that houses most of the Government agencies.)

The catch-all for the risky loan business is the Farmers' Home Administration, which 24 out of 25 De Kalb County farmers surveyed said was not needed. It makes loans which the Government forbids other loan agencies to make. Robert Becker, supervisor from outside the county, looks over the six tenant-purchase farms in De Kalb set up by the Farm Security Administration. He handles distress loans to producers, and has the new job of sifting applications for the Public Farm Housing Loans to farmers who want to build a home, put in a bathroom, or build a hog house, and who can't get credit elsewhere. A fifth of his time, and of his office help, takes $1,612 in Federal money.

The 11 vocational agriculture teachers in De Kalb County are paid an average of $4,225.33 each, about one-fourth of which comes from Federal funds. The 12 home economics teachers get about $2,600 each, of which a fourth comes from Federal funds. The agriculture teachers lead Future Farmer clubs; the home-economics teachers, Future Homemakers clubs. In aims and purposes, they are not unlike the 4–H Clubs.

"About 90 percent of our Future Farmers were also 4–H Club members," said W. C. Mummert, who was an agriculture teacher for 7 years, a farm adviser for 6 in De Kalb County. "But we were constantly warned from the State and Federal offices when I was an agriculture teacher to get out of leading 4–H Clubs—to emphasize to the boy with a beef calf that while it could be used in both FFA and 4–H work, the calf definitely was a Future Farmer project being used as a 4–H project and not a 4–H project being used as a Future Farmer project."

The Future Farmers have a district fair. The 4–H Club members have a county fair—mostly the same boys and girls, same animals, same projects.

Yet, there are 2,000 farm boys and girls between 10 and 20 in De Kalb County who are members of neither organization. Better organization between Government-paid youth leaders would permit us to reach more of them, believes Mummert. He used to have regular meetings with the vocational-agriculture teachers when he was in extension work. We have so much in common and could do so much more if we'd have one coordinated program. There's wasted opportunity here for furthering agriculture.

Training veterans how to farm is costing the Government 50 percent more than its 11 agriculture teachers and 12 home-economics teachers. The United States Veterans' Administration poured $20,118.04 into the county to train 111 boys. In addition to the agriculture teachers who get an additional $55 a month for teaching a veterans' class, seven extra instructors were hired at $65 a month to teach one night class a week—three self-employed veterans make up one class.

Extension activities in De Kalb County cost the Federal Government $7,660. About $5,000 of this pays part of the salary of the farm adviser (county agent), his assistant, home adviser and her assistant, while the balance is for the part-time services of 48 university extension specialists who visited the county for 1 day or more during the course of the year. The county itself contributes $6,922, and the State $3,922 toward the farm and home advisers' wages.

The statistics show the farm adviser spent 173 days in the office, 126 in the field, had 9,226 phone calls, wrote 7,554 letters, visited 107 farms, had 98 night meetings and 6,000 office visits. The home adviser and her assistant worked 241 days with adults, 240½ with 4-H Clubs and older youth. They made 113 home visits, had 1,234 office calls, 1,599 telephone calls. They have 678 home-bureau members, 308 girl 4-H Club members, and 75 rural youth. "This is one group we really overwork," one farmer commented when he saw these statistics.

A former extension director of De Kalb County feels there can be improvement here. "We have extension specialists come up from the university for a 1-day stand, and maybe 16 to 30 farmers show up for the meeting. And they're the same farmers who come meeting after meeting. We should have the information from the specialists in a form

that would get it out to all 2,500 farmers in De Kalb County."

In a nearby county, a health extension specialist (salary: $5,000) came from the State college, 165 miles away (expenses: $25) to talk to a meeting on health. Her audience: six women. The cost: $10 each.

The Production and Marketing Administration paid 83 men and women for working on the farm program in De Kalb County—committeemen, office girls, crib inspectors, auditors, field men. The bill for 1949 will be an estimated $31,746.57. This does not include any conservation payments, crop loans, or the $64,082 to set up cribs and seal corn.

"The farm program is run by the farmers," the PMA chairman said. "But elections for PMA committeemen are getting to be pretty much of a joke," said one farmer. This past year only 180 out of 2,500 farmers voted. The three township committeemen and their two alternates, voting for themselves in each township, could have swung the elections throughout the county. In two townships, only four men showed up to cast ballots.

"I'm afraid that when a farmer is elected to the PMA committee he becomes biased in spite of himself," believes Henry Parks. "And once we set up a temporary Government bureau, it quickly becomes permanent."

"If you think PMA has a big staff now," cracked one former official, "wait till we get corn and wheat quotas and maybe soybean-acreage control—brother, you'll see the PMA grow and grow."

With all of these facts and statistics, De Kalb County is a most unusual county:

1. It has fewer Federal employees than most counties of similar size. It has no REA, Crop Insurance Corporation, Forestry Service, Reclamation Service, or half a dozen other Government agencies that have been set up to help the farmers farm in many counties.

2. Its employees, prodded by intelligent farm boards, do a better-than-average job. Example: The local PMA committee spent only 9 percent of the total soil-conservation payments for administration, while the State average was nearly 14 percent and some counties spent almost 20 percent—just to figure up and send out the checks.

3. Cooperation between Government bureaus is as high as in any county I've visited. "Sometimes I think the Extension Service, the PMA, and PCA have to have so many meetings to keep their wires straight, they waste time when they should be working," smiled E. E. Houghtby.

4. There is a strong desire by De Kalb County farmers to stand on their own feet. Through their County Farm Bureau—2,900 members at $15 each in a county of 2,500 farms—they have spent $8,200 on youth and extension activities. They have hired a livestock marketing expert for $4,000. One feeder said he made $1,900 when Lee Moser advised him to reject a country bid and ship his cattle to Chicago. Another afternoon, he visited four different farms, and those farmers by following his advice on shipping, made an extra $3,600. Last year he gave advice to 900 livestock men. "That's the kind of advice we can't get from Washington for any price," says the County Farm Bureau president, George Bark.

Last year, worried about high taxes, they hired a tax expert for $4,192. "We get our tax bills, bellyache and then forget them," says Bark. "We wanted our citizens to know where their tax money goes, so we can get the most for our tax dollar."

They invested $2,800 in a soil-testing laboratory. They test soil free, and will pick up soil samples for 10 cents an acre.

De Kalb County farmers know they can do things at the county level—they also feel that they can do more of their own thinking there.

"In forty-two years of farming, Uncle Sam looked to us to keep him going. Now it seems everyone is looking to Uncle Sam to keep them. Let's look after ourselves. Farmers at the grass-roots level are just as smart as they are at the State or Federal level," declared Frank Schweitzer. "We're petted too much politically."

County PMA Chairman Terwilliger had something to say on that too: "We can stand on our own feet. We're able to think for ourselves. We don't want dictation from the State offices. We don't have to take guff from anyone outside the county. Give the farmers the right to decide what they want."

De Kalb County farmers, appreciating the need of some kind of farm program, nevertheless want it kept simple. They don't like to see Big Government get bigger, and controls get more rigid.

Daniel Webster's Speech 100 Years Ago Today

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. RANKIN. Mr. Speaker, today is another anniversary that will live long in the history of America. One hundred years ago today Daniel Webster made his famous Seventh of March speech.

That speech contains some colloquy between him and John C. Calhoun. Present that day was Jefferson Davis, later President of the Confederacy, and also Senator Cass, of Michigan, who I believe was at one time the Democratic candidate for President.

Daniel Webster made more enemies in the North with that speech than any other speech he ever made, for the simple reason he was trying to avert an internal conflict, the War Between the States.

It came after he passed away and his son, probably his only son, Fletcher Webster, was killed in the first battle, the Battle of Bull Run.

As I look back over that history I wonder if it would not be good for the Members of the House to reread that speech and reread the colloquy between him and Mr. Calhoun and to get back on the beam, if you please, and take the advice of Calvin Coolidge.

On one occasion I attended an American Legion convention in Boston. I saw two Presidents of the United States on the same platform, a former President and the then President of the United States. It was the only time I have ever seen that situation. The only man in this House who was present, if I remember correctly, was the gentleman from Massachusetts [Mr. WIGGLESWORTH]. The boys were all singing "We've paid our debt to Lafayette; who the hell do we owe now?" They were clamoring for Mr. Coolidge to make a speech. Mr. Hoover at that time was President and was on the platform with him.

Finally the pressure got so strong that Mr. Coolidge rose and made one of the best speeches I have ever heard a man make in one sentence. He said, "We have paid our debt to Lafayette; now let us pay our debt to ourselves," and sat down.

It is time for us to take that sage advice and save America for Americans—for our children and our children's children to the remotest generation.

The speech made by Daniel Webster 100 years ago today is as follows:

SPEECH IN THE SENATE OF THE UNITED STATES, MARCH 7, 1850

The VICE PRESIDENT. The resolutions submitted by the Senator from Kentucky were made the special order of the day at 12 o'clock. The Senator from Wisconsin [Mr. Walker] has the floor.

Mr. WALKER. Mr. President, this vast audience has not assembled to hear me; and there is but one man, in my opinion, who can assemble such an audience. They expect to hear him, and I feel it to be my duty, as it is my pleasure, to give the floor, therefore, to the Senator from Massachusetts. I understand it is immaterial to him upon which of these questions he speaks, and therefore I will not move to postpone the special order.

Mr. WEBSTER. I beg to express my obligations to my friend from Wisconsin [Mr. Walker], as well as to my friend from New York [Mr. Seward], for their courtesy in allowing me to address the Senate this morning.

Mr. President, I wish to speak today, not as a Massachusetts man, nor as a Northern man, but as an American, and a Member of the Senate of the United States. It is fortunate that there is a Senate of the United States; a body, not yet moved from its propriety, not lost to a just sense of its own dignity, and its own high responsibilities, and a body to which the country looks, with confidence, for wise, moderate, patriotic, and healing counsels. It is not to be denied that we live in the midst of strong agitations, and are surrounded by very considerable dangers to our institutions and government. The imprisoned winds are let loose. The East, the North, and the stormy South, combine to throw the whole ocean into commotion, to toss its billows to the skies, and disclose its profoundest depths. I do not affect to regard myself, Mr. President, as holding, or as fit to hold, the helm in this combat with the political elements; but I have a duty to perform, and I mean to perform it with fidelity, not without a sense of existing dangers, but not without hope. I have a part to act, not for my own security or safety, for I am looking out for no fragment upon which to float away from the wreck, if wreck there must be, but for the good of the whole, and the preservation of all; and there is that which will keep me to my duty during this struggle, whether the sun and the stars shall appear, or shall not appear, for many days. I speak today for the preservation of the Union. "Hear me for my cause." I speak, today, out of a solicitous and anxious heart, for the restoration to the country of that quiet and that harmony which make the blessings of this Union so rich and so dear to us all. These are the topics that I propose to myself to discuss; these are the motives, and the sole motives, that influence me in the wish to communicate my opinions to the Senate and the country; and if I can do anything, however little, for the promotion of these ends, I shall have accomplished all that I expect.

Mr. President, it may not be amiss to refer very briefly to the events which, equally sudden and extraordinary, have brought the political condition of the country to what it now is. In May 1846 the United States declared war against Mexico. Our armies, then on the frontiers, entered the provinces of that Republic, met and defeated all her

troops, penetrated her mountain passes, and occupied her capital. The Marine force of the United States took possession of her forts and her towns, on the Atlantic and on the Pacific. In less than 2 years, a treaty was negotiated, by which Mexico ceded to the United States a vast territory, extending seven or eight hundred miles along the shores of the Pacific, and reaching back over the mountains, and across the desert, until it joins the frontier of the State of Texas. It so happened, in the distracted and feeble state of the Mexican Government, that, before the declaration of war by the United States against Mexico had become known in California, the people of California, under the lead of American officers, overthrew the existing provincial government of California, the Mexican authorities, and ran up an independent flag. When the news arrived at San Francisco that war had been declared by the United States against Mexico, this independent flag was pulled down, and the Stars and Stripes of this Union hoisted in its stead. So, sir, before the war was over, the forces of the United States, military and naval, had possession of San Francisco and upper California, and a great rush of emigrants from various parts of the world took place into California in 1846 and 1847. But now, behold another wonder.

In January of 1848, the Mormons, or some of them, made a discovery of an extraordinarily rich mine of gold, or, rather, of a very great quantity of gold, hardly fit to be called a mine, for it was spread near the surface, on the lower part of the south, or American, branch of the Sacramento. They seem to have attempted to conceal their discovery for some time; but soon another discovery, perhaps of greater importance, was made of gold, in another part of the American branch of the Sacramento, and near Sutter's Fort, as it is called. The fame of these discoveries spread far and wide. They inflamed more and more the spirit of emigration toward California, which had already been excited; and persons crowded in hundreds, and flocked toward the Bay of San Francisco. This, as I have said, took place in the winter and spring of 1848. The digging commenced in the spring of that year, and from that time to this the work of searching for gold has been prosecuted with a success not heretofore known in the history of this globe. We all know, sir, how incredulous the American public was at the accounts which reached us, at first, of these discoveries; but we all know, now, that these accounts received, and continue to receive, daily confirmation, and down to the present moment I suppose the assurances are as strong, after the experience of these several months, of mines of gold apparently inexhaustible in the regions near San Francisco, in California, as they were at any period of the earlier dates of the accounts. It so happened, sir, that, although after the return of peace, it became a very important subject for legislative consideration and legislative decision, to provide a proper territorial government for California, yet differences of opinion in the counsels of the Government prevented the establishment of any such territorial government, at the last session of Congress. Under this state of things, the inhabitants of San Francisco and California, then amounting to a great number of people, in the summer of last year, thought it to be their duty to establish a local government. Under the proclamation of General Riley, the people chose delegates to a convention; that convention met at Monterey. They formed a constitution for the State of California, and it was adopted by the people of California in their primary assemblages. Desirous of immediate connection with the United States, its Senators were appointed and Representatives were chosen, who have come hither, bringing with them the authentic constitution of the State of California; and they now present themselves, asking, in behalf of their State, that it may be admitted into this Union as one of the United States. This constitution, sir, contains an express prohibition against slavery, or involuntary servitude, in the State of California. It is said, and I suppose truly, that of the members who composed that convention some 16 were natives of, and had been residents in, the slaveholding States, about 22 were from the nonslaveholding States, and the remaining 10 members were either native Californians or old settlers in that country. This prohibition against slavery, it is said, was inserted with entire unanimity.

Mr. HALE. Will the Senator give way until order is restored?

The VICE PRESIDENT. The Sergeant at Arms will see that order is restored, and no more persons admitted to the floor.

Mr. CASS. I trust the scene of the other day will not be repeated. The sergeant-at-arms must display more energy in suppressing this disorder.

Mr. HALE. The noise is outside of the door.

Mr. WEBSTER. And it is this circumstance, sir, the prohibition of slavery by that convention, which has contributed to raise, I do not say it has wholly raised, the dispute as to the propriety of the admission of California into the Union under this Constitution. It is not to be denied, Mr. President, nobody thinks of denying, that, whatever reasons were assigned at the commencement of the late war with Mexico, it was prosecuted for the purpose of the acquisition of territory, and under the alleged argument that the cession of territory was the only form in which proper compensation could be made to the United States by Mexico, for the various claims and demands which the people of this country had against that government. At any rate, it will be found that President Polk's message, at the commencement of the session of December 1847 avowed that the war was to be prosecuted until some acquisition of territory should be made. And, as the acquisition was to be south of the line of the United States, in warm climates and countries, it was naturally, I suppose, expected by the South, that whatever acquisitions were made in that region would be added to the slaveholding portion of the United States. Very little of accurate information was possessed of the real physical character, either of California or New Mexico; and events have turned out as was not expected; both California and New Mexico are likely to come in as free; and therefore some degree of disappointment and surprise has resulted. In other words, it is obvious that the question which has so long harassed the country, and at some times very seriously alarmed the minds of wise and good men, has come upon us for a fresh discussion; the question of slavery in these United States.

Now, sir, I propose, perhaps at the expense of some detail and consequent detention of the Senate, to review historically this question, which, partly in consequence of its own importance, and partly, perhaps mostly, in consequence of the manner in which it has been discussed in one and the other portion of the country, has been a source of so much alienation and unkind feeling.

We all know, sir, that slavery has existed in the world from time immemorial. There was slavery, in the earliest periods of history, in the oriental nations. There was slavery among the Jews; the theocratic government of that people ordained no injunction against it. There was slavery among the Greeks; and the ingenious philosophy of the Greeks found, or sought to find, a justification for it exactly upon the grounds which have been assumed for such a justification in this country; that is, a natural and original difference among the races of mankind, and the inferiority of the black or colored race to the white. The Greeks justified their system of slavery upon that idea, precisely. They held the African, and in some parts the Asiatic, tribes to be inferior to the white race; but they did not show, I think, by any close process of logic, that, if this were true, the more intelligent and the stronger had therefore a right to subjugate the weaker.

The more manly philosophy and jurisprudence of the Romans placed the justification of slavery on entirely different grounds.

The Roman jurists, from the first and down to the fall of the empire, admitted that slavery was against the natural law, by which, as they maintained, all men of whatsoever clime, color, or capacity were equal; but they justified slavery, first, upon the ground and authority of the law of nations, arguing, and arguing truly, that at that day the conventional law of nations admitted that captives in war, whose lives, according to the notions of the times, were at the absolute disposal of the captors, might, in exchange for exemption from death, be made slaves for life, and that such servitude might descend to their posterity. The jurists of Rome also maintained that by the civil law there might be servitude or slavery, personal and hereditary; first, by the voluntary act of an individual who might sell himself into slavery; secondly, by his being received into a state of slavery by his creditors in satisfaction of his debts; and, thirdly, by being placed in a state of servitude or slavery for crime. At the introduction of Christianity, the Roman world was full of slaves, and I suppose there is to be found no injunction against that relation between man and man, in the teachings of the Gospel of Jesus Christ, or of any of his apostles. The object of the instruction imparted to mankind by the founder of Christianity was to touch the heart, purify the soul, and improve the lives of individual men. That object went directly to the first fountain of all political and all social relations of the human race, as well as of all true religious feeling, the individual heart and mind of man.

Now, sir, upon the general nature, and character, and influence of slavery, there exists a wide difference between the northern portion of this country and the southern. It is said on the one side that, if not the subject of any injunction or direct prohibition in the New Testament, slavery is a wrong; that it is founded merely in the right of the strongest; and that it is an oppression, like unjust wars, like all those conflicts by which a mighty nation subjects a weaker nation to its will; and that slavery, in its nature, whatever may be said of it in the modifications which have taken place, is not in fact according to the meek spirit of the Gospel. It is not "kindly affectioned"; it does not "seek another's, and not its own"; it does not "let the oppressed go free." These are sentiments that are cherished, and recently with greatly augmented force, among the people of the Northern States. They have taken hold of the religious sentiment of that part of the country, as they have more or less taken hold of the religious feelings of a considerable portion of mankind. The South, upon the other side, having been accustomed to this relation between the two races all their lives, from their birth; having been taught, in general, to treat the subjects of this bondage with care and kindness, and I believe, in general, feeling for them great care and kindness, have not taken the view of the subject which I have mentioned. There are thousands of religious men, with consciences as tender as any of their brethren at the North, who do not see the unlawfulness of slavery; and there are more thousands, perhaps, that, whatsoever they may think of it in its origin, and as a matter depending upon natural right, yet take things as they are, and, finding slavery to be an established relation of the society in which they live, can see no way in which, let their opinions on the abstract question be what they may, it is in the power of the

present generation to relieve themselves from this relation. And, in this respect, candor obliges me to say, that I believe they are just as conscientious, many of them, and the religious people, all of them, as they are in the North who hold different opinions.

Why, sir, the honorable Senator from South Carolina, the other day, alluded to the separation of that great religious community, the Methodist Episcopal Church. That separation was brought about by differences of opinion upon this particular subject of slavery. I felt great concern, as that dispute went on, about the result; and I was in hopes that the difference of opinion might be adjusted, because I looked upon that religious denomination as one of the great props of religion and morals, throughout the whole country, from Maine to Georgia, and westward, to our utmost western boundary. The result was against my wishes and against my hopes. I have read all their proceedings, and all their arguments; but I have never yet been able to come to the conclusion that there was any real ground for that separation; in other words, that any good could be produced by that separation. I must say I think there was some want of candor and charity. Sir, when a question of this kind seizes on the religious sentiments of mankind, and comes to be discussed in religious assemblies of the clergy and laity, there is always to be expected, or always to be feared, a great degree of excitement. It is in the nature of man, manifested by his whole history, that religious disputes are apt to become warm, as men's strength of conviction is proportionate to their views of the magnitude of the questions. In all such disputes, there will sometimes men be found with whom everything is absolute, absolutely wrong, or absolutely right. They see the right clearly; they think others ought so to see it, and they are disposed to establish a broad line of distinction between what is right, and what is wrong. And they are not seldom willing to establish that line upon their own convictions of truth and justice; and are ready to mark and guard it, by placing along it a series of dogmas, as lines of boundary on the earth's surface are marked by posts and stones. There are men who, with clear perceptions, as they think, of their own duty, do not see how too hot a pursuit of one duty may involve them in the violation of others, or how too warm an embracement of one truth may lead to a disregard of other truths equally important. As I heard it stated strongly, not many days ago, these persons are disposed to mount upon some particular duty as upon a war horse, and to drive, furiously on and upon, and over, all other duties that may stand in the way. There are men who, in times of that sort, and in disputes of that sort, are of opinion that human duties may be ascertained with the exactness of mathematics. They deal with morals as with mathematics; and they think what is right may be distinguished from what is wrong, with the precision of an algebraic equation. They have, therefore, none too much charity toward others who differ from them. They are apt, too, to think that nothing is good but what is perfect, and that there are no compromises or modifications to be made in submission to difference of opinion, or in deference to other men's judgment. If their perspicacious vision enables them to detect a spot on the face of the sun, they think that a good reason why the sun should be struck down from heaven. They prefer the chance of running into utter darkness, to living in heavenly light, if that heavenly light be not absolutely without any imperfection. There are impatient men, too impatient always to give heed to the admonition of St. Paul, "that we are not to do evil that good may come;" too impatient to wait for the slow progress of moral causes in the improvement of mankind. They do not remember that the doctrines and the miracles of Jesus Christ have, in 1,800 years, converted only a small portion of the human race; and among the nations that are converted to Christianity, they forget how many vices and crimes, public and private, still prevail, and that many of them, public crimes especially, which are so clearly offenses against the Christian religion, pass without exciting particular indignation. Thus wars are waged, and unjust wars. I do not deny that there may be just wars. There certainly are; but it was the remark of an eminent person, not many years ago, on the other side of the Atlantic, that it was one of the greatest reproaches to human nature, that wars were sometimes just. The defense of nations sometimes causes a just war against the injustice of other nations.

Now, sir, in this state of sentiment upon the general nature of slavery lies the cause of a great part of those unhappy divisions, exasperations, and reproaches, which find vent and support in different parts of the Union. Slavery does exist in the United States. It did exist in the States before the adoption of this Constitution, and at that time.

And now let us consider, sir, for a moment, what was the state of sentiment, North and South, in regard to slavery, at the time this Constitution was adopted. A remarkable change has taken place since; but what did the wise and great men of all parts of the country think of slavery, then? In what estimation did they hold it at the time when this Constitution was adopted? Now, it will be found, sir, if we will carry ourselves by historical research back to that day, and ascertain men's opinions by authentic records still existing among us, that there was no great diversity of opinion between the North and the South, upon the subject of slavery. And it will be found that both parts of the country held it equally an evil, a moral and political evil. It will not be found that, either at the North or at the South, there was much, though there was some, invective against slavery as inhuman and cruel. The great ground of objection to it was political; that it weakened the social fabric; that, taking the place of free labor, society became less strong and labor was less productive; and, therefore, we find from all the eminent men of the time the clearest expression of their opinion that slavery was an evil. And they ascribed its existence here, not without truth, and not without some acerbity of temper and force of language, to the injurious policy of the mother country, who, to favor the navigator, had entailed these evils upon the colonies. I need hardly refer, sir, particularly to the publications of the day. They are matters of history on the record. The eminent men, the most eminent men, and nearly all the conspicuous politicians of the South, held the same sentiments; that slavery was an evil, a blight, a blast, a mildew, a scourge, and a curse. There are no terms of reprobation of slavery so vehement in the North of that day as in the South. The North was not so much excited against it as the South; and the reason is, I suppose, because there was much less of it at the North, and the people did not see, or think they saw, the evils so prominently as they were seen, or thought to be seen, at the South.

Then, sir, when this Constitution was framed, this was the light in which the Convention viewed it: The Convention reflected the judgment and sentiments of the great men of the South. A Member of the other House, whom I have not the honor to know, in a recent speech, has collected extracts from these public documents. They prove the truth of what I am saying, and the question then was how to deal with it, and how to deal with it as an evil. Well, they came to this general result: They thought that slavery could not be continued in the country if the importation of slaves were made to cease, and therefore they provided that after a certain period the importation might be prevented by the act of the new Government. Twenty years was proposed by some gentleman, a northern gentleman, I think, and many of the southern gentlemen opposed it as being too long. Mr. Madison especially was melting warm against it. He said it would bring too much of this mischief into the country to allow the importation of slaves for such a period. Because we must take along with us, in the whole of this discussion, when we are considering the sentiments and opinions in which the constitutional provision originated, that the conviction of all men was that if the importation of slaves ceased the white race would multiply faster than the black race, and that slavery would therefore gradually wear out and expire. It may not be improper here to allude to that, I had almost said, celebrated opinion of Mr. Madison. You observe, sir, that the term "slave," or "slavery," is not used in the Constitution. The Constitution does not require that "fugitive slaves" shall be delivered up. It requires that "persons bound to service in one State and escaping into another shall be delivered up." Mr. Madison opposed the introduction of the term "slave," or "slavery," into the Constitution, for he said that he did not wish to see it recognized by the Constitution of the United States of America that there could be property in men. Now, sir, all this took place at the Convention in 1787; but connected with this, concurrent and cotemporaneous, is another important transaction not sufficiently attended to. The Convention for framing this Constitution assembled in Philadelphia in May and sat until September 1787. During all that time the Congress of the United States was in session at New York. It was a matter of design, as we know, that the Convention should not assemble in the same city where Congress was holding its sessions. Almost all the public men of the country, therefore, of distinction and eminence were in one or the other of these two assemblies, and I think it happened, in some instances, that the same gentlemen were members of both. If I mistake not, such was the case of Mr. Rufus King, then a Member of Congress from Massachusetts and at the same time a member of the Convention to frame the Constitution. Now, it was in the summer of 1787, the very time when the Convention in Philadelphia was framing this Constitution, that the Congress in New York was framing the ordinance of 1787. They passed that ordinance on the 13th of July 1787 at New York, the very month, perhaps the very day, on which these questions about the importation of slaves and the character of slavery were debated in the Convention at Philadelphia. And, so far as we can now learn, there was a perfect concurrence of opinion between these respective bodies, and it resulted in this ordinance of 1787, excluding slavery as to all the territory over which the Congress of the United States had jurisdiction, and that was all the territory northwest of the Ohio. Three years before Virginia and other States had made a cession of that great territory to the United States, and a most magnificent act it was. I never reflect upon it without a disposition to do honor and justice, and justice would be the highest honor, to Virginia for the cession of her northwestern territory. I will say, sir, it is one of her fairest claims to the respect and gratitude of the United States, and that, perhaps, it is only second to that other claim which attaches to her—that from her counsels and from the intelligence and patriotism of her leading statesmen proceeded the first idea put into practice of the formation of a general Constitution of the United States. Now, sir, the ordinance of 1787 was applied thus

to the whole territory over which the Congress of the United States had jurisdiction. It was adopted 2 years before the Constitution of the United States went into operation, because the ordinance took effect immediately on its passage, while the Constitution of the United States, having been framed, was to be sent to the States to be adopted by their conventions, and then a government was to be organized under it. This ordinance, then, was in operation and force when the Constitution was adopted and the Government put in motion, in April 1789.

Mr. President, three things are quite clear as historical truths. One is, that there was an expectation that, on the ceasing of the importation of slaves from Africa slavery would begin to run out here. That was hoped and expected. Another is, that, as far as there was any power in Congress to prevent the spread of slavery in the United States, that power was executed in the most absolute manner, and to the fullest extent. An honorable Member, whose health does not allow him to be here today——

A SENATOR. He is here. (Referring to Mr. Calhoun.)

Mr. WEBSTER. I am very happy to hear that he is; may he long be here, and in the enjoyment of health to serve his country! The honorable Member said, the other day, that he considered this ordinance as the first, in the series of measures, calculated to enfeeble the South, and deprive them of their just participation in the benefits and privileges of this Government. He says very properly that it was enacted under the old confederation and before this Constitution went into effect; but my present purpose is only to say, Mr. President, that it was established with the entire and unanimous concurrence of the whole South. Why, there it stands! The vote of every State in the Union was unanimous in favor of the ordinance, with the exception of a single individual vote, and that individual vote was given by a northern man. But, sir, the ordinance abolishing, or rather prohibiting slavery northwest of the Ohio, has the hand and seal of every southern Member in Congress. So this ordinance was no aggression of the North on the South.

The other and third clear historical truth is, that the Convention meant to leave slavery in the States, as they found it, entirely under the authority and control of the States themselves.

This was the state of things, sir, and this the state of opinion, under which those very important matters were arranged, and those three important things done; that is, the establishment of the Constitution with a recognition of slavery as it existed in the States; the establishment of the ordinance prohibiting to the full extent of all territory owned by the United States, the introduction of slavery into that territory, while leaving to the States all power over slavery in their own limits; and creating a power, in the new government, to put an end to the importation of slaves, after a limited period. And here, sir, we may pause. We may reflect for a moment upon the entire coincidence and concurrence of sentiment, between the North and the South, upon all these questions, at the period of the adoption of the Constitution. But opinions, sir, have changed, greatly changed, changed North, and changed South. Slavery is not regarded in the South now as it was then. I see an honorable Member of this body paying me the honor of listening to my remarks (Mr. Mason); he brings to me, sir, freshly and vividly, what I have learned of his great ancestor, so much distinguished in his day and generation, so worthy to be succeeded by so worthy a grandson, with all the sentiments he expressed in the Convention in Philadelphia.

Here we may pause. There was, if not an entire unanimity, a general concurrence of sentiment, running through the whole community, and especially entertained by the eminent men of all parts of the country. But soon a change began, at the North and the South, and a severance of opinion showed itself; the North growing much more warm and strong against slavery, and the South growing much more warm and strong in its support. Sir, there is no generation of mankind whose opinions are not subject to be influenced by what appears to them to be their present, emergent, and exigent interests. I impute to the South no particularly selfish view in the change which has come over her. I impute to her certainly no dishonest view. All that has happened has been natural. It has followed those causes which always influence the human mind and operate upon it. What, then, have been the causes which have created so new a feeling in favor of slavery in the South, which have changed the whole nomenclature of the South on that subject, so that, from being thought and described in the terms I have mentioned and will not repeat, it has now become an institution, a cherished institution in that quarter; no evil, no scourge, but a great religious, social, and moral blessing, as I think I have heard it latterly spoken of? I suppose this, sir, is owing to the sudden uprising and rapid growth of the cotton plantations of the South. So far as any motive consistent with honor, justice, and general judgment could act, it was the cotton interest that gave a new desire to promote slavery, to spread it, and to use its labor. I again say that that was produced by causes which we must always expect to produce like effects; the whole interest of the South became connected, more or less, with it. If we look back to the history of the commerce of this country at the early years of this Government, what were our exports? Cotton was hardly, or but to a very limited extent, known. The tables will show that the exports of cotton for the years 1790–91 were not more than $40,000 or $50,000 a year. It has gone on increasing rapidly, until the whole crop may now, perhaps, in a season of great product and high prices, amount to a hundred millions of dollars. In the years I have mentioned, there was more of wax, more of indigo, more of rice, more of almost every article of export from the South, than of cotton. I think it is true when Mr. Jay negotiated the treaty of 1794 with England, that he did not know that cotton was exported at all from the United States; and I have heard it said, also, that the customhouse in London refused to admit cotton, upon an allegation that it could not be an American production, there being, as they supposed, no cotton raised in America. They would hardly think so now.

Well, sir, we know what followed. The age of cotton become the golden age of our southern brethren. It gratified their desire for improvement and accumulation at the same time that it excited it. The desire grew by what it fed upon and there soon came to be an eagerness for other territory—a new area or new areas—for the cultivation of the cotton crop, and measures leading to this result were brought about rapidly, one after another, under the lead of southern men at the head of the Government, they having a majority in both branches to accomplish their ends. The honorable Member from South Carolina observed that there has been a majority all along in favor of the North. If that be true, sir, the North has acted either very liberally and kindly or very weakly, for they never exercised that majority efficiently five times in the history of the Government when a division or trial of strength arose—never. Whether they were outgeneraled or whether it was owing to other causes, I shall not stop to consider, but no man acquainted with the history of the country can deny that the general lead in the politics of the country for three-fourths of the period that has elapsed since the adoption of the Constitution has been a southern lead. In 1802, in pursuit of the idea of opening a new cotton region, the United States obtained a cession from Georgia of the whole of her western territory, now embracing the rich and growing State of Alabama. In 1803 Louisiana was purchased from France, out of which the States of Louisiana, Arkansas, and Missouri have been framed as slaveholding States. In 1819 the cession of Florida was made, bringing in another region of slaveholding property and territory. Sir, the honorable Member from South Carolina thought he saw in certain operations of the Government, such as the manner of collecting the revenue, and the tendency of measures calculated to promote emigration into the country, what accounts for the more rapid growth of the North than the South. He ascribes that more rapid growth not to the operation of time but to system of government and administration established under this Constitution.

That is matter of opinion. To a certain extent it may be true; but it does seem to me that if any operation of the Government could be shown in any degree to have promoted the population, and growth, and wealth of the North, it is much more sure that there are sundry important and distinct operations of the Government, about which no man can doubt, tending to promote, and which absolutely have promoted, the increase of the slave interest and the slave territory of the South. Allow me to say that it was not time that brought in Louisiana; it was the act of men. It was not time that brought in Florida; it was the act of men. And lastly, sir, to complete those acts of men which have contributed so much to enlarge the area and the sphere of the institution of slavery, Texas, great and vast and illimitable Texas, was added to the Union as a slave State in 1845; and that, sir, pretty much closed the whole chapter, and settled the whole account. That closed the whole chapter, that settled the whole account, because the annexation of Texas, upon the conditions and under the guaranties upon which she was admitted, did not leave within the control of this Government an acre of land, capable of being cultivated by slave labor, between this Capitol and the Rio Grande or the Nueces, or whatever is the proper boundary of Texas, not an acre. From that moment, the whole country, from this place to the western boundary of Texas, was fixed, pledged, fastened, decided, to be slave territory forever, by the solemn guaranties of law. And I now say, sir, as the proposition upon which I stand this day, and upon the truth and firmness of which I intend to act until it is overthrown, that there is not at this moment within the United States, or any Territory of the United States, a single foot of land, the character of which, in regard to its being free-soil territory or slave territory, is not fixed by some law, and some irrepealable law, beyond the power of the action of the Government. Now, is it not so with respect to Texas? Why it is most manifestly so. The honorable Member from South Carolina, at the time of the admission of Texas, held an important post in the executive department of the Government; he was Secretary of State. Another eminent person of great activity and adroitness in affairs, I mean the late Secretary of the Treasury, Mr. Walker, was a conspicuous member of this body, and took the lead in the business of annexation, in cooperation with the Secretary of State; and I must say that they did their business faithfully and thoroughly; there was no botch left in it. They rounded it off, and made as close joiner work as ever was exhibited. Resolutions of annexation were brought into Congress, fitly joined together, compact, firm, efficient, conclusive upon the great object which they had in view, and those resolutions passed.

Allow me to read a part of these resolutions. It is the third clause of the second section of the resolution of the 1st March

1845, for the admission of Texas, which applies to this part of the case. That clause reads in these words:

"New States, of convenient size, not exceeding four in number, in addition to said State of Texas, and having sufficient population, may hereafter, by the consent of said State, be formed out of the territory thereof, which shall be entitled to admission under the provisions of the Federal Constitution. And such States as may be formed out of that portion of said territory lying south of 36°30' north latitude, commonly known as the Missouri Compromise line, shall be admitted into the Union with or without slavery, as the people of each State asking admission may desire; and in such State or States as shall be formed out of said territory north of said Missouri Compromise line, slavery or involuntary servitude (except for crime) shall be prohibited."

Now what is here stipulated, enacted, secured? It is, that all Texas south of 36°30', which is nearly the whole of it, shall be admitted into the Union as a slave State. It was a slave State, and therefore came in as a slave State; and the guaranty is, that new States shall be made out of it, and that such States as are formed out of that portion of Texas lying south of 36°30' may come in as slave States to the number of four, in addition to the State then in existence, and admitted at that time by these resolutions. I know no form of legislation which can strengthen this. I know no mode of recognition that can add a tittle of weight to it. I listened respectfully to the resolutions of my honorable friend from Tennessee, Mr. Bell. He proposed to recognize that stipulation with Texas. But any additional recognition would weaken the force of it; because it stands here on the ground of a contract, a thing done for a consideration. It is a law founded on a contract with Texas, and designed to carry that contract into effect. A recognition now, founded not on any consideration or any contract, would not be so strong as it now stands on the face of the resolution. Now I know no way, I candidly confess, in which this Government, acting in good faith, as I trust it always will, can relieve itself from that stipulation and pledge, by any honest course of legislation whatever. And, therefore, I say again that, so far as Texas is concerned, in the whole of Texas south of 36°30', which, I suppose, embraces all the territory capable of slave cultivation, there is no land, not an acre, the character of which is not established by law, a law which cannot be repealed without the violation of a contract, and plain disregard of the public faith.

I hope, sir, it is now apparent that my proposition, so far as it respects Texas, has been maintained; and that the provision in this article is clear and absolute—and it has been well suggested by my friend from Rhode Island that that part of Texas which lies north of 34° of north latitude and which may be formed into free States, is dependent, in like manner, upon the consent of Texas, herself a slave State.

Well, now, sir, how came this? How came it to pass, that within these walls, where it is said by the honorable Member from South Carolina that the free States have always had a majority, this resolution of annexation, such as I have described it, found a majority in both Houses of Congress? Why, sir, it found that majority by the great number of northern votes added to the entire southern vote, or at least nearly the whole of the southern votes. The aggregate was made up of northern and southern votes. In the House of Representatives it stood, I think, about 80 southern votes for the admission of Texas, and about 50 northern votes for the admission of Texas. In the Senate, the vote stood for the admission of Texas 27, and 25 against it; and of those 27 votes, constituting a majority for the admission of Texas in this body, no less than 13 came from the free States, and 4 of them were from New England. The whole of these 13 Senators, constituting, within a fraction, you see, one-half of all the votes in this body for the admission of Texas, with its immeasurable extent of slave territory, were sent here by free States.

Sir, there is not so remarkable a chapter in our history of political events, political parties, and political men, as is afforded by this measure for the admission of Texas, with this immense territory, that a bird cannot fly over in a week. [Laughter.] Sir, New England, with some of her own votes, supported this measure. Three-fourths of the votes of liberty-loving Connecticut were given for it, in the other House; and one-half here. There was one vote for it in Maine, but I am happy to say not the vote of the honorable member who addressed the Senate the day before yesterday [Mr. HAMLIN], and who was then a Representative from Maine in the House of Representatives: but there was a vote or two from Maine, aye, and there was one vote for it from Massachusetts, given by a gentleman then representing, and now living in, the district in which the prevalence to some extent of free-soil sentiment for a couple of years or so has defeated the choice of any member to represent it in Congress. Sir, that body of northern and eastern men, who gave those votes at that time, are now seen taking upon themselves, in the nomenclature of politics, the appellation of the northern Democracy. They undertook to wield the destinies of this empire, if I may call a republic an empire, and their policy was, and they persisted in it, to bring into this country, and under this Government, all the territory they could. They did it under pledges, absolute pledges to the slave interest in the case of Texas, and afterward they lent their aid in bringing in these new conquests to take their chance for slavery or freedom. My honorable friend from Georgia, in March 1847, moved the Senate to declare that the war ought not to be prosecuted for acquisition, for conquest, for the dismemberment of Mexico. The same northern Democracy entirely voted against it. He did not get a vote from them. It suited the views, the patriotism, the elevated sentiments of the northern Democracy to bring in a world here, among the mountains and valleys of California and New Mexico, or any other part of Mexico, and then quarrel about it; to bring it in, and then endeavor to put upon it the saving grace of the Wilmot Proviso. There were two eminent and highly respectable gentlemen from the North and East, then leading gentlemen in the Senate—I refer, and I do so with entire respect, for I entertain for both of those gentlemen, in general, high regard, to Mr. Dix, of New York, and Mr. Niles, of Connecticut—who both voted for the admission of Texas. They would not have that vote any other way than as it stood; and they would have it as it did stand. I speak of the vote upon the annexation of Texas. Those two gentlemen would have the resolution of annexation just as it is, and they voted for it just as it is, and their eyes were all open to its true character. The honorable Member who addressed us the other day from South Carolina, was then Secretary of State. His correspondence with Mr. Murphy, the Chargé d'Affaires of the United States in Texas, had been published. That correspondence was all before those gentlemen, and the Secretary had the boldness and candor to avow in that correspondence that the great object sought by the annexation of Texas was to strengthen the slave interest of the South. Why, sir, he said so, in so many words——

Mr. CALHOUN. Will the honorable Senator permit me to interrupt him for a moment?

Mr. WEBSTER. Certainly.

Mr. CALHOUN. I am very reluctant to interrupt the honorable gentleman; but, upon a point of so much importance, I deem it right to put myself in rectus in curia. I did not put it upon the ground assumed by the Senator. I put it upon this ground: that Great Britain had announced to this country, in so many words, that her object was to abolish slavery in Texas, and through Texas to accomplish the abolishment of slavery in the United States and the world. The ground I put it on was, that it would make an exposed frontier, and, if Great Britain succeeded in her object, it would be impossible that the frontier could be secured against the aggressions of the abolitionists; and that this Government was bound, under the guaranties of the Constitution, to protect us against such a state of things.

Mr. WEBSTER. That comes, I suppose, sir, to exactly the same thing. It was, that Texas must be obtained for the security of the slave interest of the South.

Mr. CALHOUN. Another view is very distinctly given.

Mr. WEBSTER. That was the object set forth in the correspondence of a worthy gentleman not now living, who preceded the honorable Member from South Carolina in the Department of State. There repose on the files of the Department of State, as I have occasion to know, strong letters from Mr. Upshur to the United States minister in England, and I believe there are some to the same minister from the honorable Senator himself, asserting to this effect the sentiments of this Government, viz: that Great Britain was expected not to interfere to take Texas out of the hands of its then existing government, and make it a free country. But my argument, my suggestion is this; that those gentlemen who composed the northern democracy when Texas was brought into the Union, saw, with all their eyes, that it was brought in as a slave country, and brought in for the purpose of being maintained as slave territory to the Greek Kalends. I rather think the honorable gentleman who was then Secretary of State might, in some of his correspondence with Mr. Murphy, have suggested that it was not expedient to say too much about this object, lest it should create some alarm. At any rate, Mr. Murphy wrote to him, that England was anxious to get rid of the constitution of Texas, because it was a constitution establishing slavery; and that what the United States had to do, was to aid the people of Texas in upholding their constitution; but that nothing should be said, which should offend the fanatical men of the North. But, sir, the honorable member did avow this object himself, openly, boldly, and manfully; he did not disguise his conduct, or his motives.

Mr. CALHOUN. Never, never.

Mr. WEBSTER. What he means he is very apt to say.

Mr. CALHOUN. Always, always.

Mr. WEBSTER. And I honor him for it. This admission of Texas was in 1845. Then, in 1847, flagrante bello between the United States and Mexico, the proposition I have mentioned was brought forward by my friend from Georgia, and the northern democracy voted straight ahead against it. Their remedy was to apply to the acquisitions, after they should come in, the Wilmot proviso. What follows? These two gentlemen, worthy and honorable and influential men, and if they had not been they could not have carried the measure, these two gentlemen, Members of this body, brought in Texas, and by their votes they also prevented the passage of the resolution of the honorable Member from Georgia, and then they went home and took the lead in the Free Soil Party. And there they stand, sir. They leave us here, bound in honor and conscience by the resolutions of annexation; they leave us here, to take the odium of fulfilling the obligations in favor of slavery,

which they voted us into, or else the greater odium of violating those obligations, while they are at home making capital and rousing speeches for free soil and no slavery. [Laughter.] And, therefore, I say, sir, that there is not a chapter in our history, respecting public measures and public men, more full of what should create surprise, more full of what does create, in my mind, extreme mortification, than that of the conduct of this northern democracy.

Mr. President, sometimes, when a man is found in a new relation to things around him and to other men, he says the world has changed, and that he has not changed, I believe, sir, that our self-respect leads us often to make this declaration in regard to ourselves, when it is not exactly true. An individual is more apt to change, perhaps, than all the world around him. But, under the present circumstances, and under the responsibility which I know I incur by what I am now stating here, I feel at liberty to recur to the various expressions and statements, made at various times, of my own opinions and resolutions respecting the admission of Texas, and all that has followed. Sir, as early as 1836, or in the early part of 1837, there was conversation and correspondence between myself and some private friends, on this project of annexing Texas to the United States; and an honorable gentleman with whom I have had a long acquaintance, a friend of mine, now perhaps in this Chamber, I mean General Hamilton, of South Carolina, was knowing to that correspondence. I had voted for the recognition of Texan independence, because I believed it was an existing fact, surprising and astonishing as it was, and I wished well to the new Republic: but I manifested from the first utter opposition to bringing her, with her slave territory, into the Union. I happened, in 1837, to meet friends in New York, on some political occasion, and I then stated my sentiments upon the subject. It was the first time that I had occasion to advert to it; and I will ask a friend near me to do me the favor to read an extract from the speech, for the Senate may find it rather tedious to listen to the whole of it. It was delivered in Niblo's Garden, in 1837.

(Mr. Greene then read the following extract from the speech of Mr. Webster, to which he referred:)

"Gentlemen, we all see that, by whomsoever possessed, Texas is likely to be a slaveholding country; and I frankly avow my entire unwillingness to do anything which shall extend the slavery of the African race on this continent, or add other slaveholding States to the Union.

"When I say that I regard slavery in itself as a great moral, social, and political evil, I only use language which has been adopted by distinguished men, themselves citizens of slaveholding States.

"I shall do nothing therefore, to favor or encourage its further extension. We have slavery already among us. The Constitution found it among us; it recognized it, and gave it solemn guaranties.

"To the full extent of these guaranties, we are all bound in honor, in justice, and by the Constitution. All the stipulations contained in the Constitution in favor of the slaveholding States, which are already in the Union, ought to be fulfilled, and, so far as depends on me, shall be fulfilled in the fullness of their spirit, and to the exactness of their letter. Slavery, as it exists in the States, is beyond the reach of Congress. It is a concern of the States themselves. They have never submitted it to Congress, and Congress has no rightful power over it.

"I shall concur, therefore, in no act, no measure, no menace, no indication of purpose, which shall interfere or threaten to interfere with the exclusive authority of the several States over the subject of slavery, as it exists within their respective limits. All this appears to me to be matter of plain and imperative duty.

"But when we come to speak of admitting new States, the subject assumes an entirely different aspect. Our rights and our duties are then both different. * * *

"I see, therefore, no political necessity for the annexation of Texas to the Union—no advantage to be derived from it; and objections to it of a strong, and, in my judgment, of a decisive character."

Mr. WEBSTER. I have nothing, sir, to add to, nor to take from, those sentiments. That speech, the Senate will perceive, was in 1837. The purpose of immediately annexing Texas at that time was abandoned or postponed; and it was not revived with any vigor for some years. In the meantime it had so happened that I had become a member of the Executive Administration, and was for a short period in the Department of State. The annexation of Texas was a subject of conversation, not confidential, with the President and heads of departments, as well as with other public men. No serious attempt was then made, however, to bring it about. I left the Department of State in May 1843, and shortly after I learned, though by means which were no way connected with official information, that a design had been taken up of bringing Texas, with her slave territory and population, into this Union. I was in Washington at the time, and persons are now here who will remember that we had an arranged meeting for conversation upon it. I went home to Massachusetts and proclaimed the existence of that purpose, but I could get no audience, and but little attention. Some did not believe it, and some were too much engaged in their own pursuits to give it any heed. They had gone to their farms, or to their merchandise, and it was impossible to arouse any sentiments in New England or in Massachusetts, that should combine the two great political parties aganist this annexation; and indeed there was no hope of bringing the northern democracy into that view, for their leaning was all the other way. But, sir, even with Whigs, and leading Whigs, I am ashamed to say, there was a great indifference towards the admission of Texas, with slave territory into this Union. The project went on. I was then out of Congress. The annexation resolutions passed the 1st of March 1845; the Legislature of Texas complied with the conditions and accepted the guaranties; for the phraseology of the language of the resolution is, that Texas is to come in "upon the conditions and under the guaranties herein prescribed." I happened to be returned to the Senate in March 1845, and was here in December 1845, when the acceptance by Texas of the conditions proposed by Congress was communicated to us by the President, and an act for the consummation of the connection was laid before the two Houses. The connection was then not completed. A final law doing the deed of annexation, ultimately, had not been passed; and when it was put upon its final passage here, I expressed my opposition to it, and recorded my vote in the negative; and there that vote stands, with the observations that I made upon that occasion. It has happened that between 1837 and this time, on various occasions and opportunities, I have expressed my entire opposition to the admission of slave States, or the acquisition of new slave territories, to be added to the United States. I know, sir, no change in my own sentiments, or my own purposes, in that respect. I will now again ask my friend from Rhode Island to read another extract from a speech of mine made at a Whig Convention in Springfield, Mass., in the month of September 1847.

Mr. Greene here read the following extract:

"We hear much just now of a panacea for the dangers and evils of slavery and slave annexation, which they call the 'Wilmot proviso.' That certainly is a just sentiment, but it is not a sentiment to found any new party upon. It is not a sentiment on which Massachusetts Whigs differ. There is not a man in this hall who holds to it more firmly than I do, nor one who adheres to it more than another.

"I feel some little interest in this matter, sir. Did not I commit myself in 1837 to the whole doctrine, fully, entirely? And I must be permitted to say that I cannot quite consent that more recent discoverers should claim the merit and take out a patent.

"I deny the priority of their invention. Allow me to say, sir, it is not their thunder. * * *

"We are to use the first and last and every occasion which offers to oppose the extension of slave power.

"But I speak of it here, as in Congress, as a political question, a question for statesmen to act upon. We must so regard it. I certainly do not mean to say that it is less important in a moral point of view, that it is not more important in many other points of view; but, as a legislator, or in any official capacity, I must look at it, consider it, and decide it as a matter of political action."

Mr. WEBSTER. On other occasions, in debates here, I have expressed my determination to vote for no acquisition, or cession, or annexation, North or South, East or West. My opinion has been, that we have territory enough, and that we should follow the Spartan maxim, "Improve, adorn what you have, seek no further." I think that it was in some observations that I made on the three-million loan bill, that I avowed that sentiment. In short, sir, the sentiment has been avowed quite as often, in as many places, and before as many assemblies, as any humble sentiments of mine ought to be avowed.

But now, that, under certain conditions, Texas is in, with all her territory, as a slave State, with a solemn pledge, also, that if she shall be divided into many States, those States may come in as slave States south of 36° 30', how are we to deal with this subject? I know no way of honest legislation, when the proper time comes for the enactment, but to carry into effect all that we have stipulated to do. I do not entirely agree with my honorable friend from Tennessee [Mr. Bell], that, as soon as the time comes when she is entitled to another Representative, we should create a new State. The rule in regard to it I take to be this: that, when we have created new States out of Territories, we have generally gone upon the idea that when there is population enough to form a State, 60,000 or some such thing, we would create a State; but it is quite a different thing when a State is divided, and two or more States made out of it. It does not follow, in such a case, that the same rule of apportionment should be applied. That, however, is a matter for the consideration of Congress, when the proper time arrives. I may not then be here. I may have no vote to give on the occasion, but I wish it to be distinctly understood, today, that, according to my view of the matter, this Government is solemnly pledged, by law and contract, to create new States out of Texas, with her consent, when her population shall justify and call for such a proceeding, and so far as such States are formed out of Texan territory lying south of 36° 30', to let them come in as slave States. That is the meaning of the resolution which our friends, the northern democracy, have left us to fulfill; and I, for one, mean to fulfill it, because I will not violate the faith of the Government. What I mean to say is, that the time for the admission of new States formed out of Texas, the number of such States, their boundaries, and the requisite amounts of population, and other things connected with the admission, are in the free discretion of Congress, except this.

to wit, that when new States, formed out of Texas, are to be admitted, they have a right, by legal stipulation and contract, to come in as slave States.

Now, as to California and New Mexico, I hold slavery to be excluded from those Territories by a law, even superior to that which admits and sanctions it in Texas. I mean the law of nature, of physical geography, the law of the formation of the earth. That law settles forever, with a strength beyond all terms of human enactment, that slavery cannot exist in California or New Mexico. Understand me, sir; I mean slavery as we regard it; slaves in gross, of the colored race, transferable by sale and delivery, like other property. I shall not discuss the point, but leave it to the learned gentlemen who have undertaken to discuss it; but I suppose there is no slave of that description in California now. I understand that peonism, a sort of penal servitude, exists there, or rather a sort of voluntary sale of a man and his offspring for debt, as it is arranged and exists in some parts of California and some Provinces of Mexico. But what I mean to say is, that African slavery, as we see it among us, is as utterly impossible to find itself, or to be found in California and New Mexico, as any other natural impossibility. California and New Mexico are Asiatic in their formation and scenery. They are composed of vast ridges of mountains of enormous height, with broken ridges and deep valleys. The sides of these mountains are barren, entirely barren; their tops capped by perennial snow. There may be in California, now made free by its constitution, and no doubt there are, some tracts of valuable land. But it is not so in New Mexico. Pray, what is the evidence which every gentleman must have obtained on this subject, from information sought by himself or communicated by others? I have inquired and read all I could find, in order to acquire information on this important question. What is there in New Mexico that could, by any possibility, induce anybody to go there with slaves? There are some narrow strips of tillable land on the borders of the rivers; but the rivers themselves dry up, before midsummer is gone. All that the people can do in that region is to raise some little articles, some little wheat for their tortillas, and all that by irrigation. And who expects to see a hundred black men cultivating tobacco, corn, cotton, rice, or anything else, on lands in New Mexico, made fertile only by irrigation? I look upon it, therefore, as a fixed fact, to use an expression current at this day, that both California and New Mexico are destined to be free, so far as they are settled at all, which I believe, especially in regard to New Mexico, will be very little for a great length of time; free by the arrangement of things by the power above us. I have therefore to say, in this respect also, that this country is fixed for freedom, to as many persons as shall ever live in it, by as irrepealable and more irrepealable law, than the law that attaches to the right of holding slaves in Texas; and I will say further that if a resolution, or a law, were now before us to provide a Territorial government for New Mexico, I would not vote to put any prohibition into it whatever. The use of such a prohibition would be idle, as it respects any effect it would have upon the Territory; and I would not take pains uselessly to reaffirm an ordinance of nature, nor to reenact the will of God. And I would put in no Wilmot proviso for the mere purpose of a taunt or a reproach. I would put into it no evidence of the votes of superior power, for no purpose but to wound the pride, even whether a just pride, a rational pride, or an irrational pride, to wound the pride of the gentlemen who belong to Southern States. I have no such object, no such purpose. They would think it a taunt, an indignty; they would think it to be an act taking away from them what they regard a proper equality of privilege; and whether they expect to realize any benefit from it or not, they would think it at least a plain theoretic wrong; that something more or less derogatory to their character and their rights had taken place. I propose to inflict no such wound upon anybody, unless something essentially important to the country, and efficient to the preservation of liberty and freedom, is to be effected. Therefore, I repeat, sir, and I repeat it because I wish it to be understood, that I do not propose to address the Senate often on this subject. I desire to pour out all my heart in as plain a manner as possible; and I say, again, therefore, that if a proposition were now here for a government for New Mexico, and it was moved to insert a provision for a prohibition of slavery, I would not vote for it.

Now, Mr. President, I have established, so far as I proposed to go into any line of observation to establish, the proposition with which I set out, and upon which I propose to stand or fall; and that is, that the whole territory of the States in the United States, or in the newly acquired territory of the United States, has a fixed and settled character, now fixed and settled by law, which cannot be repealed; in the case of Texas without a violation of public faith, and by no human power in regard to California or New Mexico; that, therefore, under one or other of these laws, every foot of land in the States or in the Territories has already received a fixed and decided character.

Sir, if we were now making a government for New Mexico, and anybody should propose a Wilmot proviso, I should treat it exactly as Mr. Polk treated that provision for excluding slavery from Oregon. Mr. Polk was known to be in opinion decidedly averse to the Wilmot proviso; but he felt the necessity of establishing a government for the Territory of Oregon, and, though the proviso was in it, he knew it would be entirely nugatory; and, since it must be entirely nugatory, since it took away no right, no describable, no estimable, no weighable, or tangible right of the South, he said he would sign the bill for the sake of enacting a law to form a government in that Territory, and let that entirely useless, and, in that connection entirely senseless, proviso remain. Sir, we hear much of the annexation of Canada; and if there be any man, any of the Northern Democracy, or any one of the Free-Soil Party, who supposes it necessary to insert a Wilmot proviso in a territorial government for New Mexico, that man will of course be of opinion that it is necessary to protect the everlasting snows of Canada from the foot of slavery by the same overspreading wing of an act of Congress. Sir, wherever there is a substantive good to be done; wherever there is a foot of land to be staid back from becoming slave territory; I am ready to assert the principle of the exclusion of slavery. I am pledged to it from the year 1837; I have been pledged to it again and again; and I will perform those pledges; but I will not do a thing unnecessarily that wounds the feelings of others, or that does disgrace to my own understanding.

Mr. President, in the excited times in which we live, there is found to exist a state of crimination and recrimination between the North and South. There are lists of grievances produced by each; and those grievances, real or supposed, alienate the minds of one portion of the country from the other, exasperate the feelings, and subdue the sense of fraternal affection, patriotic love, and mutual regard. I shall bestow a little attention, sir, upon these various grievances produced on the one side, and on the other. I begin with complaints of the South. I will not answer, further than I have, the general statements of the honorable Senator from South Carolina, that the North has grown upon the South in consequence of the manner of administering this Government, in the collecting of its revenues, and so forth. These are disputed topics, and I have no inclination to enter into them. But I will state these complaints, especially one complaint of the South, which has in my opinion just foundation; and that is, that there has been found at the North, among individuals and among legislators, a disinclination to perform, fully, their constitutional duties in regard to the return of persons bound to service who have escaped into the free States. In that respect, it is my judgment that the South is right, and the North is wrong. Every member of every northern legislature is bound by oath, like every other officer in the country, to support the Constitution of the United States; and this article of the Constitution, which says to these States, that they shall deliver up fugitives from service, is as binding in honor and conscience as any other article.

No man fulfills his duty in any legislature who sets himself to find excuses, evasions, escapes from this constitutional obligation. I have always thought that the Constitution addressed itself to the legislatures of the States or to the States themselves. It says that those persons escaping to other States shall be delivered up, and I confess I have always been of the opinion that it was an injunction upon the States themselves. When it is said that a person escaping into another State, and becoming therefore within the jurisdiction of that State, shall be delivered up, it seems to me the import of the passage is, that the State itself, in obedience to the Constitution, shall cause him to be delivered up. That is my judgment. I have always entertained that opinion, and I entertain it now. But when the subject, some years ago, was before the Supreme Court of the United States, the majority of the judges held, that the power to cause fugitives from service to be delivered up was a power to be exercised under the authority of this Government. I do not know, on the whole, that it may not have been a fortunate decision. My habit is to respect the result of judicial deliberations, and the solemnity of judicial decisions. But, as it now stands, the business of seeing that these fugitives are delivered up resides in the power of Congress and the national judicature, and my friend at the head of the Judiciary Committee has a bill on the subject now before the Senate, with some amendments to it, which I propose to support, with all its provisions, to the fullest extent. And I desire to call the attention of all sober-minded men, of all conscientious men, in the North, of all men who are not carried away by any fanatical idea or by any false idea whatever, to their constitutional obligations. I put it to all the sober and sound minds at the North as a question of morals, and a question of conscience. What right have they, in their legislative capacity, or any other capacity, to endeavor to get round this Constitution, to embarrass the free exercise of the rights secured by the Constitution to the persons whose slaves escape from them? None at all; none at all. Neither in the forum of conscience, nor before the face of the Constitution, are they justified, in my opinion. Of course, it is a matter for their consideration. They probably, in the turmoil of the times, have not stopped to consider of this; they have followed what seemed to be the current of thought and of motives as the occasion arose, and they neglected to investigate fully the real question, and to consider their constitutional obligations; as I am sure, if they did consider, they would fulfill them with alacrity. Therefore, I repeat, sir, that here is a ground of complaint against the North well founded, which ought to be removed, which it is now in the power of the different departments of this Government to remove; which calls for the enactment of proper laws authorizing the judicature of this Government, in the several States, to do all that is necessary for the

recapture of fugitive slaves, and for the restoration of them to those who claim them. Wherever I go, and whenever I speak on the subject, and when I speak here I desire to speak to the whole North, I say that the South has been injured in this respect, and has a right to complain; and the North has been too careless of what I think the Constitution peremptorily and emphatically enjoins upon her as a duty.

Complaint has been made against certain resolutions that emanate from legislatures at the North, and are sent here to us, not only on the subject of slavery in this District, but sometimes recommending Congress to consider the means of abolishing slavery in the States. I should be sorry to be called upon to present any resolutions here which could not be referable to any committee, or any power in Congress; and, therefore, I should be unwilling to receive from the Legislature of Massachusetts any instructions to present resolutions expressive of any opinion whatever on the subject of slavery, as it exists at the present moment in the States, for two reasons: Because, first, I do not consider that the Legislature of Massachusetts has anything to do with it; and next, I do not consider that I, as her representative here, have anything to do with it. Sir, it has become, in my opinion, quite too common, and if the legislatures of the States do not like that opinion, they have a great deal more power to put it down than I have to uphold it; it has become, in my opinion, quite too common a practice for the State legislatures to present resolutions here on all subjects, and to instruct us on all subjects. There is no public man that requires instruction more than I do, or who requires information more than I do, or desires it more heartily; but I do not like to have it come in too imperative a shape. I took notice, with pleasure, of some remarks upon this subject made the other day in the Senate of Massachusetts, by a young man of talent and character, of whom the best hopes may be entertained. I mean Mr. Hillard. He told the Senate of Massachusetts that he would vote for no instructions whatever to be forwarded to Members of Congress, nor for any resolutions to be offered expressive of the sense of Massachusetts as to what her Members of Congress ought to do. He said that he saw no propriety in one set of public servants giving instructions and reading lectures to another set of public servants. To their own master all of them must stand or fall, and that master is their constituents. I wish these sentiments could become more common, a great deal more common. I have never entered into the question, and never shall, about the binding force of instructions. I will, however, simply say this: If there be any matter pending in this body, while I am a Member of it, in which Massachusetts has an interest of her own not adverse to the general interests of the country, I shall pursue her instructions with gladness of heart and with all the efficiency which I can bring to the occasion. But if the question be one which affects her interest, and at the same time equally affects the interests of all the other States, I shall no more regard her particular wishes or instructions than I should regard the wishes of a man who might appoint me an arbitrator, or referee, to decide some question of important private right between him and his neighbor, and then instruct me to decide in his favor. If ever there was a government upon earth, it is this Government; if ever there was a body upon earth, it is this body which should consider itself as composed by agreement of all, each Member appointed by some, but organized by the general consent of all, sitting here under the solemn obligations of oath and conscience to do that which they think to be best for the good of the whole.

Then, sir, there are the abolition societies, of which I am unwilling to speak, but in regard to which I have very clear notions and opinions. I do not think them useful. I think their operations for the last 20 years have produced nothing good or valuable. At the same time, I know thousands of their members to be honest and good men; perfectly well-meaning men. They have excited feelings; they think they must do something for the cause of liberty, and in their sphere of action they do not see what else they can do, than to contribute to an abolition press, or an abolition society, or to pay an abolition lecturer. I do not mean to impute gross motives even to the leaders of these societies, but I am not blind to the consequences of their proceedings. I cannot but see what mischiefs their interference with the South has produced. And is it not plain to every man? Let any gentleman who doubts of that, recur to the debates in the Virginia House of Delegates in 1832, and he will see with what freedom a proposition made by Mr. Randolph for the gradual abolition of slavery was discussed in that body. Every one spoke of slavery as he thought; very ignominous and disparaging names and epithets were applied to it. The debates in the House of Delegates on that occasion, I believe, were all published. They were read by every colored man who could read, and to those who could not read, those debates were read by others. At that time Virginia was not unwilling nor afraid to discuss this question, and to let that part of her population know as much of the discussion as they could learn. That was in 1832. As has been said by the honorable Member from South Carolina, these abolition societies commenced their course of action in 1835. It is said, I do not know how true it may be, that they sent incendiary publications into the slave States; at any event, they attempted to arouse and did arouse, a very strong feeling; in other words, they created great agitation in the North against Southern slavery. Well, what was the result? The bonds of the slaves were bound more firmly than before; their rivets were more strongly fastened. Public opinion, which in Virginia had begun to be exhibited against slavery, and was opening out for the discussion of the question, drew back and shut itself up in its castle. I wish to know whether anybody in Virginia can, now, talk as Mr. Randolph, Governor McDowell, and others talked, openly, and sent their remarks to the press, in 1832? We all know the fact, and we all know the cause; and everything that this agitating people have done has been, not to enlarge, but to restrain, not to set free, but to bind faster the slave population of the South. That is my judgment. Sir, as I have said, I know many abolitionists in my own neighborhood, very honest, good people, misled, as I think, by strange enthusiasm; but they wish to do something, and they are called on to contribute, and they do contribute; and it is my firm opinion this day, that within the last 20 years as much money has been collected and paid to the abolition societies, abolition presses, and abolition lecturers, as would purchase the freedom of every slave, man, woman, and child, in the State of Maryland, and send them all to Liberia. I have no doubt of it. But I have yet to learn that the benevolence of these abolition societies has at any time taken that particular turn. [Laughter.]

Again, sir, the violence of the press is complained of. The press violent. Why, sir, the press is violent everywhere. There are outrageous reproaches in the North against the South, and there are reproaches no better in the South against the North. Sir, the extremists of both parts of this country are violent; they mistake loud and violent talk for eloquence and for reason. They think that he who talks loudest reasons best. And this we must expect, when the press is free, as it is here, and I trust always will be; for, with all its licentiousness, and all its evil, the entire and absolute freedom of the press is essential to the preservation of government on the basis of a free constitution. Wherever it exists, there will be foolish paragraphs and violent paragraphs in the press, as there are, I am sorry to say, foolish speeches and violent speeches in both Houses of Congress. In truth, sir, I must say that, in my opinion, the vernacular tongue of the country has become greatly vitiated, depraved, and corrupted by the style of our congressional debates. [Laughter.] And if it were possible for those debates to vitiate the principles of the people, as much as they have depraved their taste, I should cry out "God save the Republic."

Well, in all this I see no solid grievance, no grievance presented by the South, within the redress of the Government, but the single one to which I have referred; and that is, the want of a proper regard to the injunction of the Constitution for the delivery of fugitive slaves.

There are also complaints of the North against the South. I need not go over them particularly. The first and gravest is, that the North adopted the Constitution, recognizing the existence of slavery in the States, and recognizing the right, to a certain extent, of representation of the slaves in Congress, under a state of sentiment and expectation, which do not now exist; and that, by events, by circumstances, by the eagerness of the South to acquire territory and extend her slave population, the North finds itself, in regard to the relative influence of the South and the North, of the free States and the slave States, where it never did expect to find itself when they agreed to the compact of the Constitution. They complain, therefore, that, instead of slavery being regarded as an evil, as it was then, an evil which all hoped would be extinguished gradually, it is now regarded by the South as an institution to be cherished, and preserved, and extended; an institution which the South has already extended to the utmost of her power by the acquisition of new territory.

Well, then, passing from that, everybody in the North reads; and everybody reads whatsoever the newspapers contain; and the newspapers, some of them, especially those presses to which I have alluded, are careful to spread about among the people every reproachful sentiment uttered by any southern man bearing at all against the North; everything that is calculated to exasperate, to alienate; and there are many such things, as everybody will admit, from the South, or some portion of it, which are disseminated among the reading people; and they do exasperate, and alienate, and produce a most mischievous effect upon the public mind at the North. Sir, I would not notice things of this sort appearing in obscure quarters; but one thing has occurred in this debate which struck me very forcibly. An honorable member from Louisiana addressed us the other day on this subject. I suppose there is not a more amiable and worthy gentlemen in this Chamber, or a gentleman who would be more slow to give offense to anybody, and he did not mean in his remarks to give offense. But what did he say? Why, sir, he took pains to run a contrast between the slaves of the South and the laboring people of the North, giving the preference in all points of condition, and comfort, and happiness, to the slaves of the South. The honorable Member, doubtless, did not suppose that he gave any offense, or did any injustice. He was merely expressing his opinion. But does he know how remarks of that sort will be received by the laboring people of the North? Why, who are the laboring people of the North? They are the North. They are the people who cultivate their own farms with their own hands; freeholders, educated men, independent men. Let me say, sir, that five-sixths of the whole property of the North is in the hands of the

laborers of the North; they cultivate their farms, they educate their children, they provide the means of independence; if they are not freeholders, they earn wages; these wages accumulate, are turned into capital, into new freeholds, and small capitalists are created. That is the case, and such the course of things among the industrious and frugal. And what can these people think when so respectable and worthy a gentleman as the member from Louisiana undertakes to prove that the absolute ignorance and the abject slavery of the South are more in conformity with the high purposes and destiny of immortal, rational, human beings, than the educated, the independent, free labor of the North?

There is a more tangible and irritating cause of grievance at the North. Free blacks are constantly employed in the vessels of the North, generally as cooks or stewards. When the vessel arrives at a southern port, these free colored men are taken on shore, by the police or municipal authority, imprisoned, and kept in prison, till the vessel is again ready to sale. This is not only irritating, but exceedingly unjustifiable and oppressive. Mr. Hoar's mission, some time ago, to South Carolina, was a well-intended effort to remove this cause of complaint. The North thinks such imprisonments illegal and unconstitutional; and as the cases occur constantly, and frequently, they regard it as a great grievance.

Now, sir, so far as any of these grievances have their foundation in matters of law, they can be redressed, and ought to be redressed; and so far as they have their foundation in matters of opinion, in sentiment, in mutual crimination and recrimination, all that we can do is to endeavor to allay the agitation, and cultivate a better feeling and more fraternal sentiments between the South and the North.

Mr. President, I should much prefer to have heard from every Member on this floor declarations of opinion that this Union could never be dissolved, than the declaration of opinion by anybody that, in any case, under the pressure of any circumstances, such a dissolution was possible. I hear with pain, and anguish, and distress, the word "secession," especially when it falls from the lips of those who are patriotic, and known to the country, and known all over the world, for their political services. Secession! Peaceable succession! Sir, your eyes and mine are never destined to see that miracle. The dismemberment of this vast country without convulsion! The breaking up of the fountains of the great deep, without ruffling the surface! Who is so foolish, I beg everybody's pardon, as to expect to see any such thing? Sir, he who sees these States, now revolving in harmony around a common center, and expects to see them quit their places and fly off without convulsion, may look the next hour to see the heavenly bodies rush from their spheres, and jostle against each other in the realms of space, without causing the crush of the universe. There can be no such thing as a peaceable secession. Peaceable secession is an utter impossibility. Is the great Constitution under which we live, covering this whole country, is it to be thawed and melted away by secession, as the snows on the mountain melt under the influence of a vernal sun? disappear almost unobserved, and run off? No, sir! No, sir! I will not state what might produce the disruption of the Union; but, sir, I see as plainly as I see the sun in heaven, what that disruption itself must produce; I see that it must produce war, and such a war as I will not describe, in its twofold character.

Peaceable secession. Peaceable secession. The concurrent agreement of all the members of this great Republic to separate. A voluntary separation, with alimony on one side and on the other. Why what would be the result? Where is the line to be drawn? What States are to secede? What is to remain American? What am I to be? An American no longer? Am I to become a sectional man, a local man, a separatist, with no country in common with the gentlemen who sit around me here, or who fill the other House of Congress? Heaven forbid. Where is the flag of the Republic to remain? Where is the eagle still to tower? Or is he to cower, and shrink, and fall to the ground? Why, sir, our ancestors, our fathers and our grandfathers, those of them that are yet living amongst us with prolonged lives, would rebuke and reproach us; and our children and our grandchildren would cry out shame upon us, if we of this generation should dishonor these ensigns of the power of the Government and the harmony of that Union which is every day felt among us with so much joy and gratitude. What is to become of the Army? What is to become of the Navy? What is to become of the public lands? How is each of the 30 States to defend itself? I know, although the idea has not been stated distinctly, there is to be, or it is supposed possible that there should be, a Southern Confederacy. I do not mean, when I allude to this statement, that anyone seriously contemplates such a state of things. I do not mean to say that it is true, but I have heard it suggested elsewhere, that that idea has originated a design to separate. I am sorry, sir, that it has ever been thought of, talked of, or dreamed of, in the wildest flights of human imagination. But the idea, so far as it exists, must be of a separation, assigning the slave States to one side and the free States to the other. Sir, there is not, I may express myself too strongly, perhaps, but some things, some moral things, are almost as impossible as other natural or physical things; and I hold the idea of a separation of these States, those that are free to form one government, and those that are slave-holding to form another, as a moral impossibility. We could not separate the States by any such line, if we were to draw it. We could not sit down here today and draw a line of separation that would satisfy any five men in the country. There are natural causes that would keep and tie us together, and there are social and domestic relations which we could not break if we would and which we should not if we could. Sir, nobody can look over the face of this country at the present moment, nobody can see where its population is the most dense and growing, without being ready to admit, and compelled to admit, that ere long America will be in the valley of the Mississippi.

Well, now, sir, I beg to inquire what the wildest enthusiast has to say on the possibility of cutting that river in two, and leaving free States at its source, and its branches, and slave States down near its mouth, each forming a separate government? Pray, sir, pray, sir, let me say to the people of this country that these things are worthy of their pondering and of their consideration. Here, sir, are five millions of freemen in the free States north of the River Ohio: Can anybody suppose that this population can be severed, by a line that divides them from the territory of a foreign and an alien government, down somewhere, the Lord knows where, upon the lower banks of the Mississippi? What would become of Missouri? Will she join the arrondissement of the slave States? Shall the man from the Yellowstone and the Platte be connected, in the new Republic, with the man who lives on the southern extremity of the Cape of Florida? Sir, I am ashamed to pursue this line of remark. I dislike it, I have an utter disgust for it. I would rather hear of natural blasts and mildews, war, pestilence, and famine than to hear gentlemen talk of secession. To break up, to break up this great Government, to dismember this glorious country, to astonish Europe with an act of folly such as Europe for two centuries has never beheld in any government or any people. No, sir; no, sir. There will be no secession. Gentlemen are not serious when they talk of secession.

Sir, I hear there is to be a convention held at Nashville. I am bound to believe that if worthy gentlemen meet at Nashville in convention their object will be to adopt counsels conciliatory, to advise the South to forbearance and moderation, and to advise the North to forbearance and moderation; and to inculcate principles of brotherly love and affection, and attachment to the Constitution of the country as it now is. I believe, if the convention meets at all, it will be for this purpose; for certainly, if they meet for any purpose hostile to the Union, they have been singularly inappropriate in their selection of a place. I remember, sir, that when the treaty was concluded between France and England, at the peace of Amiens, a stern old Englishman and an orator, who regarded the conditions of the peace as ignominious to England, said in the House of Commons, that if King William could know the terms of that treaty he would turn in his coffin. Let me commend this saying of Mr. Windham, in all its emphasis and in all its force, to any persons, who shall meet at Nashville for the purpose of concerting measures for the overthrow of this Union, over the bones of Andrew Jackson.

Sir, I wish now to make two remarks, and hasten to a conclusion. I wish to say, in regard to Texas, that if it should be, hereafter, at any time, the pleasure of the Government of Texas to cede to the United States a portion, larger or smaller, of her territory which lies adjacent to New Mexico, and north of 34 degrees of north latitude, to be formed into free States, for a fair equivalent in money or in the payment of her debt, I think it an object well worthy the consideration of Congress, and I shall be happy to concur in it myself, if I should be in the public counsels of the country at that time.

I have one other remark to make. In my observations upon slavery as it has existed in the country, and as it now exists, I have expressed no opinion of the mode of its extinguishment or melioration. I will say, however, though I have nothing to propose, because I do not deem myself so competent as other gentlemen to take any lead, that if any gentleman from the South shall propose a scheme of colonization, to be carried on by this Government upon a large scale, for the transportation of free colored people to any colony or any place in the world, I should be quite disposed to incur almost any degree of expense to accomplish that object. Nay, sir, following an example set here more than 20 years ago by a great man, then a Senator from New York, I would return to Virginia, and through her for the benefit of the whole South, the money received from the lands and territories ceded by her to this Government, for any such purpose as to relieve, in whole or in part, or in any way to diminish or deal beneficially with, the free colored population of the Southern States. I have said that I honor Virginia for her cession of this territory. There have been received into the Treasury of the United States $80,000,000, the proceeds of the sales of the public lands ceded by her. If the residue should be sold at the same rate, the whole aggregate will exceed $200,000,000. If Virginia and the South see fit to adopt any proposition to relieve themselves from the free people of color among them, or such as may be made free, they have my free consent that the Government shall pay them any sum of money out of its proceeds, which may be adequate to the purpose.

And now, Mr. President, I draw these observations to a close. I have spoken freely, and I meant to do so. I have sought to make no display; I have sought to enliven the occasion by no animated discussion, nor have I attempted any train of elaborate argument. I have wished only to speak my sentiments, fully and at large, being desirous, once and

for all, to let the Senate know, and to let the country know, the opinions and sentiments which I entertain on all these subjects. These opinions are not likely to be suddenly changed. If there be any future service that I can render to the country, consistently with these sentiments and opinions, I shall cheerfully render it. If there be not, I shall still be glad to have had an opportunity to disburden my conscience from the bottom of my heart, and to make known every political sentiment that therein exists.

And now, Mr. President, instead of speaking of the possibility or utility of secession, instead of dwelling in these caverns of darkness, instead of groping with those ideas so full of all that is horrid and horrible, let us come out into the light of day; let us enjoy the fresh air of liberty and union; let us cherish those hopes which belong to us; let us devote ourselves to those great objects that are fit for our consideration and our action; let us raise our conceptions to the magnitude and the importance of the duties that devolve upon us; let our comprehension be as broad as the country for which we act, our aspirations as high as its certain destiny; let us not be pigmies in a case that calls for men. Never did there devolve on any generation of men higher trusts than now devolve upon us, for the preservation of this Constitution, and the harmony and peace of all who are destined to live under it. Let us make our generation one of the strongest and brightest links in that golden chain, which is destined, I fondly believe, to grapple the people of all the States to this Constitution, for ages to come. We have a great, popular, constitutional Government, guarded by law, and by judicature, and defended by the whole affections of the people. No monarchial throne presses these States together; no iron chain of military power encircles them; they live and stand upon a Government popular in its form, representative in its character, founded upon principles of equality, and so constructed, we hope, as to last forever. In all its history it has been beneficent; it has trodden down no man's liberty; it has crushed no State. Its daily respiration is liberty and patriotism; its yet youthful veins are full of enterprise, courage, and honorable love of glory and renown. Large before, the country has now, by recent events, become vastly larger. This Republic now extends, with a vast breadth, across the whole continent. The two great seas of the world wash the one and the other shore. We realize, on a mighty scale, the beautiful description of the ornamental edging of the buckler of Achilles —

"Now the broad shield complete, the artist crown'd
With his last hand, and poured the ocean round;
In living silver seem'd the waves to roll,
And beat the buckler's verge, and bound the whole."

Agricultural Services by the Federal Government

REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. JONES of Missouri. Mr. Speaker, an obscure headline in one of the Washington newspapers yesterday caught my eye and as I considered the implications contained in the statement of fact, or perhaps the predictions contained in that headline, I received a letter from one of my constituents in southeast Missouri which further impressed me with the fact that our people are becoming more conscious of the need for greater efficiency and more economy in the operation of our Government. The headline, "Few Federal agencies can expect increase in funds by House group," headed an article which stated in part that—

Representative WHITTEN, Democrat of Mississippi, chairman of the Agriculture Subcommittee, reminded Agriculture officials of the big Federal deficit in a closed meeting and he added: "We will be fortunate if we can go along at the same rate that we have in the past, much less increase appropriations. * * * We have reached a point where we have to be selective."

The Agriculture budget as recommended by the President would add funds for 2,600 new jobs.

Coming as I do from one of the richest and most productive agricultural districts and representing a constituency which includes as progressive a group of farmers as will be found anywhere, I believe I am thoroughly conscious of and deeply appreciative of the many fine services which are being rendered by the several agencies in the Department of Agriculture.

For some time, however, I have been deeply concerned over the apparent conflicting interest and the overlapping functions of some of these services. For many years I have been a member of the farm bureau in my home county which sponsors the county agent's office, and I am familiar with the many accomplishments of the Extension Service in that area. I am always impressed when I read the annual report which sets out the activities in which the county agent and the home demonstration agent are engaged.

I have witnessed the development of the PMA organization throughout my district and I know that this program has made a most valuable contribution and has provided the machinery for implementing the farm program which has been responsible for many farmers enjoying a prosperity which was unknown prior to the early thirties.

More recently, farmers in three of the counties in my district, recognizing the benefits which are possible through a soil-conservation program, have organized soil-conservation districts. Despite the fact that these districts have been operating only a short time, the results which have been obtained are doing much to create interest in this program throughout the other counties of the district.

Unfortunately, despite the valuable contributions which are being made by each of these agencies, I have been conscious of the fact for some time that there is an overlapping of their functions, and while this in itself might not be a sufficient ground to demand that some action be taken to bring about a unification or an integration which would prevent a duplication of their efforts, since only a comparatively small percentage of the farmer taxpayers are being reached by either or all of the agencies. The fact that there is an apparent lack of coordination, which at times has resulted even in a conflict which has brought about contradictory policies, leads me to believe that it is time for a comprehensive study to be made of this situation.

In the letter above referred to, my constituent in reporting a meeting which was held in one of the counties of my district for the purpose of discussing the possibilities of establishing a soil-conservation district, reports that "farmers at the meeting agreed that there are far too many overlapping duties and services offered by the many Federal agencies interested in agriculture. It has reached the point where the various agencies are 'sniping' at each other in public to the detriment of themselves and certainly to the farmers."

The writer who is a former teacher of vocational agriculture and who has since been employed in the Missouri Department of Education as director of veterans' education, in which capacity he had the opportunity to work with and through many other Federal agencies, but who is now in business for himself, makes this further comment:

No doubt all of the agencies render a certain amount of good service to the farmer. It may be that all of the services now being rendered—and proposed—are necessary. It is a shame, however, that these services cannot be offered by a coordinated branch of the United States Department of Agriculture, thereby eliminating the confusing contradictory advice now given the farmer and certainly eliminating the costly overlapping now existing.

While this writer does not propose to have the answer and as he states:

This letter is not for the purpose of condemning any particular agency, I hope you can use it as a fair reflection of the thinking of at least some farmers in your district in your efforts to improve agricultural services to the farmers by the Federal Government.

At the meeting to which he referred in his letter, he pointed out that there was some discussion and quotations made from a recent article in the Country Gentleman, March 1950 issue, entitled "Big Government Is in Your County, Too." In this same issue is also an editorial by Dean Rusk of the Illinois College of Agriculture which bears out the theme of the article. I have read this article and also the editorial and I believe it does present in an interesting and informative manner the problem which has been causing me some concern, in that a similar condition exists not only in the 10 counties of my district but also in hundreds of other counties throughout the agricultural section of this Nation.

I think that we have a situation in the Department of Agriculture which can be compared to the Department of Defense. Just as no one would suggest doing away with the Army, Navy, Air Force, or Marine Corps, neither am I suggesting that we abolish the Soil Conservation Service, the Production and Marketing Administration, or the Extension Service, yet I do believe that there is a need for unification and an integration of the services within the United States Department of Agriculture, and I believe

that there is an opportunity for the same type of economy to be effected within the Department of Agriculture which is being brought about in the Department of Defense.

I am today extending my remarks in the Appendix, in two instances, including the article, Big Government Is in Your County, Too, and an editorial, A Cure for Big Government Ills, which appeared in the March 1950 issue of the Country Gentleman.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. O'NEILL. Mr. Speaker, a great deal has been said for and against the proposal to admit Hawaii to statehood; a proposal to create an additional State in our Union.

I have had the honor to work closely with the Delegate from Hawaii and I have had the honor to second the motion to report the Hawaii proposal.

I desire to record my sincere thanks to the Delegate from Hawaii, Hon. JOSEPH R. FARRINGTON, for the careful, considerate, and learned manner in which he made available to my committee and myself the many considerations contained in this proposal. I believe this gentleman is entitled to great credit from this Congress for his untiring work, to the end that our work was made as light as possible under all the circumstances.

H. R. 49, the Hawaii bill, provides for the addition as a State of a Territory as large as Connecticut and Rhode Island. It contains a population of one-half million people.

Hawaii offered to exchange her independent sovereignty for annexation to our country 53 years ago, and by that independent act and the continuous demonstration of unquestioned loyalty, has sufficiently shown a planned intention of being one of us. We accepted that annexation 52 years ago, and "Pearl Harbor" and the consequent conduct of the people of Hawaii is proof of the wisdom of that annexation.

The desire for statehood has been brought to the attention of Congress 15 times since annexation. That indicates readiness for peaceful democratic action. It is a model of peaceful planning on the part of Hawaii; and is critically indicative of the slowness of the democratic processes upon the part of the other—the Congress.

Statehood will increase immeasurably the prestige of America throughout the Orient, at a time when it is badly needed.

The National Military Establishment and the Departments of Agriculture and Interior have made favorable reports in behalf of this proposal.

I urge my colleagues to prompt and favorable action upon this proposal.

Liberalism in the Present Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. MULTER. Mr. Speaker, many of us in this House believe that we are true liberals in the full sense of the word, but at times it is difficult to give an exact definition of the word or a clear connotation of the concept of liberalism. We are living in a time of confusion. Terms pertaining to political concepts and ideologies that were so readily understood by all only yesterday, have been twisted and misrepresented to the point where we are not certain what they stand for today.

I believe the Members of this House, whether they consider themselves liberal or not, will enjoy reading the following article, published in the New Republic, March 6, 1950:

LIBERAL CACHEXIA: ITS CAUSE AND CURE
(By David Goldknopf)

Lately I have been sitting up with my favorite sick friend, the liberal. You say that liberal doesn't mean anything any more and yet you know perfectly well what it means. You know that my friend used to be a New Dealer, that he is now a Fair Dealer, that he is not progressive. He does not believe that private enterprise is ever strictly private, and he does believe that in large and important areas where its services have been somewhat less than adequate—health, housing, education—government ought to do something. In other words, he isn't afraid of the Government meddling in his life as long as he feels that it's his government. He likes Eleanor Roosevelt and Chester Bowles, Walter Reuther and Estes Kefauver, David Lilienthal and the Douglasses of both Senate and Supreme Court (not to mention Helen Gahagan). You can continue this sort of documentation almost endlessly. You can predict how my sick friend will feel—if he is well enough to feel anything—about nine-tenths of the bills to come before the next Congress. How can you call any word meaningless that tells you so much?

No, the trouble with "liberal" is not lack of meaning; it is lack of motion. My friend is suffering from cachexia: (ka-kek'si-a), a condition of ill health with malnutrition and wasting of the body, due to some chronic constitutional affection, as tuberculosis or cancer (Webster). His limbs are lax, his eyes dull, his movements random and ineffectual. Bright lights disturb him (and so, for that matter, does dim light). He cannot stand loud noises, whether from the left or the right. Occasionally a hollow groan escapes him, as if in the memory of an unpardonable and irremediable error. And there are times when, out of the depths of his ineffable despondency, he feels compelled to repeat his dismal story—

"I am a liberal. I abhor communism. But in my abhorrence of communism I find myself allied to those very elements of society that I have always distrusted and often despised. This is my incubus. I raise my voice against the abuse of a minority, and the Communist raises his voice, too. And somehow he can always raise his voice higher than mine. I whirl upon him snarling, 'How many slave laborers are there in Siberia!' 'That's telling 'em!' yipe my ancient enemies of the right. 'Vile Francophiles!' I shout at them. 'Don't you call me comrade!' 'Double in spades!' crows the Commie. Back to my left! 'Stay away from me,' I cry menacingly. 'I'll tito you!' 'Let him have it!' the Hearst press yodels. 'I'll hold his hands!' Back to my right! 'Union-buster!' 'Fascist scum!' and the Commie hisses. 'Mad-dog reactionary!' Left! Right! And another left! And another right! I fall back against the ropes A left, another left; I'm slipping down; the count, three, four; I—what happened?"

Tears come to his eyes. And to mine, too, for I remember him so strong and indomitable—the tilt of his chin in the old May Day parades, his picket-line stamina. I turn my head so that I cannot see his pain, so that he cannot see my grief.

I am a liberal. I abhor smallpox. But in my abhorrence of smallpox I find myself allied to those very elements of society that I have always distrusted and often despised.

Nobody ever says that. It's creviced with all kinds of fallacies.

1. I am a liberal. I abhor smallpox. In this case juxtaposition certainly implies connection: Abhorrence of smallpox is an attribute of liberalism. But we know that it isn't so, that there is no connection between liberalism and the abhorrence of smallpox.

2. I abhor smallpox. Who doesn't? But why make a point of it? Why this obsessive need to put yourself on record? And how much time can you afford to devote to the abhorrence of smallpox? Even if you spent as little as a half-hour a day on it, wouldn't your life be seriously distorted?

3. But in my abhorrence of smallpox I find myself allied to those very elements. This is sheer nonsense. Alliances aren't fortuitous; they are expressions of intent. You don't "find" yourself allied any more than you "find" yourself married. It may be a mistake, but it's not an accident.

Then what ails my friend? If his self-styled incubus can be disposed of with a casual sweep of the logical broom, how does one account for his lamentable condition? Obviously his troubles do not lie within the luminous boundaries of reason. For example, he seems to have been terribly worried about maintaining his identity, his "position." But why haven't his adversaries of the right and left been similarly preoccupied? In a recent congressional vote on a foreign issue (it doesn't matter what issue; that's exactly the point) three New York City Representatives voted "nay." One was a Democrat who has, however, always enjoyed American Labor Party support. Another has followed every twist and turn of the Communist Party line with contortionist dexterity. The third was an unregenerate conservative who made his political reputation, such as it is, by conducting a shameless prewar witch hunt in the colleges of New York—a witch hunt that did put a Communist instructor in jail for perjury, but completely ignored an outspokenly Fascist college professor who was, in fact, to broadcast for Hitler during the war. All three Representatives voted the same way on an important policy bill—without embarrassment. They were not afraid that they would be compromised by their association. They did not consider themselves associated.

Only the liberal is dismayed by oppositions of this sort. Why? The Communist changes his "position" as casually as a trapeze artist. Reactionaries can be just as mercurial. The imperialist of yesterday becomes the isolationist of today without any noticeable "sturm und drang." The apologists of free enterprise vote gaudy subsidies for Maine's potato farmers. Nor can these paradoxes be marked off as political hypocrisies. Both on the left and on the right there are profound convictions that are never violated. But these convictions, being profound, have nothing to do with the relative

superficialities of "program" or "position." They are, in fact, not at all political. They deal with the nature of man and how much say he has in his destiny.

The Communist, we know, believes that man has very little say in his destiny. He redefines freedom as submission—submission to the dialectical current of history—"the recognition of necessity." The Communist believes in economic determinism. He believes in the supremacy of class interests.

On the face of it, the conservative has an altogether different view of things. Man has an immense, an almost unqualified control over his destiny. Success is universally attainable; anyone can make good if socialistic government doesn't mess up the American way. But what is success? Success is—ah—well—success, the ranch house in the suburbs, the good car, the devoted wife, getting what you want out of life. And what's more (this, far more confidently), the only reason a man will work is to achieve success. To get what he wants, to keep what he has got.

Somehow or other, success is never defined in terms of—oh—the Golden Rule or the Brotherhood of Man, or any of the other ideals to which the conservative sincerely and often actively subscribes. In fact, the conservative seems merely to have substituted personal for class interest. Whether he realizes it or not, he believes in the inherent, intransigent, and apparently limitless selfishness of man. Sometimes that selfishness is enlightened; that is to say, a man may forego a small bone today for a larger, juicier one tomorrow. And there are rules in the dog fight we call life—rules that must be obeyed if you don't want to go to jail, or to hell, or to both. But those are limitations upon the expression of selfishness, not upon its influence or applicability. Success is a personal, never a social achievement. A man may slave for his children; it is because they are his, and let other men slave for theirs. Man being man, that is the way it has got to be, and any tampering with this primordial condition can lead only to socialistic chaos.

You might say, then, that the Communist takes a mechanical view of life and the conservative takes a biological, or more specifically, Darwinian, view. Or—Communist thinks that man is pushed to his destiny, and the conservative thinks that he is pulled. But is there really a great deal of difference between the electric goad under the tail and the carrot in front of the nose? A mule is a mule.

Doesn't the liberal believe that man is pushed? Certainly. Slums, disease, poverty predispose thousands to delinquency, for example, and we ought to get rid of those evils. (But the relationship between, let us say, poverty and crime is a statistical one; you cannot attribute the brutalization of any one person to his environment.) Is man pulled? Sure. We'd never get anything done without incentives. (But these incentives vary widely, and the fact that they are incentives does not necessarily make them ungenerous. The altruist receives satisfaction from his altruism, the hero from his heroism; it does not follow that self-satisfaction is the motive for altruism or heroism.) Pushed or pulled, says the liberal, man nevertheless keeps his feet and walks forward under his own power and by his own volition. And he does not walk alone.

Therein lies the difference between the liberal and his adversaries of the right and left. It is not a difference in program, and the liberal who predicates his difference on program is bound to be confounded as conservatives and Communists veer temporarily toward him. The liberal is different in that he believes in at least a limited freedom of choice—and that means choice of ends as well as means. He believes in altruism. He believes that the human race is a community, if not yet a fraternity. He respects man.

The Communist does not. He has some respect for the capitalist, none at all for the workingman. The worker is a dupe, a pawn, who must be led every inch of the dialectical way—"educated." Actually, you can't blame the Communists for feeling as they do. Respect implies responsibility. If a man is, as the solacing phrase goes, a "product of his environment," you can no more respect him than you can iron ingots. (Properly speaking, you cannot hate him either, and it is a fact that in the early days of the Russian revolution Lenin cautioned his followers against hating the people they were forced to murder. But this particular discipline seems to have been relaxed over the years.)

On the other hand, it isn't easy to respect the conservative ideal either—the man who has made good. Even the conservative senses this. It isn't enough to make good; you must use power and wealth usefully. The conservative ideal is a man who has spent 60 years of his life accumulating his pile, and the rest of his years dispensing it philanthropically. During his last years he completely reverses his field. And he knows it. But all he can do is grunt in that gruff old way which fools no one—the old rascal—"Well, you can't take it with you." A number of movies have been built around this situation. You can expect a great many more. (As a matter of fact, a pretty good case could be made for the thesis that Scrooge is the conservative ideal.) But no movie is going to solve the most serious conflict in the conservative philosophy: the conflict between make-good and do-good.

The liberal respects man. He believes in man. He believes in him not as a dialectical pawn, nor as a refugee from the jungle. He believes in him as a distinguishably human being. He believes in society. He believes in it not as an instrument of suppression or of progress, nor as a device for controlling or arbitrating the beastliness of man. Nor as a convenience. Nor as an invention. He believes in society as an aspect of man's humanity—source and outgrowth, flower and root.

What makes man that way? One might as well ask, "Why mind?" "Why life?" "Why matter?" "Why motion?" Strictly speaking, none of these Sunday-sermon topics is legitimate. That is the way things have happened. And altruism is no more incredible than breathing, breathing than gravitation. Nothing explains anything. Matter does not explain mind; sex does not explain love; biology does not explain society.

In fact, biology explains a lot less than we've been brought up to think. It is true that sight has great survival value, but once a man has eyes he can use them for anything he pleases. He can paint pictures that have no survival value—in any sense of the phrase. More important, the sighted person is not a blind man plus sight. He is an altogether different person. Similarly, the social being is not an individual in society; that is the definition of the unsocial being. If anything, the social being is society in the individual. This may be the contributive insight of our century. Just as the eighteenth was the mechanical century and the nineteenth the biological century, so the twentieth may be the social century. If that's the case—and we've still got half a century to go—there'll be some changes made. You can expect even so monumental a nineteenth-century achievement as psychoanalysis—Darwinism extended to the mind—to undergo eclipse or profound modification. You may expect the current childish and undignified quest for private religious salvation to run its course. You may expect liberalism to become increasingly confident and expressive.

Diversity of human goals, freedom of choice, altruism, the social nature of man: for the liberal they are facts, not hypotheses or utopian aspirations. Considered collectively, they make up the distinguishing character of liberalism. The liberal who remains true to them need never fear the contamination of the left or right.

Will this prescription bring the sick liberal instantly to his feet? Probably not. His present disorders are, fortunately, symptomatic rather than essential, but a symptom can be almost as noxious as the disease itself. Alcoholism is a system of deep psychic disorders, but before the alcoholic can be cured he must stop drinking. Similarly, the liberal's preoccupation with communism cannot be airily dismissed. The burden of disavowal has become too onerous, the repudiation of past associations too demanding. The history of this preoccupation has a certain clinical charm. But so far as treatment goes, the future is more important than the past. And most important of all is the present.

It is a tragic blunder for the liberal to be mouse-trapped into an anti-Communist position. It is a tragic blunder for him to be mouse-trapped into an antianything position. The premises of liberalism—consider them again—are all positive. The conservative and the Communist are both at their best as a member of the minority opposition. In fact, both can be very useful to the liberal in that role. Put either of them into power, and the result is ruinous. But the genius of liberalism is best expressed when the liberal is in power. To allow himself therefore, to be cast in the role of opposition is a sure route to self-annihilation. The primary tactical principle of the Communists has always been dominate or destroy. Negative domination is a highly efficient technique of destruction. That is why the Communist will go to great extremes to alienate the liberal, to force a fight. In a political dog fight he can't lose. The role of underdog is immensely gratifying to him, ideologically, tactically, and psychologically. Ideologically, because it bears out Marxist predictions; tactically, because martyrdom is his greatest asset; psychologically, because it vindicates all the bitterness, sadism, and insecurity that predispose him to communism in the first place. But the liberal is a friendly person. He does not enjoy rancor. He wants to work with people. He wanted to work with the Communists before the war, during the war, and immediately after the war. He is a trusting person. He believes in sincerity and good intentions. He is a sanguine person. Antagonisms make him bilious. My friend is very bilious.

All of which leads to several categorical conclusions. When Communists hold a cultural conference, liberals do not hold a countercultural conference. When Communists march down Eighth Avenue on May day liberals do not march down Fifth Avenue. When the Communists commission Paul Robeson to sing for civil liberties, liberals have no part in any protest demonstration. Liberals do not carry on in this infantile way. They do not rise to the Communist bait. In the words of the sidewalk psychologist, "They do not give them that satisfaction."

The liberal spends his time and energy doing what comes naturally—beating the drum for liberalism. He believes in at least limited freedom of will and he tries to extend its limits. He believes in the diversity of human goals and arbitrary restrictions in this respect meet with his sharpest disapproval. He believes in altruism and he believes that man should be sufficiently liberated from his biological obligations to be able to practice it. He believes in the sodality of the human race, but he notes, regretfully,

that a great many of its details remain to be worked out.

In other words, he has a full-time, self-perpetuating job on his hands. And the next time the Reds and the reactionaries start swinging at each other I hope he has sense enough not to step in between them. We lose more damn liberals that way.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. O'NEILL. Mr. Speaker, a great deal has been said for and against the proposal to admit Alaska to statehood; proposal to create an additional State in our Union.

I have had the honor to work closely with the Delegate from Alaska and I have had the honor to make the motion to report out the Alaska proposal.

I desire to record my sincere thanks to Delegate, the Honorable E. L. BARTLETT, of Alaska, for the careful, considerate, and learned manner in which he made available to my committee and myself the many considerations contained in this proposal. I believe this gentleman is entitled to great credit from this Congress for his untiring work, to the end that our work was made as light as possible under all the circumstances.

H. R. 331, the Alaska bill, provides for the addition to the Union as a State our "last frontier." It adds a State that is a vast storehouse of undeveloped resources which our people will need. It is larger than 12 other States, in population, at the time of their admission as States.

The tradition of self-government is a strong American tradition, and today fulfills the obligation of the United States under the United Nations Charter "to develop self-government."

During the last year alone 138 corporations were authorized to do business in Alaska. This indicates a large new reservoir of business and trade for our Nation. Two national forests of 21,000,000 acres give our country a huge reserve of timber products. That is all in compliance with our historical and economical planning.

Commodity Credit Corporation

REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. TALLE. Mr. Speaker, I understand that Secretary of Agriculture Charles Brannan was awarded a gold medallion for outstanding service to agriculture at a convention of the so-called Farmers Union in Denver, Colo., yesterday. Most of us from the Middle West understand Mr. Brannan's service to the American farmer only too well.

For example, several days ago he came before the Banking and Currency Committee, of which I am a member, to request $2,000,000,000 additional borrowing authority for the Commodity Credit Corporation. When he took office 20 months ago, the corporation had, unimpaired, its full borrowing authority of $4,750,000,000. On February 14, 1950, the balance of its borrowing authority had shrunk to one and one-third billions under Mr. Brannan's administration. And, remember, appropriations for the Department of Agriculture are not included in the three and one-half billion CCC dollars he has spent in a little more than a year and a half.

But perhaps we should quote Mr. Brannan himself on his strange service to agriculture. Here is what he testified before the committee last Wedesday:

> In 2 years, gross farm income has dropped more than two billion dollars, and cash expenses have gone up by more than one billion. After paying cash expenses, farm operators last year had 17 percent less money than in 1948 and about 22 percent less than in 1947. The purchasing power of farm families in terms of 1947 dollars dropped about two billion dollars in 1948, another two billion dollars in 1949, and could drop still another two billion dollars in 1950 if farm prices do not strengthen.

Yes, indeed, Mr. Brannan has compiled quite a record of service to American farmers. I wonder, though, how many farmers will appreciate his service in reducing their income tax liability by slashing their incomes so drastically.

Then there are other services to agriculture in which Mr. Brannan has had sterling assistance from other executive departments of the Truman Administration. An outstanding example is the program of shrinking our exports and encouraging increased imports of foodstuffs which we have in surplus supply—such as potatoes, beans, and pork. To permit this continued importation of surplus foods is to betray the American farmer. No saving is reflected to the consumer because the Commodity Credit Corp. buys, stores, and eventually sacrifices at a substantial loss any surpluses that are accumulated. In short, Mr. Brannan's service on this score results in subjecting the American farmer to unwarranted criticism, and in saddling the American taxpayer with senseless expenditures that benefit neither the producer nor the consumer.

In addition, Mr. Brannan has performed no small service in his 1950 acreage-allotment program which will save our farmers the trouble of cropping more than 30,000,000 fertile acres that were under the plow last year. There will be even more idle land in 1951 unless he stops killing American agriculture with his special brand of service, and starts distributing intelligently the surpluses he has accumulated.

Mr. Brannan's greatest service to agriculture, however, lies in his continued attempts to sabotage the efforts of the Congress and the responsible farm organizations to work out a sound, long-range program for American agriculture—a program based on price supports sufficiently flexible to insure profitable farming operations with a minimum of Government controls and at a reasonable cost.

Mr. Speaker, if the present Secretary of Agriculture really wants to earn the gold medallion that has been given him for alleged service to our farming population, he can do so very easily—by simply submitting his resignation to the President.

Veterans' Credit Bill

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. DENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NATIONAL ASSOCIATION OF LETTER CARRIERS, BRANCH NO. 377,
Evansville, Ind., March 4, 1950.

Hon. WINFIELD K. DENTON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DENTON: I have been informed that H. R. 87, the veterans credit bill, will probably be called up in the House Tuesday, March 7. Efforts will be made to kill this bill with "kindness" by various amendments which would increase the cost to such a figure that H. R. 87 would fail of enactment.

One of these so-called liberal amendments would extend the benefits of H. R. 87 to veterans in every department of the Government. As postal employees we have no objection to veterans in other departments receiving a salary commensurate with the position they occupy, however I would like for you, Mr. DENTON, to point out that when the reclassification act of 1945 was passed these employees received an increase of $360 per annum and said increase was added to the entrance salary. As a result every employee who has come into these other Government agencies since 1945 has received the benefit of that increase.

This is not the case in the postal service. When the reclassification act was passed July 1, 1945, every regular employee received an increase of $400 per annum and every substitute carrier and clerk received this $400 when they advanced to a regular position, but the entrance salary was left at $1,700 and every veteran coming into the postal service since July 1, 1945, has been short this $400 that was given to all those employees who were fortunate enough to remain at home during the last war. Obviously this is very unfair and penalizes a man for being away in the defense of his country. I trust that you can agree that the veterans who entered other Government positions have already received $360 per annum that our boys in the postal service are still striving for.

The House Post Office and Civil Service Committee has voted to instruct Chairman TOM MURRAY to offer an amendment to H. R. 87 substituting S. 689 as passed by the Senate last August. I hope that you will be present to support the committee amendment and to vote against all amendments that would increase the cost of this legislation to a figure that would prevent it becoming law.

If the veterans in the other agencies are entitled to still more than those in the postal service there is a bill pending in the Post Office and Civil Service Committee granting them credit for their military service. If it is the desire of Congress to give this credit it should be passed on its own merit and not be tacked on to our bill that we have worked for so many months.

Sincerely yours,

CLIFFORD W. KERNEY,
President.

P. S.—I will appreciate very much having this in the RECORD.

Ethiopian Government Protests Appointment of Fascist Gen. Guglielmo Nasi as Administrator in Somaliland

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and memorandum:

ETHIOPIAN EMBASSY,
Washington, D. C., January 31, 1950.

Representative ADAM CLAYTON POWELL,
House of Representatives,
Washington, D. C.

DEAR SIR: The Ethiopian Embassy wishes to enclose herewith a memorandum made by the Imperial Ethiopian Government registering their objection to the proposed appointment of the Fascist Gen. Guglielmo Nasi to run the administration of former Italian Somaliland under the United Nations trusteeship.

With best wishes and regards of the Ethiopian Embassy,

Sincerely yours,

MESFIN BEGASHET.

ETHIOPIAN GOVERNMENT PROTESTS APPOINTMENT OF FASCIST GEN. GUGLIELMO NASI AS ADMINISTRATOR IN SOMALILAND

It has come to the attention of the Imperial Ethiopian Government that Italy proposes to appoint as its administrator of former Italian Somaliland, under the United Nations trusteeship, the Fascist General Nasi.

We wish to protest this appointment with all the vehemence at our command, for the reasons here set forth:

1. General Nasi was an active participant in the Italo-Ethiopian War. He played an important part in the invasion and occupation of Ethiopia, and has, therefore, been listed as a war criminal by the Allied War Crimes Commission.

2. He is one of the senior Italian officers who, together with General Graziani waged the unprovoked 1935–36 campaign against Ethiopia. His return to east Africa, where he took part in the initiation, planning, and launching of the aggressive war against Ethiopia from within Somaliland, is considered a menace to the security of our country. We must point out in this connection, that during the occupation, he was at one time Governor of Harar Province in Ethiopia, and subsequently became vice Governor General of Ethiopia under the Duke of Asota. Consequently the Imperial Ethiopian Government views with serious concern his proposed appointment as Administrator of Somaliland, where, under the Fascist regime, he once served as Governor of Harar and Somaliland combined.

3. The Imperial Ethiopian Government is in possession of ample documentary proof of the educational policies fostered by General Nasi during the occupation, a policy of ever maintaining the status quo of illiterate people. We have, therefore, no doubt that no one is less fitted than General Nasi to guide the destinies of the very people whom, under the United Nations mandate, Italy is expected to prepare for independence within 10 years.

In view of our intimate experience with General Nasi, the Imperial Ethiopian Government trusts that the United Nations will not let this proposed appointment, which we consider most undesirable, go unnoticed.

We trust, too, that members of all peace-loving nations will take our view seriously and support the rejection of this appointment.

South Carolina Pioneer in Patents

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the Mayflower Hotel on Monday, March 6, 1950, under the auspices of the American Patent Law Association:

Mr. Chairman, members of the American Patent Law Association, distinguished guests, as evidence of my gratitude for sharing your dinner tonight I intend to be brief enough to justify your inviting me again. After these several years of expert indoctrination in patent law at the hands of many of your skilled colleagues, I am beginning to feel that I now am only semi-illiterate in this important subject, but I am yet far from constituting a competitive threat to even the lowliest of those present. While that apprenticeship does not qualify me as an authority on our patent system, it has at least given me a constant and growing awareness of its profound importance to our American way of life and of its sensitivity to change. What started out as a perfunctory legislative assignment for me has become a considerable interest by choice.

In a way, the patent system is part of my inheritance as a South Carolinian, and perhaps that accounts for the more than random interest I had even prior to coming across the facts that I am now about to relate:

These facts concern the vital role played by my State in the early history of the patent and copyright laws.

It is a strange coincidence that South Carolina had a patent law of its own, even before the adoption of the Constitution. Most of the independent States had their own copyright laws, but South Carolina alone had her individual patent law.

On March 26, 1784, the General Assembly of South Carolina enacted a law "for the encouragement of arts and sciences." This law related to both copyrights and patents, and provided for securing exclusive rights to authors and inventors. Of course, this law was rather simple in its terms, but it does show an appreciation of the desirability of a patent law on the part of South Carolina. As I have indicated, none of the other States had any similar statute.

This is not all. The Constitutional Convention, which met 3 years later, found South Carolinians foremost in the introduction of patent and copyright clauses to the Constitution.

It was our brilliant young Charles Pinckney who on August 18, 1787, as a delegate to the Constitutional Convention, introduced a resolution that the legislature of the Government they were framing be given the power: "To grant patents for useful inventions," and "To secure to authors exclusive rights for certain times." Though Pinckney was the youngest man in the Convention, more of his ideas were written into our organic law than of any other delegate.

John Rutledge, another South Carolina delegate, headed the Committee on Detail to which the various resolutions were referred. In their report, the said committee included the clause relating to patents and copyrights which was unanimously adopted by the Convention as a part of our Constitution. I need not repeat its familiar language to you, but wish to point out the similarity between the objective specified in the Constitution—promoting the progress of science and the useful arts—and that specified in the title of the South Carolina statute of 1784—encouraging arts and sciences.

Finally, the bills which became our first patent and copyright laws were presented on April 10, 1790, to Congress by Representative Aedamus Burke, of South Carolina as chairman of a special committee on patents and copyrights.

So you see that in my present capacity as chairman of a congressional subcommittee responsible for patent legislation I am only doing what comes naturally.

The patent laws, born as they were of wisdom and fortified through the years by the genius of our people, justly merit our pride and our constant effort toward their preservation and strengthening. It is a tribute to the authors that the major structure of those laws, as they were enacted in the 1830's remain largely unchanged in principle today and have accommodated themselves with astonishing ease to the revolutionary advances in technology through the intervening years. The twentieth century in particular, with its overwhelming progress in science and in business strategies, has subjected the patent laws to great tests.

The evidences of this wear and tear are nowhere demonstrated so effectively as in the record of legislation which has been proposed and considered during the past two decades in Congress. In my brief tenure we have been confronted with patent proposals of the most complex nature, difficult for the lay mind to comprehend, and even more difficult, once understood, to determine. If you learned gentlemen feel disposed to question the diligence of your legislators in considering your patent problems, lay it not to our lack of interest but rather to your own talented disagreement.

By this time you have all probably received preliminary drafts of a proposal to revise and amend the patents title of the United States Code. I am heartened by the manner in which the organized patent bar has come forward in a commendable and constructive fashion to help Congress in undertaking this formidable assignment. Your instantaneous cooperation has been one of the most dramatic evidences of the democratic process that I have had the pleasure of witnessing. With the attitude you have adopted I am confident that we shall perform a painstaking, objective study of the subject that will ultimately produce a body of laws which will serve our future as well as the present ones have served our past.

May I assure you again that the draft which you have received is merely a starting point. The committee has given it neither prolonged study nor endorsement, and its sole purpose is to serve as a target. We believe it is a workmanlike, professional document, entailing skill, knowledge, and patience on the part of its authors. It em-

bodies many similar suggestions, many borrowed from other sources, and some novel in themselves. This will be your opportunity, gentlemen, to help mold the future of our great patent system.

May your restless, inquiring, inventive minds continue to search and thus harness even the elements of nature and alleviate pain and suffering among all mankind everywhere so that lightning and light, frost and flame, and all the secret subtle powers of the earth and sky may be made subservient to man's will under God.

A Cure for "Big Government" Ills

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Country Gentleman:

A CURE FOR "BIG GOVERNMENT" ILLS

(By Dean Henry P. Rusk)

What is wrong with the USDA? No one can read John Strohm's article on page 21 of this issue without realizing that something is seriously wrong.

Over the years, the Department has enjoyed the confidence of a vast majority of our citizens—farmers and nonfarmers alike. Probably it has rated higher in the minds of more people than any other department of the executive branch of the Government. In such an atmosphere the Department of Agriculture, with the support of the State experiment stations and the Cooperative Extension Service, came to be recognized as an important servant of our whole economy.

Public confidence in the Department as a source of sound information on an ever-widening range of problems has brought increased demands for service and forced expansion of activities. The evolution of the Department has been characterized not only by tremendous growth, but also by the addition of functions that may have conflicting implications.

From a beginning devoted to the increase of production, it has in later years received legislative mandate to control production.

From a beginning dedicated to the expansion of opportunities, it has come to have responsibility for the security of those with limited opportunities.

From a beginning directed to greater use of our natural resources, it has come to place major emphasis on conservation.

The original functions remain, and the newer responsibilities, or as is often the case, increased emphasis on separate phases of old responsibilities, have been undertaken by more or less independent administrative units. The agricultural task force of the Hoover Commission found that this type of development has resulted in a loose confederation of autonomous bureaus and agencies with strong tendencies to develop independent, overlapping, and duplicating programs.

John Strohm has pin-pointed the problems as he found them at the grass-roots level. Among the farmers of one outstanding agricultural county, he finds confusion and misunderstanding regarding the functions, services, and jurisdiction of various agencies operating in the area. And among the agencies themselves, he found overlapping of programs and duplication of effort.

The normal reaction after reading Mr. Strohm's article is to ask, "Whose fault is it? Who is to blame for this situation?" No individual is to blame and certainly not Secretary Brannan. He is just a new tenant in an old house, to which new additions have been built year after year by preceding generations; and the house, though often altered, has never been thoroughly remodeled and modernized. Secretary Brannan is not responsible for this, but an aroused public should hold him jointly responsible with Congress for a thorough remodeling job.

Strohm's criticism is directed at the local level. To correct the most obvious faults at this level, the task force recommended consolidation of field services where possible, administration of action programs by departmental employees through offices based on the States as units, and the establishment of State and county councils of elected farmers whose major responsibility would be to represent the farmers rather than the action agencies. These council members would receive no pay, but would be reimbursed for out-of-pocket expenses.

But the basic faults in the organization and procedures of the USDA are at the top. The rapidity of the Department's growth can be partially measured by the increase from 18,000 to more than 80,000 employees in 20 years. Its share of the national budget increased from less than $17,000,000 in 1912 to a high of approximately 2½ billion, including restoration of 1½ billion of CCC capital, in 1947. This rapid growth has been accompanied by diffusion of authority, failure to develop clear lines of authority, and failure to clearly designate delegated authority. Some 20 different offices report to the Secretary.

The Hoover Commission's task force on agriculture sought to remedy the major faults of the present organization by grouping the functions of the Department into logical administrative units, later called services. Those recommended by the task force are: (1) Research Service, (2) Extension Service, (3) Agricultural Resources Conservation Service, (4) Commodity Adjustment Service, (5) Regulatory Service, (6) Agricultural Credit Service.

The task force believed that the Rural Electrification Administration was essentially a Government credit agency and that its services to borrowers' cooperatives could be handled most effectively through the reorganized Agricultural Credit Service. It believed that the REA's research and information programs should be handled through the Research Service and the Extension Service.

Apparently the Commission believed that the record of the REA had been so good and public opinion was so favorable that it was not feasible at this time to incorporate REA into the more logical functional pattern recommended by the task force, for in its final report the Commission lists a seventh Service—the Rural Electrification Service.

In this connection it may be pointed out that the record of the cooperative agricultural credit agencies has been just as good as that of REA. The Federal land banks have rendered an outstanding service, repaid the United States Treasury for all borrowed capital, and become wholly owned by the borrowers. The leading editorial in the January issue of Country Gentleman reports that the 36 production credit associations of Texas are paying off the last dollar of capital advanced by the Government. They, then, like the land banks, will be wholly owned and controlled by the borrowers. This record of handling credit like credit rather than like subsidies speaks well for contributions of the whole cooperative credit system to the support of American free enterprise. The more nearly all Government lending to agriculture can fit this pattern, the better off we will all be.

An example of some of the absurdities in organization and procedures found by the agriculture task force is the dual set-up for the management of a large body of public forest land in Oregon and California, where the USDA and the Department of the Interior administer alternate sections in each township. The confusion resulting from paralleling and overlapping functions, policies, and programs of these two independent and unrelated Government agencies is obvious. The task force on agricultural activities recognized the serious need for better coordination and integration of Government programs for management and conservation of our natural resources. It viewed them properly as a community of interests, which could be most successfully administered by a single agency in one department.

Its recommendations were largely followed by the Commission, which proposed that all major soil, range and forest conservation agencies should be brought together in an Agricultural Resources Conservation Service.

Adoption of the basic features of the Hoover Commission report is not seriously jeopardized by differences in the opinions of those honestly endeavoring to secure the most efficient and economical organization of our governmental procedures. The real danger comes from those who want to maintain status quo. Most of those who violently resist change are among the hundreds of thousands of Government employees. Every proposed change for any department affects the status of some employees. They know where and how to make their complaints, influence administrators and Members of Congress.

Public opinion is overwhelmingly in favor of the Commission report, but it is not so vocal as the opposition. If the public allows this type of opposition to defeat our country's major effort to improve the efficiency of the executive branch of the Government, we shall have to admit that there is some ground for the fear of some that we are tending away from "government of the people, by the people, and for the people," toward a government by bureaucracy in the interest of its employees.

Former Secretary CLINTON P. ANDERSON, who has had experience in attempts to reorganize the Department of Agriculture and knows all the difficulties involved, in a recent public address said:

"If we approach every proposed reorganization of the Department of Agriculture with the condition that no employee is to be separated from his task, that no responsibility is to be lessened, that no services are to be regrouped, then no progress will be made either toward increased efficiency or reduced costs. It is only when there is determination that simplification must and will be achieved regardless of who is involved or how many positions are abolished that there can be any effective result. * * *

"Therefore, I suggest that we start by agreeing that reorganization is possible and should be undertaken. The plan proposed by the Hoover Commission may not be the only one that could be developed. It is, however, available and specific. It deals directly with conditions as they now exist. In the absence of a current and better proposal, it deserves a trial."

Resolutions of Ottumwa, Iowa, Federated Home Culture Club

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include a

set of resolutions adopted by the Ottumwa (Iowa) Federated Home Culture Club expressing its united opposition to any proposals for socialized medicine:

Be it resolved, That the Ottumwa (Iowa) Federated Home Culture Club does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control.

We are against socialized medicine because of the following:

Whereas the American family has received the finest quality of medical care available in any country in the world, developed under our system of free enterprise; and

Whereas compulsory health insurance, wherever tried, has caused a decline in national health and deterioration of medical standards, and facilities, to the detriment of family welfare; and

Whereas compulsory health insurance, wherever tried, has taken away the family's right to choosing its own family physician; and,

Whereas invasion of family privacy and violation of the sanctity of the patient-physician relationship have proved to be one of the most objectionable features of compulsory health insurance, wherever tried; and

Whereas compulsory health insurance would result immediately in a tax of 3 percent on the income of the American workingman, rising within a few years to 6 percent and higher, creating a new tax burden which would reduce household budgets and bring down family standards of living; and

Whereas Government control of medical services, by gradually undermining free enterprise and establishing heavy new tax burdens and unprecedented national deficits, would threaten national bankruptcy and encourage the spread of socialism, which would endanger the rights of our children to the individual freedoms which have been the American heritage.

FEPC Bill

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

IMPERIAL COURT, DAUGHTERS OF ISIS,
New York, January 21, 1950.

In re FEPC bill.

Hon. ADAM CLAYTON POWELL, Jr.,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN POWELL: The 5,000 members of the Imperial Court, Daughters of Isis, Auxiliary to the Imperial Council Ancient Egyptian Arabic Order Nobles of the Mystic Shrine of North and South America and Its Jurisdictions, Inc. (Prince Hall Affiliation), stand firmly behind you in your battle to secure passage of H. R. 4453, the FEPC bill.

Our several subordinate courts throughout the country devote themselves to charitable work. A true Daughter of Isis must, like a true physician, serve her needy fellow men without thought of recompense. Like physicians and other practitioners of the Golden Rule, we would welcome the opportunity to have abolished that particular need for our existence.

The physician may earn his income by treating our sick but his constant aim is to abolish sickness. Likewise, the Daughters of Isis exist to administer charity to the needy; but we hope, pray, work, and fight for elimination of such need.

Time and time again, experts have testified to the economic results of discrimination. Billions of dollars are poured annually down the drain as the exaction of bigotry. As a byproduct, millions of citizens—members of so-called minority groups, are pushed aside from the main stream of American life and forced into economically depressed ghettos. From among these ghetto dwellers come the most constant calls for our charitable ministrations.

The President's civil-rights program, by removing the dollar leak of discrimination, would go far toward eliminating the economic ghetto and improving the whole American economy. FEPC stands foremost of all the items formulating the civil-rights program.

We urge you to be firm in your battle to enact this legislation. Lift up the depressed by breaking down the walls of bullion. Give all citizens an equal opportunity through gainful employment. Enact FEPC—by so doing, the greatest work of all will be accomplished; that of striking at the causes which create applicants for charity.

Wishing you every success, we remain,
Fraternally yours,
EXCELLE HARMON MOORE,
Imperial Commandress,
Imperial Court, Daughters of Isis.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

STATEHOOD FOR HAWAII

Following its recent action on Alaska, the House of Representatives now takes up the question of statehood for Hawaii. The same strong and fundamental argument for favorable action applies in this case as in the other: namely, the fact that the people of these islands, like the people of Alaska, ask to be represented in the Government which taxes them and makes their laws. We on the mainland cannot reject this appeal without repudiating a basic principle of our own democracy.

En route to a decision, the House will meet two counter arguments which were raised in the debate over Alaska: That the Hawaiian Islands, though American soil, are not contiguous to continental United States and lie at a great distance from it, and that their population is too small to rate representation by two Members in the Senate. So far as the first point is concerned, other noncontiguous bits of land (Manhattan Island comes to mind) are and always have been represented in Congress, while the argument of distance has vanished with the air age. As for the second point: Hawaii outranks seven continental States (one of them an original member of the Union) in respect to population.

An additional counter argument (not heard in the case of Alaska) is that the Islands have a mixed population. So have we all, as individual States. And if it is further objected that Hawaii's mixed population includes many orientals, with an implied query as to how loyal a State so constituted would be, the answer is that all groups of the Hawaiian people gave a convincing demonstration of their loyalty and fortitude under the severe tests of a war that began with an attack upon Hawaiian soil.

Before the present session of Congress ends we hope that the stars of the new States will have been added to the flag.

Somerset County Maple Festival

EXTENSION OF REMARKS
OF
HON. ANTHONY CAVALCANTE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. CAVALCANTE. Mr. Speaker, each year in Somerset County, Pa., the citizens of Meyersdale conduct the Somerset County Maple Festival. This year it is expected that this festival will be bigger and better than ever, and because of its national importance, it is a pleasure for me to extend an invitation to all of my colleagues to attend this great occasion. Under leave to extend my remarks, I wish to insert in the RECORD an invitation from Mr. M. Frank Beamer, Jr., chairman, Somerset County Maple Festival, his personal invitation to each and every Member in both Houses:

SOMERSET COUNTY MAPLE FESTIVAL,
Meyersdale, Pa., March 6, 1950.

Mr. ANTHONY CAVALCANTE,
Member of Congress, House Office Building, Washington, D. C.

DEAR MR. CAVALCANTE: We again extend to you as our esteemed Representative in the Congress of the United States, a very cordial and hearty invitation to be with us during the Somerset County Maple Festival, to be held in Meyersdale, March 24 and 25.

We also request that, in behalf of the maple festival committee, you extend to those distinguished gentlemen in the United States Senate and House of Representatives, our invitation to accompany you to the hills of Somerset County and be in Meyersdale on March 24 and 25 for this great festival.

Meyersdale is located in the famous Allegheny Mountains, near the summit of Mount Davis, the highest point in the State of Pennsylvania. The days are warm, the nights are cool, and the fair breezes blow making the sweet waters flow from the heart of the maple, thus enabling the aborigines to produce the finest, purest, and sweetest maple sirup in the world. For years Vermont sirup processors have been bragging about their wonderful blended maple sirups, yet, few people realize that it takes the 100 percent pure maple sirup from Somerset County, Pa., to make the Vermont sirup good.

Also tell them that here they will see one of Somerset County's fairest young ladies crowned as queen to reign over the festival, in a colorful, elaborate coronation ceremony. There will also be served buckwheat cakes smothered in butter and in this finest and purest of all maple sirups. A pageant depicting the maple-sirup industry will be presented and in it they will see a historical picture of Somerset County when it was a part of the great Cumberland County. There will be a mammoth parade with hundreds of marching units from surrounding States, and dancing at the queen's ball with music by a nationally known band. Tours of well-known sugar camps in the area will be conducted to see how this sweetest and purest maple sirup is produced and processed. All activities will be broadcast via national net-

works and completely covered by news agencies.

As James Whitcomb Riley so aptly wrote in his poem, "'Mongst the Hills of Somerset"—

'Mongst the Hills o' Somerset—
Wisht I was a-roamin' yet!
My feet won't get used to
These lowlands I'm trampin' through.
Wisht I could go back there, and
Stroke the long grass with my hand,
Like my schoolboy sweetheart's hair,
Smoothed out underneath it there.
Wisht I could set eyes once more
On our shadders, on before,
Climbin' in the airly dawn,
Up the slopes 'at love growed on,
Natcheral as the violet
'Mongst the Hills o' Somerset.

How 't 'u'd rest a man like me
Jes' fer 'bout an hour to be
Up there where the mornin' air
Could reach out and catch me there!—
Snatch my breath away, and then
Rinse and give it back again,
Fresh as dew, and smellin' of
The old pink I us't to love;
And a-flavorin' ev'ry breeze
With mixed hints o' mulberries
An' may-apples, from the thick
Bottom lands along the crick,
Where the fish bit, dry or wet,
'Mongst the Hills o' Somerset!

Like a livin' pictur' things
All come back; the bluebirds sings
In the maple, tongue and bill
Thrillin' glory fit to kill!
In the orchard jay and bee
Ripen the first pears to me;
And the "Prince's harvest," they
Tumble to me where I lay
In the clover, provin' still
"A boy's will is the wind's will,"
Clean forgot is time, and care,
And think hearin', and gray hair;—
But there's nothin' I forget
'Mongst the Hills o' Somerset.

Middle-aged—to be egzact,
Very middle-aged, in fact—
Yet a-thinkin' back to them,
I'm the same wild boy again.
There's the dear old home once more,
And there's mother at the door—
Dead, I know, for thirty year,
Yet she's singin', and I hear;
And there's Joe and Mary Jane,
And Pap, comin' up the lane.
Dusk's a-fallin', and the dew
'Pears like it's a-fallin' too—
Dreamin' we're all livin' yet—
'Mongst the Hills o' Somerset.

Once again, please accept and extend to the Members of Congress of the United States our most cordial and sincere invitation to be with us during the festival.

Sincerely yours,

M. F. BEAVER, JR.,
Chairman, Somerset County Maple Festival.

More Light on the State Department

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica (Calif.) Evening Outlook of March 2, 1950:

MORE LIGHT ON THE STATE DEPARTMENT

The following is a quote from an Associated Press story out of Washington, dated February 28, dealing with testimony about the State Department given before a Senate Appropriations Subcommittee:

"The Hiss matter came up after Department Undersecretary of State John E. Peurifoy had testified that in the last 2 years the Department has rid itself of 202 employees who were under security investigation.

"He said 91 of the 202 were homosexual cases, explaining that such persons are rated bad risks because they might be blackmailed by spies."

We confess that we were more startled by that casual statement than by any other revelation that has come out of Washington in many months.

The Department of State is a good-sized agency, with 21,203 employees at last count. Whatever the number, it is shocking that 202 employees of the Department had to be dismissed because their loyalty was doubtful, and that 91 of these doubtful cases were found to be homosexuals.

Add to favorite swish occupations: A career in the United States State Department.

Now at last we know why American foreign policy in the Orient has been so confused. While the more manly Reds and fellow travelers argued in favor of embracing the Chinese Communists, the representatives of the third sex wanted to give everybody a good slap on the wrist.

Hong Kong

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Time magazine for March 6, 1950:

HONG KONG

WITH HIS MAJESTY'S COMPLIMENTS

In Hong Kong last week a British colonial court decided that 71 United States-made planes, formerly the property of Nationalist China, now belong to the Chinese Communists. With the aircraft (including DC-3s, five Convairs and five four-engined Skymasters) went 20,000 tons of maintenance equipment; altogether the property was worth $30,000,000.

The planes had been operated by Nationalist China's Government-owned CNAC and CATC. As Communist armies overran the mainland, the lines retreated to Hong Kong's Kai Tak Airfield. There, last November, most of their Chinese personnel declared allegiance to the Communist (Time, November 21) and shooed off Nationalist officials.

To get the planes out of Communist hands, the Nationalist Government sold the property to a United States corporation headed by its good friend of Flying Tiger fame, Maj. Gen. Claire Chennault, who operated Nationalist China's other air line (CAT). But when Chennault tried to take possession, Hong Kong authorities blocked him. There were reports of Communist threats to British business interests; one story was that the Communists threatened to confiscate one British business in Shanghai for every plane that went into Chennault's hands.

Meanwhile, there was an unexplained delay in a final court hearing. Then, in January, His Majesty's Government recognized Communist China. In last week's decision, Chief Justice Sir Leslie Gibson ruled that British recognition established Red ownership of the disputed planes. "Any question as to sovereignty * * * of a foreign state," he said, "is a question on which the court must be guided by the attitude of His Majesty's Government * * *. Our state cannot speak with two voices on such a matter, the judiciary saying one thing and the executive another."

At Kai Tak Airfield, exultant Chinese Communist mechanics painted Red flags on 71 fuselages.

Doctor Assails Dollar Chasing by Colleagues

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of March 7, 1950:

DOCTOR ASSAILS DOLLAR CHASING BY COLLEAGUES

Dr. R. J. Wilkinson, president of the Southern Surgical Congress, last night ascribed greed and selfishness to members of the medical profession and demanded a medical program which will give good treatment to all people at a price they can pay.

Dr. Wilkinson's remarks were part of the presidential address delivered at the end of the first day of the congress' 4-day convention in the Shoreham Hotel.

CALLS FOR LEADERSHIP

Charging a menace of being "manhandled by forces that are ruthless and have neither the doctor's nor the patient's welfare at heart," Wilkinson called for "fearless leadership to awaken the doctors to their responsibilities.

"Most of our young doctors, upon completion of college work, are pseudo scientists instead of well-trained practitioners of medicine," he said.

"In most instances," he continued, "the young graduate's patient must be hospitalized because the doctor has been taught to depend largely on hospital facilities for both diagnosis and treatment.

"Is it any great wonder,'" he asked, "that we are unable to supply doctors for our rural areas or for them to condescend to answer many night calls?"

SLAPS MEDICAL ASSOCIATION

With an oblique slap at the American Medical Association, Wilkinson said the association's ironclad rules, ultraconservativeness, and lack of fearless leadership are responsible for the present plight of the doctor.

Wilkinson cited the rapid growth of the Nation's population compared with the failure of medical schools to keep pace by providing a corresponding number of graduates.

He said there were 600 more young doctors graduated in 1909 than in 1949. With the Government (VA) absorbing many of them and the annual doctor death rate of 3,500 remaining constant, the plight of the patient grows serious, he added.

HITS EDUCATIONAL SET-UP

The doctor decried the present educational requirements, established by the AMA which compel medical students to go to school for 10 or 11 years, then finish as men who consider themselves specialists and charge high prices for services they are not yet qualified to give.

The diminishing of ordinary general practitioners in this country, Wilkinson said, may be accounted for by these long years of required study and by the inroads made by the Government's "baited hook."

EFFECTS OF VA ASSAILED

Referring to the Veterans' Administration practice of paying a flat $50 for a few hours of a specialist's time, Wilkinson said this can be considered "hush money" and accounts for the medical profession's hands-off policy in the matter of attacking regimented VA medical methods.

"Today," he said, "many of our young physicians are seeking employment with the VA, not for the high-type training offered, but because of the promise of a life of ease and retirement after 20 years' service."

"Some undoubtedly are afraid of complete regimentation and are seeking this protection in the hope of immunity when and if the fatal day arrives. I am afraid these boys will be disillusioned regarding their status if the day comes."

Wilkinson concluded with a demand for more State aid of medical schools, shortened educational requirements without sacrificing rigidity, condemnation of VA's socialistic methods, and an increased volume of medical students.

HESS RAPS DOLLAR CHASE

Dr. Elmer Hess, vice chairman of the council on medical service, AMA, told the group that current differences between physicians and hospitals, primarily based on financial matters, can be resolved if both sides stop thinking about the almighty dollar and become more interested in the public good.

Dr. Hess echoed Wilkinson's words by charging the Veterans' Administration with opening the doors to all ex-servicemen who become ill, although those hospitals were originally established to care only for service-connected disabilities.

The convention is represented by doctors from 12 States and the District of Columbia. The greater part of the session, which ends Thursday afternoon, will be taken up with reading medical treatises, with discussion periods following each reading.

Civil Rights

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

EAST END CIVIC LEAGUE,
Little Rock, Ark., February 21, 1950.
CLAYTON POWELL, Jr.,
House of Representatives.

GENTLEMAN: The news has reached us through our local paper (Arkansas Gazette) that the one Dr. J. M. Robinson, president of the Arkansas Negro Democratic Association of which we are a part, stated that the Negro in the South is not ready for civil rights; such statements we do flatly denounce.

Dr. J. M. Robinson also stated in his letter that the South is not ready for full participation in civil rights. It is our thinking that we are one Nation indivisible. He also stated, "I believe that reform of this kind should take place by gradual integration and not by overnight legislation." In question of power, Thomas Jefferson wrote: "Let no more be heard of confidence in man but bind him down by the chain of the Constitution" (legislation).

We further believe that the citizens of each State should be entitled to equal privileges and protection regardless of skin color, hair texture or religious faith. We are asking only for protection in the things God has given us; for out of one blood God has made all nations of men to dwell on the face of the earth, not as chattel, but as men.

Again, Thomas Jefferson wrote: "All men are born equal." This document has been carefully investigated and after much deliberation by our organization we thought to send a copy to each of the above-named persons. We would have you know that it is the offspring of our thinking, uninfluenced by any political party.

Now, therefore, we pray you upon your sacred honor that you will exert your every effort to see that this civil-rights bill be passed immediately. You have our confidence. May the grace of our Lord Jesus Christ be with you.

J. L. HAWKINS, *President.*
MRS. M. JACHSON, *Secretary.*

The Mopac Turns to Radio

EXTENSION OF REMARKS
OF
HON. JOHN B. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am proud to call attention to the fact that the Missouri Pacific Railroad and the M. K. & T., which serve Missouri and St. Louis, are pioneering the use of radio. They have found it helpful and are extending its use. The timely editorial from the St. Louis Post-Dispatch of February 21, which follows, discusses this subject:

To those of us who are supporting H. R. 378, and working for railway safety in the face of blind and obstinate opposition of those who oppose the use of radio or any other safety device, it is refreshing to know that the Missouri Pacific and the Katy, which are so large a part of our everyday life, are showing the way.

THE MOPAC TURNS TO RADIO

Included in the Missouri Pacific's $5,399,000 improvement program is $164,000 for train radio. This is a small but important item of the total bill, because radio is largely neglected as an aid to railroad safety. In this region, the Katy is the only other line to make much use of radio for any purposes.

Actually, safety is not the principal reason for the Mopac's action. It is installing the radio equipment on 53 freight trains, largely for cab-to-caboose communication in switching work. This will help operating efficiency more than safety. Still, some accidents have developed from slowness in getting freights onto sidings. Here, the cab-to-caboose system can help.

Passenger trains, however, should have first call on train radio, and it should be intertrain radio. The use of radiophone between trains could have helped prevent many accidents. One was the Otterville collision on New Year's day 1948, when one Mopac train ran into the rear of another and 14 persons were killed.

Most railroads have opposed efforts to make them adopt train radio on grounds that it is too experimental. Though neither the Mopac nor the Katy are making anywhere near full use of radio for safety reasons, they have gone far enough to dispose of the argument that train radio is impractical.

Public Works for Full Employment

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, under unanimous consent to extend my remarks, I wish to include the following article from the Washington Post of March 7, 1950, on the subject of unemployment:

IDLE NOW TOTAL 4,684,000, HIGHEST POINT SINCE AUGUST 1941

Unemployment figures rose to 4,684,000 in February, highest since August 1941.

The figure, reported by the Commerce Department yesterday, is an increase of 204,000 over January.

The total does not count those idle because of strikes.

In the Government's statistics, strikers are counted as employed since they have a regular job, even though they are not working at it while on strike.

Secretary of Commerce Sawyer said in a statement:

"The slight rise in unemployment between January and February appears to be due mainly to a seasonal increase in the labor force and not to any cutbacks in employment.

"Nonfarm employment seems to be holding steady this year in contrast to last year."

The Census Bureau, which prepared the figures, observed that between January and February last year there was a 500,000 increase in the number of jobless, "with nonseasonal cutbacks in employment an important factor in the rise."

The 204,000 rise in unemployment from January to February this year resulted from the fact that 210,000 persons, including midyear school graduates, entered the labor force—and only 6,000 new jobs were available immediately.

The 6,000 new jobs raised the total of those with regular work to 56,953,000.

The 4,684,000 total of unemployed compares with 5,620,000 in August 1941.

In this connection, I wish to refer to H. R. 5010 which I introduced on June 6, 1949 and which was referred to the Committee on Public Works, which reads as follows:

A bill to authorize the expenditure of $5,000,000,000 through the Federal Works Agency to provide for needed public improvements and to promote full employment

Be it enacted, etc., That it is hereby declared to be the policy of the Congress that within the provisions of this authorization and through the organization of the

Federal Works Agency measures be taken to restore full employment within the United States and to construct projects in cooperation with the local communities in order to provide needed public improvements.

SEC. 2. Work on all projects shall be paid for at the hourly rates of wages equal to those prevailing for similar work in private industry in the locality or to the union scale of wages obtained for such work in such locality.

SEC. 3. No worker shall be denied employment because of sex, race, color, religion, length of residence within a community, political opinion, or membership in any economic, political, or religious organization, excepting persons who are members of organizations advocating the overthrow of the United States Government by force or violence.

SEC. 4. The Administrator of the Federal Works Agency is hereby directed to distribute equitably between the States the various projects with a view especially to meeting the unemployment situations as they may exist.

SEC. 5. There are hereby authorized to be appropriated to the Federal Works Agency the sum of $5,000,000,000 for the purposes named.

Mr. Speaker, it is to be noted that the current unemployment of 4,684,000 does not include persons who are idle because of strikes. Such persons, in the computation of the Commerce Department are considered as having jobs. It is also to be noted that the current figure represents the highest number of unemployed since August 1941. Hence it is apparent that good reasons exist for taking immediate action on such legislation as H. R. 5010.

Public works in this country have been retarded during the period of the war and its aftermath. Modern and adequate road construction for highways and through cities are needed or else the production of automobiles in this country will be interfered with. The construction of needed post offices, other Federal buildings and schools would benefit communities with improvements that are overdue and would put men to work and would reverse this trend of growing unemployment.

I am requesting the Public Works Committee of the House of Representatives to commence hearings on such legislation.

American Planes in Hong Kong

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. HALE. Mr. Speaker, under leave to extend my remarks I desire to call attention to the speeches made on March 1 by Mr. LODGE, of Connecticut, and Mr. LARCADE, of Louisiana, about the American planes in Hong Kong. The State Department should take effective action to prevent these planes from falling into the hands of the Chinese Communists. Our consul general in Hong Kong, Karl Rankin is known to me as a man of exceptional abilities but he cannot be expected to act effectively unless his superiors in the State Department will give him appropriate instructions and back them up. The British are our allies in the Far East but they are endangering the foundations of this alliance with consequences so serious as to outweigh any temporary advantage they may reap from what amounts to paying "squeeze" to the Communists with American property. That in my opinion is not the way for the British to save Hong Hong.

I append an article by Clyde Farnsworth appearing in the Washington News of February 28 last and a dispatch from London appearing in the New York Herald Tribune of February 28:

[From the Washington News of February 28, 1950]

PROTEST OVER PLANES LACKS REAL PUNCH

(By Clyde Farnsworth)

HONG KONG, February 28.—Whatever Secretary of State Dean Acheson may have said about the vigor of American conversations with the British over their gift of 71 American-registered transport planes and other aviation assets to the Chinese Reds, the State Department has been pulling its punches.

The State Department has been using strong language but not strong enough to make the British back up on a deal that was cooking for 3 months as part of Britain's recognition of Red China.

United States Consul General Karl Rankin has been going as far as his instructions permit in voicing official American disapproval. But he said today there had been no actual protest over last week's ruling of the Hong Kong Supreme Court.

Representations to Hong Kong haven't been elevated to the plane of formal notes. An official said the State Department had gone no further than to say that if a fair trial was not granted by the British to determine title to the airlines' assets, the United States would view that shortcoming as an unfriendly act.

[From the New York Herald Tribune of February 28, 1950]

HONG KONG RULING TO STAND

LONDON, February 27.—The British Government cannot and will not interfere with a Hong Kong Supreme Court decision handing over 90 Chinese air-line planes to the Communist Government of China, a Foreign Office spokesman said today.

He confirmed that representations against the ruling have been made to Great Britain by the United States, which contends the planes passed into the hands of an American company through purchase. But, he added, the court ruling in the British colony is something over which the British Government has no control.

The VA Cut

EXTENSION OF REMARKS
OF
HON. CHARLES P. NELSON
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. NELSON. Mr. Speaker, I am sure there are many of us in the House who are sincerely interested in economy to whom the proposed cut in Veterans' Administration personnel poses a problem. We would all like to know why and where those cuts are to be made and just whom they will affect. No such cut could be justified if it materially affects the treatment of veterans with service-connected disabilities and especially those veterans who now live and may always live in the psycho wards of our hospitals because of the horrors of war. To us then the statement of the council of the American Psychiatric Association is most disturbing. I am informed that this association represents 5,500 psychiatrists throughout this country. I believe that statement should be spread in the RECORD for our information.

On Friday, March 10, 1950, 8,000 employees of the United States Veterans' Administration will be notified of their dismissal if immediate action by Congress is not taken. Government procedures prevent Veterans' Administration officials from telling Congressmen directly of the disastrous results which will follow. Contemplated reduction in personnel will result in immediate deterioration of medical care to veterans and discourage remaining personnel in the performance of their duties.

This kind of false economy always results in less effective treatment which ultimately means greater expense to taxpayers.

The American Psychiatric Association strongly maintains that unless this action is prevented, medical care of nervous and mentally disabled veterans will deteriorate below accepted adequate standards.

The President's Vacation

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. ARENDS. Mr. Speaker, the President is going down to Key West next Sunday for another vacation. The White House explains that he is tired and needs a rest. Very likely the President is tired because of two things. It must have been an extreme exertion for the President to insist over and over again that the coal strike was not a national emergency, that the people were not suffering from the severe winter weather and that the Nation's economy was not upset despite the fact that the strike idled 600,000 workingmen.

Secondly, the President certainly must be exhausted over the labor of devising ways and means to spend the people's money and just how to continue his plans to spend us into false prosperity.

We can expect developments on the spending front during the Key West vacation. Remember the last time he went down to the sands of Florida, it was from there that his Budget Director announced that the 1950 budget couldn't possibly be balanced without a tax increase.

It was also at Key West last November that the Democratic National Chairman solemnly said that the people would gladly accept any tax increase the President might request in 1950.

So, Mr. Speaker, we should keep attuned to the pronouncements coming from Key West during the next few weeks. I am certain they will affect the whole Nation.

Along this line, under permission to extend my remarks, I include in the RECORD an editorial in the Cleveland Plain Dealer which everybody in the country should read. It certainly hits the nail right on the head.

THIS IS NOT FICTION

Will the reader pretend that he has an obscure neighbor by the name of Harry Truman? And will he pretend that Neighbor Truman has decided he must borrow money, a decision which many of us ordinary folks have reached at times in the tempestuous course of life?

Neighbor Truman, we're going to pretend, steps into the bank to apply for the loan, and we're going to have the privilege of observing the transaction.

"I want to borrow $500," says our neighbor. (Now most will anticipate the next few questions, having been through it.)

"Do you have any debts at the present time?" the banker inquires.

"Yes," says our neighbor. "I owe the bank at this moment about $25,800."

"What is your annual income, Mr. Truman?"

"I have take-home pay amounting to $3,750 a year," says he.

"Hmmmmm," the banker hmms. He at once is suspicious of the client's ability to pay the old debt without $500 more added. And aren't his eavesdropping neighbors suspicious, too?

But the banker gives allowance for unforeseen circumstances. So he asks Mr. Truman, "Do you think you will be able to save a large portion of your income this year and each succeeding year to reduce your indebtedness?"

"Oh, no." Neighbor Truman replies to the surprise of the banker, and the neighbors listening in. "My necessary living expenses this year will be $4,250. I'll be forced to spend more than I earn."

"Pardon me," the startled banker interjects. "Do you mean that, owing already an amount that constitutes seven times what you'll take in during a year, you're going to spend more than you earn?"

"That's right," says Neighbor Truman. "You see, I must provide tuition at private schools for my children. I must help a poor relative set up a new business in which he's going to lose money for a long time to come."

"Just what kind of business is that relative going to sink your money in?" the incredulous banker asks.

"Why," says Mr. Truman, "he's got a wonderful humanitarian idea. He's going to sell milk to the Hottentots at a price they can afford to pay."

"But just those things won't eat up your whole income this year, will they?"

"No, but that isn't all," says Mr. Truman. "I am building security for my children by putting price supports under them. My boys sell newspapers to the neighbors at a nickel apiece, but I give them an extra nickel. My daughters make lamp shades which they sell for $5, but I don't think that's a fair price, so I give an extra $2 for each one they sell. Besides my wife wants a television set."

The banker now steps aside to get his breath. Here's a fellow who owes more than he can ever repay if he lives frugally below income seeking to borrow still more, and at the same time boldly proclaimng his intention of carrying out fantastic money-spending schemes.

What will the banker do?

Will he lend the new money? It's silly even to ask the question.

This scene is not fiction. It constitutes a faithful reproduction of the program set forth in regal solemnity by President of the United States Harry S. Truman. Multiply all figures by 10,000,000 and you have the Truman budget, his plan of government, the Government's income, and the Government's debt.

In this case Congress is the banker. If it makes the loan, Borrower Truman's note will have to be signed by the taxpayers, which is to say by all the people. Who, in his right mind, would voluntarily sign the note of such a profligate spender?

World Peace Threatened by the Arms Race in the Middle East

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. DOLLINGER. Mr. Speaker, knowing that many of my colleagues are as perturbed as I am over the arms race in the Middle East, and the lack of action on the part of our State Department to stop it, I am including in the RECORD my letter to the Secretary of State, so that Members of the House may know what I have requested of him.

MARCH 7, 1950.

The Honorable the SECRETARY OF STATE,
Washington, D. C.

SIR: The purpose of this communication is not merely to express alarm and concern over the great arms race in progress in the Middle East, but to call upon you, as countless others have, to use all the power vested in you, to stop it.

Authoritative reports—admitted by all the nations involved—prove that the Arab nations, Egypt, Iraq, Transjordan, and Syria, are rearming for war. They have recently purchased and contracted for, large numbers of jet fighters, heavy bombers, artillery, and mobile units, as well as modern and heavily gunned destroyers, corvettes, and submarines. In November 1949, we learned that the Egyptian Purchasing Mission was placing orders for $45,000,000 worth of artillery, jet aircraft, infantry equipment, and sea torpedo craft. She will soon have a total of six new warships. It is not necessary for me to lay facts and figures before you. As our Secretary of State you have access to much more material and information than do our regular news sources.

That the greatest arms race in the history of the Middle East is on, is acknowledged. We also know that the equipment involved has come from Britain, and that she is also appropriating huge sums in her budget for the rearming of the Arab states. At the same time, the United States is supplying money, arms, and ammunition to Britain, and we are told that surplus American arms which we left in England, are today in the possession of Egypt and other Arab states. Therefore, unwittingly, the United States is contributing toward the rearmament of the Arab nations, and increasing the threat to Israel. Yet, the position of the United States has been that export of arms to that area of the world should be strictly limited to such arms as are within the scope of legitimate security requirements.

The British insist on their freedom to ship arms overseas, claiming that such shipments are necessary to establish the morale of the Arab states as a buffer against further Communist expansion. We know that the shipments are not necessary, nor are they being made for the purpose of maintaining internal law and order, and for the purpose of self-defense. All this dates back to an agreement that Great Britain made after the end of World War I, when she was entrusted with the Mandate of Palestine. At that time (1920) Transjordan was considered a part of Palestine. Two years later, the British Government declared "the exclusion of Transjordan from the article of the mandate relative to the establishment of a Jewish national home in Palestine." Then the Emir of Transjordan organized a regular armed force. This force, known as the Arab Legion, was commanded by Col. F. G. Peake Pasha, a Britisher. In 1938, Colonel Peake was replaced by Col. Glubb Pasha, another Britisher. Under these two British officers the Arab Legion came to be the most effective fighting force in the entire Arab world.

At the end of World War II, Britain signed a treaty with Transjordan, recognizing it as a fully independent state and agreeing to give military aid to each other as a result of an armed attack by a third party; she also agreed to afford financial assistance in meeting the cost of the military units of Transjordan as well as to provide British officers for training in all fields of military and aeronautical instruction, including such arms, ammunition, equipment, aircraft, and other materials as may be necessary. In view of the terms of this treaty, England found herself bound by her word and believed that from the spring of 1946 she was obliged to render financial and military assistance to Transjordan. Although the treaty did not specify a definite sum of money, it was later agreed that the sum would not exceed two and one-half million pounds sterling annually (about $10,000,000 at that time). In the 1949–50 budget, this annual payment was raised to three and one-half million pounds sterling. As soon as the UN Security Council lifted the arms embargo on August 7, 1949, Britain started to send arms to the Arab nations.

The extravagant military preparations on the part of the Arabs points to only one thing—war Any other conclusion is only wishful thinking. The volume and kind of arms being purchased by the Arabs from England and other European nations are far in excess of what are needed for ordinary defense in peacetime. And who is the potential victim? Israel. The Arabs have threatened a "second round" against Israel. Statements by their military and government officials as well as a hostile press, all point to a renewal of hostilities against Israel.

There is at present no peace between Israel and the Arab states. There is merely a cessation of hostilities. But we had all hoped that Israel and the Arab states would soon agree upon final and lasting peace treaties. To encourage and assist them in an armaments race at this time is cruel, and the results will be disastrous.

Our Government has maintained that it is dedicated to helping people of all democratic nations so that they may live in peace, free from the threat of aggression. Yet, by giving military and financial aid to Britain, we are helping her to undermine the safety and security of Israel. Britain contends that by sending arms to the Arab states, she is not violating her agreement with us under the mutual defense program. I maintain that if it is no direct violation, then it is such a circumvention of the pact that our aims are destroyed. The fact is that in helping Britain, we make it possible for her to arm aggressor nations in the Middle East. These nations have Israel as their target, and have sworn to conquer her.

A short time ago, we welcomed Israel into the world's family of democracies. She has emerged triumphant after years of bloodshed, untold hardships, and struggle. Although faced with all the economic and governmental problems of a new nation, she undertook at the same time to receive 150,000 displaced persons and to resettle and assimilate them as well as 200,000 more of the

homeless and disinherited human beings who looked to her for shelter.

It is a stark tragedy that at this crucial point in Israel's history, she is forced to divert her manpower, energies, depleted finances, and efforts, to defense activities instead of being assisted along the path of peace, security, and freedom for which she has fought so desperately. Furthermore, it is a sad commentary upon the leading nations of the world, that we are to a great extent, responsible for her plight.

Mr. Secretary, you have remained very calm in the face of these developments. Your attitude has been that we should wait and see what happens. Surely, you know what happens when potential enemies are geared for war and when one of them is boasting that it will conquer the other. Surely, I need not point out to you that war in any part of the world today, threatens every other nation in the world. There must be no renewal of the Palestine conflict.

What is tantamount to a violation of protocol occurred in Washington last week. The State Department let out a story about an Israeli request to purchase arms from the United States. Normally, the applicant publishes such a request, if he so wishes, but the recipient of the application rarely does so. The statement given by the State Department failed to place accurate emphasis on the Israeli request. Israel's communication protested arms shipments to the Arab states, hoped America would take steps to prevent such a race, and added, in conclusion, that as a means of prevention Israel wished to purchase arms in America.

By not revealing the background against which the Israeli request was transmitted, the State Department created the impression of an outright arms request. Thus, it might be interpreted that Israel's past protests against arms shipments to the Arab states were merely a blind or smoke screen preparatory to Israel's own arms request.

Again let me emphasize—Israel wants peace, not conflict. You, as a powerful Cabinet officer, our Secretary of State, have at your command the means to avoid such a conflict. You can insist that the British Government stop the shipments of arms to the Arab nations until the United Nations has had a chance to investigate the entire situation in the Middle East. The United States should stop all aid to Britain as long as she persists in arming aggressor nations.

The United States has assumed a leading role in the world. This being so, let us aim for the respect of nations by upholding the cause of peace, and have the courage to insist upon the right. Any other attitude on our part will bring shame upon us and the derision of our enemies. To continue to close our eyes to the impending shooting war in the Middle East is to violate our commitments to the world.

Mr. Secretary, what are you going to do?

Sincerely yours,

ISIDORE DOLLINGER,
Member of Congress.

Billions for Arizona Landholders but Not One Cent for a Crippled Child

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. POULSON. Mr. Speaker, the State of Arizona, which is now asking the Congress for a $1,500,000,000 reclamation gift, has just announced a new policy that reveals the great "humanitarian instincts" in the hearts of the Arizona people.

That policy is: No crippled Indian child shall be helped.

The Public Welfare Board of Arizona, which favors the proposed central Arizona project, recently voted to refuse their annual Federal grant of $100,000 for crippled children rather than include Indian crippled children.

All other States provide treatment for crippled Indian children on the same basis as for other crippled children.

Not Arizona.

Arizona is now asking that the Federal Treasury hand out one and a half billion dollars for a project to bring Colorado River water to a few thousand acres of land which is owned by a few large growers and speculators.

This is to be a gift to rich white Arizonians by the American taxpayers.

But what will these rich Arizonians do for the crippled children of their State? Rather than let Indian crippled children be helped, they have refused their annual Federal grant. Thus, they have not only deprived the crippled Indian children, but have deprived the white Arizona crippled children as well.

Regarding this matter, Miss Katharine F. Lenroot, chief of the Children's Bureau, Federal Security Agency, is quoted as follows:

The Children's Bureau did not voluntarily or arbitrarily withdraw funds for crippled children in Arizona. The decision was that of the Arizona State Board of Public Welfare. Over 2 years ago the Children's Bureau advised the Arizona State Department of Public Welfare that the exclusion of Indian crippled children from the treatment services was contrary to the intent of the Social Security Act.

What has Arizona been doing with the Federal money it received each year for aid of crippled children? The Indian Rights Association states that for years Arizona has been taking this Federal money on the basis of including Indian children, but has refused to help Indian crippled children.

The victims of this devious and reprehensible practice are physically handicapped Indian children—

Declares the association.

Another indication of how little regard Arizona has for Indians, crippled or not, is the fact that the proposed central Arizona project would flood an Indian reservation, destroying the farms and homes of these Indians, and repay them nothing. The project would, however, make scores of white millionaires at the expense of taxpayers of other States.

In December 1949 the Children's Bureau proposed that Arizona accept Indian crippled children in need of treatment on an equitable basis with non-Indian children, the cost not to exceed 15 percent of the total expenditures in the State for this program. Indian children make up about 15 percent of the child population in Arizona. The State of Arizona rejected the Bureau's proposal.

Miss Lenroot stated:

Because of this discriminatory action on the part of the Arizona Welfare Board and its refusal to accept any Indian children for treatment, other crippled children in the State are deprived of the care which could have been purchased with the $100,000 of Federal crippled childrens' funds allocable to Arizona each year.

But even this was not enough for the generous Arizona officials. They had to strike another blow at Indians. The welfare board also decided to discontinue all State funds for children with rheumatic fever who received care from the board of public health. The reason for this action? The public-health program of care included Indian mothers and Indian children.

As stated further by the Indian Association, this unjust action of Arizona fits into a pattern of State discrimination which has for years denied the Indian aged, blind, and dependent children the social-security benefits extended to all other Arizona citizens, including the big landholders who are trying to raid the Treasury for more than a billion dollars.

Under the Social Security Act, Federal aid is granted to all States for the care and treatment of crippled children on the basis of the total number of all children, not just on the basis of non-Indian children.

Apparently this is Arizona's policy:

Free millions for each white landholder, but not one cent for a crippled Indian child.

The United States and the Near East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. MULTER. Mr. Speaker, on several occasions in the recent past—notably on February 20 and 28—I drew the attention of the Members of this House to the fact that a general rearmament race is now taking place in the Near East which is bound, sooner or later, to lead to a renewal of warfare in that part of the world and to the most dire consequences for the peoples of the Near East and the peace of the world.

The United States is vitally interested in maintaining peace throughout the world, including the Near East. It is quite clear and readily understood today by the people of this country that an act of aggression anywhere in the world is a disturbance of the peace everywhere.

There is reason to believe that some of the surplus American arms and military equipment from the recent war, as well as some of the arms which we are shipping to England and other western European countries to bolster their defense, is finding its way to Egypt and the other Arab states. Thus, indirectly, our country is a partner to Britain's rearmament of the Arabs. By our support and tacit approval of Britain's action we are condoning such deeds and encouraging Arab aggression against Israel.

The upshot of this has been that Israel was compelled to divert a substantial

part of its resources for armaments in order to face realistically the terrible threat of war. Instead of devoting its full attention to solving its economic problems and to the absorption of the many homeless Jews who have found a place of refuge and a new home in Israel, the young Jewish state is forced to turn its attention to armament in order to secure its future existence and that of its people.

If, for reasons of security, our country finds it necessary to rearm the Near East, then such policy of rearmament should apply to all countries, including Israel. I have been to Israel twice in the past year and a half and I can assure the Members of this House that the United States has a most loyal and devoted friend in the Jewish state, where there is a deep understanding and appreciation of our way of thinking, our mode of life, and our civilization. Israel is a true bastion of democracy in the Near East.

Now Israel has approached the United States with the request that it be permitted to purchase the necessary arms in this country. I would much prefer that the United States use its good offices and its most convincing arguments to persuade Britain to abandon her dangerous policy of arming the Arab States as the best way to prevent the outbreak of hostilities in the Near East.

If, however, this is impossible at the present time, then our country should make available arms to Israel in order to balance the rearmament program in the Near East and in this way eliminate the restlessness and fear which is rampant among the peoples of that area. By so doing, we shall also hasten the attainment of genuine peace treaties between Israel and its neighbors.

Mr. Speaker, at this point I want to read an editorial entitled "For Middle East Peace," from the Jewish Advocate, Boston, Mass., of March 2, 1950, as follows:

FOR MIDDLE EAST PEACE

The disclosure that Israel's Ambassador to Washintgon, Eliahu Elath, had requested the State Department to permit the sale of arms to the new state was neither surprising nor unwarranted.

The Arabs have long been receiving heavy arms from Britain, and our own Secretary of State has defended London's policy on the ground that shipments were made under long-standing treaties aimed at enabling the Arab countries to maintain internal security. The fact that the shipments were of so heavy and abundant a nature as to preclude the conclusion that they were meant solely for internal-security purposes did not deter Mr. Acheson from displaying irritation when pushed against the wall. In fact, shortly after Louis Lipsky, chairman of the American Zionist Council, called on the State Department to protest against the heavy shipments of British arms to Egypt, Mr. Acheson found it necessary to stress at his press conference that he had not changed his mind about the issue.

Now, if Washington and London are so concerned about internal security in the Arab lands, the corollary follows that they should be equally concerned about Israel's ability to maintain internal security. And if the Arab countries get tanks, destroyers, submarines, and jet planes—as Drew Pearson told the UJA national conference at Miami Beach last week end—for the preservation of internal order, there is no reason to assume that Israel doesn't need them.

But the truth of the matter is that a dangerous cold war is being conducted in the Middle East against Israel and that the shipping of heavy arms to those countries foreshadows the possibility of a second Arab round against Israel and its people. If that is the motive behind Britain's heavy sale of arms, it is simple logic that American sale of arms to Israel would prevent another war in that segment of the world. The argument that the arming of the Arabs is part of the world picture, a sort of precaution against an aggressive Soviet move, is too specious a contention to merit serious consideration. The realists in Washington and in London know full well that if they must count on the Arabs to hold back the march of the hammer and sickle in that area they might just as well write off the Middle East.

If it is peace in the Middle East that is really the concern of our policy makers, they have only one course—either have Britain abandon her dangerous policy or else offset that evil by permitting Israel to secure arms in the United States.

Political Parade

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Rothwell Brown in the Washington Times-Herald of January 20, 1950:

POLITICAL PARADE

(By George Rothwell Brown)

President Truman, with a cynical effrontery without precedent in American history, has now openly and brazenly asserted the mastery of the executive power over the legislative branch of the Government.

This is the sinister significance of this week's show-down battle in the House of Representatives over a resolution to restore the power of the rules committee.

"I am doing everything possible," said the President in a direct quotation, "to have that motion beaten when it comes up for consideration on the floor of the House."

Those shocking words, hitherto unfamiliar to American ears, represent the most flagrant and unconstitutional attempt at executive usurpation of power since the adoption of the organic law of the Republic.

They mean that the President of the United States has viciously undertaken to dictate to the House of Representatives the making of its own rules.

No President in this country ever before thus publicly claimed a royal prerogative which went out of fashion in the English-speaking world with the overthrow of the Stuart kings and the Declaration of Independence.

The Constitution of the United States provides that each House may determine the rules of its proceedings.

The form of government it provides is strictly one of separate and independent branches, legislative, executive, and judicial.

A President of the United States has no more authority to tell the House of Representatives or the Senate what rules it may or may not adopt, than he has to tell the United States Supreme Court what decision to hand down in a pending case in which, as President, he might be interested.

As a matter of fact the rules of House and Senate are carefully designed to preserve the constitutional functions and independence of those bodies and to prevent any attempt at executive encroachment.

The President's impudent interference in the vital question now agitating and dividing the membership of the House is a deliberate and premeditated infringement upon congressional liberty of action under the Constitution.

It is a challenge to the high estate of the House and its freedom from all Executive penetration, and is enough in itself alone to inspire the House to repudiate this attempted invasion of one of its most sacred rights, by ignoring the President's pressure—and it is plenty—and restoring its powers to the Rules Committee.

The President's intemperate attack upon the constitutional integrity of the House of Representatives was made before a so-called civil-rights group that has been meeting in Washington.

This outfit made a great show of excluding all Communists who clamored for admission, but with transparent insincerity it has swallowed nearly the whole of what the Communists stand for.

But there is more than FEPC or civil rights involved in the revolt of conservative Members of both parties in the House against Executive domination.

Notwithstanding it was deprived of its traffic control of pending legislation on January 3, 1949, the Rules Committee, controlled by a bipartisan conservative majority, has been bottling up since the adjournment of the last session of Congress a prospective welfare-state-treasury raid involving eventually upward of $15,000,000,000. Some estimates are much higher.

The continued solvency of the United States is hanging in the balance in the Rules Committee at this very moment.

If the floodgates of squandermania are opened this country is sunk.

Thus far the Rules Committee has been keeping back the threatening tide of unconscionable spending that could only end in national bankruptcy.

But in its present condition of limited power it cannot hold back this impending flood of red ink indefinitely.

Mr. Truman knows that if the conservative coalition in the House can rehabilitate the Rules Committee the scheme to socialize America cannot be carried any further this year.

From his point of view his design to browbeat the House into submission to his will is perfectly understandable.

Aided by the powerful labor dictators who are deluging Members with their demands and orders, the President is pouring it on.

Will the Republican minority play Truman's game?

It is up to them.

The Coal Industry Wanes

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I reproduce the editorial taken from the Shreveport Times of February 26, 1950, entitled "The Coal Industry Wanes." This editorial is as follows:

THE COAL INDUSTRY WANES

Ten years ago a month-long strike in the coal industry was enough to bring the economic life of this country to a dead stop. Times have changed. The mines have been

shut down two-thirds of the working time for the past 8 months. A dead stop is not in the picture.

During 1949 coal production in this country dropped 170,000,000 tons below the level of 1948 because of strikes and the short workweek. But this low level of production fell only 10,000,000 tons short of meeting the full demand for coal in the United States market.

This down slide of the coal industry as a factor in meeting the total fuel demand is at the bottom of the labor-management strife in the industry, and the important thing is that the situation for the industry seems certain to become worse, much worse, in the months and years ahead.

Among the one-time giant consumers of coal which have turned to other fuels at a fast clip in recent years is the railroad industry. A generation ago 90 percent of all fuel used by the railroads was coal. Two years ago coal constituted 68 percent of all rail fuel. But today, because of the rapid change to Diesel oil, only 26 percent of all passenger mileage is being regularly provided by steam-powered locomotives and only 46 percent of all freight mileage. These figures are based on normal operations, not on operations curtailed because of the coal strike.

Many other industries are abandoning, or have abandoned, coal as fuel. The steel industry is still a large user, primarily because no effective substitute for coal has been found in steel making. But the research experts of the major steel companies are at work seeking new processes which will permit abandonment of coal. If a process is found—and it is likely one will be found—the demand for coal will take a fresh skid.

The prospect is then that many of the mines now being operated skip-stop fashion because of labor difficulties will close down entirely before many years have passed. The mine owners and miners alike have been trapped by a sweeping change in fuel use, and the closing of the trap has been accelerated by labor wrangling, higher production costs, uncertainties as to supplies.

One characteristic of our highly industrialized economic life is that it is unfriendly to high costs wherever they may be. The coal industry for too long harbored the conviction that the country cannot get along without coal. And now the country is well on the way toward doing it. Any philosophy of production or of management or of marketing which is premised on the belief that the consuming public must have a certain commodity or service or production method is resting on a flimsy foundation in these days of rapid research development and sharp industrial competition.

CARE Book Bill

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star:

CARE BOOK BILL

When at war's end, Selective Service Director General Hershey strongly recommended that the wages earned by the conscientious objectors and paid into the Treasury should be appropriated for a welfare fund for these men and their families, the conscientious objectors themselves rejected the proposal. They voted instead that the money, which amounts to $1,327,641.67, be turned over to CARE for furtherance of its program of restocking the war-ravaged libraries of the world with the latest and best in scientific and technical books and journals. The crying need for such intellectual nourishment in countries which suffered an almost 10-year blackout of medical, scientific, and professional information need hardly be labored here. Nor does it seem necessary to point out that the advantages of making self-help available to professional men in other countries are mutual.

Yet, this humanitarian gesture was slapped down in the House on Wednesday. The measure was defeated amid a chorus of unworthy fulminations about economy, isolationism, and drearily familiar money-down-the-rathole formulas. Since the fund does not come out of tax money, the economy talk is not convincing. The contention that the program duplicates the work of the State Department library service was not well made, since CARE seeks only to provide books for already established national institutions, while the State Department must house, equip, and staff its libraries. The objections voiced to the conscientious objectors themselves were simply irrelevant. These men contributed a total of 8,237,866 man-days of labor during the national emergency. They have, as Representative JUDD, sponsor of the bill, points out, a moral equity in the funds paid to those among them who were assigned to private employers. They have chosen a worthy purpose for their disposition.

Freedom on the Baltic

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. KLEIN. Mr. Speaker, it was recently my privilege to speak at Webster Hall, in New York, to a considerable gathering of American citizens, or prospective citizens, of Lithuanian birth or derivation. The occasion was the meeting, on February 19, of the Luthuanian-American Council of Societies, to celebrate the thirty-second anniversary of the declaration of independence of the Republic of Lithuania—a date revered in their hearts, though Nazi terror and Soviet might have eclipsed the reality.

A resolution was adopted at that meeting which, under leave, I am inserting in the RECORD at the request of the council, that the dream of liberation may not die:

Citizens of New York meeting under the auspices of the Greater New York Lithuanian-American Council of Societies, on the 19th day of February 1950, at Webster Hall in New York City, for the purpose of fittingly commemorating the occasion of the thirty-second anniversary of the declaration of independence of the Republic of Lithuania; after deliberating upon the present-day political situation as it affects Europe and particularly Lithuania and its neighbors, Latvia and Estonia, make note thereof herein and the following resolutions thereon, to wit:

Whereas after military victory over Nazi Germany, the promise of freedom, happiness and justice to the enslaved peoples in Europe has thus far been denied due to the Soviet Russian aggression and the peoples of Lithuania and her Baltic neighbors are subjected to systematic mass extinction and deportations to Arctic Russia and Siberia; and

Whereas the Atlantic Charter and four freedoms gave promise of freedom to the enslaved peoples of Europe; that the great powers of the world would not seek territorial aggrandizement and that the Atlantic Charter was a proposed basis for a just peace for which we fought and bled; and

Whereas the peoples of Lithuania and her Baltic neighbors Latvia and Estonia have been subjected to mass extinction and deportations of their peoples, fathers separated from their wives and children and families systematically broken and disrupted and it is noted that more than 800,000 persons had disappeared from the country under Soviet auspices prior to 1948 and some 200,000 vanished in the self-same year, and these practices fall within the definition of genocide which is described as the willful destruction, in whole or in part, of a national, ethnical, racial or religious group; and

Whereas the question of the ratification of the Genocide Convention is now before the United States Senate, and it appearing that several of the members of the United Nations have already approved same, and it appearing that genocide is a most horrible crime which must be prevented and punished: It is therefore unanimously

Resolved, That the President of the United States of America and the Secretary of State be requested—

1. That the United States of America in any peace settlement negotiations with Soviet Russia respecting Germany and the countries contiguous thereto, require the preliminary and immediate withdrawal of Russian occupation armies—MVD police and Communist Party forces, from Lithuania, Latvia, and Estonia, and to give aid to the peoples of the Baltic states, if so requested, in restoring the political sovereignty and interim regimes of those countries.

2. That the Baltic states in any such negotiations should be fully represented by the Supreme Lithuanian Committee of Liberation and the respective Latvian and Estonian representatives directing the liberation services.

3. That we urge most vigorously that the United States Senate ratify the Genocide Convention since it represents the first international legislation designed to effectuate the program initiated in the United Nations to abolish barbarous practices of mass killings and deportation of peoples as having no moral or legal sanction in this mid-twentieth century.

That copies of these resolutions be directed to be sent to the President, Secretary of State, and Members of Congress of the United States from the State of New York.

JOSEPH P. GINKUS,
Chairman.
DANIEL J. AVERKA,
Secretary.

The Tough Job

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include a very interesting editorial taken from the February 1950 issue of the Louisiana Farm Bureau News. It re-

lates to cotton production and new legislation, and is as follows:

THE TOUGH JOB

Just about the toughest job Congress has to face in writing a cotton-acreage bill that will remove certain injustices in the present law is to steer a middle course between the proposals of some folks who have odd ideas about successful farming and other successful business operations and the proposals of other folks who may not understand the situation and who might make it worse by what could be described as unwise generosity.

The present law is unjust to the many growers who would have to make unfairly drastic cut-backs in their cotton acreage. This part of the law should be corrected. But it might be dangerous if the correction went so far as to make the whole acreage-allotment and marketing-quota program ineffective. Cotton growers know that better than anyone else.

Whatever their troubles, cotton growers aren't asking for a free ride on the gravy train. Neither the cotton grower nor any other farm group expects the Government price-support program to take care of unlimited production, or even of production so large that vast surpluses continue to pile up. As a matter of self-interest, it should not be necessary to point out that such a development might endanger the entire price-support program for cotton and even the rest of the farm program.

The Basing-Point System

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

NELSON CO.,
Detroit, Mich., February 23, 1950.

The Honorable FRANCIS P. WALTER,
House Office Building,
Washington, D. C.

DEAR MR. WALTER: I have been very much disturbed because certain Members of Congress opposed to S. 1008 have made emphatic statements that this bill is dangerous to and is opposed by the small-business man.

We operate a small local business, employing between 100 and 120 people. The elimination of the basing-point system has already caused us financial losses, and it is apparent to us that unless S. 1008 is made into law our pipe-distribution activity will be destroyed.

I wish, therefore, to present to you, as a member of the conference committee on this bill, the facts as we see them.

I trust that you will take time to read the attached paper and that it will give you some new and additional viewpoints on this legislation.

Yours sincerely,

H. R. DUSENDORF,
Purchasing Agent, Nelson Co.

The opponents of the basing point (or more properly, the freight-absorption) pricing system claim that it (1) is harmful to the small-business man; (2) constitutes an unfair method of competition; (3) results in price discrimination; (4) creates monopolies; (5) is in the interests of big business and (6) that legislation to reinstate that or a similar system will destroy present antitrust laws and the Robinson-Patman Act.

It is apparent that, if these claims were correct, this company, composed of loyal Americans operating a small business, would likewise be opposed but our experience with and without basing-point pricing on steel pipe indicates that the evils mentioned above exist only under the nonbasing-point system.

1. Freight-absorption legislation will preserve, not harm, small business.

The steel-pipe mill nearest to Detroit is at Lorain, Ohio. Under the basing-point system, all Detroit steel-pipe distributors bought at the Lorain base, meaning that even though their pipe came from farther away, they paid freight only from Lorain to Detroit. Under nonbasing-point pricing, distributors who buy from the Lorain mill pay, because of varying freight charges, $1.20 per ton less than those who buy from Youngstown, Ohio, and $2.80 per ton less than those who buy from Pittsburgh, the two next nearest sources.

In a competitive economy, in a free-enterprise system, a commodity like steel pipe cannot be sold by one distributor at a higher price than his competitors. The distributor buying from the Lorain mill establishes his selling price based on mill costs plus freight from Lorain. Detroit distributors who buy from Youngstown or Pittsburgh must sell at that same price. It is apparent that a distributor whose supply of pipe comes from Pittsburgh at an extra cost of $2.80 per ton, would, on an annual volume of 1,000 tons (which is not unusual) suffer a loss of $2,800 without in any way affecting the corporate big business condemned by the opponents of the freight-absorption pricing system. Small businesses—local distributors of steel pipe—all over America have suffered such and much greater losses since the basing-point pricing system was dropped—and nobody has gained. It is contended that steel mills can absorb these extra freight charges providing they do not do it in collusion. The steel mills, however, claim that such absorption under existing legislation is in violation of the Robinson-Patman Act.

2. Lack of freight-absorption pricing destroys free competition: It is apparent from the above that certain distributors have a cost advantage over others and, therefore, the latter group has no competitive opportunity. Theoretically, competition would be restored if all distributors purchased from the nearest mill but this is impossible under today's conditions because the nearest mill is unable to take on any more distributors in this area. This likewise applies to other mills in other areas. If all pipe distributors in each area bought from one mill it would establish a regional monopoly which would be entirely in control of prices and competition in each area.

3. Lack of freight-absorption pricing causes price discrimination: From the above example, it is apparent that price discrimination is not a fault of the freight-absorption pricing system but is caused by the lack of such system.

4. Lack of freight-absorption pricing will create monopolies:

In the absence of freight-absorption pricing, all distributors of steel pipe will eventually be compelled, so far as is possible, to make their purchases from the closest source of supply or go out of the pipe distribution business. Under these circumstances, each steel pipe producer will have a monopoly in the area in which he has a freight advantage. This condition does not exist at present because some mills do not have sufficient capacity to supply everyone in their monopoly area, while other mills are able to produce a great deal more than their monopoly area can consume. As some mills increase their production while others reduce theirs, the eventual consequence will be that each mill will have only sufficient capacity, manpower, and machines to supply their own monopoly area.

For example, many steel pipe distributors on the eastern coast who previously purchased their pipe elsewhere now buy it from a mill at Sparrows Point, Md., because of freight losses if purchased from their previous source. When the lines are finally drawn and each mill is producing only the pipe they can sell in their own monopoly area, a shutdown of the Sparrows Point mill because of labor difficulties, fire, an act of God or any other cause would mean that the entire east coast would have no source of supply. This same condition would apply to all monopoly areas.

5. Lack of freight-absorption pricing benefits Big Steel, hurts Little Steel.

The first effect of the banning of basing-point pricing was the voluntary and involuntary discontinuance of sales by steel mills to customers in areas where freight cost difference would compel these customers to seek a nearer source of supply when steel shortages no longer exist. Thus, large steel corporations with multiple-plants have an advantage over smaller one-plant producers.

The second effect was an endeavor, successful in many cases, to persuade steel-consuming manufacturers to move their plants or build new ones near to existing steel mills. This can be accomplished by guaranteeing a supply of steel to consuming-manufacturers nearest the mill.

Smaller one-plant steel corporations supplying distant customers cannot, without freight-absorption pricing, compete with large multiple-plant producers having a plant nearer the customer and must, therefore, seek customers nearer home or go out of business.

It is the contention of opponents of freight-absorption pricing that new steel mills will be built in various parts of the country to supply high-consumption areas. There is nothing to stop such construction under freight-absorption pricing as witnessed by the steel mills in Detroit and elsewhere which were built during the basing-point pricing era.

Under a non-freight-absorption pricing system, however, the restriction of sales in monopoly areas, the transportation cost of raw materials and several other important factors would legislate against the construction of new mills in many if not all areas where mills do not now exist. It is very probable, too, that if such mills were constructed they would be built by the larger steel corporations, thus further stifling small steel. Steel mills cannot be constructed as cheaply nor as quickly as other manufacturing plants and, therefore, it is to the interests of Big Steel to persuade steel-consuming industry to come to steel rather than steel to go to them. The old saying, "It is easier to sweep the little to the lot than the lot to the little" aptly expresses this condition.

6. Lack of freight-absorption pricing may centralize industry: Inasmuch as it is improbable that steel mills will be built all over the country and inasmuch as steel-consuming industry has already begun to move nearer existing steel mills, it is very possible that the final result will be a centralization of industry that could be very disastrous to our country if war should occur.

7. Lack of freight-absorption pricing restrict freedom of choice:

When the inevitable happens and all pipe distributors in each area are purchasing, as a matter of survival, their supply of pipe from the one pipe mill most advantageously situated to serve their area, neither they nor the ultimate consumer will have any choice as to which brand of pipe they may buy.

For example, recently a steel consumer wishes to buy two carloads of pipe made of a special steel needed for a specific purpose. They first approached the nearest mill because pipe from there would cost them less. The pipe was needed within 60 days and the nearest mill could not make delivery of all items within that time. The next nearest mill (still operating in the Detroit area only because the nearest mill cannot take care of

all demands for standard pipe) agreed to supply those items of pipe which the nearest mill could not furnish.

When, as is inevitable under a non-freight-absorption pricing system, all pipe mills have adjusted their production capacity to take care of only their monopoly area, such freedom of choice will be impossible and the consumer will be compelled to wait until the monopoly-area mill can take care of his needs.

8. Freight-absorption legislation need not affect anti-trust legislation nor the Robinson-Patman Act:

The Robinson-Patman Act, as well as all antitrust legislation, was designed to protect the American people from those who might have the power to destroy the opportunity for free competition on which this country was built. The lack of freight-absorption pricing on commodities destroys that opportunity and, therefore, legislation to keep that opportunity in existence is in line with such laws rather than opposed to them.

9. Effects of regional monopolies created by lack of freight-absorption pricing: Consider some of the effects of regional monopolies in the manufacture of steel pipe. Assume that all of the steel pipe needed for gas, water, steam, oil, air, and thousands of industrial uses in any manufacturing area came from one producer, that which could deliver pipe to that area at the lowest price and asume, too, that some unavoidable circumstance forces that mill to suspend operation. Where, then, would the people of that area get steel pipe? All other mills would be operating at full capacity to supply the requirements of their own monopoly area and would not be capable of nor interested in taking on the requirements of an area which will not need them when the monopoly mill resumes operation. What would happen under those circumstances if our country should suddenly be thrown into war as it was on December 8, 1941? If the Detroit area was the one affected, how would war-matériel plants be able to do their part? If it was an oil-producing area, what then? And even in peacetime, how would the emergency problems in plumbing, heating, manufacturing, gasoline refining and distribution and the thousands of other places where steel pipe is a necessity be solved?

This presentation is based almost entirely on one steel product, pipe, but practically everything which has been said about it applies as well to all steel products. Regional monopolies will restrict the production of all manufacturers, will prevent the starting of new enterprises, will stifle the need for industrial research, thus depriving the American people of new and improved products and will seriously damage if not destroy the American system of competition and the most important guaranty of the American Constitution, the freedom of opportunity.

Thoughts About War

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Bruce Barton from the Washington Sunday Star of March 5, 1950:

THOUGHTS ABOUT WAR
(By Bruce Barton)

We Americans romanticize too much—about everything from love to hot dogs. But one thing we should be coldly realistic about is war.

To bring our history into better focus, we might begin by remembering our wars. What we call World Wars I and II really were III and IV.

World War I was Europe's Seven Years' War, England and Prussia were allies against France, Austria, Russia, Sweden, and Spain. Over here it was the French and Indian War. Our ancestors teamed up with the British (George Washington was a young officer in the English forces) and tossed out the French.

World War II (a continuation of I) we call our American Revolution. Our ancestors teamed up with the French and threw out the British.

Both these wars were fought for splendid principles, but they also were very profitable.

The last profitable wars that ever will be waged were our Mexican War and England's war in South Africa. By our peace treaty we got from Mexico, for a paltry $15,000,000, Utah, Nevada, California, and large parts of New Mexico, Arizona, and Colorado. The British got the South African gold and diamond mines.

Our war with Spain grew out of what the great historian, Charles A. Beard, called the devil theory of war. There are in the world good people—ourselves—and bad people—devils. When the devils do what we good people think they shouldn't do, it is our duty to shoot them.

The Spaniards were doing wrong to the Cubans. We fought them in an inexpensive, badly managed war, and promptly were victorious. We wound up with Puerto Rico, the Philippines, and a sort of general mortgage on Cuba—all rich islands.

What we didn't realize until later was that these islands had masses of poor people, for whom we had made ourselves responsible. We have paid billions for that easy victory and still are paying.

World wars III and IV almost could be called the wars that nobody won. The English and Germans and French now know that, while they were shooting enemies, they were shooting customers. They lost their wealth, their plants, and their markets. For our part, we are paying through the nose to support both our allies and our enemies.

World war V, if it comes, will complete the destruction of Great Britain and Europe, throw Russia back into barbarism, wipe out our entire wealth, and destroy all the progress we have made in our 150 years as a nation.

These thoughts are unpopular. It is popular to talk about our moral obligation to prepare to defend freedom all over the world. I prefer to talk about a war that we somehow ought to be smart enough to avoid, since it is perfectly certain, that while we won't lose, we cannot possibly win.

Apportionment

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. COLE of New York. Mr. Speaker, one of the outstanding persons in the country who has devoted a lifetime of study to the problem of congressional reapportionment is Dr. Walter F. Willcox, formerly of Cornell University, now living at 3 South Avenue, Ithaca, N. Y. A summary of the results of his studies has been published in a recent issue of the Cornell Law Quarterly. However, Dr. Willcox has written to me his own summarization of the conclusions reached as the result of his studies, which I am taking the liberty of inserting in the Appendix of the CONGRESSIONAL RECORD for reference by any future students of this problem, as well as for the assistance of appropriate committees of the Congress and the Congress itself in dealing with the question of congressional reapportionment.

Because of Dr. Willcox's outstanding position in this field, I feel certain that his views, conclusions, and recommendations will merit and receive the careful consideration and attention of the Congress.

ITHACA, N. Y., *February 17, 1950.*
Hon. W. STERLING COLE,
House of Representatives,
Washington, D. C.

DEAR MR. COLE: After nearly 50 years of work on the apportionment problem I have reached results which are explained and defended in an article in the forthcoming number of the Cornell Law Quarterly, two preprints of which go to you under another cover. A summary of the conclusions follows:

SUMMARY OF RESULTS

The number of methods of apportionment which satisfy the mathematical conditions of the problem is indefinitely large.

There is no mathematical reason for preferring one method of apportionment to another.

When these different methods are applied to the 1940 figures, nineteen different results are reached. Under the 1950 figures the number is not likely to be less.

These results differ only in the number and the allotment of what might be called transferable seats, that is, seats which would go by one extreme method to a State with more and by the other extreme method to a State with less than the average population.

Between these extreme methods a series of intermediate methods can be constructed so that each method would transfer one, and only one, seat from a large State to a small one, or vice versa, as compared with the methods on either side of it in the series.

The proper basis for preferring one set of results to another is to be found not in mathematical or political considerations but in deciding how to interpret the ambiguous phrase of the Constitution, "shall be apportioned among the several States according to their respective numbers."

The method which was used before 1840 apportioned all transferable seats to large States, although there is no evidence that Congress intended this or realized that it was the inevitable result of the method.

The debates and votes since 1840 indicate that Congress now aims at equalizing the district population in the two groups of large and small States.

Every method used or proposed for a century has divided the transferable seats almost evenly between large and small States.

These methods differ in the weight given to fractional remainders. The one used before 1840 rejected all such remainders. The intermediate methods which succeeded it give additional seats to remainders larger than about one-half but differ among themselves in where they place the critical fractions separating those large ones which are given weight from those smaller ones which are rejected. The smaller the critical fraction, the more transferable seats are apportioned to small States.

Among this group of intermediate methods the method of major fractions, under which the critical fraction is one-half, makes the district population of the two groups of large and small States most nearly equal.

Under 1940 figures the present method of equal proportions requires a critical fraction of .45 instead of .50. Whenever its results differ from those of the method of major fractions, that is because it adopts a critical fraction somewhat less than .50.

If Congress should decide that the conflict of interests between large and small States, so crucial in the constitutional convention, a conflict which points to the method of major fractions, is no longer important and that in consequence to aim at equalizing the district population of the 48 States individually is better than to aim at equalizing the district population of the two groups as units, that decision would point toward the method of included fractions.

The realization since 1900 that Congress must start apportionment, not from scratch, but with a body of 48 Representatives, one for each State, prescribed by the Constitution tells also in favor of the method of included fractions.

Under that method Representatives are apportioned one after another, beginning with No. 49, to whatever State has at that point the largest district population.

The results of the method of included fractions differ from those of the method of equal proportions and all other methds by reducing the difference between the largest and the smallest of the 48 district populations and also reducing their average to the lowest point possible.

W. F. WILLCOX.

Actual Farmers Headed for Trouble in the Agricultural Program

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. BURDICK. Mr. Speaker, I want to sound this note of warning to the Members of Congress who represent the actual farmers of this country. Acreage allotments are based on the 4-year average preceding the year for which the allotment is determined. For example in 1952, the allotment will be based on the acreage of 1948, '49, '50, and '51.

Individuals and incorporated concerns, who are not actual farmers and have no interest in a home on the land, are busy in western Kansas and Colorado breaking up thousands and thousands of acres of land with high-powered machinery. To show just how fast these acres are being brought in by big operators, I will say that there were 7,000 acres brought in 1942 and 177,000 in 1949.

In 1949 a contractor broke up 63 sections of land in Colorado, and that process is quite general in those two States. By 1952 there will be 8,000,000 acres of additional wheat acreage, hence if this acreage is spread over the years 1948, 1949, 1950, and 1951, those 8,000,000 acres will be eligible for allotment. Since the allotment program is based on acreage, these 8,000,000 acres will compete with those who have made and are making farming a business. Those farmers will have to share the allotment acreage with those bringing in these huge acres, and in North Dakota alone, by 1952, it will mean that the farmers will be cut a 1,000,000 acres.

On the small farms, where farmers live and operate on a family-sized farm, the acreage allowed will be so curtailed that the small farmer will be unable to plant enough wheat to supply his family, pay for his expenses, taxes, and machine equipment. In fact, that situation is already here in a small way, and many farmers who operate small units are objecting vehemently to the acreage cuts for 1950.

Another cause for great alarm among small farms is the fact that in figuring the acreage base, not only the actual land planted to wheat, but the summer-tilled acreage all goes in as cropped land and swells the historic base.

Unless the members of the Agriculture Committees of the Senate and House are alert and understand what this wholesale production of new acres means, the whole farm belt will be up against such a severe cut in acreage that many small farmers will be put out of business.

Not much harm has yet been done, but looking ahead just a year or two it is easy to see the disaster awaiting.

Isthmian Canals and Atomic Bomb Defense Plans

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. MARTIN of Iowa. Mr. Speaker, in previous extensions of remarks I have commented at length with respect to the basic fallacy in the presentations of the promoters who urge the building of a new Panama Canal at sea level on the alleged ground that such construction is dictated by the atomic bomb and new weapon dangers.

In my extensions I have unfailingly emphasized the view that the security of any type of canal depends not upon passive defense features that may be embodied in the designs of construction, but upon the active might of our armed forces supported by our industrial capacity and the traditional American spirit.

It is most fitting, therefore, to include in the RECORD an enlightening statement of Dr. Vannevar Bush, the eminent authority on modern weapons, on the general subject of defense against atomic bombs and the projected hydrogen bomb, made before the Senate Committee on Armed Services on February 9, 1950, and published in the Associated Press dispatches on that date.

The full text of the Associated Press story follows:

A-BOMB DEFENSE PLANS BASED ON OLD METHODS—DR. BUSH SAYS NO TRICK WAY HAS BEEN FOUND TO DEFEND UNITED STATES FROM ATOMIC ATTACK

WASHINGTON, February 9.—Dr. Vannevar Bush, atomic scientist, said today there was no trick way to defend the United States against attack by A-bombs or the projected hydrogen superbomb.

"There is no defense against a bomb, as such," Dr. Bush told newsmen after he had testified at a secret 2-hour session before the Senate Armed Services Committee.

By that he said he meant no method had yet been worked out by American scientists to detonate atomic weapons carried by enemy planes before the bombs have been dropped.

Dr. Bush quickly hedged, however, by saying defenses against any new weapons developed so quickly it is dangerous to forecast what may emerge from defense laboratories in the future.

ONLY TWO WAYS OF DEFENSE

But at present, he said, the only way to defend against an atomic bomb is to "stop the airplane or other carrier before it gets to the target—bomb the place that is manufacturing the bombs."

Dr. Bush was one of the Nation's top scientists advising military leaders during World War II. He served as Director of the Office of Scientific Research and Development and as adviser to the Joint Chiefs of Staff.

Behind closed doors Dr. Bush talked at length with members of the Armed Services Committee, drawing a broad picture of what can be expected in future warfare.

Senators were close-mouthed about his testimony, but Chairman TYDINGS, Democrat of Maryland, later told newsmen Dr. Bush said there was no "complete defense" against atomic or hydrogen bombs. "Dr. Bush gave us a very concise account of modern warfare and what has been and is being done," TYDINGS said.

The Maryland Senator said Dr. Bush urged "more research and development" toward building up national defense, but TYDINGS gave no details.

Coincidentally, Senator BRICKER, Republican of Ohio, dropped a hint that United States scientists possibly have been working on the H-bomb far longer than generally supposed. It was a week ago Tuesday that President Truman gave the go-ahead order for development of the so-called hell bomb.

But BRICKER, a member of the Joint Congressional Atomic Committee, commented to newsmen:

"Dr. Bush told us about the hydrogen bomb 3 years ago—about as much as has been made public recently."

Estimates on how long it would take to build the H-bomb have ranged from 1 to 4 or 5 years. Scientists say it would be 8 to 1,000 times more devastating than the wartime A-bomb and theoretically would have no limit to its destructive fury.

Froelich's Folly

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. TALLE. Mr. Speaker, the February 28, 1950, issue of the Development Bulletin published by the Iowa Development Commission contains the little-known but dramatic story of the invention of the tractor by John Froelich, of Froelich, Iowa, in my district.

Modern farming on the scale which it is practiced in the United States would be impossible without the tractor. Its invention initiated the rise of the American farmer as the greatest food pro-

ducer in the history of mankind. The name of the inventor, John Froelich, should be as familiar to every schoolboy as the names Eli Whitney, Cyrus McCormick, and Luther Burbank. Unfortunately, Froelich's name is relatively unknown.

It is important that we revere the memories of these great inventive geniuses, not merely because of their marvelous contributions to the advancement of civilization, but also because they symbolize what freemen can accomplish under a free-enterprise system.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the article referred to:

IOWAN INVENTED TRACTOR

About the time the cry of "Gold" rocked a growing nation, another cry was heard out on the prairie land of Iowa, made by a baby boy who was destined to invent a machine which would revolutionize farm work.

The machine he was to invent in Iowa alone helps cultivate the fields which annually produce more wealth than all the gold mines in the world.

Today, that machine—the tractor—is the flagship of the farm, with more than 2,000,000 in operation on farms in the United States. About 213,000 are in Iowa.

The inventor, John Froelich, is little known.

John Froelich was born November 24, 1849, in Giard, Iowa, but was living in nearby Froelich (named after his father) when he began dreaming of plans for the tractor.

From youth he had shown an inventive turn of mind. Among his inventions were a washing machine and a corn picker. But, like his father, he was also a businessman and operated an elevator and feed mill at Froelich in the 1880's.

He made good side money with a well-digging outfit and for 4 years took his threshing rig on "runs" in Iowa and South Dakota. It was during the time Froelich operated his two outfits that he realized the impracticality of the big steam engines which made modern farming at that time.

Then in 1890 John Froelich started hinting around about a mechanical power machine he had in mind. Most folks around the community were amused. They admitted he was a good businessman, but after all John wouldn't see 40 again, and he knew better than to go around saying that some day traction engines would do the work of horses on farms. And as for his talk about a smaller traction engine that would run on gasoline—had he been out in the sun too much?

John Froelich heard these snide remarks, but went about his work. In 1892 he went to Cincinnati where he bought a large vertical one-cylinder gasoline-powered engine which he shipped back home. It had a 14-inch stroke and bore. He placed the engine on wooden beams mounted on the running gear of a steam traction engine.

The two parts didn't fit together too well. In fact, in many respects, they didn't fit at all, and Froelich and his helper, William Mann, had to borrow, design, and recast many new parts.

It took time, but gradually in John Froelich's little blacksmith shop there took form a hybrid contraption that made folks smile. But the day came when the machine was assembled and ready for trial.

Froelich tugged at the massive flywheel. The machine wouldn't start.

No matter how hard Froelich and Mann yanked on the flywheel, the machine simply would not start; and somewhere, among the spectators, there was a snickered "I thought so."

Then Mann had an idea.

He twisted the bullet from a rifle cartridge, wedged the cartridge in the priming cup, hit it with a hammer.

That did it.

With a cough and a roar, the engine came to life and the flywheel began to spin. The closest spectator jumped back, horses reared and tried to pull loose from the nearby hitching rail. "Good boy, John," shouted the spectator who a few minutes before had scoffed.

Froelich, on the driving platform, nimbly eased his invention into gear. It lurched forward. "Back 'er up, John," someone called. He tried the reverse. The machine clanked backwards.

Out on the road he went, and to a farm where a neighbor was threshing grain. His machine was substituted for the steam engine. It did the job.

That was a summer day in 1892 when the first self-propelled gasoline-powered traction engine, capable of forward and reverse motions, chugged along at the snail's pace of 2 miles per hour.

A few weeks later, Froelich and a crew took the new invention and a new threshing machine to South Dakota where they harvested 72,000 bushels of grain.

Success seemed a cinch. But success was still 20 years away, and John Froelich was to be separated from his invention which went on to fame and became the product of a whole new industry.

After successful field tests, a group of businessmen at Waterloo organized the Waterloo Gasoline Traction Engine Co. John Froelich was president. The company built two tractors, but both were returned. Somehow all efforts to manufacture a practical tractor failed.

But John Froelich believed in his machine and experimentation went on. Then, in 1895, after the company had decided to make stationary gasoline engines to secure income to offset experimentation costs, the company was reorganized as the Waterloo Gasoline Engine Co. But John Froelich, whose interest was in tractors not in engines, withdrew from the company. Later he moved to St. Paul, Minn., where he died May 23, 1933.

In 1913 the company offered a successful model—a two-cylinder opposed engine on a four-wheel chassis. Twenty tractors were sold. The tide had turned.

The upsurge has gone on, and in its wake great plants have arisen throughout the Nation, some of them in Iowa, which make the tractors that came from the brain of John Froelich, of Giard, Iowa.

He has been almost forgotten down the roll call of years. Even after the value of his contribution to agriculture was established, the world gave him little recognition. But Froelich, Iowa, the town where his dream started, remembered him. In 1939 the little community dedicated a historical marker to his memory. Part of the marker reads:

"In this village, John Froelich built the first gasoline tractor that propelled itself backward as well as forward. Far reaching in its effect on modern agricultural history, it moved out of this village and into the world in 1892."

Reform of Electoral College System

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include a letter sent to me by J. Harvie Williams, a constituent of mine, who is a student of political science. Mr. Williams has made a careful analysis of the present electoral college system, the Lodge-Gossett proposal, and my resolution, House Joint Resolution 414, which is an alternative reform proposal of the present electoral college system.

The letter follows:

NEW YORK, N. Y., *February 22, 1950.*

Hon. FREDERIC R. COUDERT, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. COUDERT: As you requested, I have made a comprehensive study of the comparative effect of the electoral reforms proposed in Lodge-Gossett amendment and in the amendment which you introduced on February 6 in House Joint Resolution 414.

To Senator LODGE, of Massachusetts, and Representative GOSSETT, of Texas, must go the bulk of the credit for bringing the need of electoral reform to the fore in the public mind. And to Lucius Wilmerding, Jr., of Princeton, N. J., must go the credit for the most scholarly and complete study of the subject that I have seen, published as the leading article in Political Science Quarterly for March 1949. These gentlemen have forced the cause to its present vantage point in public thought. They have pointed out some of the weaknesses of our present electoral system. Senator LODGE has won the acclaim of all friends of electoral reform by his remarkable achievement in winning more than a two-thirds majority (64 to 27) in the Senate for his electoral reform plan, although many able and thoughtful men question the principle on which it is founded and doubt seriously that it would solve the problem in view.

Before the House of Representatives comes to act on the measure, most careful consideration should be given to these questions regarding it:

1. Does the Lodge-Gossett amendment conform to the established structure of American government?

2. Does it bring into closer balance the electoral power and the congressional power of the political parties in the States and therefore in the Nation?

3. Does it reduce or eliminate the present basis of ideological conflict between the President and the Congress—the greatest weakness of the present system?

The whole case for the electoral college is set forth in a single paragraph in George Bancroft's History of the United States, VI (pp. 339–349):

"And now the whole line of march to the mode of the election of the President can be surveyed. The Convention at first reluctantly conferred that office on the National Legislature; and to prevent the possibility of failure by a negative vote of one House or the other, to the Legislature voting in joint ballot. To escape from the danger of cabal and corruption, it next transferred the full and final power of choice to an electoral college that should be the exact counterpart of the joint convention of the two Houses in the representation of the States as units as well as population of the States, and should meet at the seat of Government. Then fearing that so large a number of men would not travel to the seat of government for that single purpose, or might be hindered on the way, they most reluctantly went back to the choice of the two Houses in joint convention. At this moment the thought arose that the electors might cast their votes in their own States, and transmit the certificates of their ballots to the seat of government. Accordingly, the work of electing a President was divided; the Convention removed the act of voting from the joint session of the two Houses to

electoral colleges in the several States, the act of voting to be followed by the transmission of authenticated certificates of the votes to a branch of the General Legislature at the seat of government; and then it restored to the two Houses in the presence of each other the same office of counting the collected certificates which they would have performed had the choice remained with the two Houses of the Legislature.

Thus it is clear that the founding fathers regarded the electoral college as a counterpart body of the whole Congress. It was necessary then—and still is necessary now—to articulate the Federal and national features of our Government in the election of a President as they are articulated in the two Houses of Congress, the Senate being a Federal body with equal representation for the States as units and the House of Representatives being a national body with representation based on the population of the States. Too, the electoral college was and is necessary to maintain the separation of executive and legislative power, an essential element in the structure of our National Government. This articulation of Federal and national principles in our Constitution, while the result of a political compromise in the Convention, is the root of our greatest contribution to the knowledge and practice of statecraft and government—the eminent and successful principle of dual sovereignty.

To each State the founding fathers gave electoral power equal to its congressional power, and so it remains today. But the concept of the electoral college as the counterpart of Congress in the articulation of Federal and national electoral power was destroyed by political leaders of the larger party in each of the States. To win all of the electoral power in a State these political leaders had things rearranged so that all presidential electors ran for election on general State-wide tickets. This is the arrangement that permits the entire electoral vote of a State to go to the presidential candidate of one party by as little as one vote plurality. This practice is the source of the complaints against our present electoral system. This is the situation sought to be corrected. I don't believe there are very many among the American people who want to change violently the structure of our Government, and I am certain that the sponsors of the Lodge-Gossett amendment are not among that number.

I am equally certain that the Coudert electoral reform plan embodied in House Joint Resolution 414, will make the electoral college the exact counterpart of a joint session of the Senate and the House of Representatives. It provides:

"SECTION 1. Each State shall choose a number of electors of the President and Vice President, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress, in the same manner as its Senators and Representatives are chosen * * *."

The effect of this provision would be to put an end to the prevailing practice in the States of choosing all of their presidential electors by the general State-wide ticket system. Rather, only the two Federal electors, corresponding to each State's two Senators, would be elected on a State-wide basis, unless, as in some States, some of the Representatives are elected at large; and the national electors, corresponding to the Representatives in Congress, would be elected in congressional districts, or at large in a few cases.

Adoption of the Coudert amendment would have these important political effects:

1. Divide each State's electoral power among the parties on the same basis that its congressional power is divided among them. Thus national parties would have electoral power commensurate with their congressional power—an ideal situation.

2. Give the Presidency to any party that won a bare majority (218) of the seats in the House, and won a bare majority of the States (25) with two electors each, for a total of 268 electoral votes, or won more congressional districts and carried fewer States.

3. The President and the whole Congress would have exactly the same constituency cast up in the same form. Pressure groups of all kinds would have the same weight in electing the President that they have in electing the whole membership of the House and Senate. There would be no basis for an ideological conflict between the President and the Congress when both were of such close political complexion.

4. Both large and small States would have their political weight properly divided among the parties in the election of the President.

5. States having large blocs of doubtful electoral votes would no longer be the exclusive sources of party candidates for President, although they would continue to have the largest delegations at the nominating conventions.

6. New York's 47 doubtful electoral votes under the present system would be reduced to a doubtful 12 under the Coudert amendment, since only 10 of its 45 House seats (43 before 1932) have changed their party representation since 1920. The two Federal electors would always be doubtful. New York would continue to be a dominant State, but its dominance would not be overwhelming. The same would be true of other large States like Pennsylvania, Ohio, Illinois, and California.

It is clear, then, that the Coudert amendment conforms squarely with the established structure of our National Government, that it would almost exactly balance the electoral and congressional power of the political parties, and thus would eliminate the basis of the present ideological coflict between the President and the Congress—a conflict that will doom our form of government if it is not soon ended.

It should be noted that the Coudert amendment maintains the requirement of a majority of the electoral vote for the election of the President; and it should be emphasized that the majority requirement is the primary basis of our two-party political system. Under the Coudert amendment, when no candidate for President or Vice President received a majority of the electoral vote the final choices would be made by a joint session of Congress voting as a single body, from among the persons having the three highest numbers of votes on the lists of those voted for for each office. Three-fourths of the combined membership of the Senate and the House would be required as a quorum.

On the other hand, by introducing a new and novel application of the principle of proportional representation for the division of each State's electoral vote proportionally among the candidates for President, and allowing the election of a President by a plurality of only 40 percent of the electoral vote, the Lodge-Gossett amendment would violate the established structure of our National Government and remove the foundation of the two-party system. By abolishing the electoral college entirely the Lodge-Gossett amendment attempts to remove the Federal feature from our form of government, insofar as it is possible politically to do so. It denies the validity of dual-sovereignty.

Conceivably in 25 years, once the proportional principle has been dignified with constitutional authority, several of our larger States will be electing their Representatives in Congress by some system of proportional representation; and, conceivably, several new minor parties will be electing, together, a bloc of 25 to 35 Representatives who will be a continuing balance of power in the Congress of the United States. It should be remembered that the proportional principle is the source of the multiparty systems that have paralyzed European governments and brought up dictators to relieve the paralysis. Both Hitler and Mussolini had their political origins in the conditions created by proportional representation.

Based on previous elections, which can only be guides, for under either, electoral reform plan campaigns would have been conducted differently, the Lodge-Gossett amendment would have violently shifted the parties' source of electoral power. The Republicans in 1948 would have won from the Democrats 32.4 additional electoral votes. But, 30.2 of them would have come from the 11 Southern States and 13.9 of them would have come from the five border States of Maryland, West Virginia, Kentucky, Missouri, and Oklahoma, for a total of 44.1 electoral votes. A Republican loss of 11.7 electoral votes in the 32 Northern States brings the net gain down to 32.4 electoral votes. To match this gain of 44.1 votes in electoral power in the Southern States and the border States the Republicans have only 5 House seats of congressional power and carried only the State of Maryland by a plurality.

A comprehensive study of the prospective shifts of electoral power under the Lodge-Gossett amendment reveals that Republican gains are consistently in the southern and border States and the Republican losses are, of course, in the North. Both parties would lose electoral power where they would have congressional power, and would gain electoral power where they have little or no chance of gaining congressional power. Thus, the Lodge-Gossett amendment would produce as great a disparity between the sources of the parties' electoral and congressional power as exists under the present system, with a growing basis for the continuance of the ideological conflict between the President and the Congress.

There is enclosed a table showing the net electoral vote advantage by the sectional political divisions of the country for the parties in terms of the Coudert plan over the Lodge plan, for the 1948, 1944, and 1940 elections.

You will note that the Coudert plan is consistently better for Republicans in the 32 Northern States—both in the 8 largest States and in the other 24—and is equally advantageous for the Democrats in the border and Southern States. Except in 1940 when some odd parties elected Representatives in some of the Western States, other parties are consistent net losers in all sections under the Coudert plan. Vice versa, the other parties would be consistent gainers in all sections under the Lodge-Gossett plan.

Sincerely,

J. HARVIE WILLIAMS.

Red Victim Bares Confession Agony

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1950

Mr. HELLER. Mr. Speaker, under unanimous consent, I include in the RECORD the following article from the Brooklyn Eagle by Edward V. Roberts entitled "Red Victim Bares Confession Agony":

RED VICTIM BARES CONFESSION AGONY

(By Edward V. Roberts)

WASHINGTON, March 4.—A man who may now be dead has given the free world its

first detailed picture of Communist secret police methods used to obtain confessions in Soviet-type political trials.

The State Department said today the story—a tragic tale of the utter break-down of a man's will to resist—is the first time the civilized world has been told how the Soviets force men to swear publicly to crimes they did not commit.

The Department released a sworn statement by Michael Shipkov, former employee of the United States Legation in Bulgaria, describing how he confessed espionage and treason after 32 hours of questioning and torture by the Bulgarian State Security Militia last August.

After confessing he agreed to return to the Legation and serve as an informer for the police. Instead, he immediately wrote the details of his experience in an affidavit which he gave to American officials. Then he remained hidden in the Legation for 6 months.

He finally left February 11, was recaptured, and promptly indicted for treason.

HIS FATE STILL A MYSTERY

Inasmuch as such trials frequently are carried out in secret, there is no way of knowing whether he has yet been tried. The penalty for treason in Bulgaria is death.

The State Department suggested that Shipkov's affidavit shed light on how confessions were obtained from Joseph Cardinal Mindszenty, imprisoned for treason in Hungary; Robert A. Vogeler, American businessman, imprisoned for espionage in Hungary; and 15 Protestant pastors convicted of spying for the United States last year in Bulgaria.

Shipkov's story was told in an 8,000-word affidavit, written in longhand. He told how his confession was extracted from him and how he was made to implicate others. The confession, he said, was "dragged out of me against my will, against any knowledge of actual truth, under duress."

Shipkov said he was questioned by seven militiamen, working in teams. The interrogation began on a Saturday afternoon and continued until Sunday night. The only interruptions, he said, came during his periodic collapses from exhaustion.

During most of the questioning Shipkov was forced to stand facing a wall, bent forward, with one finger of each hand pressing against the wall. When his answers were unsatisfactory he was slapped or struck on the back of the neck.

"This posture does not appear unduly painful, nor did it particularly impress me in the beginning. And yet, combined with the mental strain, with the continuous pressure to talk, with the utter hopelessness and the longing to go through the thing and be sent down into silence and peace—it is a very effective manner of breaking down all resistance," Shipkov wrote.

"And after a time of this I broke down. I told them I was willing and eager to tell them all they wanted. The main appeal is to end the pain, to stop needless, futile resistance, and to come nearer to the moment when they would let me in peace."

Shipkov thought the worst was over then. They let him sit down, gave him a cigarette, "even lit it for me."

But he was wrong. The interrogation was only beginning. The inquisitors wanted details.

"And this went on, hour after hour, throughout the night, throughout the day, without respite or end.

"How can I best explain?" he wrote. "The only straw for which I could reach is the impression that I had, in my emptied, vacant thoughts, of some sentence that had pleased them, or that had conformed with the pattern I had so often seen in the [Communist] newspapers.

"And if I were to stop and plead fatigue, or poor memory, or ask to rest—the wall again and again, and the slaps and the blows in the nape. And I remembered I would come up gasping and talk and talk and feel utterly broken."

CONFESSION WRUNG BIT BY BIT

Bit by bit, he said, he made the "confession" they wanted, naming people they seemed to want named, inventing details they wanted; yes, he had spied for the British and for the Americans, and on the Americans for the British; yes, he had distorted events in Bulgaria "to provoke hatred and cause foreign intervention"; and so on, for hours and hours.

Out of his agonies Shipkov's mind retained two vivid impressions which he wrote down:

"1. They are not overinterested in what you tell them. It would appear that the ultimate purpose of this treatment is to break you down completely and deprive you of any will power or private thought or self-esteem, which they achieve remarkably quickly.

"2. I rarely could perceive any personal hatred or enmity for me—contempt certainly, but sooner an academic detachment dealing with an annoying problem * * * and a fanatic, rabid devotion to communism and hatred for Anglo-American resistance to them."

Alaska Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. BARTLETT. Mr. Speaker, Statehood for Alaska, lead editorial which appeared in the New York Herald Tribune for March 7, makes such a compelling argument for Alaska statehood that it answers every objection which has been raised against the statehood bill which was approved by this House last week. I do not see how anyone could fail to be swayed by the persuasive language of the Herald Tribune editorial which is quoted here in full text:

STATEHOOD FOR ALASKA

At a time when Russia frowns across the Bering Strait at the northernmost frontier of the United States, it is of supreme importance that Alaska be a strong point of American defense. This is not exclusively, nor even most importantly, a matter of physical armament. It requires, rather, that Alaska be sound and vigorous, militarily, economically and politically; that it share in the main currents of American life. In the cold war, the best garrisons are not those who wear uniforms; they are citizens with the full rights of citizenship, promoting the prosperity of their communities and aware of their responsibilities. Such rights as Alaskans have enjoyed under the Territorial government are, to be sure, far superior to those which any subject of a Soviet dictatorship is granted by his masters. But American freedom should not be exemplified in a crucial region, by half measures. As an example of the intrinsic dynamism of the American way, if for no other reason, Alaska should be admitted to statehood.

Such a decision—which has already been approved by the House of Representatives—will have other practical benefits. As a State, represented in Congress and able to vote for Presidents, Alaska could attract a larger population, work more freely to develop the riches of its huge area, help to dispel the ignorance which has hampered its growth. Too many Americans are still only vaguely aware of the potentialities of Alaska; its semidependent status has fostered an impression of wild wastelands, romantic but exotic. To bring Alaska into the familiar political pattern of the American States will adjust this viewpoint, allow a more realistic appraisal of Alaska's value and encourage the investment of capital, skills, and human hopes.

Yesterday the House gave a voice vote for statehood for Hawaii as well. There is no necessary connection between the two; Hawaii must be considered on its own merits, which are strong. But the Alaskan case is, in our judgment, overwhelming. Virtually all of the opposition in the House to Alaska's entry has been based on political considerations—the fact that as a State it would have two Senators, like all the rest, despite the disparity between its present population and that of New York, for example, or California. But if statehood will increase Alaska's citizenry, it would be a mistake to hamper the growth of an important portion of America because of a situation which may well be temporary and which, in any case, was expressly provided in the Constitution to balance the political power of large and small States. Shifts in population have before this made many of the arguments used against the acquisition of Territories by the United States ludicrous—it used to be said, for example, that Oregon was worthless because of the "1,500 miles of unredeemed and invincible sterility, with a backbone of snow-covered and (for most of their length) impassable mountains" separating that region from the East. Time proved the folly of this judgment; given courage and imagination in Congress, time can do the same for Alaska.

The Challenge of Atheism

EXTENSION OF REMARKS
OF
HON. BOURKE B. HICKENLOOPER
OF IOWA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1950

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Challenge of Atheism," delivered by George E. Stringfellow, an officer of the Mystic Shrine, before the joint meeting of the Central States and Midwest Shrine Associations, Sioux City, Iowa, on February 24, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF ATHEISM

There is a Godless ideology in this troubled world of ours that is spreading like a prairie fire. Loyal and God-fearing Americans cannot read their newspapers or listen to their radios without recoiling emotionally at the thought that we have in our country an organization whose leaders brazenly tell us that in time of war, if that war were with the Soviet Union, they would follow the Red flag instead of the Stars and Stripes. That, I submit, is a plea of guilty of treason in advance of the act.

We face a more formidable enemy today than ever before in the history of this Republic. We face an enemy who can and who will destroy us if we permit him to divide us, as he is well on the way to do. In 1939 he was an enemy of 170,000,000 people. In 1945 he was an enemy of 345,000,000

people. In 1950 he is an enemy of 800,000,000 people. In 1939 he lay east of Poland. In 1950 he is on the River Elbe with nothing between him and the English Channel but weak, divided, and disorganized people whom his agents have infiltrated. In 1950 he is controlling the whole western Pacific, from Vladivostok to the Hainan Islands. This enemy is a power stronger than we, and the sooner we recognize this fact the less chance there will be of our being absorbed by Communist Russia.

While the hour is late, it isn't too late yet for us to save ourselves from that Godless ideology, but we cannot temporize with it much longer and remain freemen. The Communists are infiltrating all departments of our Government—the State Department, the Treasury Department, the Department of Justice, and the executive department. David Demarest Lloyd, who admitted joining the Washington Cooperative Bookshop, which is on the Attorney General's list of subversive organizations, and who for an appreciable period of time was a member of the National Lawyers' Guild, which has been listed as a Communist front by the House Un-American Activities Committee, is now one of President Truman's speech writers. It was Lloyd who wrote the President's Oklahoma speech in which the President defended his stand insofar as Reds in our Government are concerned. Since resigning from the Washington Cooperative Bookshop and the National Lawyers' Guild, Lloyd has written complimentary articles on Alger Hiss, who was recently convicted for lying about his giving state secrets to the then Communist courier, Whittaker Chambers.

Inasmuch as membership in Masonry is a prerequisite for membership in the Shrine, the future of our organization is contingent upon the health and growth of Masonry. That's why I shall emphasize what the Communists in our Republic are doing to destroy Masonry and, indirectly, the Shrine of North America. Lest you think I am an alarmist, I shall read brief excerpts from the 1949 annual report of the Grand Master of Masons from one of our Southern States.

"I learned early in the grand lodge year," said the grand master in his report to the grand lodge, "through conference with a sister jurisdiction that there existed an organized Communist campaign to destroy the effectiveness of Freemasonry through infiltration and boring from within. My investigations showed that in many subordinate lodges the investigation of petitions was ineffectual and inadequate. Radical changes were made in our form of petition and procedure of investigation for the purpose of keeping Communists out of our fraternity."

We know that Communists have infiltrated some of our lodges and we know what they are doing to keep the best type of citizens out of blue lodges by the exercise of the ballot.

Our form of government was virtually born in Masonic lodges. The Masons, as you know, engineered the Boston Tea Party and, on the occasion of his midnight ride, Paul Revere was an officer of his lodge. A large majority of the signers of the Declaration of Independence and the Constitution of the United States were Masons. Masons, in my opinion, have a greater responsibility to keep America American and thus preserve our way of life than any other segment of our human family. There are said to be 3,500,000 Masons in the United States, most of whom would, if organized and energized, become Paul Reveres, in which event, we would need have no fear for the safety of our country.

The founders of our way of life placed their belief in the existence of the Supreme Being. You cannot read the Constitution of the United States or the Declaration of Independence; you cannot read the constitutional debates, out of which our Republic was born, without realizing that our founding fathers recognized that a government of freemen must necessarily rest upon spiritual values. Was it not Paul who said, "Where the spirit of God exists, there will be found freedom." The Communists deny the existence of a Supreme Being and brazenly proclaim that the spirit of Christianity—belief in God—must be exterminated everywhere before communism is safe anywhere. No greater indictment could be drawn of any movement than to say it cannot exist in a religious atmosphere.

Kill the spirit of God in America and our liberties will evaporate almost overnight. The Communists know this and that's why they are infiltrating our churches; yes, I said our churches, and all other organizations whose structures are founded upon a belief in God.

We are engaged in an atheistic war which is sapping our financial strength. This war is called a cold war yet it is proving to be as expensive as a hot war from a monetary standpoint. It was Lenin, that patron saint of communism, who said many years ago that sooner or later the Communists hope to force America to spend her way to destruction. In a measure, that's what is being done in our country today. The war in which we are engaged is a perilous one, more perilous than the hot war with the Germans and the Japs. We have lost virtually all of the preliminary battles. It takes a courageous people to face that fact, but I submit that if we don't have the courage to face it honestly we will certainly be destroyed.

We must divorce our minds from the things that are trivial and concentrate upon the great problem of saving our civilization from atheism and communism, which go hand in hand. We can save our way of life if we have the courage and the character to follow the advice of our Masonic forefathers who did so much to make our way of life possible and if we are worthy of our heritage, we must put forth the same kind of effort which they put forth.

Nothing pleases the Communists more or advances their interests more rapidly than the wasting of human effort through strikes and unrest, the dissipation of our mineral resources and fertility of our soil which we are doing by various forms of subsidies and governmental extravagance which pyramid our national debt. In his Farewell Address George Washington, one of our Masonic forefathers, admonished us to, "Cherish public credit and avoid the accumulation of debt." This, among other things, we have failed to do. Our Masonic forefathers gave us a way of life which has produced a greater degree of liberty and a higher living standard than ever experienced before in the history of civilization. If we Masons fight for its preservation and encourage others to emulate our efforts, we shall not fail.

What Is the Sixteenth Amendment?

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1950

Mr. POULSON. Mr. Speaker, Charles Coburn, the eighth generation of Coburns born in America, has never alined himself with politics. An actor of stage and screen, therefore a servant of the people, his interests politically have been in the preservation of the Constitution and the American way of life, rather than in party politics.

Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Mr. Coburn:

WHAT IS THE SIXTEENTH AMENDMENT?

(By Charles Coburn)

Ask the first 100 people you meet the question, "What is the sixteenth amendment?" and you will be amazed to find not more than one can give you the answer.

The Constitution of the United States is a contract of agreement between the "people" as party of the first part, and the "servant of the people" (the Government) as party of the second part.

All contracts are based upon "intent," "purpose," and "consideration"; consequently, any proposed change in or any added clause to the agreement should be in keeping with the original intent, purpose, and consideration upon which the contract is based.

It is my belief that the sixteenth amendment is directly opposed and antagonistic to the Constitution of the United States and repugnant to the intent upon which the contract is based.

In the Declaration of Independence our forefathers stated very clearly that men "are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

Among the charges made against the dictatorship of King George III were:

"For imposing taxes on us without our consent.

"For abolishing the free system of English laws and establishing an arbitrary government."

The fear expressed by our forefathers of leaving any possible loophole whereby our Government might ever become a political dictatorship was emphasized by Benjamin Franklin who said:

"We have gone back to ancient history for models of government, and examined the different forms of those republics which having been formed with the seeds of their own dissolution now no longer exist. And we have viewed modern states all round Europe, but find none of their constitutions suitable to our circumstances."

The main intent of our system of checks and balances—that is, of having three departments of government—executive, legislative, and judicial—was to prevent any arbitrary power being given to any one department of government.

The purpose of the contract is expressed in the preamble of the Constitution:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

All the articles and amendments in and to the Constitution, up to the sixteenth amendment, are in support and full accord with the intention expressed in the preamble.

George Washington in his Farewell Address warned his fellow citizens "against the insidious wiles of foreign influence * * * since history and experience prove that foreign influence is one of the most baneful foes of republican government."

It is obvious that our form of government was never intended to countenance fascism, communism, socialism, or welfare statism, or any other form of dictatorship destructive to our system of free enterprise and to the liberty and independence of a free people.

The insidious seed of dissolution was injected into the Constitution against the warning of Benjamin Franklin and George Washington, and "we the people" were sold down the river when through stupidity or cupidity our trusted representatives of 42 State legislatures ratified the sixteenth amendment granting dictatorial powers to Congress.

The sixteenth amendment is worded as follows:

"The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration."

Up to and including 1932, the figure for living expenses was arbitrarily set at $2,500 for a single person and $3,500 for a married couple. Today the figure is arbitrarily set at $600 for a single person and $1,200 for a married couple. And this is done at a time when living expenses are perhaps three or four times as much as they were in 1932. So with one fell swoop the Government takes out of each taxpayer's income $1,900 for a single person and $2,300 for a married couple. In other words, this law puts arbitrary power into the hands of a branch of the Government to take a man's life without a hearing, for, as Shakespeare says:

"You take my house when you do take the prop that doth sustain my house; you take my life when you do take the means whereby I live."

Through the present brutally unfair and viciously discretionary system of taxation our National Government has added bureaucrat to bureaucrat and subsidy to subsidy and there are now more than 19,000,000 persons living in whole or in part on the National Government, supported by the workers and salaried people of the country.

Chief Justice Marshall was right in saying: "The power to tax is the power to destroy." Not only has the sixteenth amendment nullified most of the clauses of the Constitution which protected our system of free enterprise, but it is a whip in the hands of a political machine rapidly driving us into socialism or welfare statism and pauperism.

For who can live on $600 a year at the present high cost of living which is due to our present system of taxation. It is obviously an admission of dishonest thinking for the Government to allow a hard-working taxpayer only $600 a year for his living expenses and then appeal to Congress for $1,200 a year for old-age security. Though I am in favor of $1,200 for old-age security, this kind of reasoning is illogical to say the least.

"We the people" are fast becoming the slaves of a bureaucratic Government, for no matter what we earn by the sweat of our brow we may keep only as much or as little as the czars of taxation are pleased to allow us. In these circumstances how can a man provide for himself and his family and set aside anything for the future? This is certainly not the intent of the contract which definitely promises the people "the right to be secure in their persons" * * * "Justice" * * * "domestic tranquility" * * * and the "blessings of liberty for ourselves and our posterity."

The political slogan of "soak the rich" for the purpose of getting votes has been exploded by the arbitrary power to tax—and the socialistic practices of England have already proven there is no such thing possible as an even distribution of wealth—any more than it is possible to have an even distribution of brains or intelligence. The only thing which can be and is distributed evenly is poverty—and America is headed in that direction under the present practice of deficit spending by the Government.

If the Supreme Court of the United States can find any legal technicality for not declaring the sixteenth amendment unconstitutional, or if Congress cannot find ways and means of taking the teeth out of this amendment and compel the administration to eliminate wasteful expenditures, then it is the duty of every loyal American, regardless of his political affiliation, unless he is in favor of having a socialist government, to insist upon the repeal of the sixteenth amendment, which is unquestionably un-American in spirit and repugnant to the original Constitution of these United States.

Who is here so base that would be a slave? If any, speak; for him have I offended. Who is here so vile that would not love his country? If any, speak; for him have I offended. Who is here so stupid that would destroy our Constitution? If any, speak; for him have I offended. I pause for a reply.

Nomination of William Crawford Gorgas in the Hall of Fame

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. BATTLE. Mr. Speaker, under unanimous consent to revise my remarks, I include a letter I have written to Dr. Sockman, director of the Hall of Fame, in behalf of the memory of Gen. William Crawford Gorgas:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 7, 1950.

Dr. RALPH W. SOCKMAN,
Director, New York University Hall of Fame, New York, N. Y.

DEAR MR. SOCKMAN: I wish to add my endorsement to the many you are receiving in behalf of the nomination of William Crawford Gorgas to the Hall of Fame.

The Dictionary of American Biography has called Dr. Gorgas the man who made possible the construction of the Panama Canal. This alone is an eminent achievement. But Dr. Gorgas did more. It was his conquering of disease in Habana and later in Panama which made possible the eradication of yellow fever in the Western Hemisphere.

Historians agree that one of the chief causes of French failure to build the Panama Canal at the end of the nineteenth century was the twin scourge of yellow fever and malaria. Records show that during their 9 years on the isthmus, the French lost nearly 23,000 workers. At all times at least one-third of their labor force was sick. Panama had earned the name "White Man's Grave."

It was to this veritable pest hole that Dr. Gorgas came, fresh from his successful sanitation campaign in Habana where both yellow fever and malaria was brought under control for the first time. In due time, according to Theodore Roosevelt, Jr., "Gorgas so improved the sanitary conditions of this death-laden region that it became more healthful and showed a lower death rate than any community in the United States." This public-health miracle wrought by Dr. Gorgas made possible the building of the Panama Canal with little loss of life.

Modern American communities have been rendered almost immune to mass epidemics of plague proportions because of the amazing advance of preventive medicine and public-health techniques. Most Americans find it difficult to visualize the horror of the plagues that devastated the Old World and America too until comparatively recent times. As late as 1873 my home town of Birmingham, then 2 years old, was almost wiped off the map by a cholera epidemic. Having heard tales from our grandparents of that terrible experience, we can more readily picture the desolation visited upon a community by such a scourge—the frenzied exodus of all able-bodied citizens, leaving the sick behind without care, the almost complete paralysis of business and all normal life.

In 1878, shortly before Gorgas began his yellow-fever work in Habana, the United States had more than 100,000 cases of yellow fever and more than 20,000 deaths. Today the disease is almost unheard of. But the significant fact to be borne in mind is that the brilliant pioneering of one man in preventive medicine and sanitary engineering freed the modern world of this dread disease. If it were not for Dr. Gorgas our statistics might still be heavy with deaths from yellow fever.

Therefore it is not only as one of the architects of the mighty Panama Canal that we revere the memory of William Crawford Gorgas, though this accomplishment in itself adds permanent luster to his name. It is because of the effect of his life and work upon the health and welfare of all mankind that we feel he belongs beside the other great immortals in the Hall of Fame. In the words of Maj. Gen. Robert E. Noble, United States Army, Dr. Gorgas "was a soldier, a doctor, a humanitarian. The good he did will live to bless the peoples of the world in generations yet unborn."

For these reasons, then, I respectfully request your earnest consideration of the nomination of Alabama's Dr. William Crawford Gorgas to the New York University Hall of Fame.

Sincerely yours,

LAURIE C. BATTLE.

Statement by Henry Ford II

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1950

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important announcement from Henry Ford II, president of the Ford Motor Co. It deals with that company's organization of a fund in an attempt to discharge obligations as an industrial citizen in the fields of charity, education, public and private health and hospitalization, civic and community development. In my opinion, it is an outstanding example of industrial citizenship.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

Henry Ford II, president of Ford Motor Co., made the following statement today (March 6):

"We wish to announce the formation, under Michigan charter, of Ford Motor Co. Fund, a charitable, nonprofit corporation.

"The purpose of Ford Motor Co. Fund will be the alleviation of want and human suffering and the betterment and improvement of mankind through the making of contributions to organizations operating exclusively for charitable, scientific, literary, or educational purposes.

"The fund will be financed principally by contributions from Ford Motor Co.

"This action is an attempt to organize ourselves to discharge to the best of our ability our obligations as an industrial citizen in the fields of charity, education, public and private health and hospitalization, civic and community development in Dearborn, Detroit, and elsewhere.

"It is our observation that traditional sources of financial support of private institutions operating in these fields are tending to disappear. We do not like the consequences inherent in the alternative facing such private institutions—that of having to turn to government for much-needed financial aid. In our opinion, this situation places an increasing responsibility upon American businesses in their role of industrial citizens.

"Ford Motor Co. Fund headquarters will be located in Dearborn.

"The board of trustees of the fund are Henry Ford II, Ernest R. Breech, L. D. Crusoe, John R. Davis, Benson Ford, William T. Gossett, D. S. Harder, and T. O. Yntema.

"Henry Ford II is president of the fund, Ernest R. Breech is executive vice president, Allen W. Merrell is vice president and chairman of the administration committee, L. E. Briggs is vice president and treasurer, and Fred A. Thomson is secretary."

Depletion Allowance

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. CHURCH. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the RECORD, for the consideration of the Members of the House, a letter I have received from Mr. John E. Hughes, attorney at law, of Chicago, Ill. He presents a very interesting comment on the proposed change in existing law with respect to depletion allowance.

CHICAGO, ILL., *March 1, 1950.*

Hon RALPH E. CHURCH,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE CHURCH: The President, in his tax message, said one man had an income of $1,000,000 a year for the 5 years 1943–47 and by using it to drill for oil escaped income taxes on it and now has properties yielding $5,000,000 a year.

It is too bad for the revenue there are not more such men because these properties must be worth $25,000,000, and when he dies the Federal estate tax thereon at present rates will be about $16,600,000, and also if he now has income from the property of $5,000,000 a year he pays an annual income tax of 77 percent on half of his income, or almost $2,000,000, unless he has a wife who survives him and to whom he leaves half his property, in which case his estate will be half that but her estate must pay on the balance when she dies.

If he had not drilled for oil the Treasury would have collected only about $4,000,000 in income tax from him for 1943 to 1947, inclusive. Thus, instead of losing money by the provisions the President attacks the Treasury gains as above-stated. Also, the example failed to note that oil drillers were in high-tax brackets and the $1,000,000 spent in development did not escape tax because they paid tax on a considerable portion of it at high rates.

Furthermore, if the depletion allowance is modified, then oil producers should have the same treatment now afforded timber operators who only pay 25-percent tax on timber sold under section 117 (h) of the Internal Revenue Code. Oil, unlike timber, is irreplaceable.

I am writing you on my own behalf as an oil operator.

Faithfully yours,

JOHN E. HUGHES.

The American Taxpayers Are on the Sucker Lists of Arizona Landholders

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. POULSON. Mr. Speaker, the lesson for today will be on the subject of men making fortunes at the expense of our National Treasury. The particular example I shall use involves a gigantic reclamation project for the State of Arizona. This proposed development—the central Arizona project—would cost the Nation's taxpayers an initial billion and a half dollars.

The Arizona landholders who would benefit the most from this fantastic project do not propose to pay any of its original cost. The whole thing would be a gift to them from the people of the United States. Yet, these same Arizona landholders would make untold millions of dollars if the Congress should approve this incredible scheme.

How could such a thing happen? I shall tell you.

Under somewhat unusual circumstances, of which the Arizona promoters are well aware, the big landholders would operate beyond the control of reclamation laws. They would be excess owners, yet the 160-acre limitation law could not be applied to them.

Let us consider the evidence.

The Bureau of Reclamation report on the central Arizona project states, on page R–9, that about 628,000 acres in the project area have a history of irrigation.

The report continues:

About 32 percent of the land with a history of irrigation is held in excess ownership.

Thirty-two percent of 628,000 acres is 200,960 acres.

Excess ownership means land held by individuals in excess of the 160-acre limitation law for projects constructed with Federal money.

The excess-ownership estimate of the Bureau of Reclamation is not only incorrect but is deceptive. Hidden in the Bureau's own report are figures which show the excess ownership to be much greater.

On page R–12 is this statement:

An estimated 7 percent of the farms are 500 acres or larger in total acreage and contain an estimated 55 percent of the irrigated land.

Well, Mr. Speaker, the Bureau says approximately 628,000 acres in the project area have a history of irrigation. Some simple arithmetic reveals that 55 percent of 628,000 acres is 345,400 acres.

Therefore, the Bureau's excess-ownership estimate of 200,960 acres is completely untrue. The fact is that more than half of the irrigated land in the project area, 345,300 acres, is held in excess ownership.

Now, Mr. Speaker, ordinary irrigated farm land in the project area is worth about $300 an acre. Therefore, if the proposed project were approved, the 345,400 acres held in excess ownership could be sold for $103,620,000.

That is a tidy sum. But wait. Who would get it?

The Bureau report says there are about 6,000 farms in the project area. Seven percent of these farms contain 55 percent of the irrigated land. Seven percent of 6,000 is 420.

Therefore, we have the startling disclosure that under the project 420 large landowners in the project area would be in a position to sell their holdings for $103,620,000.

Let us take some specific examples to prove the case.

It so happened that in Pinal County, Ariz., between 1939 and 1947, about 193 excess ownerships were created by using water pumped from natural underground storage basins. This pumping was done in the face of dire warnings that there was not adequate water for such operations. But the speculators wantonly continued their plundering, and there was no law to stop them.

These 193 excess ownerships in Pinal County alone contain more than 137,000 acres. Using the basic value of $300 an acre, the 193 excess ownerships under pumped water in Pinal County would have a selling value of at least $41,000,000 if the proposed project were approved.

Yet, these 193 excess ownerships would pay none of the cost of the project. They could get this high figure for their excess land because under the project there would be an assured water supply, which costs them nothing.

In due course I shall name the 193 excess owners in the Pinal area.

First, Mr. Speaker, I should like to explain this underground water gimmick, which makes the proposed project the greatest Christmas present in reclamation history.

The plan of the proposed project is to bring water on the surface from the Colorado River to the project area. Enormous amounts of this water will flow into the underground basins.

The Federal 160-acre limitation law applies only to water carried to the project. Now what about this water after it goes down into the underground basins?

There is the gimmick.

I have shown that there are in one part of Pinal County alone at least 193 excess ownerships, created between 1939 and 1947, which use only underground water. Under the project these excess ownerships would be given free a dependable source of water, a gift from the Federal Government.

Why? Because there is no way to apply the 160-acre limitation law to underground water.

These 193 excess ownerships could remain in excess, and there would be nothing the Government could do to bring them under the limitation law. They could take all the water they needed from the underground basins. Therefore, they would receive all the benefits of the project without paying 1 cent of its cost.

There are, of course, many more such excess ownerships in other sections of the project area which would receive similar Christmas presents.

It is a rosy prospect, indeed, especially for the large landowner in the project area, and Arizona's own statements support this contention.

Let us look at the record for a moment. In the last session, hearings were held on the Arizona project before the House Public Lands Committee. Mr. V. E. Larson, an engineer of the Bureau of Reclamation, testified that the 160-acre limitation law would be applied to the proposed Arizona project, and that "some of the larger areas or farms would have to be broken down to fall within the limitation."

Mr. Larson was careful to use the word "some," for the large farms using underground water exclusively would not have to be broken down at all. These pump farms would go right on taking what water they needed, and no one could stop them. I am sure that Mr. Larson and the Reclamation Bureau is very much aware of this fact.

In the same public lands hearing, the distinguished Congressman from Arizona [Mr. MURDOCK], questioned a witness, Mr. Charles A. Carson, as follows:

Mr. MURDOCK. Mr. Carson, if this legislation should be enacted, will not this project be a Federal reclamation project?

Mr. CARSON. Yes, of course.

Mr. MURDOCK. Will not the 160-acre limitation law apply as elsewhere?

Mr. CARSON. Yes.

Now, Mr. Carson is a leading water attorney for the State of Arizona. He is a fervent advocate of the proposed Arizona project. In the hearings he was questioned at length, and I should like to read a short excerpt from the record when he was being questioned by my colleague, Mr. ENGLE of California:

Mr. ENGLE. Mr. Carson, I notice that on page R-12 of the Bureau of Reclamation report that it states that the largest individual farm, in terms of irrigated acreages, averaged * * * 10,430 acres under irrigation during the period 1940 to 1944. * * * Do you mean to say that these farms with an average irrigated acreage of 10,430 acres under irrigation are going to be all reduced to 160 acres?

Mr. CARSON. Yes, sir. Most of those now are not dependent upon surface diversion. They are pumped areas, Mr. ENGLE, and not under any Federal reclamation project. They are under no regulation by the Government nor anybody else. They are outside the boundaries of all the irrigation districts that are established in Arizona, or that share in the Federal reclamation project water. If this project goes through and is authorized, it is my understanding that this would all be Federal reclamation project and that those ownerships would be broken down.

Mr. ENGLE. Do you know of any practical way to apply the 160-acre limitation to underground water?

Mr. CARSON. No.

Mr. ENGLE. I do not, either.

And I might say, Mr. Speaker, that it cannot be done. These Arizona landholders using pumped water from the underground pools cannot be controlled, or forced under the 160-acre limitation law. They could, under this project, go right ahead using the underground water, and no one could stop them. That is what Mr. Carson, Arizona's leading spokesman, himself, said. And in this instance, I agree with Arizona.

Now, Mr. Speaker, who are the 193 excess owners in Pinal County? Here are their names, and the amount of acreage registered to them on local Government records between the years 1939 to 1947:

	Acreage
P. H. Ethington	6,807
Arizona Farm Products Corp	5,814
C. A. Owen	4,232
T. Decker	2,945
P. Bianco	2,720

So, Mr. Speaker, we have the situation where the excess landholders and speculators in Arizona would get all the benefits from this incredible proposed project and would have to pay none of the costs.

I can see why the Arizona landholders want this project, but I cannot conceive of the Congress authorizing it.

This Freedom

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona Tribune of March 6, 1950:

THIS FREEDOM

While we're talking so much about freedom in this country, all of us should get down to brass tacks and check up on our freedom.

Do we have as much as we once had? Is our freedom gradually disappearing? From the standpoint of the individual, is our Government a good Government. Or, under the American interpretation, is it becoming a bad Government?

It is necessary in a large sense to regard freedom from an economic, as well as a political standpoint. If a people are treading a road to economic serfdom, it must be reasonable to suppose that they have lost their freedom.

Now, examine the American scene from that vantage point. A good government will guide a people, will help them to help themselves, offer unity, and give them economic freedom by permitting them opportunity, and the privilege of retaining as much of the money they earn as possible.

On the other hand, a government that does anything less is a bad government, as Americans regard freedom and opportunity, political as well as economic.

February 11, in this column, we discussed the subject, Was Lincoln a Reactionary? Some of the quotations attributed to Lincoln were taken from quoted sources, in the belief they were Lincoln's. Mr. Walter Winchell, the radio commentator, a few days later, took us, and others to task, for using these quotations as attributed to Lincoln.

Mr. Winchell, a friend of long standing of the New Deal, said they were mere propaganda from Republican sources.

However, if his purpose was defense of the New Deal, it would appear he was quibbling over the issue. For, Lincoln did express sentiments opposing the kind of ruinously spendthrift Government we now have.

Here is another quotation from Lincoln, which even Mr. Winchell must acknowledge as authentic. It is entirely to the point we wish to make:

"Inasmuch as most good things are produced by labor, it follows that all such things ought to belong to those whose labor has produced them. But it has happened in all ages of the world that some have labored and others have enjoyed a large proportion of the fruits. This is wrong, and should not continue.

"To secure to each laborer the whole product of his labor as nearly as possible is a worthy object of any good government."

It needs only a glance at American taxation today to realize that under this definition of good government, we do not have it.

Earned income is taxed by the Government up to 90 percent. Federal taxation penalizes economic growth, it curbs improvement of living standards, and actually threatens national security.

Our economic strength is our greatest defense asset. Gen. Paul von Hindenburg, after World War I, said, "Germany's armies were not defeated in the field. Germany was vanquished by the overwhelming weight of American production."

That same production which provided the metal sinews of war from Stalingrad to the South Pacific was a major factor in the victory in World War II.

Yet, America now is laboring under a Federal tax policy which interferes, actually retards, the long-range growth and expansion needed to keep America strong.

The majority of all corporate equity investment is financed through profits. But, the administration has been leading a campaign in recent years to make profits look like stealing candy from a baby. To back up this attitude, it has imposed severe corporate taxes that drain off in large measure the funds that otherwise would go for plant expansion, and creation of new plants.

The postwar record shows that industry has saved a smaller amount of the funds needed to finance physical growth than ever before in a time of good business.

High individual income taxes add to the problem. They have drained off what used to be the risk capital that created new industry. These taxes reduce both the capacity and the willingness of the public to save and invest in business and industry.

We have created a Government that is taking an average of 25 to 30 percent of individual income in taxes.

It is a policy that is crushing the system that gave the world the greatest war production it ever had seen, and gave the allies the strength needed for victory.

We are going to need that strength again, if not to win a war, certainly, to win the peace.

Labor Is Opposed to Excise Taxes

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. MULTER. Mr. Speaker, on several occasions in recent years I introduced bills and submitted statements to the House Ways and Means Committee urging the repeal of wartime excise taxes, especially the retail tax on furs, jewelry, luggage, and cosmetics. I pointed out how continuation of these taxes is stifling business activity in the country and affecting employment.

I have before me a copy of a statement submitted to the House Ways and Means Committee by Mr. Jack Wieselberg, president of the International Handbag, Luggage, Belt, and Novelty Workers Union, A. F. of L., urging repeal of the 20-percent excise tax on luggage, handbags, and other leather goods.

Let me call the attention of the membership of the House to the very interesting fact brought out by the president of this union, representing industries in which are employed over 100,000 workers, to the effect that "during the past year there was a curtailment of from 30 to 40 percent in production in the plants in which our members are employed." Mr. Wieselberg's statement to the committee follows:

STATEMENT OF JACK WIESELBERG, PRESIDENT, INTERNATIONAL HANDBAG, LUGGAGE, BELT AND NOVELTY WORKERS UNION, A. F. OF L.

Mr. Chairman and members of the Ways and Means Committee, in behalf of the many, many thousands of members of the International Handbag, Luggage, Belt and Novelty Workers Union, A. F. of L., and their families, in every part of this country from coast to coast, I urge the outright repeal of war-imposed excise taxes on handbags, luggage, traveling bags, and personal leather goods.

Firstly, I call to your attention that the Congress is morally obligated to honor its original commitment that this excise tax should have been removed 6 months after the termination of hostilities.

Secondly, the original purpose of the excise tax to help raise required funds for the successful prosecution of the war and in order to conserve vital war materials has long since ceased to exist. Hostilities were victoriously completed and the raw material going into the manufacture of our products now exists in a superabundance.

Thirdly, by no stretch of the imagination can our products be labeled a "luxury." Consequently the continued 20-percent excise tax of handbags, luggage, and personal leather goods is inequitable and unconscionable. Yet, it continues to exist without any justification whatsoever. The fact that milady's handbag is as necessary and essential to the feminine portion of our population as the pockets of a man's suit or coat is so obvious as to require no further comment. It is utterly fantastic and unrealistic for anyone to label this item a luxury and to make it subject to a luxury tax. And you, the members of this committee, who must carry back and forth with you to Congress and back to your homes items such as luggage, traveling bags, briefcases, and wallets—are these items luxuries? How could you function as legislators if you were deprived of any one of these items? Could

you, by any stretch of the imagination, be charged with indulging in a luxury because of the practical necessity to own and use these items? The traveling salesman, the technician, the professional man, all of whom could not conduct their business or make a living without these items—are they indulging in carrying about and lugging about luxuries? These items are as much the tools of the trade for the people who need them as the mechanic's and laborer's equipment.

There is still another, more important and more persuasive reason for the immediate and complete elimination of the wartime "luxury" 20-percent excise tax upon handbags, luggage, traveling bags and personal leather goods. At our recent international convention held in Atlantic City the 240 delegates representing 80 locals from every part of our country went on record unanimously demanding the complete elimination of this unconscionable and inequitable tax. Why? For the very vital reason that this tax is not only inequitable and unconscionable but because it is ruinous and demoralizing to the very industries in which our members are employed, and upon which their families depend for a livelihood. Our survey and report shows that during the past year there was a curtailment of from 30 to 40 percent in production in the plants in which our members are employed. Consequently, there was a resultant enforced idleness experienced by a corresponding lay-off of large numbers of workers. There was a reduced income for those fortunate enough to work part time.

It is for the foregoing reason that our delegates to the convention unanimously demanded the immediate repeal of this unconscionable tax. It is for such reason that the American Federation of Labor supports this demand for the elimination of this "luxury" tax.

Our industries have been hit harder than any other—although there was less justification for imposing this tax on our industries than on any other one.

Let us face this problem with realism. Let us not make this problem a political football. How long can a 20-percent wartime "luxury" excise tax be maintained on admittedly essential commodities? How long can this condition be continued when it causes irrevocable loss and threatens the very existence of American industries which employ more than 100,000 workers—and affect the hundreds of thousands who are members of their families and who depend upon the continued existence of these industries for their very livelihood? Every survey conducted by us, and yes, by independent impartial agencies, report that there is buyer resistance because of this unconscionable and inequitable tax. The thousands of small-business people who retail these items to the general public report that they are constantly asked "When are these taxes going off?" There is no satisfactory answer and the public doesn't buy. How many tens of thousands of small-business people are being ruined by such shortsighted policy can be understood by any person willing to face the facts. The demoralization of the industries manufacturing these basic necessities has been permitted to a point that cries out for speedy and immediate relief. The consequent unemployment in those industries has reached a point of crisis.

Be assured, gentlemen, that our Government is losing money because of the continued imposition of this inequitable tax. Not only have many manufacturers gone out of business during the past year, and others ceased operation for 6, 7, or 8 months, but those that have operated have done so on a part-time basis. Consequently there has not only been an economic loss to the industry and its workers but the Government has lost in taxes and will continue to lose in taxes on incomes, business, etc., far more than the ruinous 20 percent excise tax will or can bring in henceforth. So far as the Government is concerned this is bad business procedure. I haven't even mentioned the cost to Government in paying out relief, unemployment insurance, etc., all of which is directly traceable to the curtailment of manufacture due to the 20 percent tax.

In conclusion permit me to point out to you that the American public does not consider basic necessities such as handbags, luggage, traveling bags, briefcases, personal leather goods, etc., as luxuries. In fact, Congress never classified these items as luxuries. The continued levy of this tax upon these products is burdensome and ruinous. It is a suicidal tax policy which literally kills "the goose that lays the golden egg."

The imposition of an excise tax on the production of essential goods has no place in a peacetime tax structure. This is particularly true when the items subjected to the excise tax are necessities and not luxuries. Such taxation constitutes an obstacle which cannot be hurdled in the path of an expanding economy. It is absolutely ruinous to industries manufacturing essential goods which have already been demoralized and seriously crippled because of this burdensome tax.

To save our industries, to revive and stimulate employment, and to promote the growth and welfare of American industries manufacturing essential items such as handbags, luggage, traveling bags, and personal leather goods requires the immediate repeal of the 20-percent luxury excise tax upon these items.

Who Is an Indian?

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting statement by Paul L. Fickinger, Area Director of United States Indian Service, Billings, Mont., made before the Rotary Club, Billings, Mont., February 20, 1950:

I am pleased with the privilege of discussing briefly some phases of Indian administration. Some of the things I will say today may not completely represent the thinking and views of the Department and therefore I take full responsibility for my remarks.

Why is there a Federal Bureau of Indian Affairs?

The Federal Government first got into the Indian welfare business through the regulation of trade. Benjamin Franklin had reported to the Albany Congress of 1754 that "many quarrels and wars have arisen between the Colonies and the Indian nations through the bad conduct of traders who cheat the Indians after making them drunk."

In the Federal Constitution the States delegated to the National Government the duty of regulating commerce with foreign nations, among the several States, and with the Indian tribes. By Jefferson's time we began to take thought as to how the Indians might be accommodated to the life which was rapidly engulfing them. Jefferson himself wrote: "Encourage them to abandon hunting, to apply themselves to the raising of stock, to agriculture, and domestic manufacture. * * * The ultimate point of rest and happiness for them, is to let our settlements and theirs meet and blend together, to intermix, and become one people."

Two decisions of Congress had the effect of moving the Federal Government from the limited responsibility of regulating trade to a wider one in the field of welfare—in the direction, indeed of carrying out the objective stated by Jefferson.

The first of these was the passage of the Indian Removal Act of 1830 which resulted in the physical removal of some 30 tribes from east of the Mississippi to an all-defined Indian Territory west of the river. These removals involved the United States in expenditures for the costs of removal including the cost of land improvements owned by the Indians, and for tools, equipment, and assistance in establishing themselves in the new country.

The second of these decisions was the adoption of language in the Appropriation Act of 1871 declaring that "Hereafter no Indian nation or tribe within the territory of the United States shall be acknowledged or recognized as an independent tribe or power with whom the United States may contract by treaty." The decision had the effect of bringing the Indian people under the legislative control of Congress to an extent not previously attempted. Prior to 1871 a total of 374 treaties were entered into by the United States Government with the several Indian tribes. Since 1871 nearly 5,000 laws having to do with Indians have been placed on the statute books.

Originally jurisdiction over Indian matters was in the military branch. The Bureau of Indian Affairs was created in 1824 and was placed in the War Department. When the Department of the Interior was created in 1849 the Indian Bureau was transferred to it and came under civilian administration. However, there were constant calls upon the military branch all through the succeeding generation and many Indian agencies were supervised by military men on loan to the civilian branch.

We have long since moved away from military measures in our handling of Indian affairs but there has remained the attitude that Indians are a people apart and that the Indian Service deals with matters which are not of general concern. Legislation providing privileges or benefits for the general population is still being written in a manner to exclude Indians from the application of the legislation. It is necessary to pass special legislation if they are to benefit. There is no reason for this; welfare laws of general application should extend to Indians.

Let us now define a few terms.

1. What is an Indian? This one is easy. An Indian is a human being, even as you and I are pleased to consider ourselves.

2. The next one, Who is an Indian? is not so easy to define. For some purposes an Indian is one who is of one-half or more degree of Indian blood. In other circumstances an Indian is one who is of one-fourth or more degree of Indian blood and in still other instances an individual is considered an Indian if he has one-eighth, one-sixteenth, one-thirty-second, one-sixty-fourth, or one one-hundred-twenty-eighth, etc., degree of Indian blood and is an enrolled member of some tribe. Quite confusing.

There is real need for a declaration by the Congress of the United States as to just who is an Indian. The matter of clarifying this item has been approached many times by many authorities but the complications of old treaties, tribal rights, conflict of individual interests, and various statutes have, to date, made it impossible to have a meeting of minds on the subject.

In my opinion, our Congress will have to settle the matter by an arbitrary blood quantum, or some other equally arbitrary definition.

3. The third definition, What or who is a ward Indian? is likewise a simple one even

though the term "ward" is universally misunderstood and loosely used when applied to Indians. There are no ward Indians except a small handful who have been declared by the courts as non compos mentis, or insane. Indians are no longer prisoners of war. They are full citizens of the United States of America and of the States in which they reside. The so-called reservations on which some of them live are not prison areas; they are the homes of a segment of our population free to go and come as they please.

The term "reservation" derives its name from the fact that the land within a given area was reserved by the Indians for themselves when they gave, sold, or had taken from them, the vast holdings they once owned. We could just as easily apply the term "reservation" to Billings because we have defined an area known as the city of Billings which you and I have reserved, through purchase, as a home for ourselves.

True, most of the remaining land of our Indian reservations is held in trust by the Federal Government for the Indians and as such there are certain restrictions against its alienation. A discussion of that matter would involve more time than is available to me today. There also is the fact that so long as the land remains in this trust status it is nontaxable. This tax-free status of the land, however, was a part of the compensation awarded the Indians for the vast bodies of land they ceded to the Government of the United States, which in turn was made available to our forefathers for homestead entry, and certain sections in each township to the States for school purposes.

The fact of Federal restrictions on trust property and an unfortunate simile made use of by the great John Marshall form the thread upon which has grown the popular concept of Federal wardship and the discriminations practiced in some States and communities against the alleged wards.

Holding of lands in trust constitutes wardship for the Indian no more than for the pioneer homesteader. Yet, our great State has by recent legislative enactment placed a statute on the books defining a ward Indian as anyone whose name appears on a tribal membership roll and as such denies to him certain privileges accorded other citizens of the State—this in spite of the fact that many Indians do not live within the boundary of a reservation. (Others own property in fee title and as such pay taxes.)

If this can be done for one group of our citizens, what is to prevent similar legislation to deny rights and privileges to other segments of our citizenry? Those whose names appear on the roll of Rotary International, for example. Obviously, such legislation is unconstitutional and should never have been enacted.

What is the nature of the Indian problem?

The general picture of the Indians today is one of poverty and of limited opportunity. Land constitutes the economic base for the world population, and so it is with the Indian, yet today one-third of the Indian population is totally landless and for at least another one-third their land holdings are in such a state of divided interests as to be practically useless to them. Even with this situation the picture might not be so dark if the land still in Indian ownership were more equally distributed or it lay in more favorable climatic belts but neither of those conditions prevail and the living standard of those Indians suffers in consequence.

The principal causes of the present land situation stems from the General Allotment Act of 1887 which, though beneficially intended, had the effect of forcing the alienation of large areas of Indian land. Under this act, each Indian whose name appeared on the tribal roll was allotted a given acreage of land from the tribal holdings, ranging in size generally from 40 acres of irrigated land to 640 acres of western grazing land, generally also with little thought being given to the adequacy of the allotment as an economic unit.

The individual allottees were then authorized to obtain fee title and to dispose of their holdings. Between 1887 and 1934, by reason of this legalized alienation, Indian lands decreased from 138,000,000 acres to approximately 52,000,000 acres. During this same period the Indian population increased by approximately 100,000. The area lost was with few exceptions the most desirable and productive land. Some lands have since been restored to Indian ownership to bring the total to its present 56,000,000 acres.

Let us look now briefly at the problem in Montana. We have within the State seven Indian reservations, and an Indian population of some 20,000. Indian lands total in round figures 6,500,000 acres of which roughly 1 percent is irrigated, 6 percent dry farm, 71 percent open grazing, 15 percent forest and woodland, 3 percent other types, and 4 percent are barren and waste.

A great many of the allotments are so involved in heirship, frequently with heirs through three generations and so numerous, that partitioning or division between heirs is economically impossible. The usual practice then is for the land to be leased, sometimes to an Indian, but more frequently to a non-Indian, because few of the Indians are economically able to finance such a venture. The lease rentals are divided between the heirs in accordance with their undivided heirship interest in the land. It is not uncommon for an heir's share to amount to only a few cents. This causes a tremendous administrative problem—one that is increasing day by day.

Another problem lies in the fact that the original allotments were not economic units to begin with. One 640-acre grazing allotment might have water but 10 others lying adjacent to it would not have, and as such were useless by themselves. The result—the whole is leased as a unit, sometimes to an Indian but more frequently to a non-Indian.

Other contributing factors against a greater use of existing resources include a lack of know-how of our American economy—an economy quite foreign to the early life and tradition of the Indians—lack of adequate credit with which to get a start and unquestionably in some instances a lack of interest, and finally the continued pressure of outside forces to gain possession of Indian land.

I am constantly besieged with requests from Indians wanting a patent in fee to their land so that they can sell it to a non-Indian. In some instances these are legitimate requests but by far the greater number come from Indians who have lived all their life on the reservation and will continue to live there. In many instances the bulk of their income comes from lease money on the very land they wish to sell. Its sale offers immediate possession of a few hundred or thousand dollars which would soon be gone and they would then be wholly dependent on someone for a living. In many such instances the holding is not adequate for use by itself, and the rental income is small.

The situation presents a serious problem. What would you do about it?

True, not all Indians want to farm or raise stock even if there were adequate, usable land for them all. That, too, poses a problem of what to do, proper training in skills, acceptance in a community, and adjustment.

I do not mean to imply that all of the Indians in Montana are faced with this kind of a problem. There are many who, through trades and purchases, have built themselves an economic unit and through Indian Service assistance from a meager credit fund have gotten a start and are successful farmers or ranch operators. Others are working in towns and cities, have adjusted, and are substantial citizens of their communities. Their number is far too small in comparison to those still remaining. They have done this, too, in the face of terrific odds.

The lack of resources, lack of training, and health deficiencies combine to make it difficult for Indians either to survive in their home environments or to establish themselves in communities where opportunity is richer.

This by no means exhausts the list of Indian problems in Montana, but let us consider for a moment some solutions.

The problem of the Indian must be worked out in terms of developing to the utmost such of their resources as are capable of development and their proper use by the Indians. As a coordinate of this program, there must be an intensification of the training of Indians, secure them in good health, and establish them in communities where they can support themselves, when such support cannot be obtained in the reservation area.

Some of the requirements for implementing such a program involve:

1. Regrouping of land holdings into proper economic units—a stupendous job.
2. Further development of the available resources—extension of irrigation facilities, conservation, etc.
3. Development of sound individual farm and ranch plans.
4. Availability of adequate credit facilities.
5. Intensification of training in skills for those desiring work in industrial fields and for whom a land base is not available.
6. Facilities for relocating and establishing families in a permanent economy in communities.
7. A vehicle whereby Federal responsibility to rehabilitated families may be terminated.
8. Repeal of the Federal Indian liquor law.
9. An outlawing of the use of peyote.
10. Passage of a law of uniform descent to eliminate further complicated inheritance tangles.
11. Development of a social structure.

This will cost money, but by far the greater amount would be in the form of credit, and thus recoverable, but, in my thinking, a greater expenditure now to clean up the situation will be a good investment and eliminate future expenditures such as will be required if we continue on our present piecemeal course.

The ultimate purpose of Indian policy is to attain that objective stated by Jefferson "to intermix and become one people." Personally, I am impatient with the slowness of attainment. The process must be speeded up.

I have been an employee of the Bureau of Indian Affairs for nearly 18 years and it has never been my thought that the Indian problem is the sole responsibility of the Federal Government and the Indian Service. That responsibility must be shared by every citizen of Montana—by every citizen of the United States, Indian and non-Indian alike.

Until that principle is accepted and activated we will fail miserably in the stated objective. There is no room in the program for emotionalism or sentimentalism. We must work on the basis of cold hard facts and realism tempered with firm but sympathetic understanding. There is no place in this program for political maneuvering.

As the Indian achieves certain privileges, such as handling his own leasing, property, etc., he must likewise accept and discharge the responsibilities that go with such privileges. We hear the oft repeated cry from a small irresponsible group "We want to be like other people," "Abolish the Indian Bureau," "Turn us loose." What many of them mean is that they want all trust restrictions on their money and property removed but not have to assume the related responsibilities.

Several months ago we issued from my office an opinion and directive to our superintendents to the effect that automobiles owned by Indians (unless title to the automobile was in the United States Government in trust for the Indian, and few if any are in that status) were subject to property tax even though purchased with funds derived from leases or other income from trust land. Prior to this opinion most Indians and county authorities had assumed they were nontaxable. Pursuant to our opinion, the State attorney general issued a similar opinion to county officials. A vocal few of the Indians are protesting the opinion and attempting to enlist the aid of attorneys, congressional delegations, etc., to break the opinion. They want title to such automobiles in their own name so that they can do as they please with them, sell, mortgage, etc., but they do not want to accept the responsibility of taxes that goes with that privilege.

In fairness to the great majority of the Indians, I must say they are paying their tax and accepting the responsibility.

This leads me to the point, however, that such cooperation cannot all be one-sided. Today Indians are paying taxes as you and I do on most of their property except their trust land.

We other citizens of the State of Montana must accord to them the same privileges we enjoy. Such things as the order from the State welfare board in January reducing ADC grants to Indians but to no one else can only retard the ultimate goal. If the State is running short of money and a reduction must be made, that reduction should apply to all ADC recipients, not just Indians. I am glad to say that order has been rescinded.

Other forms of discrimination must be eliminated and avoided. Signs in hotel lobbies and cafe windows reading "Indians not welcome," "Indians and dogs not allowed," and advice from citizens to Indians who are trying to establish themselves in a community "Go back to the reservation," only complicate and retard the program.

Such episodes as occurred this winter in the northern part of the State with the emotional and hysterical stories of starving Blackfoot Indians destroy years of constructive work. The weather and snow were severe, maybe more so than usual, but Blackfoot Indians were not starving. There was an orderly relief program in effect, and had been, long before the stories broke. The effect of the emotional display was to completely disrupt this orderly relief program so that many Indians not actually in need received relief.

The matter of snow removal was something different. We needed help on the reservations as did the counties and State, to break open the roads. However, we were delivering supplies and fuel to isolated Indian families and bringing any seriously sick in to the hospital by a weasel that we secured from the Army 3 years ago during that severe winter. The point I am making is that winter comes to this north country every year. We and everyone else know it. Residents should prepare for it. Fuel and food supplies should be laid in during the summer.

In my opinion relief assistance should not be provided to any employable Indian or non-Indian without the performance of some useful and constructive work. Every time this is not done you weaken the moral fiber of those people. You destroy initiative and the acceptance of responsibility to do things for themselves and this will call for greater and greater appropriations for relief purposes. The constructive answer to such a problem of course is an economy that provides work opportunity for such employables, and I do not refer to the temporary economy of a WPA program.

Now to sum this up in a few words let me say to you that unless we all work together and solve these various problems, instead of spending $50,000,000 a year on Indian matters, in time we will be spending $150,000,000, $200,000,000, $300,000,000 a year and still be no farther along. In fact, in my opinion, we will be farther from a constructive solution than ever. When I say we will be spending, I mean you and I, for it is our tax dollar that is being used.

At any rate, when we have assisted the Indians to a sound economic status and to intermix and become one people then and only then can we reduce or eliminate Federal expenditures on their behalf and abolish the Bureau of Indian Affairs. From a humanitarian as well as a financial standpoint, may we, with God's help, speed that day.

The British Socialists Take Over Business

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, George Sokolsky in his broadcast of February 26 points out that the British Socialists—the Labor Party—started out to nationalize business on a modest scale but it has now reached a considerable development. Under leave to extend my remarks I am including part of his broadcast:

The Socialists in Great Britain set out to build a welfare state, but slowly. They proposed to limit their nationalization of the means of production and distribution and the welfare of the people to 20 percent. But the nature of modern life is such that if 20 percent is nationalized, it affects the whole of life. Fabian socialism is a slow step to the totalitarianism of communism.

This is what the Socialists have done:

March 1, 1946: The Bank of England was nationalized.

August 1, 1946: Civil aviation was nationalized.

January 1, 1947: Coal mining industry was nationalized.

January 1, 1947: Telecommunications were nationalized.

January 1, 1948: Inland transportation was nationalized.

April 1, 1948: Electrical utilities industry was nationalized.

July 5, 1948: Health services were nationalized.

May 1, 1949: Gas industry was nationalized.

November 24, 1949: Bill enacted to nationalize iron and steel.

The Socialists could only accomplish that program if the United States made up the deficits, if the United States paid part of the bills. And the United States has been paying part of the bills—a huge part. They are our very expensive cousins.

And while we have been paying part of the bills, the labor government has been making separate arrangements with the Communist states, with Poland, Czechoslovakia, China, and maybe with others, to our detriment.

And now there are several proposals before our Government to make a great contribution to Great Britain—another contribution in billions of dollars. Among the most fantastic is the proposal to let goods come into this country which is to undersell American-manufactured goods. Then when the Americans go broke, the United States Government will pay the owners of the company a subsidy, and labor a dole, to make up for the loss. This nonsense must be given full debate, for it can wreck our economy.

At any rate, the British people have turned down socialism and the welfare state, as New Zealand and Australia have voted against socialism and the welfare state. Ernest Bevin said last July that the United States was, "As much a welfare state as we are, only it is in a different form."

But now Great Britain has repudiated socialism—definitely and unmistakably. The effects of the repudiation are naturally not yet clear, but as the weeks unfold the picture, it will become clearer—the full effects of this election will be clearer.

Obviously, the Attlee government is stymied. It cannot do much in continuance of its Socialist program. It cannot propose new legislation to nationalize more of British life. It must stand still.

On the other hand, the British are an extraordinarily patriotic people. It is inconceivable to believe that Winston Churchill would do anything to imperil his country. No matter how ambitious an Englishman may be, he never risks his country. He never puts self above King, as he would say it. Therefore Winston Churchill and Clement Attlee, no matter what their differences, will watch closely that whatever they do, England will not be at a disadvantage.

The right of a people to choose and to change its own government is one of the most essential of human rights. It correctly makes government the servant not the master of the people.

Different peoples devise different methods to achieve this result and to preserve this right.

The British have from earliest times, from Alfred the Great to this last election, worked at representative government as has no other people in history. They have achieved a method that is more representative than our own.

And even more, they have achieved a maturity of responsibility among public servants that can be the envy of all peoples. And it still works.

Congratulations to Max Abelman

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1950

Mr. HEFFERNAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an editorial from the Brooklyn Eagle honoring a distinguished gentleman of Brooklyn, N. Y., Mr. Max Abelman:

Our congratulations to Max Abelman, secretary of the board of Jewish Hospital, who was the guest of honor at a birthday luncheon the other day at which a large group of his friends presented him with a plaque dedicated to his 40 years of community service. We join in the tribute to Mr. Abelman because we know the story of his unselfish devotion to Brooklyn, his never-failing eagerness to participate in activities which reflect credit on the borough. It is our hope that he enjoy many more years of service to others, as we know full well that out of this he gets his greatest joy in life.

Passing of Daniel Frisch Is a Great Loss

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. MULTER. Mr. Speaker, Daniel Frisch, president of the Zionist Organization of America, died March 7, 1950, at the Presbyterian Hospital, Columbia Medical Center, after a serious operation. He was 52 years old.

He is survived by his widow, Tillie; a daughter, Mrs. Marvin Bacaner, of Boston, Mass.; and a son, Lazar, a student in the University of California.

Funeral services held in New York were attended by men and women from every walk of life and of every religious denomination. His body was then taken to Indianapolis for interment. The body was escorted by a prominent ZOA delegation. Despite serious illness, Mr. Frisch carried on with his presidential duties in directing the affairs of the Zionist Organization of America until he was taken to the hospital. He was the first president in the 53-year history of the orgarization to die in office.

Mr. Frisch's election to the presidency of the organization at the fifty-second annual convention held on May 27–29, 1949, at the Hotel Statler, New York, climaxed a career of more than 30 years of active association with and participation in the American Zionist movement. Born in Palestine, Mr. Frisch was taken by his parents to Rumania at the age of 1 year and immigrated to the United States in 1921 and settled in Indianapolis, Ind.

From the very day he immigrated to this country, Mr. Frisch was active in the work for the Zionist cause and for the welfare of the Jewish community in general. Combining idealism with practical approach, Mr. Frisch soon was accorded recognition for his organizational abilities and for the indomitable spirit to which he applied himself to the task of furthering the cause of Zion reborn. Despite the pressure of a successful business, Mr. Frisch devoted most of his time and energies to the cause of Zion and to the community.

While Mr. Frisch attended the Yeshiva —rabbinical seminary—abroad and a scion of famed rabbis in Rumania (his father and grandfather were rabbis in Rumania), he assumed the title of layman as a byline in his extensive writings. A writer and speaker of note, his articles on the philosophy and organizational problems of the Zionist movement have attracted international attention.

Before taking up his residence in New York some 5 years ago, Mr. Frisch during his domicile in Indianapolis was elected the delegate of that community to the American Jewish Conference and was subsequently named the outstanding Jewish citizen of the State. For a number of years he was chairman of the board of education of the Jewish Education Society of Indianapolis and was president of the Beth El Zedeck Temple there. He was a founder of the Indianapolis Zionist district and later was elected president of the Ohio Valley Zionist region.

Mr. Frisch attended most of the World Zionist Congresses during the last 2 decades and also was a delegate to the London Zionist Conference held before the end of the war. In 1934 he was elected a member of the national ZOA administrative council and later he became its chairman. He was also a member of the national ZOA executive for many years and until his election to the presidency in May 1949 he served as vice president of the ZOA and vice chairman of its inner committee.

Although only 9 months in office, Mr. Frisch left an indelible mark on the American Zionist movement by the inauguration of several major constructive projects embodied in his program for action for work in Israel and for cultural survival on the American Jewish scene, which was unanimously adopted by the national administrative council and national executive committee of the ZOA.

Immediately after the convention, Mr. Frisch left for Israel on a mission of close cooperation with the Israel Government and to lay the groundwork for the launching of ZOA projects embracing aid to the middleman, or the forgotten men as Mr. Frisch termed them, and for the erection of a ZOA house in Tel Aviv which is to serve as a center of information for American tourists, Jewish and non-Jewish, as well as to provide information on the American Jewish community to the Israelis.

Mr. Frisch again visited Israel last month, and together with Mr. Fred Monosson of Boston, chairman of the ZOA house building committee, he broke ground for the erection of the house. The ceremonies were attended by Prime Minister David Ben Gurion, United States Ambassador James McDonald, members of the Israel Cabinet, and members of the Knesset (Parliament). During this visit to Israel, Mr. Frisch made arrangements with the colonization department of the Jewish Agency for Palestine for the settlement of American pioneers on two ZOA colonies which are to be established under an agreement signed by Mr. Frisch in November with the Jewish Agency for Palestine and the World Confederation of General Zionists. He returned to this country an ill man.

Mr. Frisch's widely acclaimed program also called for a drastic revision in Hebrew education and the presentation of a comprehensive plan for the democratization of the Jewish communities.

In all his actions and writings, Mr. Frisch assumed a militant stand on major questions affecting the future of Zionist movement. He was frank, outspoken and minced no words in voicing his convictions.

The national ZOA office today released the text of a letter which Mr. Frisch dictated from his hospital bed on the eve of the operation. In this letter, which was addressed to the officers of the ZOA regions and 800 branches throughout the country, Mr. Frisch said:

You might find it rather strange that one who, like myself, is facing an unavoidable major operation, should dictate from his hospital bed a letter to his friends—but strange things do happen in life.

I trust you will believe me when, standing at the crossroads of life in more than one sense, I tell you that I am convinced that a strong ZOA and a vigorous general zionism (not zionism in general), are as indispensable today to the welfare and growth of Israel, both as a state and as a people, as they have been.

During the 9 months of my presidency, I have given the ZOA and the Zionist movement my very all. I have tried to manage the affairs of the ZOA without regard to past politics or any attempt to settle old accounts. I have tried to do my very best; I think I have earned the right to call on others to do theirs.

We are now facing the next convention. Believe me that, as I lie here, I have nothing on my mind concerning personalities that may compete for one position or another. All I am concerned about is that the dignity and the power and usefulness of the ZOA should be reflected in the next convention. We must come to the convention with a treasury capable of carrying us through the lean summer months and with a membership as large, if not larger, than that of a year ago. For the ZOA cannot maintain its influence and creativity without funds and a large membership.

May I appeal to you to help me and the ZOA by doing your very utmost within the next 60 days, from March 15 to May 15—our two mobilization months—so that we may exceed by far last year's membership and the proceeds of the American Zionist Fund, without which the ZOA cannot function?

I shall be thinking of you, looking forward to your help.

May life be kind to you always.

Cordially yours,

DANIEL FRISCH, *President.*

As the world joins us in mourning our loss, we in ZOA pledge ourselves to fulfill his last request.

More Debt and More Taxes Is Not the Cure for Excessive Debt and High Taxes

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. WHITE of Idaho. Mr. Speaker, many thoughtful and prominent citizens are deeply concerned with the present trend of Government spending and its final result.

Recently there was received a copy of a letter on Government spending addressed to the President by a former schoolmate and now a prominent businessman of Spokane, Wash., which is inserted here for the consideration of the Members of Congress:

FEBRUARY 23, 1950.

His Excellency HARRY S. TRUMAN,
President of the United States,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: Don't you think, Mr. President, that it is about time we got our house in order? At the present moment we are Russia's No. 1 enemy and the No. 1 enemy of China. Russia would strike in a moment if she believed she was strong

enough or we were weak enough. We are becoming weaker internally each day, and we cannot continue to spend our substances without one day becoming too weak to resist a strong aggressor nation. In 1926 Lenin is reported to have said, "Some day we shall force the United States to spend itself into destruction."

You must know, Mr. President, that an individual or a nation can't spend more than they take in without having disastrous results. We could probably cut $7,000,000,000 from our budget and our people would be better off and national defense would not be reduced nor necessary foreign spending impaired. It would take courage, of course, but the welfare of this Nation is far more important than the welfare of any individual or group of individuals in it.

You may ask, Where can we save $7,000,000,000? And I suggest the following savings:

Veterans' program	$2,000,000,000
Housing	1,000,000,000
CCC and reclamation	675,000,000
Rural electrification	218,000,000
Army engineers	200,000,000
School aid	290,000,000
Stock piling	350,000,000
Hoover economies	2,700,000,000

These savings will total over $7,000,000,000.

Russia, Mr. President, is getting stronger and we are getting weaker. We are becoming encircled by Russia, and some day, unless we change our ways and become strong internally and externally, it will be too late. Again, we cannot dissipate our substances and remain strong. There'll be no Marshall plan to help us.

One of our principal troubles is excessive debt and taxes, and we cannot cure these by more debt and more taxes. In spite of suggestions to the contrary, we cannot buy friendship or peace. Only strength and character will guarantee that.

Yours very truly,

SETH RICHARDS.

Hydrogen Bombs Versus Human Brotherhood

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an address by my friend, Mr. L. T. Merrill, of Beloit, Wis. His subject was The Handwriting on the Wall. I commend it to every Member of this body, because it is timely and points out dangers for the future that we must avoid:

THE HANDWRITING ON THE WALL

(By L. T. Merrill, pastor, Shopiere Congregational Church)

"I call heaven and earth to record this day against you that I have set before you life and death, the blessing and the curse. Therefore choose life, that both thou and thy seed may live."—Deuteronomy 30: 19.

As at Balshazzar's feast, we see ominous handwriting on the wall confronting humanity with fateful choices. Looming into our consciousness are the gigantic letters, HB, written twice. It is the same combination of letters, but one HB has suggestions of benevolence and a power for the healing of the nations. The other has a portent that is terrible and sinister: "Choose ye this day," Joshua told the children of Israel. Which HB will we choose: Human brotherhood or the hydrogen bomb?

The fateful juxtaposition of the two alternatives confronts us paradoxically when churches and schools are called upon to observe this as Brotherhood Week and the President calls us to live by the Sermon on the Mount, but at the same time exercising what he says is his sole prerogative of decision in a democracy of 140,000,000 persons, he orders full speed ahead on attempted production of an H-bomb, which Winston Churchill this week said may be a thousandfold more terrible than the atomic bomb. If used, it will make a murderous mockery of the word brotherhood and a travesty of the international pact we are being urged to adopt against genocide or mass slaughter.

Newspapers lately carried report of an eastern professor who played the suicidal game of Russian roulette, in which the player stakes his life on a 1-to-5 chance. He puts a single cartridge into one chamber of a revolver, points the weapon at his head, whirls the chambers, and pulls the trigger. Twice this young man twirled the chambers and pulled the trigger and nothing happened. He gambled the third time and blew out his brains. We say, "What folly in the individual!" But how much greater and more tragic the folly of a civilization proceeding to point an H-bomb at its own head and letting brass hats and confused and fear-driven politicians get their quivery fingers near the trigger for blasts that may blow our civilization to bits!

Twice in a generation we let them pull the trigger with devastating but not wholly fatal consequences. Give them their third gambler's chance. What then? Vividly a modern thinker phrases the question: "Will some angel," he writes, "flying through the vault of Heaven look down upon the blackened cinder that was our earth and say: 'Here once dwelt a race of men and women made in the image of God, but they rebelled against His divine law and used the forces given them for their own extinction.'"

The anniversary of Abraham Lincoln's birth that ushered in Brotherhood Week calls to mind his qualities of leadership lifting him above the littler men fumblingly wielding power today. We long for the statesmanship of a Lincoln—with all his political abilities, his shrewdness, his acumen, his adroitness, his clever manipulation of men on the checkerboard of politics and diplomacy. Lincoln would not have come down to us so cherished and enshrined in the Nation's memory if he had not had besides, in consummate degree, that human quality of kindliness, that welling capacity for compassion, for sympathy, for mercy, and for understanding the hopes and dreams of the common man.

Where is the spirit of Lincoln today? We need another Lincoln, because not merely a nation but a world has been torn asunder, because its wounds are deeper, the devastation is more terrible, the spread of human woe wrought by war is more widespread than in any previous martial upheaval in the world's history. And that freedom from fear, one of the precious four freedoms that the war statesmen promised us, has not come; instead a rule of international fear gripping the minds of politicians and military men who shape our policies for us and who have at their command means of unexampled power to lead the world from fear to destruction—fear and the power of annihilation in dreadful combination.

Where is the hope of salvation for our human brothers here or around the world in these thunderbolts of cataclysmic destruction? "When wilt Thou save the people, O, God of mercy, when?" runs the opening line of an expressive brotherhood hymn. But God is not responsible for men's folly. God has a right to expect the people whom he has endowed with free will and with the ability to search out some of the deeper secrets of His power, which they have found in atomic energy, God has a right to expect that His human children will be less foolish than some of their leaders.

Dr. Harold Urey, atomic scientist, testifying before a Senate subcommittee last week, said if a hydrogen bomb is developed to its maximum efficiency there will be no place to hide. If two nations have H-bombs, Dr. Urey stated he didn't know what the result would be. "Perhaps in the end there isn't any solution," he said. "It may be hopeless."

Are the people of the world content with continuing in a course that leads down that blind alley of moral nihilism to annihilation? After 19½ centuries of Christendom's upward striving toward a better hope, must we accept that sort of suicidal solution in this Brotherhood Week in the year of our Lord 1950? "No!" the voice of Lincoln would be telling us. "No!" the voice of Christ is telling us. "No!" we are saying in our hearts if we believe in the universal Father, the God of love who "hath made of one blood all nations of men for to dwell on the face of the earth" (Acts 17: 26).

A single individual's expression may seem pretty futile. Yet a mass prayer to God should go up and a mass petition to our scientists and to our political leaders, who in a democracy are our servants, not our masters, imploring them to explore further the possibilities of human understanding and brotherly reconciliation before it is too late, before we build up international hate, suspicion, and fear to a point from which there will be no returning. Winston Churchill wisely suggested such further exploration of these possibilities in an election speech in Britain this week. His counsel should be heeded in the White House, in Congress, and in the Kremlin, when he says, "I feel that Christian men should not close the door on any hope of finding a new foundation for the life of the self-tormented human race."

We read in the Scripture, "He that hateth his brother is in the darkness and walketh in darkness and knoweth not whither he goeth. * * * Whosoever hateth his brother is a murderer" (First John 2: 9; 3: 15).

"A new commandment I give unto you that ye love one another," said Jesus, who is the Lord of life rather than the Lord of death (John 13: 34).

The formula of Lincoln's second inaugural address for the reconciliation of the people after our throes of civil war was as old, as humane, and as Christian as the Golden Rule, and as the rule of brotherhood that the Master preached. But he was taken from us by an assassin's bullet and vindictive littler men frustrated his purposes, prolonging the bloody and hateful era of reconstruction.

The world for which Lincoln died, and for which Jesus died must apply their spirit and teachings in a more sincere, more purposeful, more far-reaching effort for the reconciliation of peoples and the healing of the nations; otherwise we shall be voices crying in a wilderness laid waste by diabolically directed science, "Peace, peace, but there is no peace."

"Love suffereth long and is kind. Love hopeth all things. Love never faileth" (First Corinthians 13: 4, 7–8). Paul meant that it would not fail if we really tried it, and the world must make another try at it or the consequences of failure in this atomic age are too terrible to contemplate.

"Thus saith the Lord, behold I set before you the way of life and the way of death" (Jeremiah 21: 8). It is a fateful choice. As we view the handwriting on the wall, which HB will we choose—the hydrogen bomb or human brotherhood?

Fair Employment Practices Legislation

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1950

Mr. HUMPHREY. Mr. President, the February 25, 1950, issue of Business Week, pages 114 through 117, presents a national survey on fair employment practices legislation. This article is entitled "Does State FEPC Hamper You?" In light of the fact that we shall soon be debating the issue of fair employment practices legislation, I ask unanimous consent to have this article reprinted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOES STATE FEPC HAMPER YOU?

How much of a headache—if any—have State fair employment laws proved to employers? With FEPC coming up on Capitol Hill, and more antibias bills coming out of State legislatures in the next year or so, management has been pressing that question.

To get an answer, Business Week did some asking of its own. It queried a group of employers on just how State FEPC laws were affecting them. To get a fuller picture, it also queried State commissions.

Briefly, the answers boil down to this:

Employers agree that FEPC laws haven't caused near the fuss that opponents predicted. Disgruntled job-seekers haven't swamped commissions with complaints. Personal friction hasn't been at all serious. Some employers still think there's no need for a law. But even those who opposed an FEPC aren't actively hostile now.

Commissions say that the laws have created no new problems for either a business or a community. They haven't interfered with any employer's basic right to choose the most competent man for a job, the commissions say. And the unanimous view is that minority groups are finding openings in places barred to them before.

I. THE STATE LAWS

Eight States have adopted enforceable FEPC laws since 1945. Two others have laws calling for employers to stop job bias on a voluntary basis. And laws have been proposed, so far, in 14 other States.

Enforceable laws are on the statute books in New York, New Jersey, Connecticut, Rhode Island, Massachusetts, Washington, Oregon, and New Mexico.

Nonenforceable laws are in effect in Indiana and Wisconsin.

Proposed laws are before the legislatures of Arizona, Colorado, Illinois, Indiana (to add teeth to the present law), Iowa, Michigan, Minnesota, Missouri, Montana, Nebraska, North Dakota, Ohio, Pennsylvania, and Utah.

In addition, four cities—Chicago, Philadelphia, Milwaukee, and Minneapolis—have enforceable local ordinances barring job bias.

What the laws do

FEPC laws in the eight States with enforceable statutes are all modeled after the wartime Executive order that terminated in 1945, and on the pioneering New York law (Business Week, June 30, 1945, p. 94). They have been through a pretty thorough shakedown period. But they have come through with only a few changes.

Broadly, these laws bear directly on an employer in three ways: (1) They bar him from refusing to hire, from discharging, or discriminating in advancement, because of race, religion, color, national origin, or ancestry; (2) they prohibit discriminatory job advertising; and (3) they ban questioning job applicants about their race or creed.

In all, the laws provide more or less tight job protection for so-called minority-group members: Catholics, Negroes, foreign-born residents, Jews, Mexicans, and Spanish-speaking residents.

II. THE COMMISSIONS' REPORT

Here's what State commissions had to say about the operation of their laws:

Connecticut: During the 1948–49 reporting period the commission handled 65 formal complaints of job discrimination—58 against employers, 5 against employment agencies, 2 against unions. It also investigated 40 cases that did not lead to formal complaints.

Half the charges involved manufacturing establishments; most alleged discrimination in hiring. Two-thirds were valid complaints, necessitating adjustment. All but one were settled without court action.

Generally, the commission reports no unfavorable comments from anyone.

Oregon: Most of the commission's work thus far has been devoted to disseminating information about the law. It has had four formal complaints of job bias—all from Negroes. One was dismissed for lack of evidence; one was substantiated and settled in conference with the prospective employer, who hired the complainant; two are still pending.

New Mexico: The commission has had six or eight complaints, of which three weren't justified. The others are in the process of investigation or conciliation.

Massachusetts: In 1948 (last year for which there is a final report) the commission handled 142 complaints and settled 135 after investigation and conference, without a single formal hearing or [having] a matter settled through conference brought into a court of law for further consideration. The other complaints were still pending when the commission reported.

The Massachusetts FEPC reports scores of job opportunities opened up for members of minority groups—including Negroes hired for the first time as retail store sales clerks. It said that a survey of settled cases indicated there had been no burden upon employers with respect to either management-employee relationships or employer-customer relationships.

New Jersey: The commission disposed of 423 formal, 195 informal, and 131 miscellaneous complaints in 1948–49. Of the formal complaints, 74 percent charged discrimination in hiring practices, and 13 percent alleged discriminatory dismissals.

The commission reports it closed 40 percent of the cases amicably, through conference; it dismissed 40 percent for lack of evidence of job bias; and the complainant withdrew in 20 percent of the cases.

The commission said that a check of 79 major New Jersey employers indicated: (1) No new difficulties or problems in business policy; (2) no interference with their basic right to select the most competent workers for [their] operations; and (3) as far as we know, the law has been fairly and effectually administered. The commission had had no complaints of FEPC-bred racial tensions or of anyone's refusing or vacating a job because of minority-group employment.

New York: The New York board has been functioning smoothly for almost 5 years. As a result, says its general counsel, Henry Spitz, minority groups have had broader employment opportunities. They're accepted today in places where they were never accepted before. The most noticeable spots, department stores and restaurants.

There's still resistance to job equality—and a great deal of discrimination. The commission is attacking these through educational efforts.

III. WHAT EMPLOYERS SAY

Reports were received from companies operating in Connecticut, New Jersey, and New York, and from Aluminum Co. of America—which has plants in six FEPC States.

Some of the comments:

Alcoa: FEPC laws have made very little difference in personnel policies, although the company has made minor changes in application forms to comply with technicalities of the various laws.

The laws have not increased the labor supply—as FEPC proponents promised they would. Alcoa said its labor market is substantially the same now as it would have been had these laws not been passed.

There have been a few cases in which we have been accused of discrimination by an applicant, where actually no discrimination existed. So Alcoa has had to adopt more precise methods of evaluating the ability of workers and more elaborate records as a potential defense in the event of future charges of discrimination.

Posting notices of compliance with the laws tended to irritate * * * employees who do not favor FEPC laws. So the company suggests more educational work among these groups.

Prudential Insurance Co.: The company has its home offices in Newark, where it employs a large white-collar work force. It feels that the job-bias ban has neither helped nor hurt—nor has it interfered with management's hiring prerogatives. Prudential has run into no opposition from employees to an antibias policy, and has had no discipline and grievance problems.

Elizabeth (N. J.) Iron Works: Management's normal rights have not been subjected to any serious pressures, and the New Jersey law hasn't created any new problems. There have been no adverse comments from employees.

Bridgeport (Conn.) Brass Co.: In Connecticut, none of the disastrous results anticipated by FEPC opponents * * * have come to pass—such as mass walkouts of employees forced to work with minority groups, loss of patronage by mercantile establishments, etc. Instead, the law is getting voluntary acceptance * * * by the vast majority of employers, employment agencies, and unions.

It has eliminated entirely a large and growing Communist campaign being waged * * * among the large urban Negro groups. It has widened job opportunities for minority-group members; but without interfering in the prerogatives of management so far as we have yet noted.

The law has had no injurious effects on the company's personnel relations, has caused no grievance or disciplinary problems. It has been ably administered—with a determined effort to get acceptance of the law through education rather than persecution.

Hat Corp. of America: The Connecticut law "has in no way interfered with our employment practices," this South Norwalk company reports. It has created no problems whatever.

Allen Manufacturing Co.: This Hartford, Conn., metalworking company has had no difficulties, is much impressed with the Connecticut law.

Pitney-Bowes, Inc.: The Stamford, Conn., postage-meter company "started a Negro integration program * * * before the enactment of the Connecticut [FEPC] act. Many of the problems which we encountered would have been much less difficult had we the support of [the] legislation." Pitney-Bowes believes the Connecticut act is "functioning very successfully."

Western Electric Co.: Plants under New York and New Jersey laws "have not had any difficulty in meeting the requirements of these laws," and the laws have not "entailed any undue hardship on employers who are trying to do a conscientious job in employee relations." The laws "have been accepted generally by our employees."

New York Shipbuilding Corp.: The Camden, N. J., firm reports no "interference with our right to select the most competent workers" and "no added problems or difficulties."

New Jersey Bell Telephone Co.: No serious difficulties have arisen under the New Jersey law, and there has been no interference with hiring on a basis of competence.

Lea Fabrics, Inc.: This Newark textile company was charged with discrimination shortly after the New Jersey law went into effect. On investigation, the company was cleared. After that first experience, the company has had "no new difficulties" in complying with the law, or in selecting the most competent workers.

St. Regis Paper Co. (Panelyte division): A few cases requiring State investigation have arisen at its Trenton, N. J., plant, but the company reports "very little difficulty" with the State act. And it reports: "No problems that have not previously been with us have been raised since the inception of the law, nor has it interfered with our hiring procedure."

Health Insurance Is Next

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1950

Mr. BIEMILLER. Mr. Speaker, those of us who advocate a comprehensive national health program welcome a significant article in the March issue of Fortune magazine titled "Health Insurance Is Next." The article was written for the Henry Luce publication by Russell W. Davenport.

The article is an important contribution to greater understanding of the need for a national health program. While we do not agree with many of Mr. Davenport's conclusions about voluntary programs, his facts about the urgent need for some kind of national program are impressive.

There is nothing radical about the author. His most prominent political activity was managing Wendell Willkie's presidential campaign in 1940. He is a Republican. What can be said about Mr. Davenport should also be said about Henry Luce, the publisher of Fortune. He is a Republican whose wife, Clare Boothe Luce, served as a Republican of considerable prominence in the House of Representatives.

This article marks a great forward step in our understanding of the state of the Nation's health. We now have groups in both political parties who realize that this serious problem is beyond political boundaries. They differ as to method, but there is no real difference of opinion that something must be done by Government action.

Mr. Davenport is very definite in declaring that the American Medical Association is doing itself and the American people a real disservice in its propaganda designed to prove there is no problem. He makes it finally and eminently clear that more than half of the American people do not get adequate medical care.

From that point of agreement, I think the legislative process can work to solve the problem. With permission to extend my remarks in the RECORD, I present the Fortune article:

HEALTH INSURANCE IS NEXT

(By Russell W. Davenport)

It is now certain that one of the big questions before the American people during the next few years will be public health. Already seven major bills have been introduced into Congress, with several others on the way. Prospective candidates are sizing up the question and feeling for their positions. All signs point to a good, old-fashioned political debate.

The issues involved in the debate are momentous. There is first of all the issue of whether a nation whose health and health services rank among the best in the world needs any major legislation at all. But secondly, even if it is granted that major legislation is needed, the controversial question arises of the kind of legislation desired. Here the inquiring citizen runs straight into the so-called welfare issue, but on a scale larger than anything he is likely to have encountered thus far. The attempt to solve the problem of health by Government initiative—as the administration proposes—would constitute a more advanced step in the direction of state socialism than the American people have yet been willing to take.

Now of all the proposals made thus far, only two approach this issue in a thoroughgoing manner on a national scale. One is the administration proposal (S. 1679 and H. R. 4312 and 4313), which has as its keystone the principle of compulsory insurance administered through governmental agencies. The other is the remarkable proposal (S. 1970 and H. R. 4919) of a group of progressive Republican Senators and Congressmen, based upon the voluntary principle. (The sponsors: Senators FLANDERS (Vermont) and IVES (New York); Representatives AUCHINCLOSS and CASE (New Jersey), FULTON (Pennsylvania), HALE (Maine), HERTER (Massachusetts), JAVITS (New York), MORTON (Kentucky), and NIXON (California).) This principle, of course, has been used in many plans, notably in the Hunt bill, which is comprehensive in scope, but vague as to its provisions and costs. More typically, however, as in the Taft bill and the Hill bill, voluntary plans are partial plans, aimed at alleviating some portion of the medical problem. But the progressive Republican plan defines a method of implementation (which the Hunt bill lacks) whereby the voluntary principle can be applied effectively on a national scale. This bill, therefore, which has had remarkably little publicity, ought to be better known, inasmuch as it seeks the achievement of an important social goal in a uniquely American manner.

An examination of all legislation dealing with health would be a lengthy process. Inasmuch as the two bills in question are the only ones that set forth a complete national health policy, with practical proposals for implementation, we shall do best to confine our inquiry to them.

Now there is a strong body of opinion, hitherto led by the American Medical Association, that there is no need for any such basic legislation as either of these bills proposes. This position rests on the record of United States medicine thus far. Since 1900, for example, life expectancy has increased from an average of 49 years to 68 years; while the population has doubled, the number of old people has nearly quadrupled; enormous strides have been made in combating pneumonia and communicable diseases; infant mortality is the lowest in the world (except in Sweden); and so forth.

Moreover, the United States is relatively very well supplied with physicians and medical facilities. There are almost 160,000 active and available licensed physicians, or, in round numbers, 1 for every 1,000 persons. We spend privately about $7,400,000,000 on medical care, $2,000,000,000 publicly, and $80,000,000 on medical research—a total of about $9,500,000,000 a year. There are about 6,000 hospitals with a total of 1,500,000 beds, which, during 1946, took care of 1 out of every 10 persons in the population. Moreover, this vast health system is bolstered in many ways. Some 18,000 local political units provide medical services of various kinds; United States industry has shown a good deal of initiative in setting up services for its employees; and there are about 500 voluntary health-insurance organizations that give some form of medical protection to 65,000,000 people. In short, says the AMA and its followers, while it may be necessary to make better provision for underprivileged groups, there is no need for comprehensive legislation.

But unfortunately these rosy statistics are neither complete nor realistic. The truth is that some portion of the American people—no one knows exactly the number—can and do get the best medical care in the world. But another portion get this kind of care only when they are lucky, or if they make a tremendous financial sacrifice; while still a third portion do not get it at all. And the disconcerting fact seems to be that the second and third groups, added together, constitute more than half of the population. The AMA itself observed in 1939 that families with incomes under $3,000 a year could not afford to pay the costs of a major or chronic illness. If this figure were adjusted for the rise in the cost of living it would today be close to $5,000 a year and would apply to about 80 percent of the population.

The illusory quality of the over-all statistics arises chiefly from the bad distribution of doctors and of medical facilities. The State of New York, for example, has 1 doctor for every 500 persons, but Mississippi has only 1 for every 1,500. In many counties of the United States there is no resident physician at all. In California there is 1 dentist for every 1,300 persons; in South Carolina 1 for every 5,000. In Connecticut there is 1 nurse for every 200 persons; in Arkansas 1 for every 2,100. In one-third of the 3,000 counties of the United States there is not a single full-time health nurse. And in specialist fields, such as pediatrics, it is found that out of a total of 3,500 pediatricians, only 4 percent are practicing in small towns or rural areas, where 60 percent of the children live. The same uneven distribution characterizes medical facilities. Forty percent of the counties in the United States have no acceptable general hospital, and not a single State has enough general hospital beds to meet the standard established by the National Health Assembly (4.5 per 1,000 of population).

Generally speaking, therefore, it can be said that the medical services of the United States, while adequate, or nearly so, in certain wealthy areas of the country, fall in other areas far below any standard that an American could conscientiously defend.

THE COST OF MEDICAL CARE

These considerations enable us greatly to clarify the debate. Almost everybody, including the AMA, agrees that direct Government aid is desirable for the expansion of medical facilities, especially hospitals; for

increasing the capacity of the medical schools; for special aid to backward areas, etc. Both the administration bill and the Republican bill provide for such aid about equally, but the amount cannot be determined until actual appropriations are made. Aid to hospitals has already been started under the revised Hospital Construction Act, which provides $150,000,000 of Federal funds annually for construction purposes.

Yet the expansion of facilities and services is by no means the whole problem. The biggest part of the problem, and the most difficult to solve, has to do with the cost of medical care; and it is here that the political debate begins in earnest. On one side there are those who contend that Government should not concern itself with this problem at all. Then there are those, such as Senator TAFT, who say that some aid must be given to cover costs, but only to those who are unable to pay. And finally, there are those who maintain that the question of costs can be met only through a national system of insurance. This is the position taken by the framers of the two bills under discussion.

It is a powerful position that will certainly win the backing of the people in the long run. For the threat of medical costs looms over the average American family in a truly sinister way. The threat does not lie in the average cost but in the fact that a serious illness may drive the cost for a particular family up into the thousands of dollars. Hence the doctor is avoided, symptoms are concealed, and diseases that might have been prevented had they been detected at the outset are permitted to develop into irreparable human tragedies. Only if these fears are disposed of by a system of insurance, it is argued, will the American people begin to approach the problem of their own health intelligently.

Of course, as already stated, about 65,000,000 people (40 to 45 percent of the population) are already covered by some form of voluntary medical insurance. But the coverage of almost all of these policies is very inadequate. Virtually all of these people are covered for hospital benefits of some kind, though often meagerly. Only about half are covered for surgery. And a pitiable 5 percent (about 3,500,000 people) are covered by relatively comprehensive plans. The Blue Cross and Blue Shield give hospitalization and some medical and surgical benefits, but their premiums, levied as flat rates, are beyond the reach of lower income groups. Moreover, 60 percent of the Blue Cross members live in six industrial States, only 17 percent in the South and West, and less than 3 percent in the rural districts. This same uneven distribution probably characterizes commercial insurance plans, employee-benefit associations, union plans, etc., etc.

In a survey recently released by the Henry Street Settlement of Manhattan it was shown that out of 200 families with incomes under $3,000 a year, there were 151 who had medical bills in 1949 ranging up to $1,000 per family. On top of these relatively tremendous costs, in many cases, a job was at stake. One woman, whose husband earned $55 a week, had to have a hysterectomy at a cost of $1,000 (doctor $400, hospital $600). In addition she paid $100 for dental care for her four children and $50 for dental care for her husband. Another woman with a chronic heart condition had not been to the doctor for 6 months because she couldn't afford to go (her husband earns $35 a week). She had a prescription for some pills, but they cost $1.90, and she had not called for them at the drugstore because she could not pay for them.

The majority of these people go to free clinics, but they dislike them intensely. The great complaint is that they have to sit around the waiting rooms sometimes as long as 6 hours, often for 3, before the doctor can get to them—women with children and household cares, men with jobs. Such people are torn between their dread of the clinics and their fear of being unable to pay the doctor. As a result, the practice has grown up of calling an ambulance, no matter what the sickness is. The ambulance has to come (with two attendants), and the person goes to the hospital, where he is properly diagnosed—all at the expense of the city. In rural areas, where there is rarely an ambulance to call, the chief problem is often to find any medical care whatever.

THE RIGHT TO LIFE

The conclusion to be drawn from such consideration is that most Americans are financially unable to care for themselves medically. If this is true, then something much more profound is involved than the AMA has admitted. With reference to the first article of this series, The Greatest Opportunity on Earth (Fortune, October 1949), it is apparent that nothing less is involved than the right of life.

As that article sought to make clear, this right, when originally framed in the Declaration of Independence, may have had a somewhat restricted meaning. But to insist on what may have been its original construction, without taking account of the evolution of the society, is in effect to discard the right. If we are to maintain the right we must endow it with contemporary meaning. And the evolutionary fact that we must take into account in the present instance is the growth of modern medicine, which gives to those who can pay for it enormous advantages over those who cannot. If we are to take the right to life seriously in our time we cannot rest our medical service upon clinics that the people dread, doctors whom they avoid, and costs capable of ruining them. We must find out how to deliver reasonably adequate medical care at a cost that anyone can afford.

And it is precisely here that all those plans fail which, like the Taft bill, propose to solve the problem by taking care only of those who are unable to pay, i. e., the indigent. A man earning $50 a week is not ordinarily described as "indigent." Yet if his wife needs a hysterectomy—not to mention a host of other hazards, some less, some more expensive—he becomes at once medically indigent. On this basis, as already pointed out, 80 percent of the American people are medically indigent, or are in danger of becoming so. The medical problem, in short, is national in scope.

This brings us face to face with the question of method. In last October's article it was pointed out that there are in general two ways to reach the social goals that have become necessities of our time. One is to permit the government to take the initiative—in which event, it was maintained, there can be no final solution except that of state socialism. The other is to encourage the voluntary initiative of private parties, whether these be business concerns, individuals, or fraternal or benevolent organizations. Insofar as such private initiative is able to implement the necessary social goals, the proper role of government remains restricted; insofar as it fails in this, the role of government is of necessity expanded.

The two medical plans presented here pose this most profound issue of our time with a precision rarely found in politics. The administration plan gives the initiative to the Government; the Republican plan, while providing Government aid, gives it to the people themselves.

THE ADMINISTRATION BILL

The chief and unique feature of the administration bill, as already indicated, is compulsory national health insurance. This is to be financed by a 3-percent pay-roll tax, which will total $4,200,000,000 a year. The basic financing of the plan is similar to Federal old-age insurance but with complications that involve considerable sums from general taxation. The bill provides for the prior appropriation of an amount equal to 1 percent of all wages (about $1,400,000,000) as a reserve fund, half of which has already been recommended in the President's budget message, with the further recommendation that it be raised by a special pay-roll tax. In addition, the bill provides for an appropriation, specifically from general taxation, equal to one-half of 1 percent of all wages about $700,000,000) for dental services and other expenses for each of the first 3 years—and 1 percent annually (about $1,400,000,000, assuming the total for wages remains the same) for the second 3 years. The total cost of this insurance from all sources, based on the administration's estimate that 80 percent of the population will be covered, therefore, would be about $6,300,000,000 the first year (including the reserve), $4,900,000,000 the second and third years, and $5,600,000,000 a year for the second 3 years.

Two points regarding these figures are worth noting. In the first place, in the British experience, the actual cost of their national health program during the first year turned out to be about double the original estimate, according to Minister of Health Aneurin Bevan. The administration proponents claim that this cannot happen to their estimates, owing to the calculating methods used; but the difficulty of forecasting the rate of increase in medical and hospital services is almost insuperable, and it is a safe guess that the present estimates would have to be revised upward.

Secondly, however, it cannot be said that costs of this order of magnitude are out of line with the task that has to be done. The aim of any national health-insurance program is to provide better medical care for more people; hence it will of necessity result in the expenditure of something more than the $9,500,000,000 that the people are now spending in the health field. Nevertheless, it must be borne in mind that the Federal expenditures would not all represent new spending: a very large portion of them (just how much would be difficult to determine) would go to pay medical bills that the people are now paying for themselves.

Perhaps the most serious defect of the administration bill is its failure to face the result of suddenly dumping such a huge load on existing medical facilities. In this connection administration supporters are not always candid. They contend that the load would not be unduly large, and they cite the experience of Britain.

It is true that statistics can be cited to show that the increased load on British medicine, caused by the national health plan, has not been unduly large. Yet it is a well-known fact in the medical profession that British doctors, with panels ranging up to 4,000 patients, and with a mass of paper work to finish every day, are carrying an enormous burden. This is made clear in the excellent report, the National Health Service of Great Britain, by Willard C. Rappleye, and in other documents. A nation's medical capacity, though impossible to measure accurately, is a real, not an imaginary factor. An effort to exceed that capacity through government compulsion can have only one result: the substitution of mass techniques for individual techniques. And while there may be much room for the development of mass techniques in American medicine, the attempt to push this too far too suddenly is bound to result in a lowering of standards, from which it would be difficult for the profession to recover.

Administration enthusiasts are inclined to make a virtue of this defect. Said the bill's father, Federal Security Administrator Oscar Ewing, in his 1948 report to the President, "Facilities and manpower expand in response to effective demand and demand depends on

total group purchasing power. * * * It is acknowledged that there is a shortage. * * * [But] the plan as outlined here * * * will provide the funds and generate the steady and increased demand which will assure us enough medical manpower and facilities in the foreseeable future."

Yet this reasoning fails to meet the realities. It is quite true that a demand creates a supply. But it is necessary to ask, "A supply of what?" We are not in this case talking about a supply of bobby pins. We are talking about a supply of medical care, and this means—if it is to mean anything honest—a supply of personal attention. As Winslow Carlton, a medical-care consultant, has put it, "The rapid processing of patients in a clinic can provide effective screening for gross diseases, but the mesh is far too coarse for the majority of ills that cause suffering and cut off life. * * * The science of medicine has greatly advanced, but * * * most medical care is still an art * * *."

It is true that millions of Americans desperately need medical care. It is true also that for these people care of some sort, even if the standard is lower, would be better than nothing. Still, the administration bill is in danger of promising the American people something that it cannot deliver. Should the bill succeed in its stated objective of reaching 80 percent of the people, within (let us say) 5 years, not only would the care of the lower-income groups be second rate, but a medical inflation would result, complete with black-market fees. People who could afford to do so would pay private fees for special attention. The inequitable distribution of good medical care would thus become even more pronounced. And the experience of our time teaches us what the remedy for this scarcity situation would surely be: more government controls.

The administration plan, in short, can succeed only insofar as it fails, within the first several years, to reach its objective of service to 80 percent of the people. A promise of medical care commensurate with American medical standards can only be honestly fulfilled if time is provided for orderly growth.

THE PROGRESSIVE REPUBLICAN BILL

This bill starts from the proposition that any group of Americans can set up an insurance plan adapted to their needs. Such groups might include those already in existence, such as Blue Shield and Blue Cross, employer plans, union plans, benefit-association plans, or entirely new plans worked out by responsible citizens. State and regional boards must approve the plans, but they would not initiate them.

The major requirements laid upon the voluntary programs, if they are to participate in Government aid, are (1) that they be nonprofit; (2) that their governing boards shall be composed of a majority of laymen; and (3) that their subscriptions shall be determined as a percentage of the subscriber's income (up to incomes of $5,000 a year and with a minimum charge of $6 a year). This latter feature is unique. Almost all the voluntary plans now in existence charge flat rates, whatever the subscriber's income, and they are therefore usually beyond the reach of lower income groups. This fact should be remembered when it is claimed that, according to past experience, voluntary insurance provides insufficient coverage. By requiring that rates be based upon a percentage of income the Republican proposal makes such plans more available than they have ever been.

Thus in a 3-percent plan, a family with an income of $5,000 a year would pay $150 a year, or $12.50 a month; one with $3,800 would pay $114 a year, or $9.50 a month; one with $1,500 a year would pay $45 a year, or $3.75 a month. They would all get the same services. It is estimated that the $3,800 family would just about pay its way on an actuarial basis. Smaller incomes would be subsidized, mostly by public funds, but partly also by the higher-income people in the plan. It is worth noting that this partial subsidization of the lower income groups by the higher ones is just what happens now, a rough and unsatisfactory way, through the scaling of charges by the doctors and the hospitals. Persons with incomes over $5,000 could join a plan, and would undoubtedly choose to do so; but in most plans they would probably be paid fixed sums (called indemnity benefits) rather than the complete costs of their care (called service benefits).

The amount of Government aid that any particular plan would receive would be determined by a formula that sounds rather complicated but is mathematically simple. To begin with, there is set up in the bill itself a yardstick plan, based on a charge of 3 percent of a subscriber's income, and providing certain specified benefits (doctors, both general and specialist; visiting nurses; hospitalization for 30 days; ambulance service; and rehabilitation). A regional board estimates the cost of providing these benefits in its region, and this estimate (if accepted by the State) is called the "cost norm" for that region. Let us suppose it to be $50 per capita. Each plan in the region is then assigned an allowed cost, depending on the number of services it offers. Manifestly, if it offers the yardstick services its allowed cost will be the cost norm of its region. If it covers lower-income groups, however, its charge of 3 percent of subscribers' incomes will result in something less than this allowed cost—let us say $37.50 per subscriber. The amount of Government aid owing to a plan will be the difference between actual subscribers' payments and the allowed cost—in this case the difference between $37.50 and $50, or $12.50 per subscriber.

An interesting feature of this formula is that if a plan is heavily loaded with lower-income groups, and has consequently a lower gross income, Government aid will be greater. Conversely, if the income groups served by the plan are relatively high, Government aid will be less. It is estimated that on the average the Government's contribution (State and Federal) will be about a quarter of the allowed cost.

A plan does not have to adhere to the yardstick, however. It may provide fewer services, in which case its allowed cost will be correspondingly less than the cost norm and it will charge less to its subscribers (say 2 percent). It will still get Government aid to cover the difference between the allowed cost of its services and the payments from subscribers. Or it may (with State approval) offer more than the yardstick and charge more than 3 percent.

By the use of this formula a maximum of freedom is assured for all concerned. Not only may patients, doctors, and hospitals stay out of all plans, but, if they want to come in, they will have a variety of plans to choose from. In fact, it is anticipated that the system will lead to a good deal of healthy competition. Some plans may devise means (for instance, by the installation of a first-rate system of group insurance) to provide more service than the yardstick, though charging only 3 percent. They would not get more Government aid than other 3 percent plans, but their popularity with subscribers would exert a competitive pressure upon less efficient plans.

It is exceedingly difficult to estimate the cost of this proposal because it is not known how fast the plans would grow. The framers of the bill have made the assumption for working purposes that in 4 years the voluntary plans could build up to a volume of about $3,000,000,000, to which the Government contribution (part State, part Federal) would be an additional $1,000,000,000. This bill, then, contemplates a somewhat smaller expenditure than the administration bill, although the two plans are set up so differently that an exact comparison is almost impossible. Since the long-range objective of both is complete national coverage, it may be assumed that their ultimate costs will be of the same order.

THE OBJECTIONS

Since only 1 day's hearings have been held on the Republican bill, it has not yet received much criticism. One objection is that it subsidizes the high costs of voluntary plans, which, besides ordinary administrative expenses, include substantial items for collection and sales promotion. Yet this objection fails to take account of a number of factors. In the first place, Government bureaus themselves are not ordinarily conspicuous for economical operation. The FSA has given a good account of itself administratively, but the administration of the health bill would be infinitely more complex than that, of say, of OASI. It would involve not merely the administration of funds but the administration of services. Secondly, competition between the voluntary plans should foster economical operation. And finally, while sales promotion would still be necessary, this would constitute a form of medical education—which is very much needed if any kind of national insurance is to be a success. In such matters the cheapest way is not always the best. Americans encourage small enterprises, for example, even though in innumerable instances these are demonstrably less efficient than very big ones. As a supporter of the Republican bill has remarked, "The additional cost of voluntary programs, if any, represents the cost of free choice."

Some people object to the plan's complexity. It is admittedly difficult to understand at first, but this is partly because it embodies some really original thinking. So far as the yardstick formula is concerned, it entails very little actuarial work that is not already done to set up any voluntary medical plan. This work will be done by actuaries and statisticians, not by the subscriber. From the latter's point of view the proposal is simple enough: Government aid to voluntary plans will enable you to insure yourself medically at a great bargain. Your concern, therefore, is to choose that plan which will give you the best service for your money.

Another and more serious objection concerns the States. The Republican plan makes Federal aid contingent on State aid, according to a formula that gives the poorer States an advantage. Thus, in order for the plans to start, States must undertake to make substantial outlays. In addition, a great many States will have to change their laws (a) to allow consumer-sponsored plans and (b) to provide for the fixing of charges on the basis of a percentage of income. These difficulties are real, but surely not insuperable. They arise partly from the fact that the States are given a real choice, whereas by the administration plan they are compelled.

The fundamental objection to the Republican proposal has to do with voluntary plans in general. Administration proponents assert that their growth has been inadequate, their costs high, and their coverage scanty. They declare flatly that the lower income groups will never subscribe to such plans. Moreover, how is the necessary capital for starting a plan to be raised? Private funds for such purposes are becoming increasingly difficult to get. In short, many an administration advocate will declare that he would prefer the voluntary system in principle; but he will add, flatly, that it won't work.

In answer to the objection about the difficulty of raising the original capital funds, the advocates of the Republican bill admit that this exists. Nevertheless, they think that the administration people exaggerate it. It is true that some voluntary plans have required very large capital funds: the health

insurance plan of Greater New York cost $250,000 to start, and the New York Group Health Assurance cost $500,000. But these plans were faced with special problems. Group-health plans in Washington, D. C., Minnesota, and Seattle cost respectively $30,000, $16,000, and $15,000 to start; and even the large Associated Hospital Service in New York City cost only $30,000. The Republican bill, moreover, provides that the Federal Government may advance non-interest-bearing loans to an approved plan up to 50 percent of the total of the starting capital.

The answer of the Republicans to the categorical objection to voluntary plans in general is made difficult by the fact that their bill is in effect proposing something entirely new. It is the contention of its sponsors that a voluntary system has never really been tried. It is true that many voluntary plans exist. But a concerted effort—promoted, possibly, by communities and civic organizations—has never been made to educate the people to the virtue of such plans, offered at below cost through Government aid. The Republicans point out that the American people have been able to educate themselves on many other matters (life insurance, for example); that vast facilities exist for the purpose; and that if community leadership were aroused throughout the country, with the help of the right kind of legislation, an entirely different atmosphere could be created that would make past experience obsolete. They feel that the administration supporters are failing to make allowance for the potentialities of the American people.

The advocates of the Republican bill believe that if universal health insurance is ever to be achieved in this country, without sacrificing the qualitative excellence of American medicine, a fairly long evolution lies ahead. The compulsory system advocated by the administration contemplates forcing this evolution. A voluntary system would stimulate it as much as possible, but never in excess of the ability of the medical profession to grow in an orderly way. The Republican plan contemplates starting with a nucleus of about 65,000,000 people who are already educated, through voluntary plans, to the idea of some medical insurance. It would not be too difficult, the Republicans think, to educate these people to the idea of complete medical insurance. From this nucleus it is no far cry to the coverage of everyone on a pay roll, where the device can conveniently be used of periodical deductions—undoubtedly with the employer sharing in the contributions. And at the same time, everyone on relief would be joining the plans, for the simple reason that most States would subscribe for them.

Such a growth of demand, the Republicans believe, would develop great pressures, not only for more medical services, but for better ones. The necessary expansion has already started in the Hospital Construction Act, and would be carried further by various provisions for direct aid to medical schools, backward areas, etc., proposed in their bill. At the end of 5 or 6 years some of this expansion would have taken place, and it would then be possible to push on toward complete national coverage. If special legislation is needed for this final step, we would then know what kind of legislation it ought to be. But to attempt to take the final step before the necessary preliminaries have been achieved seems to the Republicans both foolhardy and unnecessary.

DEMOCRATIC INTANGIBLES

Underlying all the arguments regarding these plans there are a number of important intangibles, not the least of which is the question of how far the power of government is to be extended.

The framers of the administration bill have made a sincere effort to reduce Federal powers to a minimum. The functions of the National Health Board, the top medical authority for the plan, would be essentially threefold: (1) To account for the funds; (2) to distribute the funds; and (3) to set standards. All other administrative tasks would be passed down to the States, and thence to regional boards. These powers sound innocent enough. Yet they are, after all, the ultimate powers so far as the plan is concerned; and since the whole plan is by Federal law compulsory, the Board is bound to prevail wherever its duties lead it into conflict with local interests.

But even assuming that the States would have a good deal of working power under the administration bill, we should not forget that a State is also a government. And the question is whether any government, Federal or State, ought to be drawn into such decisions as the administration bill requires some government to make. Merely to guarantee doctors control over professional matters is not enough. Doctors will be put in the position of contracting with the State concerning their fees, for example. Hospitals will also be in this position. The determination of what is adequate, what constitutes incentive, what constitutes undue profit—all this, and the paper work pertaining to it, becomes the concern of government.

The danger of this can be illustrated by a single example from the British experience. Before they installed their compulsory health-insurance system the British had a partial plan designed especially to help lower-income groups. Under this earlier plan the Government set certain rates for filling teeth, and another rate for extractions. The rate for extractions, however, turned out to be too high; the temptation for every dentist was to take a bad tooth out rather than to try to save it. This seemed to the Ministry a bad policy, and when the full-fledged compulsory-insurance plan was installed, the rates were altered, giving relatively better rates for fillings. The effect of this was to encourage dentists to save teeth; indeed, where a dentist was very busy (and almost all of them were) it became difficult to obtain an appointment for an extraction, unless one was willing to pay the dentist a private fee.

Very likely the policy of saving teeth is a wise one. But the real question is whether it is wise to implicate government, whether Federal or State, in decisions having professional repercussions that are completely unforeseeable.

Soft-Socialist planners cannot avoid this kind of thing no matter how hard they may try. For it is their invariable practice to start their planning at the wrong end of the social organism. If you start with an entity called government and work downward, there is no real way to limit its power, because nobody has more power. True limitation of government power can come only by working from the people upward. This is perhaps the most basic concept of American politics, and we shall overlook it at our peril.

The chief virtue of the progressive Republican plan is that it proceeds in exactly that manner. It is true that in order to provide for full national coverage, and especially for the lower-income groups, the Republican bill gives the Federal Government a lot of power. It has the power, that is, to approve a State's plans, and above all, to pass upon the propriety and accuracy of a State's claims for Federal aid with reference to the yardstick. Even at that, the Republican proposal gives the Federal Government far less direct power than the administration plan does: Government has nothing whatever to say, for example, about medical fees, which are wholly determined by the doctors in their contracts with the voluntary plans. Yet all that is really secondary. The great advantage of the Republican proposal lies in the fact that the initiative must come from the people and not from any government, whether Federal or State. The people and the local communities retain the power, because theirs is the decision whether to act and how to act. If the Government yardstick is not realistic they will refuse to act. The power of Government is thereby checked and balanced by the people themselves.

The ultimate question, therefore, is whether the American people have got the initiative and the intelligence to subscribe to voluntary health plans. The administration supporters do not think so. The Republicans, on the other hand, do not declare flatly that they have. They merely say that nobody knows—because nobody has really tried.

It may well be that Americans are not what we like to think they are—individuals capable of making intelligent decisions regarding their own affairs. But if this is the case, then it would seem that socialism in some form, and especially the principle of State compulsion, is unavoidable. The progressive Republicans merely maintain that this conclusion cannot be reached a priori. They say that the voluntary method should be tried first, to see how far it will go. They suggest that it will perhaps go so far that the problem of including everyone can be solved by much simpler means than those that the administration now proposes—for example, many States today require automobile drivers to carry some form of insurance, though this may be (and usually is) private insurance. The progressive Republicans believe that the hope of freedom lies in the intelligence of the millions of individuals of which our society is composed. They desire to test this proposition before surrendering it. And they maintain that the medical issue, which now faces the Nation, provides almost a perfect test.

NATIONAL HEALTH INSURANCE—TWO PLANS

There are seven major health bills now before Congress. Of these, the Taft bill and the Hill bill are both chiefly concerned with providing aid to the lowest-income groups on a basis of Federal charity. The Keating bill seeks to stimulate voluntary health insurance by providing for income-tax deductibility. The Bosone bill provides for compulsory health insurance financed by a pay-roll tax, which would pay medical bills over $50, dental bills over $25—the catastrophe type of insurance. The Hunt bill is an amorphous plan for voluntary insurance, with the Federal Government in the role of insurance company. The two bills outlined herewith are the most complete. They embody two different political philosophies, each liberal in character, which are bound to clash in coming months.

Administration plan

How it works: If an employee or self-employed, you are subject to a Federal tax, which entitles you to medical insurance. You choose your own doctor. If he has joined the plan and if he accepts you—he doesn't have to do either—he will care for you and send the bill to a Government insurance agency—either State of local—which will pay him according to the system chosen by himself or a majority of doctors in his area—salary, fee per service, or flat fee per patient on his list. The amount of his fee will be determined by a contract between him and the State or local agency, based on existing income standards in the State or area. The bill instructs that "regard shall be had for * * * annual income," and that fees should be calculated to insure "professional and financial incentives."

Regional role: The local committee or officer administers the plan in the region; publishes names of doctors, hospitals, etc., participating in the plan; disseminates information; receives and adjusts complaints; cooperates with medical profession, hospitals, etc.

State role: The State agency makes a survey to determine resources and needs of the

State; then develops a program and sets up local health service areas. It enters into agreements with all legally qualified furnishers of service—including voluntary prepayment plans—specifying what services are to be provided and what fees are to be paid. It reports all this to the National Board.

Federal role: The bill sets up a National Health Insurance Board of five, together with an Advisory Council. The Board allocates the funds to the States, taking account of population eligible for services, medical facilities, number of doctors, etc., in accordance with its own and State estimates of "the cost of reasonable and equitable compensation." It determines the extent—beyond the guaranteed minimum—of the hospital services to be rendered by the plan. It can limit dental, home-nursing, and auxiliary services. It sets the standards for specialists. It has power of approval over all State plans, and if a State fails to submit a program it must step in and administer the plan in that State.

How financed: Federal pay-roll tax of 3 percent of salaries or net income up to $4,800 per year—probably half from employers, half from employees—plus, from general or pay-roll taxes, $1,400,000,000 before the plan starts, as a reserve; plus, from general taxes, $700,000,000 a year for first 3 years, $1,400,000,000 a year for next 3 years.

Benefits: Medical, surgical, and hospital; plus home nursing, auxiliary, and dental, if available.

Hospitals: Free to join or stay out. Participating hospitals contract with the State or local agency for payments for services, based on "reasonable costs of hospitalization" and on "least expensive multiple-bed accommodations available in hospital," but National Board can set maximum payments. Plan guarantees 60 days with nursing.

Professional personnel: Doctors as individuals or groups contract with State, not with private parties. They are, however, guaranteed control of professional matters, are represented on general advisory committees, and form sole membership of special professional committees.

Republican plan

How it works: Voluntary nonprofit health-insurance plans are started in your community (with help of Federal loans). The cost of joining one will be a certain percentage of your income every year ($6 a year minimum). Your plan, if approved, will get Federal and State aid, enabling it to provide services at less than cost. The amount of aid is determined by reference to a Federal yardstick plan, which specifies certain services to be rendered for a charge of 3 percent of subscriber's income (up to $5,000). On the average, Government will contribute about a quarter of a plan's gross income. Most plans will probably follow the yardstick, but they don't have to; some may offer fewer services and charge less, others (with State approval) more services and charge more. There will thus be a variety of services. The plans will make contracts with doctors and hospitals, leaving all free to choose without Government interference.

Regional role: A regional health authority approves cooperating plans. It estimates the normal costs in its region of the yardstick services, from which, with State approval, it determines the amount of Government aid due to that particular plan.

State role: A State that decides to join the plan (it doesn't have to) divides its area into health regions and districts, authorizes any group of persons in good faith to establish a voluntary plan, and sets up a State health council. The council approves the voluntary plans. It also approves the normal cost estimates of the regional authorities, from which the amount of Government aid is calculated. The State allots such funds to the different plans, supervises their operation, and pays the subscription charge of persons on relief or unemployed.

Federal role: The Surgeon General, advised by the Health Council (11 members, all laymen), certifies State plans. He allocates funds to the States according to the formula provided by the yardstick, and also according to a formula based on per capita income of the States, which would give poorer States relatively more aid than richer ones. His role is thus chiefly one of applying formulas. He has no administrative or professional authority over the voluntary plans.

How financed: By voluntary subscriptions based on a percentage of subscribers' incomes (up to $5,000), which, according to estimates, would total about $3,000,000,000 by the fourth year, plus Federal-State aid equal to about 30 percent of the total, or $1,000,000,000 by the fourth year.

Benefit: A plan can give any benefits it wants, subject to State approval. The yardstick benefits include complete medical, surgical, hospital, and visiting-nurse services.

Hospital: Free to join or stay out. The hospitals contract directly with the voluntary plans. Government has nothing to say about it.

Professional personnel: Doctors contract with voluntary plans; Government has no say in their arrangements. Plans must be administered at all levels by a majority of laymen.

Idaho Potatoes and the Market

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. WHITE of Idaho. Mr. Speaker, much is being written and said about potatoes and the Government potato price-support program.

Potatoes are one of our most important and useful farm crops, and besides their use for food, potatoes can be manufactured into many valuable commercial products such as starch, alcohol, and potato flour.

Potatoes that are perishable in their natural state can be turned into a staple product by being dehydrated in wholesale quantities that can be packaged and preserved over the years, as they were during the war in many dehydrating plants of large capacity now idle in Idaho, Maine, and elsewhere.

Dehydrated potatoes fell into disfavor during the war due to improper cooking and serving in the Army and Navy mess. With proper preparation and cooking, dehydrated potatoes are as palatable and nourishing as cooked fresh potatoes.

It appears our Government is overlooking a big opportunity to turn a perishable farm commodity into a staple product and salvage its potato investment. For the information and consideration of the Members of the Congress, there is inserted herewith a letter, memorandum, and resolution received from the Idaho Potato Producers Association:

IDAHO POTATO PRODUCERS ASSOCIATION,
Idaho Falls, Idaho, February 23, 1950.
Hon. COMPTON I. WHITE,
House of Representatives,
Washington, D. C.

DEAR SIR: Enclosed are resolutions passed by the Idaho Potato Producers' Association.

I have attended meetings all up and down this upper valley the last 2 weeks; in every meeting they voted to discontinue support on potatoes if the rest of the States would do the same.

On February 1 Idaho had sold to the Government for support 69 sacks of No. 1 potatoes. These were the last of an early grower that had no other market at the time. All the propaganda now coming out of Washington has pushed our market into a slump. I am sure all our potatoes this year in Idaho would have found a ready market at no expense to the Government if this front-page publicity had not have happened. I am hoping these resolutions will help you in forming some program this year. We do not want a compulsory support program with quotas on a bushelage basis.

The Bingham County Farm Bureau, representing over 1,400 members and the second largest potato-producing county in the Nation, has approved these resolutions.

Very truly yours,

ERNEST ESCOTT,
Chairman, Resolutions and Legislative Committee.

IDAHO POTATO INDUSTRY THREATENED

If present legislation now being written in Washington goes into law, Idaho may be forced to grow a potato similar to other States that will yield in comparison to Maine and North Carolina. Idaho has the know-how and can raise a potato that will yield 400 to 500 bushels to the acre. Our only market for this kind of a potato, however, would be the Government as our freight rates to consuming markets make it impossible to ship this kind of a potato.

The Idaho Russet or Netted Gem is a low-yielding, high-quality potato compared to other varieties. PMA committeemen are now only allowing support on the famous Idaho potato in the larger Idaho producing counties.

It has been proven in the past that the grading and sacking process is costly to our Government and serves no useful purpose. Freight and processing has cost the Government more than the grower received for the product in many cases.

RESOLUTIONS RECOMMENDED BY THE IDAHO POTATO PRODUCERS' ASSOCIATION

Whereas the potato producers of Idaho are becoming increasingly alarmed at mounting potato surpluses, with consequent waste of Government funds; and

Whereas we believe all potato-producing States should be interested primarily in producing and marketing a quality potato through regular trade channels, and that consumer preference be recognized; and

Whereas the present subsidy program is encouraging some producing areas to grow a low quality, high-yielding potato for sale to the support program; and

Whereas we believe that the place to curtail the high cost of the subsidy program is at the source, or in the area where surpluses are created, and where heavy sales are being made to Government support; and

Whereas we are drifting toward the situation, wherein the Government, in order to strengthen their position further, and to cut the cost of potato subsidy, will harness the potato growers with still more stringent and intolerable controls and regimentation: Therefore, be it

Resolved, That we, the potato producers of Idaho, recommend to the Congress—

1. That a flexible support price be continued on the potato industry.

2. That only No. 1 potatoes 2 inches minimum be protected at full support.

3. That B grade and No. 2 potatoes be eliminated from support.

4. That certified seed growers be supported for their full crop at No. 1 support level.

5. That State potato acreages be cut in direct proportion to the surpluses that they sell to the support program, even as much as 25 percent of this surplus each year, until a proper and natural balance between production and regular consumer markets are obtained.

6. That State PMA committeemen be chosen by county PMA officials and various organizations affected.

7. That Idaho potato producers oppose the importation of Canadian potatoes under the present program.

8. That future potato programs be based on bulk delivery at the farmer's storage or point of processing.

Russian Plans for World Empire

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. MULTER. Mr. Speaker, we have been hearing a great deal lately about peace missions to Moscow and renewed efforts by our Government and leaders to persuade Stalin to sit down with our representatives and discuss peace. It seems to me that we certainly have been patient with the Russians these past few years and have given them numerous opportunities to meet us half way. Yet we continually hear pleas for "one more chance" or "one more peace conference."

The American people do not want war. I believe the Russian people do not want war either—if only they had the opportunity to speak their mind freely. But if war nevertheless engulfs this world, it will be due to the insatiable lust for power on the part of the present rulers of Soviet Russia.

The noted political commentator, Heptisax, has written a fine analysis of the situation in which he points up the futility of a peace conference with Stalin and why a conference of this kind must necessarily be worthless. His analysis was published in the New York Herald Tribune, March 5, 1950, under the title "Russian Plans for World Empire," and is as follows:

RUSSIAN PLANS FOR WORLD EMPIRE—A DISCUSSION OF THE FUTILITY OF A PEACE CONFERENCE WITH STALIN

(By Heptisax)

A few months ago a great deal was being said, particularly by the Communists and other progressives, about the hysterical temper of the witch hunt. Actually there was no widespread popular hysteria. A few extravagances were perpetrated, mostly by officialdom in Washington. A few laws were passed that we could have done without, mostly by State legislatures. And there were a few incidents to deplore, mostly provoked by the Communists. But if the witch hunt, so-called, had been pursued with anything like popular hysteria, there would have been a multiplication of incidents far more deplorable than the Peekskill affair, there would have been mob action against Communist offices and meetings, no known Communist could have moved safely in the streets, and the legislative reaction to hysteria would not only have driven the Stalinists underground but would have imposed many foolish regulations on all of us.

If one wants to see hysteria developing, the quarters in which to look for it are not those in which the bitterest anti-Stalinists assemble, but those in which the emotionalists feed their imaginations on the possible horrors of a hypothetical "hell-bomb" war, and then shriek themselves hoarse about peace. To hear this clamor or to read the appeals which individuals address to their Congressmen, and which long lists of notables, as the Communist publications call them, address to the White House, one would think that no effort had ever been made to negotiate real peace with Soviet Russia and that Stalin was standing with arms outstretched and tears in his eyes, begging for peace, while the leaders of all the non-Communist peoples exchanged cynical grins and ignored him.

These emotionalists listen eagerly to assurance from those who know Russia, and from those who think they do, that the Soviet Union does not want war. Certainly the Kremlin does not want war with this country and its allies if it can get what it wants without the risk of war.

While the Stalinists hope that they can ruin the capitalist world without head-on conflict with the West, and then simply walk into possession of the world, they have every reason to hope that there will be no war. The major device they are employing now was prescribed by Lenin in 1924, not long before his death. He advised his following to abandon the thought of a direct attack on Europe; but to go east and come back through Asia on a bankrupt and demoralized Europe. That is being done, and the prospects of making Asia worthless to Europe are so excellent that the plans for doing the same in Africa are openly discussed. Then would come South America. Great Britain and Europe cannot live without overseas markets and sources of raw materials, unless they live on us. This they couldn't do forever, but they might do it long enough to impoverish and demoralize this country. Then would come the push over in Europe and the United States—with the help, of course, of the fifth columns which would be doing their best all along with both material and moral sabotage.

Now, no one who reads Stalinist literature can have any doubt at all that that is the great plan. No one but a very simple soul can believe that the Kremlin can be persuaded to abandon that plan through suasion, cajolery, bribery, or an appeal to Stalin's finer instincts, as one letter writer who was gasping about the H-bomb recently suggested.

For these various reasons I feel that bringing popular pressure on the administration to go to Stalin begging for peace or the worthless lip service to peace which would be the result of such an effort, is wholly wrong headed. The Russians have had all the opportunities, time, and means of expression they need to demonstrate that they want live-and-let-live relations with the non-Stalinist world.

So far they have demonstrated in a hundred ways—including clear enough statements of their objectives—that that is what they do not want. The proponents of peace by incantation say that we should give them another chance, because it is possible that fear and suspicion of us account for their unfriendly and aggressive manners. I don't believe that. I think that they are moved to no small degree by fear; but what they fear is their own people and the peoples of their victim states. They feel that they cannot be secure in their despotic powers while capitalism, and the democratic institutions and freedoms associated with it, survive in this world and can be advertised to their enslaved populations as an attractive alternative to state capitalism and their ruthlessly exploited wage slavery.

Another conference, another pilgrimage of the high and mighty to a meeting place of Stalin's choice, would give the Stalin regime "face" at home and would be a depressing spectacle to such resistance forces as there are behind the iron curtain. If such a conference won us some worthless promises, it would probably be because we had left more friends in the lurch and were pledged on our part to lower our guard. If it won us nothing and had to be proclaimed a failure, the Communists would advertise the world over that it had failed because of our recalcitrance, because our war-mongering bankers and generals had no use for peace; and against their highly organized mendacity our protests would carry little weight.

The sad end to all this line of thought is that there is not going to be any peace until the sins of the Stalinist regime against the Russian and other neighboring peoples catch up with them and a tide of counterrevolution washes the rotten foundations from under the massive Red edifice. That day may come tomorrow or it may be many years away; but it is the only possible solution to the toughest problem that humanity has ever faced. But we don't hasten that day by running from the imaginary horror of H-bomb extermination into the real horror of a phony peace at Stalin's price.

The Federal Regulation of Lobbying Act

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Belle Zeller, of Brooklyn College:

THE FEDERAL REGULATION OF LOBBYING ACT

(By Belle Zeller, Brooklyn College)

Although the need for such action had long been apparent in Washington, it was not until 1946 that a Federal statute was enacted for the regulation of general lobbying activities. Prior to that year Congress had, on a number of occasions, investigated lobbying practices, and as a result had enacted measures which reached a limited number of groups engaged in them. The Public Utility Holding Company Act of 1935, the congressional act in 1936 affecting the shipping interests, and the Foreign Agents Registration Act of 1938 were important regulatory measures, but they reached only a few of the groups exerting direct and continuous influence in Washington. The Federal Regulation of Lobbying Act of August 2, 1946, is more general in its coverage, and it has been in force long enough for its effectiveness to be tested.

In this article it is my purpose (1) to supply a brief historical background for the measure referred to; (2) to examine the statute's provisions; (3) to appraise the objections raised to it; (4) to examine the actual administration of the act and point out the difficulties of enforcement, particularly during its first year; and (5) to offer recommendations for strengthening the law.

I. HISTORICAL BACKGROUND

Bills to regulate lobbying appeared in Congress as early as 1907 and were introduced from time to time thereafter. In 1928 Senator Thaddeus H. Caraway, of Arkansas, intro-

duced a bill which only the Senate passed.[1] In defending his measure, the Senator pointed out that there were between 300 and 400 "alleged associations" listed in the Washington telephone directory, "90 percent of which * * * are fake associations organized for the sole purpose of profit for those who are at Washington, [and] are engaged in obtaining money from those who live away from Washington under the belief that they are promoting some theory of government in which they are interested, or protecting or advancing the interests of some business in which they are engaged. Ninety-five dollars out of every hundred that the public pays to these alleged associations go into the pockets of the promoters of these fake associations. It might be safely said outside of a dozen there is not a penny paid to these associations that is not worse than wasted. * * *"[2]

In 1935 the excesses of the utility lobbies attracted Nation-wide attention. Of their activities, the House Rules Committee said on February 27, 1936: "The campaign to influence utility holding company legislation was probably as comprehensive, as well managed, as persistent, and as well financed as any in the history of the country.[3] As a result of this publicity, bills to regulate lobbying poured into the Seventy-fourth Congress, Senate bill 2512, sponsored by Hugo L. Black, of Alabama, and H. R. 11663, introduced by HOWARD W. SMITH of Virginia, passed their respective Houses, but their wide divergence, although bridged by the conferees, did not meet with congressional approval, and they failed to become law.[4]

However, Congress was determined that the utilities should not escape regulation, irrespective of the fate of the general lobbying bill. It therefore wrote into the Public Utility Holding Company Act of 1935, not only the provision that utilities should not contribute to party campaign funds, but the additional stipulation making it "unlawful for any person employed or retained by any registered holding company, or any subsidiary company thereof, to present, advocate, or oppose any matter affecting any registered holding company or any subsidiary company thereof, before the Congress or any member of committee thereof, or before the Commission (Securities and Exchange) or Federal Power Commission, or any member, officer, or employee of either such Commission, unless such person shall file with the Commission in such form and detail and at such time as the Commission shall, by rules and regulations or order prescribe as necessary or appropriate in the public interest or for the protection of investors or consumers, a statement of the subject-matter in respect of which such person is retained or employed, the nature and character of such retainer or employment, and the amount of compensation received or to be received by such person, directly or indirectly, in connection therewith."[5] The law further requires that financial statements be filed with the Commission "within 10 days after the close of each calendar month during such retainer or employment."[6]

Encouraged by its success in passing this legislation concerning the public utility holding companies, Congress turned its attention the following year to the lobbies of the shipbuilders and ship operators; and in 1936 a statute similarly regulated these pressure interests through registration with the United States Maritime Commission.[6]

With war clouds hanging over Europe, and activity of foreign agents on the propaganda front intensified, Congress took a protective step in 1939 by passing the first Foreign Agents Registration Act (amended in 1942), requiring that every person who is an agent of a foreign principal shall file with the Secretary of State a statement describing in detail the nature of his activities. The law provided also that political propaganda disseminated by such agents shall be so labeled and copies of such matter filed with the Librarian of Congress and the Attorney-General. Under an Executive order, effective June 1, 1942, President Roosevelt transferred to the Department of Justice the administration of registering foreign agents. Registration statements, open to public inspection, had thereafter to be filed with the Attorney General every 6 months, and a copy of each registration statement had to be furnished the Secretary of State. It should be particularly noted that the Attorney General was required also to make reports from time to time to Congress concerning the administration of the act.[7]

In reporting the special areas of lobbying activity upon which Congress has acted, it is perhaps well to include the amendment to the Criminal Code in 1940. This forbade anyone to endeavor "corruptly or by threats of force, or by any threatening letter or communication, to influence, intimidate, or impede any witness, in connection with any inquiry or investigation being had by either House, or any committee of either House, or any joint committee of the Congress of the United States" or by such methods to attempt to interfere with the proper administration of law or proceedings of inquiries. The above language appears sufficiently broad to cover the influence exerted by lobbyists upon Congress.[8]

In studying the problem of lobbying regulation at the Federal level, much can be learned from the experience of the States, 35 of which regulate lobbying in some way.[9] Of the 35, 25 now provide for the registration of legislative agents and legislative counsel employed in such capacity for compensation. The secretary of state is the officer with whom the statements are customarily filed. The required information usually includes the name and address of such agents, by whom employed, date of employment, duration of employment if it can be determined, and the special subject of legislation to which the employment relates. Seventeen of the twenty-five States also require the filing of statements of all expenses paid, incurred, or promised in connection with the promotion of legislation; thirteen require that these expense statements be filed within 30 days after the adjournment of the legislature, and two within 2 months after. In 1945, both Nebraska and Wisconsin amended their statutes to provide for the filing of expense statements during the legislative session.

These State lobbying provisions have at least established the principle that the public has a right to know who are the paid lobbyists and what is the source of their funds. It must be said, however, that the record of lobby control in most States reveals that it has not been as effective as it should be, because faulty definition has failed to include the pressure groups as well as their paid agents, and because of inadequate enforcement.

The year 1946 seemed propitious for the enactment of a general Federal lobbying law. For one thing, the first year after the cessation of the war witnessed an unprecedented amount of lobbying in connection with many controversial questions before Congress—particularly veterans' housing, price control, public-power projects, and strikes. President Truman inserted in the prepared text of his Jackson Day address on March 23, 1946, a declaration that "my friends in Congress have got to make up their minds whether they're for the veterans' rights or whether they are going to bow to the real-estate lobby."[10] Senator MURRAY, of Montana, called attention to a small ruling clique in the American Medical Association which is trying to defeat the administration plan for congressional health insurance.[11]

Earlier, on March 11, 1946, Speaker RAYBURN had called attention to lobbying activity in another area, when he stated from the floor of the House that this town, for the past 6 months, has been seething with lobbyists out to kill rural electrification and public-owned power in general.[12] The next day Chairman SABATH, of the Rules Committee, offered a resolution proposing that a special committee be established to investigate any and all groups which have or are engaged in present propaganda campaigns or lobby to defeat legislative measures for the relief of the acute housing shortage * * * to abolish or weaken price control; all groups which have or are engaged in the power lobby. This resolution was revised by the Rules Committee, directing that the investigation be made by the Rules Committee itself and that lobbying activities by Federal agencies and employees as well as by private groups be covered.[13]

Even before these and other attacks upon lobbying activities in 1946, the Special Joint Committee on the Organization of Congress was giving its attention to the need for a congressional lobbying law. In fact, the committee on Congress of the American Political Science Association, under the chairmanship of Dr. George B. Galloway, who later was named research staff director of the joint congressional committee, had recommended in 1945 that all groups, representatives of which appear before congressional committes, should register and make full disclosure of their membership, finances, etc.[14]

[14] The Reorganization of Congress; a report of the Committee on Congress of the American Political Science Association (1945), p. 80.

Many complaints of the attempts of organized pressure groups to influence the decisions of Congress were heard during the hearings of the Joint Committee on the Organization of Congress, although extensive evidence on the need for lobbying legislation was not given at these hearings.[15] In its report to Congress on March 4, 1946, the joint committee recommended "that Congress enact legislation providing for the registration of organized groups and their agents who seek to influence legislation, and that such legislation include quarterly statements of expenditures made for this purpose."[16] On August 2, 1946, the President signed the Legislative Reorganization Act, title III of which is the Regulation of Lobbying Act.[17]

II. PROVISIONS AND INTERPRETATION OF THE LOBBYING TITLE

Provisions of the Federal Regulation of Lobbying Act are set down in sections 302–311, inclusive. Section 307 is designed to define the application of the title and includes any person (defined as an individual, partnership, committee, association, corporation, and any other organization or group of persons), "who by himself, or through any agent or employee or other persons in any manner whatsoever, directly or indirectly, solicits, collects, or receives money or any other thing of value to be used principally to aid, or the principal purpose of which person is to aid, in the accomplishment of any of the following purposes: (a) The passage or defeat of any legislation by the Congress of the United States; (b) to influence, directly, or indirectly, the passage or defeat of any legislation by the Congress of the United States."

Section 305 states that every person receiving any contributions or expenditures for the purposes designated in (a) or (b) of section 307 shall file with the Clerk of the House of Representatives only, between the first and the tenth day of each calendar quarter, a statement containing the name and address of each person who has made a contribution of $500 or more, and the name and address of each person to whom an expenditure of $10 or more has been made, with the amount, date, and purpose of such expenditure. The Clerk of the House supplies Form A for the information required under this section.

In section 308, the act requires any person who engages himself for pay or for any consideration for the purpose of attempting to influence the passage or defeat of any legislation to register both with the Clerk of the House and the Secretary of the Senate before doing anything in furtherance of such object. The registrant must state his name and business address, the name and address of the person by whom he is employed and in whose interest he appears or works, the duration of such employment, how much he is paid and to receive, by whom he is paid or is to be paid, how much he is to have for expenses, and what expenses are to be included. Form B is supplied by the Clerk and the Secretary for this information.

Each person who registers in accordance with section 308 between the first and tenth day of each calendar quarter, must also file with the Clerk and the Secretary, so long as his activities continue, a detailed report of all money received and expended by him during the preceding quarter calendar in carrying on his work; to whom paid; for what purpose; and the names of any papers, periodicals, magazines, or other publications in which he has caused to be published any articles or editorials; and the proposed legislation he is employed to support or oppose. Successive reports within a calendar year must be cumulative. This information is filed on Form C. All reports and statements under the Lobbying Act must be made under oath (sec. 309).

All information required to be filed under the provisions of section 308 is to be compiled by the Clerk and the Secretary, acting jointly, as soon as practicable after the close of the calendar quarter, and printed in the CONGRESSIONAL RECORD. The statements required by the title are to be preserved for a period of 2 years, and to be open to public inspection during this interval (sec. 306). Any person who violates the provisions of this title, upon conviction, is guilty of a misdemeanor and may be punished by a fine of not more than $5,000 and/or imprisonment for not more than 12 months. Such convicted person is also debarred for a period of 3 years from influencing, directly or indirectly, the passage or defeat of legislation. Debarred lobbyists who continue their activities are guilty of a felony (sec. 310).

In section 308, the act further specifically exempts from its application (1) any person who merely appears before a committee of Congress in support of or opposition to legislation; (2) any public official acting in his official capacity; (3) any owner, publisher, or employee of a newspaper or other regularly published periodical acting in the regular course of business. Nor does the act apply to party committees or to practices and activities regulated by the Federal Corrupt Practices Act (sections 307 and 311). The report of the Joint Committee on the Organization of Congress adds further that the lobbying title does not apply in any manner to persons who appear voluntarily without compensation, and concludes the category of exempt groups by stating that the law "does not apply to organizations formed for other purposes whose efforts to influence legislation are merely incidental to the purposes for which formed."[18] An examination of the remarks of Representative HOWARD W. SMITH on the floor of Congress, June 17, 1936, indicates that the joint committee took over the Congressman's exact words in noting this last exception.[19]

Many organizations have turned to this last statement in the committee's report for clarification of legislative intent, and for an explanation of the words "principally" and "principal" in section 307. Their failure to comply with the provisions of sections 305 and 307 is based largely upon defining "principal" as "primary" or "major." There is little doubt that a literal reading of the provisions of the lobbying title presents a mass of contradictions and ambiguities. As a criminal statute, it is technically defective because such statutes are construed strictly and must define prohibited acts with certainty.[20]

The Joint Committee on the Organization of Congress stated that section 307 defines the application of the title.[21] Section 307, then, may be construed as conflicting with sections 305 and 308. As noted above, section 307 refers to anyone who solicits, collects, or receives money; section 305, however, is not limited merely to those who receive contributions, but includes persons who expend money for such purposes. Does this mean, if section 307 controls, that that part of section 305 dealing with expenditures is superfluous? There are organizations which hold that they do not solicit or receive funds for the principal purpose of lobbying, but who nevertheless expend money in hiring professional lobbyists. The implementation of the act, during the first year, clearly demonstrated that many organizations are holding section 307 the key to the coverage of the act, thus exempting from the strongest provisions of the act organizations whose legislative activities are not their principal concern, and who are careful not to accept funds earmarked for lobbying.

The relationship of sections 307 and 308 is ambiguous. By its terms, section 308 appears to exclude the definitions of section 307. Section 308 covers engagements "for the purpose of attempting to influence the passage or defeat of any legislation." Many persons who have registered under this section call attention to the minor proportions of their time devoted to influencing legislation. In so doing, they are undoubtedly following the interpretation that section 308 does not stand alone, that section 307 qualifies this section as well, and that influencing legislation must be their "principal" activity before registration is required. However, section 308 should be construed as bringing within its scope persons paid for performing services if any part of that job—no matter how infinitesimal—is concerned with influential legislation. To support this position, it is not necessary to go further than to point out that section 308 exempts from registration public officials acting in their official capacity. Except for a very small group of legislative representatives of public agencies, no reasonable interpretation could consider public officials as principally engaged in influencing legislation.[22]

The legislative history of the bill does not establish beyond any doubt the intention or the aim of Congress. Representative Dirksen, a member of the Joint Committee on the Organization of Congress, stated on the floor of the House when the lobbying section was under debate:

"The question has been raised as to whether or not an organization that pays a man to be vigilant upon legislation here would have to schedule all of their assets and all of their receipts, and probably file a very long administrative record with the Clerk of the House. That is certainly not the intention of the committee. There are some clarifying sections and some exclusions which you will find in section 308. • • • What we are trying to do here is to reach those whose principal purpose, not incidental purpose, but whose principal purpose is to come here and endeavor to influence the passage of legislation either by bringing about its defeat or its enactment."[23]

See also Columbia Law Review, vol. 47, January 1947, pp. 98–109; Yale Law Journal, vol. 56, January 1947, pp. 304–332.

[23] CONGRESSIONAL RECORD, vol. 92, July 25, 1946, p. 10138; on June 17, 1936, Representative SMITH said: "It [the lobbying bill] does not apply to organizations formed for other purposes whose efforts to influence legislation are merely incidental to the purposes for which formed." (Cf. CONGRESSIONAL RECORD, vol. 80, p. 9751.)

However, a wider purpose of the legislation was understood by Senator La Follette, chairman of the committee, as seen in his discussion with Senator Hawkes on the floor of the Senate, the day after Representative Dirksen made his comments:

"Mr. HAWKES. Mr. President, will the distinguished Senator from Wisconsin give me his opinion on one subject which has been brought to my attention by some of the finest organizations in the United States? They are somewhat concerned lest the provision in the reorganization plan against lobbying might be construed to apply to institutions such as the United States Chamber of Commerce, for instance, which was organized at the request of the President of the United States to assemble information and make it available for ready reference for members of his Cabinet and the various governmental agencies. I should like to have the Senator from Wisconsin express his opinion whether it affects these fine institutions which are a part of our business and industrial system in the United States.

"Mr. LA FOLLETTE. So far as any organizations or individuals are concerned, * * * it will depend on the type and character of activity they undertake. * * *

"Mr. HAWKES. Just a moment, Mr. President. Would not the Senator from Wisconsin be willing to express an opinion regarding such organizations of years and years standing?

"Mr. LA FOLLETTE. I cannot tell the Senator whether they will come under the act. It will depend on the type of activity in which they engage, so far as legislation is concerned.

"Mr. HAWKES. Does not the bill contain language to the effect 'if they are organized to do a business of lobbying principally'? And does not that mean something to the Senator, who knows, of course, that there is not a business organization or chamber of commerce in the United States whose representatives do not come to see Senators and Representatives and interview them regarding legislation?

"Mr. LA FOLLETTE. It will all depend on the type of activity that is carried on. I cannot give the Senator a blanket interpretation." [24]

It certainly would appear that the Joint Committee in 1946 was thinking of a broad application of the legislation, when in its report it listed the following three distinct classes to which the lobbying title applied chiefly:

"First. Those who do not visit the Capitol but initiate propaganda from all over the country in the form of letters and telegrams, many of which have been based entirely upon misinformation as to facts. This class of persons and organizations will be required under the title, not to cease or curtail their activities in any respect, but merely to disclose the sources of their collections and the methods in which they are disbursed.

"Second. The second class of lobbyists are those who are employed to come to the Capitol under the false impression that they exert some powerful influence over Members of Congress. These individuals spend their time in Washington presumably exerting some mysterious influence with respect to the legislation in which their employers are interested, but carefully conceal from Members of Congress whom they happen to contact the purpose of their presence. The title in no wise prohibits or curtails their activities. It merely requires that they shall register and disclose the sources and purposes of their employment and the amount of their compensation.

"Third. There is a third class of entirely honest and respectable representatives of business, professional, and philanthropic organizations who come to Washington openly and frankly to express their views for or against legislation, many of whom serve a useful and perfectly legitimate purpose in expressing the views and interpretations of their employers with respect to legislation which concerns them. They will likewise be required to register and state their compensation and the sources of their employment." [25]

As an additional example of its broad intention, the Joint Committee, in its two reports on the legislative reorganization bill, stressed pressure groups rather than the individuals employed by them.

"Mass means of communication and the art of public relations have so increased the pressures upon Congress as to distort and confuse the normal expressions of public opinion. * * * In order to enable Congress better to evaluate and determine evidence, data, or communications from organized groups seeking to influence legislative action, we recommend the adoption of legislation requiring the registration of all groups engaged and individuals employed in such activity." [26]

And again, the committee stated:

"A pressure-group economy gives rise to government by whirlpools of special-interest groups in which the national welfare is often neglected. * * * Without impairing in any way the right of petition or freedom of expression, Senate 2177 provides for the registration of organized groups and their agents who seek to influence legislation. * * * Full information regarding the membership, source of contributions, and expenditures of organized groups would prove helpful to Congress in evaluating their representations and weighing their worth. Publicity is a mild step forward in protecting government under pressure and in promoting the democratization of pressure groups." [27]

Still another fact to note in defense of the broader intent of Congress in 1946 is that the lobbying title is part of an omnibus bill dealing with the improvement of the organization and operation of Congress, and did not come as a demand to check the predatory pressures upon that body.

Almost immediately after the lobbying title became effective, many organizations called upon their counsel for advice concerning the applicability of the statute. The Chamber of Commerce of the United States, in its long memorandum of interpretation, reasoned that it did not fall within the purview of sections 305 and 307, and consequently did not file under Form A. The memorandum added: "It should be noted, however, that even though the organization does not have lobbying as its principal activity, an employee or other person paid by the organization who has lobbying as his principal activity may be subject to the act." [28] Was the chamber of commerce playing safe when two of its representatives filed under Form B prepared for the information required in section 308—one of whom stated in his report that his salary was $15,000 per annum, "although not more than one-fourth is paid for the principal purpose of influencing legislation as defined in section 307"? [29]

Some tax-exempt organizations were even more cautious, and filed no information under any of the forms for fear of jeopardizing their exemption under the Internal Revenue Code. For example, this is the legal advice given to one such organization:

"Since the principal purpose of the Anti-Defamation League is not to influence legislation, the mere publication of the Legislative Information Bulletin, even if it may be considered a publication which directly or indirectly affects Federal legislation, the ADL will not be compelled to register or file. The answer should be the same even in contemplation of the added factor of a Washington representative whose incidental purpose may be to influence Federal legislation.

Section 101 (6) of the Internal Revenue Code provides that a tax-exempt organization loses its tax-exempt status if a substantial part of the activity of such organization is the influencing of legislation. Such a provision may be important if the legislative activity of a tax-exempt organization, or its Washington representative, becomes greater than that of merely incidental activity." [30]

On the other hand, counsel for the American Farm Bureau Federation recommended that the federation and its employees, substantially active in influencing legislation, register under the forms supplied by the Clerk of the House and the Secretary of the Senate. "While considerable uncertainty exists as to the meaning and scope of the Lobbying Act, I am of the view that the only safe course which your organization can pursue is to register under the act." He argued that section 307 is "made decisive as

---

[24] Contrast this language with that of Representative SMITH, who sponsored lobbying legislation 10 years earlier: "The amendment proposes to change that language by striking out the words 'in whole or in part' and by inserting the word 'principally.' The reason for that amendment is, it was brought to my attention, and I think to the attention of other members of the committee, that there were many organizations of national scope who have large memberships of thousands and some of millions of members organized principally for other purposes than affecting legislation, but many of those organizations do from time to time become interested in legislation, and they undertake to do something about it. It was not thought necessary or proper that that class of organization, because a minor part of its funds were devoted to purposes of influencing legislation, should be required to report all of the dues of their hundreds of thousands of members, and for that reason this amendment is proposed so that it would not apply except where the money is collected for the principal purpose of undertaking to influence legislation or the election of Federal officers." (Cf. CONGRESSIONAL RECORD, vol. 80, March 27, 1936, p. 4535.)

Unlike the bills sponsored by Senator Caraway in the 70th Cong. and Senator Black in the 74th Cong., the Lobbying Act of 1946 does not specifically define lobbying. It may, of course, be construed that the acts and practices under the statutes that require the filing of statements may be called lobbying. In Senate bill 1095 of the 70th Cong.: "A lobbyist, within the meaning of this act, is one who shall engage, for pay, to attempt to influence legislation, or to prevent legislation, by the National Congress." In Senate bill 2512 of the 74th Cong.: "Lobbying * * * shall consist of any effort to influence the action of Congress upon any matter coming before it, whether it be by distributing literature, appearing before committees of Congress, or interviewing or seeking to interview individual Members of either House of Representatives or the Senate."

These definitions were patterned after the broader one in the House report of 1913, which defined lobbying as the "activities of a person or a body of persons seeking to influence Congress in any way whatever." (Cf. H. Rept. 113, 63d Cong., 2d sess., 1913, p. 15.)

[25] S. Rept. 1400, 79th Cong., 2d sess., May 31, 1946, p. 27.

[28] Memorandum dated August 28, 1946, p. 6.

[29] CONGRESSIONAL RECORD, vol. 93, January 3, 1947, p. 52.

[30] However, subsequently Paul Richman filed under Form B and stated that he was employed by the Anti-Defamation League of B'nai B'rith and that he "devotes less than 5 percent of his time, if any, to activity within the terms of the statute." Cf. CONGRESSIONAL RECORD, vol. 93, May 12, 1947, p. 5210.

to what persons or organizations must register under section 305. Unfortunately, section 307 is ungrammatical almost to the point of being unintelligible. * * *"[31]

III. OBJECTIONS DIRECTED AT THE ACT

The lobbying title shows poor draftsmanship in other respects. The sections do not constitute an integrated whole. There is every indication that the drafting was done hurriedly, with little fresh thinking on the problem. An examination indicates heavy dependence upon the bills introduced by Representative HOWARD W. SMITH and Senator Hugo L. Black in the Seventy-fourth Congress, 10 years earlier, and the lobbying title of the Legislative Reorganization Act of 1946 is only a slightly modified version of these earlier bills.[32] Occasionally words are used loosely; for example, a broad definition is given of a "person" in the introductory section of the title, and yet in sections 304 and 308 "individual" is used where "person" would appear to be more accurate. Furthermore, it would be difficult to understand how an association under this broad definition of "person" could be punished by imprisonment, unless individual members of the group were held responsible, in which event a serious question of deprivation of constitutional rights could be raised. There are unclear, and what appear to be contradictory, references to the Federal Corrupt Practices Act in sections 307 and 311. Section 307 exempts from the provision of the lobbying title, "duly organized State or local committees of a political party." Section 311 states that "this title shall not apply to practices or activities regulated by the Federal Corrupt Practices Act." If any reference at all to the Corrupt Practices Act is necessary here, it should be a simple statement exempting the political committees of all legally recognized parties from the provisions of the Lobbying Act. Others may be required to file under the Lobbying and Corrupt Practices Acts, depending upon their activities.

The President received the bill at the fag end of the session and signed it without detecting a typographical error that had slipped into the bill while it was being engrossed. In section 304, the word "rendered" was used instead of "render." The clear intention was that every person who receives contributions of $500 or more for the purpose stated in the law, "shall within 5 days after the receipt thereof render to the person or organization for which such contribution was received a detailed account thereof. * * *"[33] Unimportant as this error was, it received considerable unfriendly newspaper notice. In fact, on two occasions, two newspapers dealt with it exclusively. The Boston Globe[34] stated: "In any event, an act of Congress will be required to correct the mistake, and lobbyists subject to registration may take advantage of the situation and delay signing up." The Buffalo News[35] concluded its remarks on the matter this way: "You can never tell when a tense situation will be rendered past, present, or future on Capitol Hill."

Vigorous opposition was directed against section 308 of the statute because it exempts from its purview "any public official acting in his official capacity." This opposition to the exempting of "tax-paid lobbyists" was voiced by a number of organizations at the time they filed their own reports under protest, or while questioning the applicability of the law to their particular organizations. On October 9, 1946, the representative of the National Physicians Committee for the Extension of Medical Service wrote to the clerk:

"The proponents of the legislation in question have indulged in every form of propaganda and publicity they have been able to devise, including the most venomous and unfair attacks, in the leftist press and otherwise, on the National Physicians Committee and its personnel. This propaganda has, in the main, originated in and stemmed from certain branches of our Federal Government where there are long-established and well-entrenched groups of professional bureaucrats, with distinctly collectivist leanings, who are completely committed to the cause of socialized medicine and all that it entails.

"These propagandists, with the resources of the United States Treasury behind them, can and do flood the magazines and newspapers with press releases, in addition to the millions of Government bulletins and publications that are constantly going out to the general public, all at public expense. But, by the express terms of the Lobbying Act, these bureaucrats are not "lobbyists"; they need make no reports and are subject to no penalties regardless of the millions of dollars of Uncle Sam's money they see fit to spend, or however they spend it."[36]

In its memorandum on the lobbying law, the Committee on Constitutional Government, a private organization, said:

"If Congress were properly concerned about lobbying, it might and should long ago have dealt with lobbying by the bureaus set up by the President and itself. For it was shown by Representative Gross, of Pennsylvania (CONGRESSIONAL RECORD, volume 92, part 10, page A1501) that 'the worst and most persistent lobbying comes from the various bureaus within the Government in their effort to perpetuate themselves.' As one of the several illustrations, he mentioned that when Secretary Ickes appeared before the Insular Affairs Committee he was surrounded by 19 lieutenants * * *. We just recently saw the spectacle of the OPA whipping Congress to a standstill and dictating to the President. During the debate, Senator TAFT exhibited (CONGRESSIONAL RECORD, volume 92, part 7, page 8450) the OPA as the worst of all lobbyists, using the radio and propagandizing in a highly organized manner, even reaching into the schools. The bureaucrats were so impudent that they burnt TAFT in effigy in Ohio three times."[37]

There is, of course, ample precedent, in States with lobbying legislation, for exemptions of public officials who, in their official capacity, attempt to influence legislation. Furthermore, the purpose of lobbying legislation is to identify the many private organizations and their agents who are engaged in promoting or opposing legislation. Surely the Congress has other effective means at its disposal—for example, the power of the purse—to discipline such representatives of the Federal agencies who, with too much zeal, or in other objectionable ways, go about the business of influencing the legislation they are expected to administer. It would seem that appropriate local government agencies, not to mention the constituents of elected local officials, could adequately discipline State and local officials who use objectionable methods in influencing Federal legislation. It would seem reasonable, however, to withhold exemption of the provisions of the lobbying title from associations of public officials, supported in whole or in part, from private sources.

It has been charged also that the lobbying law is unconstitutional because it violates amendments I and IV of the Constitution of the United States—that the act is in contravention of the specific constitutional requirements that freedom of speech and the right to petition the Government shall not be abridged. One organization further claimed:

"The requirements of this lobbying act * * * make a system of search of the books, records, and papers of the citizen without probable cause, supported by oath or affirmation, in violation of the fourth amendment. The records which the act prescribes to be kept by the citizen are to be used against him when occasion offers. * * * In the courts of the States, as well as in the Federal courts, the constitutional provisions protecting the citizen against unreasonable searches are liberally construed in favor of the man. * * * Wherever there is a lack of jurisdictional oath, or of absolute clarity as to 'the place to be searched, and the persons * * * or things to seized,' the man wins."[38]

This is a grave charge, and it seems difficult to substantiate it. It may be in order to question the relevancy of injecting the fourth amendment into the discussion, and of the reasoning on the part of those who try to make out a case against this Federal law by citing a series of Supreme Court decisions involving that amendment but bearing questionable relation to this problem.[39] Twenty-five States now require lobbyists to register, and 17 of these also require the filing of expense statements. Are pressure groups so influential in these States as to be largely responsible for the lax enforcement of these laws, and hence find it unnecessary to raise objections to them on constitutional grounds or any other?

Surely the regulation of the lobby does not interfere with the constitutional right of free speech, or free press, or the right of petition. It denies to no one the high right of appeal to Congress or to the public for

[31] F. E. Lee to Donald Kirkpatrick, November 26, 1946. The American Farm Bureau Federation filed quarterly A reports in 1947, and four individuals, including the president, filed B reports, indicating annual salaries totaling $37,000. Each of these four representatives also filed quarterly expense statements under Form C.

[35] August 13, 1946.

[36] See also New York Times, October 18, 1946, and Philadelphia Inquirer, October 21, 1946. E. H. Cary, chairman of the National Physicians Committee, testified on April 19, 1946, before the Senate Committee on Education and Labor that his group had spent $905,359 on various forms of educational work during the last 5 years. The committee reported expenditures of $200,541.63 for the first 9 months of 1947 under the Federal Lobbying Act.

[37] First memorandum on Regulation of Lobbying Act, p. 3, probably late August 1946. The Committee for Constitutional Government reported under the Lobbying Act expenditures of $465,080.97 for the period August 2, 1946, through June 30, 1947, but gave no information on contributors.

[38] Memoranda on Regulations of Lobbying Act of the Committee on Constitutional Government, p. 3 of the first memorandum, and p. 4 of the second.

[39] Cases cited in the two memorandums prepared for the Committee for Constitutional Government include *Boyd* v. *United States* ((1886), 116 U. S. 616); *Kilbourn* v. *Thompson* (1881), 103 U. S. 163); *Sinclair* v. *United States* ((1929), 279 U. S. 263); *Interstate Commerce Commission* v. *Brimson* ((1894), 154 U. S. 447); *Federal Trade Commission* v. *American Tobacco Co.* (1924), 264 U. S. 298); *Hale* v. *Henkel* ((1906), 201 U. S. 43); *McGrain* v. *Daugherty* ((1927), 273 U. S. 135); *Jones* v. *Securities and Exchange Commission* ((1936), 298 U. S. 1.) The brief filed by the National Association of Manufacturers in the United States Federal court in Washington, D. C., on January 28, 1948, also holds that the lobbying title is in conflict with the Constitution.

the purpose of influencing legislation.[40] Penalties are provided for those who fail to comply. Of course, one of the objectives of the law is to put the whole game of pernicious lobbying out of existence and the bad pressure boys out of work. This legislation may be regarded as a curb against abuse of petition, as laws of libel and slander are in the case of freedom of speech and of press. It seems doubtful that section 310 (b) debarring a convicted person from engaging in lobbying for a period of 3 years would be considered unconstitutional either as a bill of attainder or as violative of due process. However, it is difficult to see how this penalty can be applied to associations as "persons." No constitutional question has been raised in those seven States that have similar provisions for debarment.[41]

A further complaint is made that the Lobbying Act does not go far enough. For example, the American Legion and its legislative representatives, who filed promptly under all three forms, complain (1) that the names and addresses of contributors of $499 or lesser amounts do not need to be reported; (2) that many "witnesses" who appear before committees are "lobbyists" and "should be required to state under oath on whose authority they are testifying and also to state in detail whether they received any travel expenses or other gratuities for their testimony, with the amounts thereof," (3) that all lobbyists who claim to represent organizations submit sworn statements as to their membership and by what authority they speak for such membership.

In connection with the first point, while some abuses may be practiced in the collection of contributions under $500, it would appear inadvisable to change this figure. The listing of names and addresses of thousands of persons whose contributions may really be dues paid by members of legitimate associations should not be required or encouraged. In respect to the second recommendation of the American Legion concerning witnesses before committees, rules of the two Houses can adequately meet this desirable suggestion. The Legion's third suggestion can be met by amending the statute to require such information to be furnished preferably by the organizations, rather than by their paid legislative agents. It is evident that the lobbying title stresses the financial background of lobbyists rather than the representative character of the organization, or the processes by which its decisions are reached.[42]

Lastly, another complaint directed against the act is that it goes too far—that it is built on the unwarranted assumption that all persons who collect money for the purpose of lobbying may use it in degradation of public policy, and that, therefore, all persons should be treated as potential wrongdoers. It would be difficult to produce rational evidence supporting this charge. The lobbying title does not draw a distinction between good and bad lobbying. Its aim is to stress the public character of those who participate in influencing legislation.

Wide coverage was given to the Legislative Reorganization Act by the newspapers of the country after the President affixed his signature to the bill. On the whole, the press, in both its news and editorial columns, received Congress' attempt to regulate the lobby favorably. The Cleveland Plain Dealer commented editorially on August 2, 1946: "Since most legislation is sought or opposed by special interests, it is well to have these special interests identified, and it is better to have the representatives of the special interests conduct their activities in the open rather than in secret and sometimes mysteriously. Thus, it appears that Congress has not only reorganized itself but has brought about a reorganization of the lobbyists." On the following day the Journal of Atlanta, Ga., said that "the requirement that lobbyists register and disclose the source of their funds will curb, though not eliminate, an ancient American disgrace." The Washington Post, in an editorial entitled "Goldfish-Bowl Lobbying," noted that "legislators will be able to distinguish more clearly than ever before the plea of organized money from that of individual citizens."[43] On the other hand, a number of newspapers, through feature stories, high lighted the vague terminology in the legislation under headlines that read: "New lobby law spreads confusion";[44] "Lobbying law stirs confusion in Washington—Many puzzled groups ask lawyers if they must register under new act";[45] "Lobbying law goes into effect, but exact meaning is not clear";[46] "Lobbyists slow to register";[47] "What's a lobbyist?"[48]

IV. ADMINISTRATION OF THE ACT

How has the lobbying title in the Legislative Reorganization Act been administered, particularly during the first year after it took effect on August 2, 1946?[49] With the Seventy-ninth Congress already adjourned on this date, and after numerous inquiries, the Clerk of the House of Representatives announced that the lobbying title would take effect at once.[50] To aid in both the interpretation of and compliance with the act, the Clerk's office, in consultation with the Secretary of the Senate, promptly prepared the three forms, A, B, and C, on which the information was to be set forth.[51]

Replies in the negative were given by the Clerk and the Secretary for administrative rulings or opinions relating to the interpretation and enforcement of the act. An early conference after the title became law between the Clerk and the Attorney General resulted in no official interpretation by the Justice Department.[52] It was deemed advisable to let the new statute take its course, permitting the courts to render decision, should a test be made.[53]

The following reply is typical of the Clerk's interpretation:

"The provisions of this act appear to be quite clear as to its interpretation. There remains only the possession of detailed knowledge as to the activities of a person * * * in order to apply the test very specifically set forth in the act. It is the opinion of this office that such a determination should be made by the person who believes he may come within the provision of this law, and that the Clerk of the House should not make a decision for him. For your complete information, additional copies of the forms developed by this office to assist persons in complying with the provisions are herewith. These forms by their very nature tend to simplify the process of understanding the application of this law."[54]

---

[40] Senator McCLELLAN, who preferred a lobbying bill limited to professional lobbyists, viewed the lobbying title before passage as a possible violation of civil liberties: "I should not be willing to pursue that purpose so far as to prevent the president of the Federal Farm Bureau, or the president of the CIO, or the president of the A. F. of L., or the president of the Farmers Union, or the secretary of the chamber of commerce, * * * from coming to Washington and conferring with their congressional delegation unless they agreed to register and to report as professional lobbyists. I do not think the legislation should go that far * * * I think it is probably an abridgment of the civil rights of our citizens and our constituents, when and if the law does go that far * * * I do not think we have a right to say to any citizen of our State that, as a citizen of the State, he cannot, without becoming a criminal because of violation of this proposed law, contact his Senator or his Representative in Congress and discuss with him legislation in which he or his organization is interested, unless he registers and acknowledges himself to be a lobbyist" (cf. CONGRESSIONAL RECORD, vol. 92, June 10, 1946, p. 6678).

[46] St. Louis Post Dispatch, September 22, 1946.

[47] Journal Gazette, Fort Wayne, Ind., October 10, 1946.

[48] Chicago Times, September 13, 1946.

[49] The writer has had opportunity to examine, periodically, the reports filed under the provisions of the lobbying title with the clerk of the House of Representatives and the secretary of the Senate, to talk directly with persons in these offices and with those responsible for the drafting of the legislation, to examine the memorandums of interpretation and advice prepared by counsel for a number of organizations affected by the legislation, to communicate by telephone and letter with some of the counsel and with a larger number of the Washington lobbyists themselves, to examine the press coverage from coast to coast on this lobbying title, and in some instances to talk directly with the Washington press correspondents.

[50] New York Times, August 10, 1946. Unlike other titles in the Legislative Reorganization Act, title III provided no specific date on which it was to take effect.

[51] In this connection, counsel for the American Farm Bureau Federation commented: "The simplification which the Secretary and the Clerk have thus undertaken is advantageous to persons required to register under the act, except that Form A, which is for use by organizations, states that it is filed under section 307, thus implying that any organization filing it is engaged principally in lobbying." Cf. letter of F. P. Lee to Donald Kirkpatrick, November 26, 1946.

[52] Interview with H. Newlin Megill, Acting Clerk of the House of Representatives, December 6, 1946; United States News, vol. 31, September 6, 1947, p. 70.

[53] It was disclosed on December 25, 1947, that the United States Attorney General had earlier appointed Irving R. Kaufman as his special assistant to conduct an investigation of lobbying activities. Cf. New York Times, December 26, 1947, and interview with Irving R. Kaufman, January 2, 1948. On January 14 the Attorney General announced that he had given Mr. Kaufman written authorization to appear before a grand jury in cases warranting prosecuting; and on March 23 it was disclosed that a grand jury in Washington, D. C., had started receiving evidence from the Department of Justice on alleged violations of the Lobbying Act. Cf. New York Herald Tribune, March 24, 1948. On March 30, 1948, this grand jury indicted the United States Savings and Loan League. Cf. New York Times, March 31, 1948. On January 28, 1948, the National Association of Manufacturers followed what appears an unusual course when it appealed to the Federal district court in a civil action for an injunction to enjoin enforcement of the Federal Lobbying Act, which is a criminal statute.

[54] Clerk to Edward A. Rumely, of the Committee for Constitutional Government, Inc., October 10, 1946. The same advice was repeated subsequently by the Clerk to officers of the organization. On July 8, 1947, Mr. Rumely wrote the Clerk, "* * * I protest that I am not under any legal obligation to file reports under said act, and again request a ruling on this question for future guidance."

On another occasion the Clerk returned a registration on Form A with the advice "that it should perhaps properly be filed in the name of the organization and sworn to by you as the agent thereof." And again a Form A was returned because it reflected no information. "It would appear," said the Clerk, "that such a form should be filed by the person * * * with whom you are associated, if they are receiving any contributions or expending any money for the purposes designated in paragraphs (a) and (b) of section 307. * * * In such a case, a statement by an organization should reflect some type of receipt or some type of expenditure or some information."[55] However, this procedure was soon changed. The clerk now files all reports, regardless of the nature of their contents.

The Clerk made the following reply to the request of the representative of the People's Lobby for postponement in filing his financial statement: "I note that your basis for this request is your present illness. There is no authority that lodges with the Clerk of the House in the administration of this act that would permit him to vary the requirement of this statute."

One barometer for measuring compliance is the number of registrations under the lobbying title during its first year. A total of 216 different organizations filed a total of 450 entries with the Clerk of the House under Form A.[56] These quarterly reports ranged from one to four for each organization, and, unlike the data filed on Forms B and C, are not published in the CONGRESSIONAL RECORD. Furthemore, the data supplied on Form A pertaining to the first three questions on amount and sources of contributions are meager indeed. Fuller information is supplied in answer to the last three questions concerned with the expenditures of the associations. On the other hand, too many among the 216 organizations that filed at least once during the year on Form A gave no information at all—"none" or blank spaces appearing in answer to all six questions.[57]

Many itemized expenditures, even of less than $10, appear on separately attached sheets. These statements should, and most of them do, include the expenses incurred by the lobbyists employed by the association. However, if the lobbyists' expenses are included on Form A, this does not absolve the lobbyists from registering under B and C.[58]

Among the organizations that indicated in detail not only all expenditures, but also the contributors with their names, addresses, and the amounts given, was the Citizens Committee on Displaced Persons. The chief concern of this organization, which employed 27 registered lobbyists, was to procure passage of the Stratton bill (H. R. 2910). The committee reported on Form A that during the first 6 months of 1947 it received contributions amounting to $236,753.25 and disbursed $185,431.45.

The following list gives a representative sampling of the amounts reported to have been spent by associations during the first 6 months of 1947:

American Federation of Labor (in campaign to defeat Taft-Hartley bill)	$819,648.18
Committee for Constitutional Government, Inc.	248.505.58
Townsend National Recovery Plan and Weekly	236,599.42
National Physicians Committee for the Extension of Medical Service	135,367.86
National Association of Electric Companies	126,039.75
National Home and Property Owners' Foundation	77,333.82
Southern States Industrial Council	51,686.95
Southern Pine Industry Committee	34,988.23
American Legion	29,788.22
Unemployment Benefit Advisors	25,157.79
American Farm Bureau Federation	23,097.12
Sea Air Legislative Committee	21,326.20
National Association of Cooperatives	21,119.35
National St. Lawrence Association	20,381.05
Central Valley Project Association	18,306.38
American Medical Association	15,174.11
Christian Amendment Movement	9,875.40
American Library Association	7,990.17
National Conference of Railroad Investors	7,525.83
The People's Lobby	6,694.10
National Federation of Post Office Clerks	6,283.66
North Dakota Resources Board	4,978.21
Western Defense Housing Co.	4,848.08
American Parents Association	3,372.59
Federation of American Scientists	3,007.67
Irrigation Districts Association of California	2,576.22
American Veterans of World War II	494.20
National Committee for Strengthening Congress	248.20
Legislative Bureau of the Communist Party, United States of America	34.95

Twenty-two organizations that filed under Form A had no record of having hired legislative agents. This, of course, is entirely possible under the Lobbying Act, as the following statement, attached to the Form A of the Committee for United States Information Abroad indicates: "This is a volunteer committee composed of prominent individuals who are publicly supporting legislation to continue a United States information program abroad. It has no paid employees other than the office staff listed in the enclosed Form A: therefore, we are returning the blank forms B and C."

Even among the organizations that filed under A are a number which registered under protest or with reservations. For example, the American Library Association filed Form A with a statement that although this association "* * * is of the opinion that the provisions of this act do not apply to its activities, we feel that the purpose of the act merits the cooperation of every association in the United States and is, therefore, complying with the requirements as a matter of policy."[59]

The National Association of Electric Companies stated that it was very unwillingly filing forms A, B, and C. "* * * for the information of the Congress of the United States under title III of the Legislative Reorganization Act of 1946, but seriously questions whether and to what extent that act applies to this association. The scope of that title is not clearly stated, and the forms have been prepared without the benefit of official interpretation."

However, it is the information required under Form A rather than B and C that throws important light upon the organizations that influence legislation—although occasionally the registrant under B gratuitously gives information about the association employing him. The data required in Form A emphasize what the State lobbying laws disregard, namely, that it is more important to know something of the structure, finances, and policy-making machinery of the organization than of the activities of the lobbyist employed by the pressure group.

Thus a cardinal weakness in the administration of the lobbying title must be judged by the failure of organizations to file under Form A (some of the most powerful and influential associations are in this category); and, secondly, by observing that in many cases very meager information was supplied by organizations that did file.

On Form B, 845 different registrants recorded 677 "persons" as their employers.[60] If a liberal interpretation had been given to the word "principal" in section 307, the correlation would have been higher between those who filed under Form A in accordance with sections 305 and 307 and the employers of Form B registrants reporting under section 308.[61] These 677 organizations employed a total of 1,058 legislative agents. Included among this latter figure were 74 who recorded that they were employed by more than one person. In fact, these 74 represented 287 organizations and individuals. The record is held by Walter F. Woodul, who represented 24 railroads in Texas, Missouri, and California, and the Imperial Sugar Co. of Texas. James E. Curry, representative of 16 Indian tribes, is promised 10 percent of all recovery in claims plus "reasonable fees for other work." Stephen Walter represents 14 different power companies.[62]

The registration figures also disclose that a number of associations have in their employ at the same time more than one person who is responsible for the group's legislative work. The record is held by the Townsend National Recovery Plan. Thirty-four different individuals for twenty-five States filed under Form B and indicated the Townsend National Recovery Plan as the organization in whose interest they were working. While some of the Townsend registrants indicated they were paid a flat salary of $50 or $75 a week, 18 others indicated that they received as commissions from 25 to 50 percent of the financial contributions or dues of members in their respective States. The employees at the national headquarters in Cleveland listed salaries ranging from $4,000 to $7,800 and additional expense allowances.[63] The Citi-

---

[55] South Trimble, Clerk of the House of Representatives, to Charles E. Sands, November 20, 1946.

[56] By January 31, 1948, an additional 21 "persons" filed under Form A.

[57] Among such organizations were the National Farmers Union, the United Fresh Fruit and Vegetable Association, the Institute of Cooking and Heating Appliance Manufacturers, and the United Health League.

[58] For example, J. Byron Wilson, chairman of the legislative committee of the National Wool Growers Association, filed no B or C statements. He is reported to be one of the best-known lobbyists on the Hill. The National Wool Growers Association, however, did report on its Form A, filed on July 9, 1947, that Mr. Wilson spent a total of $2,457.22 during the first two quarters of 1947, but made no mention of his annual salary. His colleague, J. M. Jones, secretary of the association, did file under B and C.

[59] However, the American Library Association listed its expenditures but not its contributions on its four quarterly Forms A. Letter of Carl H. Milam, executive secretary, to Leslie F. Biffle, Secretary of the Senate, October 10, 1946.

[60] See CONGRESSIONAL RECORD, vol. 93, January 3, 1947; February 5, 1947; May 12, 1947; August 15, 1947.

[61] Although by January 1948 a thousand lobbyists had registered, they represented a total of about 750 employer organizations and individuals. See CONGRESSIONAL RECORD, vol. 93, November 17, 1947; vol. 94, January 29, 1948.

[62] It is possible that among these 74 registrants are some who terminated their services with one organization before being employed by another. This may apply to those who filed at different times under Form B. A specific statement of termination of employment should be required on Form C.

[63] On Form A the Townsend National Recovery Plan, Inc., reported for 1946 contributions of $216,146.34 and expenditures of $584,833.47.

gens Committee on Displaced Persons followed the policy of having all of their 27 employees, including office and field workers, file individual registrations on Form B, and thus a total pay roll of $165,000 annually was recorded. It seems unnecessary to add that the number of lobbyists employed by any one organization does not indicate its strength or influence. Congress has not adopted the program advocated by the Townsend plan, nor did the Stratton bill, urged by the Citizens Committee on Displaced Persons, become law in 1947.

Significantly, former Government employees were registered as lobbyists, but not to the extent that one would expect after reading the statements of the late Senator Caraway.[64] The statements filed under the lobbying statute during its first year disclosed that eight former Members of Congress were registered, and several former officials of the Federal administrative branch.[65]

Sixty-five women are numbered among the 845 individuals who registered as lobbyists.[66] It has been estimated that their total salary is about $170,000 per year in a field of employment that is reputed to draw down in salaries four or five million dollars annually. The highest salary reported for a woman lobbyist was $7,000 per annum, and the next highest was $6,400.[67] The majority of the women lobbyists, however, draw annual salaries ranging from $3,000 to $4,000. Three make less than $1,500 a year, while a number of the women are volunteer workers drawing no salary, but only necessary expenses. The largest number of women registered for a single organization is the 10 employed by the Citizens Committee on Displaced Persons.[68]

The highest salary on record is $65,000 paid to Purcell L. Smith by the National Association of Electric Companies, who stated: "On the basis of the activities of the association to date, I estimate that not over 25 percent my time is spent on legislative matters within the purview of the act." [69] The runner-up is Stephen M. Walter with an annual salary of $52,000, while Ernest W. Greene is paid $45,180 per annum as agent for the Hawaiian Sugar Planters Association.[69] Top labor leaders, as William Green and Philip Murray, have not registered as lobbyists for their respective organizations. However, three legislative agents for the American Federation of Labor registered, each with $7,280 per annum salary, and two for the CIO at salaries of $6,000 and $4,820. It is perhaps superfluous to note that some salaries are very low indeed, one registrant recording $5 a year from the District of Columbia Federation of Women's Clubs. There are also a number of volunteers, even among the male representatives who have registered, although a reading of section 308 of the lobbying title would appear to exempt agents not employed for compensation.[70]

Approximately 400 of the nearly 700 employers of registered legislative agents came from various categories of business, whereas about 75 were labor and government employee associations. Agricultural, veteran, professional, civic, and miscellaneous groups made up the remainder.

A check of the addresses of "persons" employing lobbyists indicated that all but seven States of the Union were represented, as well as the following Territories: Alaska, Puerto Rico, and Hawaii. In addition, organizations with addresses in Mexico, the Netherlands, Egypt, Cuba, and the Canal Zone employed registered lobbyists. About 172 organizations have Washington, D. C., addresses; 107, New York addresses; Illinois comes next with 43; then California and Texas with 35 each. It has been estimated that there are about 3,000 lawyers in Washington, D. C., more per capita than in any other city in the country. A large number of the lawyers with District addresses represent, as registered lobbyists, not only organizations located in the District, but also organizations with addresses elsewhere in the country, in the territories, and in foreign countries.

Sixteen legislative agents during the first year requested that their registrations be canceled. Undoubtedly several more of the 845 registered lobbyists terminated their services without specifically notifying the Clerk of the House of Representatives or the Secretary of the Senate. In these cases one could assume that the failure to file the quarterly financial report would indicate that their services as lobbyists were at an end. The Clerk so ruled in reply to the request of Samuel Rosenman to "withdraw" his registration because his activities in connection with the specific legislation for which he represented the Associated Fur Coat and Trimming Manufacturers had come to an end with its enactment. In reply, the Clerk stated: "The act requires persons registered to file quarterly reports as long as they are engaged in the activity, and therefore failure to file such quarterly reports is a notice of withdrawal of registration pursuant to the act." [71]

In answer to the question on Form B, "the duration of such employment," either a fixed termination date was stated, or, more frequently such replies as "indefinite," "at will," "undetermined," "permanent," were recorded. One of the representatives of the American Federation of Labor, in answer to this question, said: "Until fired, resigned, retired, or dead." [72] A Rev. James C. Olden recorded that he was working for the American Negro "until the problem is solved," and that he was supported in these labors by "free will offerings of churches and interested individuals."[73]

The number of reports on Form C listing the quarterly expenditures of individual lobbyists has increased with each quarterly compilation. For example, 149 filed for the first quarter, 198 for the second, 539 for the third, 631 for the fourth, making a total of 1,517 who filed Form C during this first year.[74]

Most of the lobbyists have complied with the filing of their quarterly financial statement, although some statements came in slowly. In a number of cases, statements have been filed for two quarters at the same time. Furthermore, in a few cases, legislative agents have erroneously used Form A instead of C for their personal filing records. This confusion undoubtedly was caused by the use of the word "person," which normally means an individual rather than an association.[75] Financial statements are not required for any quarter in which the lobbyist did no lobbying. However, a few lobbyists prefer to file the C form and state, for example: "No participation in lobbying during second quarter, and I shall not be lobbying on labor legislation as set forth in first-quarter report." [76]

The statute recognizes the importance of publications in promoting legislation. Form C therefore asks for "the name of any papers, periodicals, magazines, or other publications in which he has caused to be published any articles or editorials." In the overwhelming number of cases, either "none" was recorded, or no reply at all was given. However, there are examples in which some registered agents listed newspapers and periodicals to which news releases and articles had been mailed, or in which they had been published.[77] More often, a single specific publication is mentioned, and that is usually the organ of the association employing the lobbyist, e. g., "None other than weekly newsletter published by employer."

In answer to the last question of Form C, "The proposed legislation he is employed to support or oppose," the replies take different forms. Agents for the Citizens Committee on Displaced Persons mentioned H. R. 2910, Emergency Temporary Displaced Persons Admissions Act (Stratton bill). In another case there appears a series of specific bills. The representative of the American Farm Bureau Federation replied: "In accordance with the annual meeting resolutions, adopted by the federation, proposed legislation on the following matters has been supported or opposed." [78] More often some such general

---

[64] H. J. Res. 227, 70th Cong., undertook to prohibit former Members of Congress from engaging in the practice of lobbying, but the resolution did not pass.

[65] Former Congressmen were Albert E. Carter, employed by the Pacific Gas & Electric Co. at $12,000 per annum; John A. Danaher, of Connecticut, Revere Copper & Brass, Inc., at $25,000 per year; Wesley E. Disney, of Oklahoma, National Gas Association of America, at $10,000 per year plus legal fees from other groups; Winder R. Harris, of Virginia, Shipbuilders Council of America, at $15,000 per annum; Fritz G. Lanham, of Texas, National Patent Council, State Rights Association, and others, at a total of $16,000 per year; Robert Ramspeck, of Georgia, Air Transport Association of America, at $25,000 per year; H. Jerry Voorhis, of California, Cooperative League of the United States of America, at $7,500 per year; Clifton A. Woodrum, of Virginia, American Plant Food Council, Inc., at $36,000 per annum.

Prominent among the other former public officials were Samuel Rosenman, employed by the Associated Fur Coat and Trimming Manufacturers, Inc., at $40,000 per year; and William P. MacCracken, Jr., employed by Remington Rand, Inc., at $12,000 per year, while his services to the American Optometric Association are paid for from time to time, the amount depending upon the nature of the work and the time involved.

[66] These salaries are paid, respectively, to Margaret K. Taylor by the National Cooperative Milk Producers Federation and Hilda W. Smith by the Committee for the Extension of Labor Legislation.

[67] In addition to the list published in the CONGRESSIONAL RECORD, see New York Herald Tribune, May 15, 1947.

[68] CONGRESSIONAL RECORD, vol. 93, January 3, 1947, p. 54.

[69] Representatives of the Association of American Railroads and the United States Beet Sugar Association are each paid annual salaries of $40,000.

[70] One Jostus R. Moll recorded that he received "no money or other valuable consideration" from the Frisco System Board of Adjustment, except the payment of his annual dues, and he even paid his own expenses. He added: "In addition to said consideration, I hope to receive as other consideration mentioned in the statute, the continued loyalty and gratitude of the membership of Frisco System Board of Adjustment (or any other bona fide labor union) in return for my efforts."

[71] April 8, 1947. It is evident that it would be well if some provision were made on form C specifically called for a statement of resignation or cancellation.

[72] CONGRESSIONAL RECORD, vol. 93, January 3, 1947, p. 49.

[73] CONGRESSIONAL RECORD, vol. 93, May 12, 1947, p. 5209.

[74] The last two quarters covered the first 6 months of the 80th Cong. By the end of January 1948, 2,592 filed on form C.

[75] For example, this was done by Charles E. Saltzman, who represented the New York Stock Exchange until he resigned in July 1947 to become Assistant Secretary of State.

[76] Entries for Herman M. Booth, Jr., in CONGRESSIONAL RECORD, vol. 93, May 12, 1947, p. 5216, and August 15, 1947, p. A4468.

[77] CONGRESSIONAL RECORD, vol. 93, August 15, 1947, p. A4492.

[78] CONGRESSIONAL RECORD, vol. 93, August 15, 1947, p. A4493.

characterization is given as "any margarine legislation," "measures affecting the ownership and operation of real estate," "legislation affecting credit union," "matters affecting the mortgage-banking industry," "supporting legislation for the unemployed," "all legislation of interest to business such as bills on taxes, budget control, portal-to-portal pay suits, general labor, claims, etc.," "legislation for workers."

It has been observed that 677 persons were listed as employers on Form B. In addition, there were 22 associations that filed under A, but did not employ lobbyists, according to the Form B records on file. A break-down of this total figure of 699 indicates that 498 were associations or member organizations, while 201 were individuals or individual companies and corporations. How many organizations are really active in the area of national legislation? Samuel H. Tower stated in the New York Times that "lobbying has reached, if possible, a new pitch of activity in the present session of Congress." [79]

Joseph and Stewart Alsop reported that "In the presence of lobbyists, the Eightieth Congress of the United States has behaved like a blowzy chorus girl just starting on her second pint of rye. * * * At this session something very like the beginning of a lobbyists' carnival has been plainly discernible * * * the power lobby is the most active, and most conspicuously well-heeled, in Washington. Its grand panjandrum, the high-powered P. L. Smith, representative of the National Association of Electrical Companies, gets a salary in the Hollywood class—$65,000 annually, with an ample expense account. But even the prosperous Smith is less important than the numerous officials of the large utilities companies. These converge on the Capitol at frequent intervals to make the boys on the Hill see the power question in the old free-enterprise way. And behind these large operators, there is a whole network of lawyers with retainers from the utilities, bankers with deposits from them, and other influential figures. These speak from the voting districts to Washington with voices of authority. Besides stirring up the sordid attack on David E. Lilienthal, the power people have scored major successes at this session with the Appropriations Committees." [80]

In vetoing the Housing and Rent Act of 1947, President Truman stated:

"One of the most stubborn obstacles in the way of any constructive housing program has been the opposition of the real estate lobby. Its members have exerted pressure at every point against every proposal for making the housing program more effective. They have constantly sought to weaken rent control and to do away with necessary aids to housing. * * * It is intolerable that this lobby should be permitted by its brazen operations to block programs so essential to the needs of our citizens. Nothing could be more clearly subversive of representative government. * * *" [81]

And again, Ned Brooks, Washington correspondent wrote:

"The real-estate lobby's series of successes in Congress has soothed the sting of President Truman's rebuke to it. * * * They have won all major objectives in the current session. * * * Six weeks before the session began, Boyd Bernard, then president of the National Association of Real Estate Boards, told members to 'wait for the new Congress on the Capitol steps with a proposal for a cushioned decontrol of rents.'

On May 12, after the House had passed the bill opening the way for rent increases and repealing most of the Veterans' Emergency Housing Act, the association notified members: 'We won the first round of rents through the passage of the Wolcott bill. This embodies substantially the program we wanted.'

At the same time the association was soliciting its membership for $5 contributions to conduct 'legislative and research work' here in Washington. Officials ridiculed statements that it had a $10,000,000 fund available for putting over its program, saying its goal of voluntary subscription was only $59,000. [82]

The six leading organizations which constitute the real-estate lobby in Washington are: Association of Real Estate Boards, National Home and Property Owners Foundation, National Association of Home Builders, Buildings Products Institute, United States Savings and Loan League, and National Retail Lumber Dealers Association. According to statements on file in the Clerk's and Secretary's offices, their 14 agents receive salaries totalling $81,450 per annum. Only two of these organizations during the first year filed under Form A. The National Association of Real Estate Boards reported expenditures of $39,355.72 in 1946, and the National Home and Property Owners Foundation recorded, for a 7-month period in 1946, expenditures of $232,132.08. [83]

In the New Republic, Helen Fuller refers to the "Eightieth Congress * * * [as] a demonstration of government by lobby and steamroller." She indicts, among others, the Association of American Railroads for its lobbying budget of nearly $5,000,000 per year, which got the Reed-Bulwinkle bill (exempting railroads from the antitrust laws) through the Senate; and the sugar interests, which put through "a sweet deal in the Sugar Act of 1948"; and the "big business' biggest guns, the NAM and the United States Chamber of Commerce, concentrated on labor first, taxes second." [84]

On the other hand, organized labor, with the assistance of consumer and other civic organizations, was far from quiescent. The registrations under the lobbying title record about 75 organizations affiliated with the A. F. of L. and CIO., as well as unaffiliated groups. Unprecedented sums of money were spent in legislative battles, particularly over the elimination of price controls in general, rent controls, the Taft-Hartley Labor Act, and the reorganization of the Labor Department. As never before, in enterprising and novel ways, radio and newspaper advertisements were used to carry labor's message to millions of people.

On June 23, 1947, Representative ARENDS, of Illinois, on the floor of the House, said:

"Last week, during the discussion of the President's veto message on labor, some 800 lobbyists were reported to have come to Washington in an automobile veto caravan. They came here for the purpose of influencing the President to veto the Labor Act and to exert their influence on Members of Congress to sustain such veto.

"Who paid their expenses? Have they registered as lobbyists?

"There have been reports that labor organizations have spent more than $1,000,000 in lobbying against the Labor Act and for sustaining the veto. Have those expenses been reported as lobbying costs?

"Phil Murray, president of the CIO, was interviewed on a radio program Friday night called Meet the Press. In that radio interview Mr. Murray said that he had talked to various Members of Congress about the act. Mr. Murray was asked if he thought that would come under the head of lobbying. He replied that he did not believe so. Many Members had called him asking about the act, he replied. Is that lobbying and is Mr. Murray registered as a lobbyist? [85]

The American Federation of Labor filed under Form A for the first time on July 11, 1947, a detailed statement of receipts and disbursements for the period from April 23, 1947, through June 30, 1947. It showed that the Federation had received for its fight on the Taft-Hartley bill contributions aggregating $992,452.30 from 102 of its national and international unions and from its local trade and Federal unions, and had spent $819,648.18. [86] The largest items in its expenses were: for newspaper advertising, $423,821.58; for radio advertising, $322,839.26; for radio entertainment, $61,673.54; and for telegrams, $3,641.33. The three unions making the largest contributions were: United Mine Workers of America, $90,000; United Brotherhood of Carpenters and Joiners of America, $90,000; and International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America, $93,750. Judging from these figures of the American Federation of Labor, it can be concluded that all of organized labor must have spent millions of dollars in its unsuccessful campaign to keep the Taft-Hartley bill from the statute book.

It is, of course, difficult to estimate with accuracy the number of pressure groups that are active in the area of national legislation. It is undoubtedly an understatement that, even with a strict interpretation of the lobbying law, more than the 699 employers that can now be found in the files should have registered under the lobbying title. According to the Bureau of Foreign and Domestic Commerce, more than 3,000 national trade and professional associations are represented at the capital in some manner. [87] The report of the Temporary National Committee on "Economic Power and Political Pressures," prepared by Donald C. Blaisdell in 1941, listed 381 national organizations with permanent representatives in Washington. [88] Many of the associations recorded under the lobbying law during its first year are not, of course, national organizations, and undoubtedly do

[79] New York Times, June 1, 1947.

[84] August 4, 1947.

[85] CONGRESSIONAL RECORD, vol. 93, June 23, 1947, p. 7716. Neither Mr. Murray nor Mr. Green has registered under the lobbying act.

[86] For the period April 23, 1947, through December 31, 1947, receipts were $1,046,478.03 and expenditures $834,565.38.

[87] C. J. Judkins, Trade and Professional Associations of the United States (Washington, D. C., 1942), U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce. The associations are broken down as follows: 1,900 trade associations (business competitors in one industry); 300 other "business associations" (not trade associations, but composed largely of businessmen); 600 other organizations (the activities of these are of special interest to business, such as the American Farm Bureau Federation, American Federation of Labor, American Medical Association); 300 additional associations. The National Association of Manufacturers states that there are about 1,500 national or regional trade associations of commercial or industrial enterprises.

[88] TNEC Rept. No. 26, pp. 197–201.

not all have permanent representatives in Washington. Eighty-two organizations in this 1941 list registered in some form under the lobbying law in 1946–47.

V. RECOMMENDATIONS FOR STRENGTHENING THE ACT

During its first year, the Federal lobbying law has been of limited effectiveness. However, a sufficient number of registrants have complied in one way or another to justify an early revision. Soon after the law became effective, an Omaha newspaper reported: "A cynical alliance stands as a new threat to the La Follette-Monroney Congressional Reorganization Act. The World Herald's Jack Jarrell reports from Washington that some of the Nation's top lobbyists have joined forces with the unofficial Congressional Old-Timer's Club in a drive to undercut the bill."[89] Whether or not the Omaha correspondent was correct, the Federal Department of Justice may force the hand of Congress, and revision of the lobbying law may be seriously undertaken.[90]

Unlike the original title, all proposed amendments should be subjected to careful scrutiny by committee members, following full public hearings.[91] The value of carefully planned hearings cannot be overestimated. On this point, Prof. Joseph P. Chamberlain, of Columbia University, told the Joint Committee on the Organization of Congress:

"I think, in my experience, it is enormously important in order to get good legislation to have careful committee consideration. I have drafted a good many bills in my time for private organizations, for State departments and bureaus, and I have never felt any satisfaction about any measure to which I might have given a great deal of time and consideration unless it had had a careful hearing before a committee—and I knew that the common sense of that committee had been expended on that bill."[92]

Methods employed to influence legislation are no longer restricted largely to buttonholing Members of Congress in the Nation's Capitol or at home. Mass channels of communication and the art of public relations have increased the pressures upon Congress and other Government agencies, and thus have drastically changed modern pressure techniques. It is recommended that:

1. The lobbying title of the Legislative Reorganization Act be completely redrafted and its various sections considered as an integrated whole, in order to avoid contradictions and ambiguities.

2. The words "principally" and "principal" now appearing in section 307 be deleted, and the Lobbying Act be made applicable to all organizations that now expend a specific sum (for example, at least $1,000 for any one quarter of the year) in influencing public opinion or the agencies of Government, directly or indirectly, in the passage or defeat of any legislation by the Congress of the United States. While it cannot be denied that organizations such as labor, chambers of commerce, trade associations, farm groups, etc., do perform major services not directly related to influencing legislation, such legislative activity as they do engage in, even for limited periods, may be of vital importance to the existence of these organizations. It is difficult, even at times impossible, to separate the so-called nonlegislative from the legislative expenses of any organization.[93] Therefore, the act should require a statement of the total budget of these organizations, broken down into broad categories of expenditures with a listing specifically of all items of expenditure labeled legislative. The names and addresses of contributors of $500 or more in any one quarter should appear in the statements filed under the lobbying title, whether specifically earmarked for legislative purposes or not.

3. A statement of the bona fide total membership of organizations should be required. It would also be effective if each organization were required to state how its legislative policy is determined and to indicate the responsibility of the lobbyist in conveying these views on behalf of the membership of the organization. It would then be a simple matter to expect chairmen of standing and special committees to require of a witness appearing at hearings a sworn statement as to whom he represents, the membership of his organization, and the internal structure of such organization, indicating how the position taken by the witness was arrived at. This might prove a great step in the direction of making pressure groups more representative of their actual and potential membership, and more democratic in their procedures.

4. It should be the responsibility of a specially designated agency to enforce the Lobbying Act. This agent should be the Attorney General of the United States. It would be his responsibility to see that complete information is supplied in accordance with the terms of the act and that such information is given the fullest publicity. Publicity is the key to effective enforcement of lobbying legislation. The compilation of the data for the CONGRESSIONAL RECORD is only a first step. The Clerk of the House and the Secretary of the Senate, now responsible for the compilation of the data on Forms B and C, lack police power. The information on all forms, to be prepared by the Attorney General in the first place, should be published at quarterly intervals in the CONGRESSIONAL RECORD. One copy should be filed with the enforcement agency and one with the Clerk of the House. It is further recommended that the compilation of the data be furnished either by the enforcement agency or by the Clerk of the House to the Press, Radio, and Periodical Press Galleries at stated intervals, in sufficient number to permit distribution to each accredited member of the galleries.[94] Copies of the compiled lobbying data should also be sent at weekly intervals while Congress is in session to the presiding officers of each House in sufficient number to permit distribution to each Member of Congress.

Furthermore, the Attorney General should be specifically required to evaluate in his annual report to Congress the working of the lobbying act during the past year, to interpret the information yielded under the act, and to suggest improvements through administrative or legislative action. It would be highly advisable for the appropriate congressional committees annually to evaluate the act, as provided in the Legislative Reorganization Act.

5. The act should be revised to require the the filing of statements and registration of persons who exert influence upon any Federal bureau, agency, or Government official. The Congress having taken the first step in requiring registration of persons exerting influence upon the legislative body, the extension of its provisions to the administrative agencies would be a simple matter. It would be further recogntion of the fact that the pressure upon the administrative division is considerable.[95]

6. The act should specifically prohibit the employment of any person to promote or oppose legislation when compensation is contingent in whole or in part upon the passage or defeat of legislative matters.[96]

7. The exemption granted in section 308 to newspapers or other regularly published periodicals should be extended to radio.

8. The contradictions in sections 307 and 311, as affecting the Corrupt Practices Act, should be resolved, making it clear that only duly organized State and local party committees are exempted from the provisions of the lobbying act and that others may be required to file under the lobbying and corrupt practices laws, depending on their activities.

If the foregoing suggestions were adopted, many organizations now enjoying tax exemption status under the Federal Internal Revenue Code might lose this status if they complied with the lobbying statute so amended. This is undoubtedly one of the chief reasons why many organizations have not filed under the ambiguous terms of the present law. It would seem, then, that Congress might be required to amend the Internal Revenue Code if it wished these organizations to continue as tax-exempt groups.[97]

No one doubts that it is a nuisance to require such full information from private organizations. Yet the time is opportune to insist upon it. These groups have grown accustomed in the past two decades to furnishing more and more information to the Government. Teeth should be put into the lobbying title at the earliest practicable moment. It is far better for Congress to clarify its position than for the courts to do so. Groups engaged in the legitimate activity of helping the people's representatives formulate public policy are in a sense clothed with a public interest. A democracy is entitled to

---

[89] Omaha World-Herald, October 9, 1946.

[90] See footnote 53 above. The Justice Department holds that the phrase "principal purpose" in sec. 307 means any purpose which is not incidental to the activities of the "person" in question, that any other interpretation would be meaningless and would clearly defeat the expressed intention of Congress. See testimony of Irving R. Kaufman, before the Senate Committee on Expenditures in the Executive Departments, February 17, 1948. See footnotes 53 and 83 above.

[91] The Senate Committee on Expenditures in the Executive Departments has already held such hearings, in which the writer participated on February 17, 1948, New York Times, February 18, 1948.

[92] Hearings before the Joint Committee on the Organization of Congress, 79th Cong., 1st sess., pt. 4, p. 1007.

[93] For example, the chairman of the National Legislative Committee of the American Federation of Labor, in order to support his statement "that the legislative expenses of our organization is a very minute proportion of its activities," points to the annual report of the Federation for the year ending August 31, 1946, in which the total expenditures of the federation were given at more than two and a half million dollars and legislative salaries and expenses amounted to $16,441.57. Cf. letter of W. C. Husking, December 6, 1946, and report of the executive council of the American Federation of Labor, 1946, pp. 2–3. For the year ending August 31, 1947, although the total expenditures of the federation exceeded $5,000,000, legislative salaries and expenses were $22,474. These figures do not include the sums spent in the federation's campaign to defeat the Taft-Hartley bill.

[94] For membership of the Press, Radio, and Periodical Press Galleries, see Congressional Directory, January 1948, pp. 731–783.

[95] Senate bill 2512, 74th Cong., introduced by Senator Black, made such provision.

[96] This prohibition is found in many of the State lobbying laws. Contingent payments may tend to encourage questionable practices. A registrant, in answering question 4 on form B, "how much he is paid and is to receive," stated: "$10,000 per annum as a retainer as Washington counsel on all matters affecting the economic and legal welfare of the [fur] industry, plus a fee of $15,000 in the event excise tax on furs is cut from 20 percent to 10 percent, plus an additional fee of $25,000 in the event the entire excise tax on furs is repealed on or before July 1, 1948." Cf. CONGRESSIONAL RECORD, vol. 94, January 29, 1948, p. 741.

[97] See U. S. Code, title 26, sec. 101 (6), 1938.

the fullest information from all the sources that constitute its functioning parts—and who would deny that pressure groups play a valuable and indispensable part in the dynamics of government?

However, regulatory legislation by itself, no matter how carefully drawn or vigorously enforced, will not eliminate the predatory lobby or discourage the use of questionable or illegitimate practices by pressure groups. Significantly, the lobbying title is part of the Legislative Reorganization Act which aimed to improve and modernize the organization and operations of the Congress. For example, by placing greater professional expert and clerical assistance at the disposal of legislative committees, and Members, Congress has made itself less dependent on unofficial sources of information than ever before. Strengthening the ability of Government to formulate legislative policy will go a long way toward providing effective regulation of pressure groups.

The Myth of the "Untouchable" 71 Percent

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 8, 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the RECORD a bulletin entitled, "The Myth of the 'Untouchable' 71 Percent," published by the Council of State Chambers of Commerce, signed by Alvin A. Burger, research director.

There being no objection, the bulletin was ordered to be printed in the RECORD, as follows:

THE MYTH OF THE "UNTOUCHABLE" 71 PERCENT

Spenders in and out of Congress have been utilizing what has proved to be an effective device for countering demands from folks back home for reduced Federal spending and a balanced budget. The device works this way: Pointing a frosty index finger at the complaining taxpayer, a prospending Senator (for example) will say, "Do you know that 71 percent of the proposed 1951 Federal budget goes to pay for past wars and to prevent future wars? National defense takes $13,500,000,000; services and benefits to veterans, $6,100,000,000; foreign aid, $4,700,000,000; and interest on the Federal debt, $5,600,000,000; $29,900,000,000 all told, or 71 percent of the total expenditure. Now, Mr. Public, do you want to cut down on national defense? Do you want to abolish services to our veterans? Do you want Europe to be overrun by Communists? Do you want to default on the interest on the debt? No? Well, then, that leaves only 29 percent of the budget that can be cut, and that includes outlays for health, social welfare, agriculture, labor, natural resources, and so on. Are you prepared to say where and by how much these items should be reduced?"

The average citizen is taken aback by such an assault. He has no pat answer to the phony assumption that 71 percent of the budget is immune to pruning. Left with the remaining 29 percent to ponder upon, he finds himself frustrated and silenced.

What he realizes in due time, of course, is that he has been the victim of a percentageal "con" game at which the spenders in Washington have long been adept. The scheme is to get the public to believe that 71 percent of the budget is untouchable (last year it was 76 percent), and that in any event the opportunities for substantial expense-paring are negligible.

Now what are the facts? Briefly, here they are:

1. Of the $42,400,000,000 of estimated spending in the proposed 1951 budget, only $9,400,000,000, or 22 percent, represents fixed charges not subject to reduction by Congress. The largest item in this sum is interest on the debt, estimated at $5,600,000,000.

2. Of the remaining $33,000,000,000, $14,600,000,000 is subject to outright reduction by the appropriation process, while the rest, amounting to $18,400,000,000, can be reduced somewhat by the appropriation process and substantially by amending existing laws authorizing the expenditures involved. In this latter category are programs involving Federal grants, subsidies, payments to individuals, home-mortgage purchases, etc.[1]

3. Expenditures for the Military Establishment and for veterans' services and benefits, far from being untouchable, offer abundant opportunities for spending reduction without impairing our national defense or curtailing reasonable services to veterans. Reports of the Hoover Commission and recent statements by Defense Secretary Johnson and Veterans' Administrator Gray support this.

4. Foreign aid and military-assistance expenditures are certainly subject to control by congressional appropriation except for certain obligated balances carried over from previous appropriations.

5. Ordinary domestic peacetime expenditures of the Government—those not related to past or future wars—have risen from $6,700,000,000 in 1948 to an estimated $12,300,000,000 in fiscal 1951, an increase of 84 percent.

6. The President's 1951 budget provides $953,000,000 to initiate 34 new spending programs. If Congress refuses to approve them, $953,000,000 will be saved. If Congress approves them, not only will this sum be spent, but the continuing programs will require much larger annual outlays in the years to come.

7. Despite recent improvements in many agencies of the Government, the 1951 budget still covers up much of the waste, duplication, payroll padding and inefficiencies exposed by the Hoover Commission, Byrd Committee and other survey agencies in their numerous reports. These add up to billions of dollars of possible savings.

REDUCING MILITARY EXPENDITURES

The 1951 expenditure estimate for national defense is $13,545,000,000. This huge sum nearly equals the total amount of taxes collected last year for the support of all our State governments, all our municipal and county governments and all our school systems combined. Now we all want a strong system of national defense in these days of cold war. The question is, can we, in striving for a balanced budget, achieve a cut in military spending and at the same time maintain an adequate system of defense? Senator HARRY F. BYRD maintains that we can. So does Senator PAUL DOUGLAS, of Illinois. Both have proposed that substantial cuts be made. But most encouraging of all is the attitude of Defense Secretary Louis Johnson himself, who, although a strong advocate of armed security, has shown himself to be no respecter of the sanctity of military budgets. Although he has said that military spending would probably continue at a $13,000,000,000 level until 1952, he has undertaken economy measures under the Unification Act which he estimates should result in $1,000,000,000 of savings by August 10 next. Greater combat effectiveness can be achieved as a result of these savings because of reduced excessive overhead and waste.

[1] The figures used in 1 and 2 are taken from Budget Bureau testimony before the Joint Committee on the Economic Report, January 18, 1950.

But Secretary Johnson's commendable economy efforts are encountering opposition from five principal sources. These are:

1. Certain military, naval, and Air Force brass to whom budgets are incomprehensible and the thought of conserving tax resources is repugnant;

2. Certain short-sighted industrial pressure groups having a vested interest in military spending;

3. Certain local interests that are more eager to retain unessential military installations within their boundaries than to see the Nation's budget balanced;

4. Certain employee groups which oppose reductions in the huge civilian pay rolls of the armed services; and

5. Certain Members of Congress who speak for the various interests here listed.

There is little doubt but that these interests are setting up costly obstacles in the path of true unification of the armed services. Failure to defeat them will result not only in costing the taxpayers large sums of unnecessary taxes, but also in weakening our system of national defense through foolish dissipation of its resources of manpower, materials, and money.

SAVINGS IN VETERANS' SERVICES AND BENEFITS

The estimated expenditure for veterans' services and benefits in the President's 1951 budget amounts to $6,080,000,000. The overlapping, duplication, and waste prevailing in these activities have been given full public airing through the findings of the Hoover Commission. The Commission's recommendations call for a business-like overhauling and streamlining of all veterans' services, particularly the hospital and insurance programs. If adopted, these proposals would not only save hundreds of millions of dollars to the taxpayers, but would provide more effective services for deserving veterans.

But the chief cause of much of the waste found in the Government's outlays for veterans lies in ill-advised legislation passed by Congress from time to time. A glaring example is found in certain provisions of measures providing education and training benefits for World War II veterans. Expenditures for these benefits in 1951 are estimated at $2,700,000,000.

The Servicemen's Readjustment Act of 1944 was passed to assist the returning veteran in making his readjustment to civilian life after separation from active service. Among other things, the act set up a sound system of education and in-service training benefits for veterans whose education had been delayed or impeded by war. But as time went on, Congress passed liberalizing measures which have made a large part of this program a costly farce. Abuses include:

1. The setting up of thousands of poorly qualified training schools which bid for veteran enrollments and derive exorbitant profits from tuition fees paid by the Government.

2. The enrollment of veterans for the primary purposes of income from the Government.

3. The enrollment of veterans who are temporarily unemployed or on strike.

4. The wholesale changing of courses by veterans (1,117,000 individual veterans had changed courses up to July 1949, thousands of them as many as 3 or 4 times).

5. The enrollment of veterans in courses wholly unrelated to their present or intended means of livelihood.

It is clear that the terrific waste incurred in this program stems not from faulty administration so much as from very bad laws. Responsibility for plugging up the bulk of this waste obviously rests with Congress.

INTERNATIONAL FINANCE

The President's 1951 budget sets aside $4,700,000,000 for foreign aid and other international finance programs. Of this amount

$3,300,000,000 is for ECA and $645,000,000 is for the military assistance pact entered into last year. None of these programs is a "sacred cow" insofar as the power of Congress to reduce or modify appropriations is concerned.

One of the serious questions which a Member of Congress must ask himself in voting foreign aid funds is whether he is serving the best interests of a friendly foreign nation by approving sums which throw our own budget out of balance, thus weakening the economy of the Nation on which the free world depends for aid. May we not be serving that neighbor better when we provide him fewer dollars but keep the source of those dollars solvent and sound?

IT'S UP TO CONGRESS

The plain truth is that Congress has all the power it needs to reduce Federal spending sufficiently to balance the 1951 budget.

It is Congress which appropriates funds for the executive branch to spend. It is Congress which legislates new spending programs. It is Congress—not the executive branch—which has the power to modify and repeal all such spending legislation.

The executive branch cannot spend what Congress does not appropriate. The executive branch cannot initiate spending activities which Congress does not authorize.

It is, therefore, the height of effrontery for any Member of Congress to characterize as arrant nonsense proposals that the budget be balanced through spending reduction.

The Government would quickly descend upon any taxpayer who might say, "I can't—or won't—balance my household budget. Therefore I can't pay my Federal income tax this year."

That is what the President and Congress tell us when they say, in effect, "We want to spend $5,000,000,000 in excess of our expected income next year. So if you don't mind, we'll put it on the cuff."

ALVIN A. BURGER,
Research Director, Council of State Chambers of Commerce.

Taxes! Taxes! Taxes!

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. LEONARD W. HALL. Mr. Speaker, under the leave granted me, I include for the RECORD an article on taxes written by Mr. Edward F. Hutton in the Palm Beach (Fla.) Daily News of February 23, 1950. The fundamental truths he stresses and the simplicity of his presentation should invite the attention and consideration of all of the Members of this House.

Mr. Hutton's article follows:

TAXES! TAXES! TAXES!—WHO LIKES THEM?
(By Edward F. Hutton)

They are not liked because the take is too big.

Everyone should know, including Government that the dollars which are withdrawn from industry are taxes for big Government and the tax dollars are lost to production.

Government produces no wealth and that is the only source which can yield taxes. The more money we, the people, have left, after taxes, goes into productivity as venture capital risk, which creates and increases jobs.

The correct doctrine was that taxation should be held down as low as possible consistent with: "provide for the common defense"; "maintain law and order"; "insure domestic tranquility"; "provide public service"; after which the more money which was left in the hands of we, the people, could be applied to fertilize the growth of new endeavors to create jobs.

But the climate has changed. The redistribution of wealth does not take the crude form of sharing the dollars and wealth, but, in effect, by taking from the people too much of that which they earn by their labor. This is being done by subsidies and so-called free service.

The method of confiscatory taxation obviously destroys the incentive to earn anything more than a modest income. Authorities must know how powerful the present income tax operates to restrict effort.

Human nature is what it is. So who is going to strive by hard work to double his income, only to incur heavier taxes?

Why exercise one's talents?

PENALTY ON SUCCESS

Why try to climb the ladder of success, if no rewards are to be granted?

Why penalize success?

Why penalize human ambitions?

Why destroy character and courage and initiative?

You cannot lift the wage earner by pulling down the wage payer. When that is accomplished, government becomes the wage payer. Ponder this:

What will then be the worker's hours of labor—will your pay check be more or less? How much more will be deducted from the pay envelope? And what about your life-insurance policies?

The growth of business should not be slowed down because of size. When that happens, Government stops prosperity by man-made laws. But the wheel has turned, and taxation is regarded by some as a prime instrument in achieving a socialized change in our form of government.

The ambition to attain by hard work the legitimate rewards of success is one of the most powerful motives which goes to the preservation of family life. If man be realistic, high principled, and earnest in his belief that the preservation of human dignity is a manifestation of God on earth, then government must admit also that it is possible only where all people have freedom. The Government should preserve such freedom.

THREAT TO GOVERNMENT

Government cannot continue to be strong by destroying the people's initiative and independence. The history of every business is literally a pattern of the human ambitions of all living under liberty. We are not a perfect people. Our profit-and-loss and competitive system is not perfect. Unionism is not perfect. The bar association, the church, the Government, the academy of medicine are not perfect. Nothing is, nor ever will be perfect 20,000 years hence. But the profit-and-loss and competitive system is better than any other system on God's green earth.

Show us where on the face of this earth has there been a country or form of government by which socialism, collectivism, or any other ism has given us more comforts, luxuries, and happiness than the American system?

Show us, not by arguments, dreams, blueprints, or imaginary figures, but with facts.

Show us, where is, or was, that other country that gave as much to its people as America has always given to us.

Show us; give us concrete evidence. Prove it by example. Prove that any other system is better than ours—prove that the system, founded on our Constitution and Bill of Rights gives less life, less liberty, less opportunity, and less freedom than any other system.

Show us whether the dictates of a socialized state are more important than constitutional liberty and freedom.

There are many people in this country, in and out of Government today, who are attempting to change the entire concept of liberty in America by socialistic legislation, which is the next step to communism.

There is no better way of life on the face of this earth than that which we have. To most people, America is a foretaste of heaven. We still have a system that works best for the greatest good of the people.

It is time all foreign isms be exposed for exactly what they are, and what they will do to the people, and not for the people. It was the individual know-how—individual planning and financing in free markets, regulated, but not controlled, which made America the leading industrial power. Bureaucracy—political management—by governmental direction, should not invade the fields of competitive enterprise and compete with business, which they are now doing with the taxpayers' money. Governments never have produced, nor can they produce wealth. That is not their function or duty. They should police the laws, but not control the functions of business. The only money Government has, or can get, is through taxing the people, and when it cannot get enough in taxes—directly—it hides them. The hidden taxes are deceptive and immoral. So these foreign isms mean the denial of the rights and capacity of the people to manage themselves and the things they own. Management should explain that to the people. Management is paid its salary by those whose moneys are at work in the business—so-called shareholders. They expect a return—a so-called dividend—for the use of their moneys. The expectation is a reasonable assumption. There is nothing morally or ethically wrong about that. When you destroy the incentive for a return on invested money, you destroy productivity, which is made possible by venture capital risk. It is like taking feed away from the cow, and still expecting milk.

The reverse is, Government takes the money from the people to compete against business activities without the know-how to return some rent—interest—for the taxpayers' money.

In other words, governmental take of the moneys the people earn, by confiscatory taxation, means the complete denial of the rights and capacity of the people to manage themselves and the things they own; and if these conditions continue, it means America will become a fourth-rate nation because productivity by the people, and for the people, will cease to create capital venture risk, which provides employment and increases jobs.

God created man for His purpose, to be free, and to be of service to his fellow man; not to any state.

Socialism is the "system of society in which individual ownership would be abolished and all capital and means of production would become the property of the state." And that is not God's purpose.

The present trends toward Government authority and less individual responsibility are more vicious precisely because they are hidden revolutionary acts, and hence imperceptible to the average citizen. The greater the number who profit from governmental benevolence, the lesser the public vigilance and the greater the public complacency. These are the erosive processes that wear down the rock of liberty, and then suddenly the rock is not there any more. In its place is the quicksand—political "authority," and that soon hardens into concrete bands—"the ball and chain." Always remember, power, once usurped, is never

voluntarily surrendered. Real power rests in the hands of the people, if they will only use it; and so our countries are in a race between education and catastrophe. We cannot expect the people to defend that which they do not understand. The people of our country can do anything if they are only told why, but they must be told; otherwise they will accept some foreign ism. A person's judgment is no better than his information. Business should expose these trends.

By continuous wasteful Government spending—so-called deficit financing—and increasing bureaucracy, the Nation's business is being taxed into weakness. These man-made trends, unless checked and reversed, will make business subject to political dictation.

The strength of our Government is the productivity of the people. When these foreign isms provide man's security by doing for him that which he could, and should, do for himself, it assails his best work, and destroys human ambitions. We would become a Nation subject to governmental dictation. That ends liberty—period.

Wildlife and Conservation

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. CASE of South Dakota. Mr. Speaker, the State of South Dakota has long been known as a splendid area in which to hunt game, notably the Chinese ringnecked pheasant, deer and elk, grouse and ducks. However, the people and their governmental representatives are also conscious of the need for conservation and restoration.

In that connection I wish to include here a statement from the office of the Honorable George T. Mickelson, Governor of South Dakota:

Governor Mickelson today proclaimed the week of March 19–25 as Wildlife Restoration Week in South Dakota. The Governor said the week was being sponsored nationally by the National Wildlife Federation.

Governor Mickelson said the purpose of the observance is to focus attention of South Dakota people on the urgent need for wildlife conservation and its importance upon their daily life.

State, county, and local groups were urged to hold meetings, at which time public discussions might be held with regard to better management of the State's natural resources, including water, soil, trees and all other plants, as well as animal life.

No Longer the Watchdog

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial from the Capital Journal of Salem, Oreg., on the recent action of the Armed Services Committee in the Denfeld-Matthews controversy:

NO LONGER THE WATCHDOG

A slap on the wrist is all that Secretary of Defense Johnson and Navy Secretary Matthews got for firing Admiral Denfeld last fall.

The House Armed Services Committee did no more than describe Denfeld's removal as Chief of Naval Operations as a reprisal for his frank and honest criticism. A minority group on the House committee wanted to go further. The minority urged the Attorney General to consider charges against Secretary Matthews. Such charges would be brought under a 1948 law which forbids the influencing or intimidating of congressional witnesses.

As will be recalled, Denfeld testified at the request of the committee on how unification of the armed forces was working. He was told to be frank. His views would be protected by the committee. So Denfeld told his version of how the Navy was being submerged to the detriment of the Nation. Johnson and Matthews retaliated by dumping him, an officer to whom they already had offered a new tour of duty as Chief of Naval Operations.

Johnson was praised in some quarters for preserving civilian control of the military. But that was not the point at issue in this case. It was a matter of the top naval officer being questioned by Congress as to the condition of the branch of the service he commanded. Because bull-headed Johnson didn't like the testimony, he gave Denfeld the boot.

The House Armed Services Committee didn't have the nerve to tell Johnson to stay in his own bailiwick and not overshadow the legislative branch of the Government. From now on out, Johnson will know he can get away with his control of the military—and congressional committee.

The House committee is no longer the watchdog of the country on the armed services. It is Johnson's obedient pet, waiting in fear of what its master, the Defense Secretary, will think of it. The protection it promised Denfeld amounted to no protection at all.

The Little Fellows

EXTENSION OF REMARKS
OF
HON. J. FRANK WILSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of February 7, 1950:

THE LITTLE FELLOWS

This country's long-suffering patience with strikes is rooted in our natural sympathy for the little fellow in any argument. We would all like to see little Elon College lick Notre Dame, story-book fashion. The striker shines as the little fellow and the company is the massive mastodon.

It seems to this newspaper that it is time we reexamined the question, Who is the little fellow? Who is striking against whom?

We presently have a case in which several hundred thousand coal miners have struck against a handful of coal companies, a clear case, it would seem, of the interests of the many against the interests of the few. The other little fellows involved are forgotten.

There is first of all the little fellow who heats his home with coal. A prolonged strike means real hardship for him, and if the coal miners by their concerted action win their will, it means this little fellow will pay more for every lump of coal. Further, the price of coal affects in one way or another—through higher shipping and manufacturing costs—the price of nearly everything this little fellow buys with his wages. The price of all these things too will go up, and all the little fellows will pay.

We also have presently threatened a strike in the telephone industry. In this case, about 100,000 installers and repairmen plan to walk out. The telephone company is one of the largest companies we have; this would seem a perfect example of the little men battling the Goliath. Perhaps; but whom else are they striking against?

There is again the little fellow who uses the product, and in this instance it includes just about everybody in the country. A really successful telephone strike would create an unimaginable chaos and, if won, the winnings would be paid for by everybody who uses the telephone.

But disregarding that, what of the malefactors of great wealth who own this "octopus," this telephone company? Why should we waste any sympathy on them?

Well, if that is a true picture we must have an awful lot of malefactors. Some 940,000 people jointly own the telephone company, most of whom are little people with little savings. More than one-third of the owners have less than five shares. And, curiously, among the owners are 175,000 employees of the company. Now whom are the employees striking against?

None of this is an argument against higher wages for coal miners or telephone workers. Considering the value received from a telephone and from a ton of coal it could be that the producers of these things are worthy of greater hire, that is, that all of us should pay more for their products. What we are here urging is simply more thought about the nature of these strikes.

The unions that have monopolies over whole industries are the new Goliaths. They can coerce the little fellows in their own membership—what man, however badly he wants to work, dare defy a picket line? They can coerce the rest of us—where will you get coal, or steel, or phone service, if the unions say you shan't? You have become the little fellow.

Developing an honest and fair labor policy is never going to be an easy task, but we shall not even approach it until we realize that in all these strikes there is another little fellow who has been almost forgotten.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. BARTLETT. Mr. Speaker, in connection with the Alaska statehood debate in this House last week which revolved partly around the proposition of population, I desire to submit a letter written by Mr. Paul H. Whitney, of Flushing, N. Y., which appeared in the New York Herald Tribune for March 7:

ALASKA STATEHOOD—OTHER TERRITORIES ADMITTED WITH LESS POPULATION

To the NEW YORK HERALD TRIBUNE:

The specious reasoning of several of our Congressmen in their attack on the Alaska

statehood bill should be questioned. They cry with alarm that the two Senators from Alaska, representing only 100,000 population, could nullify the votes of Senators from the more densely populated States. Exactly! It was for this express purpose that the founding fathers, after months, even years, of bitter quarreling, finally agreed that there should be equal representation in the upper House of the Congress.

It was a bitter pill that Virginia (population 747,610) swallowed when she at last agreed to stand on a parity in the Senate with Delaware (population 59,096). Pennsylvania was not happy that her 434,373 citizens might be voted down by Rhode Island's 68,825. North Carolina, with a population greater than the State of New York when the Nation was formed, recognized sparsely settled Vermont as her equal in the Senate. That fight was fought and decided more than 160 years ago, but the gentlemen from California, Illinois, Wisconsin, and Michigan appear to have forgotten their history lesson.

No precedent is being established in giving Alaska two Senators as Representative LEROY JOHNSON, of California, should know, for his State had only 92,597 population when admitted to the Union. Representative EDGAR A. JONAS should be reminded that Illinois could count only 12,282 heads when she was admitted. For the benefit of Representative ALBERT J. ENGLE, of Michigan, let it be recorded that his State had the smallest population of any that has ever been taken into the United States—a scant 4,762 according to the official Federal census. Yet that little colony of Wolverines could have nullified the votes of the Senators from Virginia or New York, either of which had a population of close to a million. Representative FRANK B. KEEFE, of Wisconsin, stands on very firm ground in fighting Alaska's plea for statehood because his State had a population of 130,945 when it first sent two Senators to Washington. Of course, he wouldn't remember that at that time New York had a population of 2,500,000.

Not counting any of the first 13 States, there have been 21 States admitted to the Union at a time when they had a population considerably less than Alaska has now.

If Alaska is to be kept out of the Union because she has only 100,000 citizens, then, by the same strange reasoning Nevada, Delaware, Vermont, and Wyoming should be evicted. Any State having fewer citizens than the "big five" should have a Senator taken away from them and any having less population than the 10 next most populous States shouldn't be allowed to have a Senator at all. How much fairer it would be to deprive of all representation in Congress such States as elect to Congress men who reason as do the Messrs. JOHNSON, JONAS, ENGLE, and KEEFE.

PAUL H. WHITNEY.

FLUSHING, N. Y., *March 3, 1950.*

Fertilizing Influence Fast Becoming a Serious Menace

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1950

Mr. BURDICK. Mr. Speaker, in my remarks on October 10, 1949, I drew the attention of the Congress to the fact that eight Members of the United States Senate had protested against the monopolistic practices of the fertilizer industry, and had asked for an investigation; and that the distinguished Representative from Wisconsin, the Honorable FRANK B. KEEFE, and the distinguished Representative from Illinois, the Honorable ADOLPH J. SABATH, had each offered resolutions requesting the appointment of a special committee to make a full and complete investigation of the fertilizer industry, and to find the facts in connection with the statements recently made by competent judges that present methods of fertilizer manufacture are not only responsible for unnecessarily increasing the amount of the farmer's national fertilizer bill $250,000,000, but are also the cause of the extensive spread of destructive plant diseases, and of the increased incidence of vascular diseases and degenerative diseases.

There are serious matters, Mr. Speaker, but the most serious phase of this matter is the fact that Federal court records show that a large number of fertilizer companies were indicted and fined for having exerted an illegal influence on State lawmakers, and that while this influence was being exerted, the State laws were so amended as to allow the manufacturers to lower the quality of fertilizer by using excessive proportions of the cheap, soluble sources of nitrogen without letting the farmers know that this was being done.

A letter dated February 25, 1950, written by Mr. William G. Holman, a well-known citizen of Virginia, to Mr. Osborne B. Bond, publisher of Liberty magazine, Chicago, Ill., contains some statements far more shocking and serious in their implications than any that have heretofore been brought to the attention of the Congress in connection with this matter. I ask that Mr. Holman's letter be inserted in the RECORD as part of my remarks.

The time has come, Mr. Speaker, for the Congress to inquire into the charges of collusion, and to take such steps as are necessary to free the fertilizer industry from monopolistic control which is proving to be a detriment to the health and welfare of the people, and obviously a detriment to the morals of public officials. To do otherwise would sound the death knell to popular government in this country, and all of us know that popular government throughout the world was never in greater peril than it is today.

The letter referred to follows:

WASHINGTON, D. C., *February 25, 1950.*

Mr. OSBORNE B. BOND,
Publisher, Liberty Magazine,
Chicago, Ill.

DEAR MR. BOND: I have just read a letter you wrote to a Congressman, in which you asked the question: "Isn't it time that something be done to keep America together?" and then that: "As a Nation we're spending billions to impress other peoples with the importance of free enterprise and what we know as the American way of life, but how about our own people at home?"

Yes, how about our own people at home, and how about the importance of, and necessity for, something that you and I know deep down in our hearts we don't have today—free enterprise?

If we really had free enterprise, would it be possible for "one-eighth of 1 percent of all the corporations in America to acquire 51 percent of the Nation's assets," and would it have been possible for 3 percent of the farmers in America to own 41 percent of the farm land?

If we really believed in free enterprise would we shrug away and do nothing about the criminal exploitation of the farmers by the Fertilizer Trust, and fertilizer practices that endanger the health of the people?

Would we condone the leasing of public lands to a few corporations on which are found the principal potash deposits in this country which enabled these corporations to obtain a monopolistic control of such an essential fertilizer ingredient as potash and to use this control to the harm and injury of the farmers?

Would we meekly submit to the encouragement given to a few fertilizer manufacturers though an Act of Congress (Webb-Pomerene Act) to acquire a monopolistic control of such essential fertilizer ingredients as phosphate rock and acid phosphate, and to the use of this control to force the smaller manufacturers to lower the quality of fertilizers, and thus impose upon the farmers and endanger the health of the people?

If we knew that collusion existed between the fertilizer industry and the Bureau of Plant Industry, and that gifts of money to this agency of the Federal Government by the fertilizer industry had blinded the eyes of these Government officials to fertilizer practices that were harmful to the health and welfare of the people, and we shrugged away the shocking implications of such a situation, wouldn't that amount to an admission that monopoly was in the saddle and free enterprise was a thing of the past? If you want the facts, open the columns of your publication to your humble servant and I will present the unvarnished facts.

Sincerely yours,

WILLIAM G. HOLMAN.

Promotion of Veterans of World War II in Field Service of Post Office Department

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1950

Mr. FORD. Mr. Speaker, I arise at this time to reaffirm my support of H. R. 87. I was one of the original supporters of this necessary remedial legislation. My testimony is included in the hearings and this statement is reprinted in the August issue of the Union Postal Clerk.

It is regrettable that a number of amendments are to be offered which will have the effect of killing the bill. This bill as modified by the substitute should be approved and I intend to support it.

I would like to review the situation in a particular community, namely, Grand Rapids, Mich., my home town. As this committee knows, all civil-service examinations for the post office were frozen during World War II. In the period between 1941 and 1946 the Department used many temporary employees but none in this group achieved permanent status because no qualifying examinations were given.

The first examinations for post office employees were held in September 1946.

The veterans of World War II who initially entered the postal service after the late war took this examination at the first opportunity, along with those who had been temporary employees during the war. I think we can validly assume that many veterans would have become post office employees during the period between 1941 and 1945 if military service had not intervened. A number of veterans passed this examination along with a few temporary employees. Those temporaries who passed examinations and became classified employees upon appointment as regulars received an automatic increase of $400 per year. This gave them a period of only 6 years in which to reach top-grade salary. Veterans of World War II have to work 10 years to reach top-salary grade.

In my estimation, under the present law an unfair discrimination presently exists as far as World War II veterans are concerned because the former temporary employees get the benefit of a $400 increase in salary while the veteran when he becomes a regular employee does not derive the same financial benefits even though his forced absence from the postal service was no fault of his. I have no desire to penalize the temporary employee who worked diligently during the war for the Post Office Department, but I certainly think we should give the veteran credit for his war service once he enters the postal service as a permanent career employee.

A failure to remedy this situation will be harmful to employee morale. This is best illustrated by a specific example. Rather than use names, I will refer to employee A, a veteran who took and passed a civil-service examination given in September 1946. A was appointed January 1, 1947, as a regular because of his high rating on the examination. Employee B, a nonveteran, took the same examination but he had been hired on May 1, 1945. B did not get his regular appointment after the September 1946 examination until April 1, 1948.

What is the situation today? B is now making $3,350 per year while A earns only $2,750 annually. There is this differential even though A has 15 months additional seniority as a regular or permanent employee. Furthermore A has been graded "outstanding" while B has only a "satisfactory" rating. Both these men do the same job, they work side by side. Employee B, the nonveteran, now earns approximately $11.54 more each week than his veteran coworker, despite A's better qualifications, both on the examination and on the periodic grading system. This is only one of many such cases but it well illustrates the inequities which must be rectified.

For the committee's examination I include a table showing the precise situation in the Grand Rapids post office. It will be seen that the veterans of World War II, who make up a substantial portion of the postal employees, are being penalized and the morale of the entire service will unquestionably suffer if this legislation is not approved.

In closing, let me emphasize the need for this legislation. Veterans of World War I have received credit for time spent in military service, even those who were not employed in the postal service prior to their entry into the armed forces. Veterans of World War II who worked for the Post Office Department previous to entry into the armed service in the last war have received credit for their military service under present pay schedules.

I therefore strongly recommend favorable consideration of H. R. 87 by this committee in order that richly deserved benefits will accrue to those veterans who direly need financial assistance at this time and in the years to come.

Classification	Regulars	Classified substitutes	Total of both	Number who are veterans of World War II	Number of World War II veterans who are eligible for Vursell Act benefits
Supervisors	37	0	37	3	0

[2] Substitutes for rural carriers are not carried either as regular or classified employees.

Summary

Total employees—Regular and classified substitutes	575
Total World War II veterans	248
Total World War II veterans who would be eligible for Vursell Act benefits	169

British Import Discriminations

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. MONRONEY. Mr. Speaker, I have just introduced a bill designed to help prevent discrimination against American-owned and controlled companies in foreign commerce. Particularly, it is designed to bring Presidential powers under the customs laws of the United States up to date and to provide against new types of discrimination which are threatening to grow up in postwar practices in world trade.

The British Government has recently placed severe limitations on the amount of petroleum products that can be shipped into the United Kingdom by American-controlled companies.

This loss of more than 150,000 barrels of our foreign market a day is complicating and making more severe the problem domestic oil producers are having with importations of off-shore oil. The flood of imported oil is increasing to such proportions that it is endangering the stability of our domestic market. The British ban against oil from American-controlled companies, applying both to foreign and domestic production, is certain to make more difficult this problem of imports.

These severe limitations are not applied to conserve the Empire's dollar reserves, nor to protect local oil production in the Dominions. They apply against all oil coming from what the British have defined as "American-controlled companies." This definition provides that such companies which are substantially owned, directly or indirectly, by American citizens, regardless of the laws under which such companies might be incorporated are under the ban.

Thus, any such company, even if incorporated under the British flag and complying with all British laws—and even if offering their oil on exactly the same terms and for exactly the same currency as British, they are off-limits and are subjected to these severe limitations for importation into the United Kingdom.

As a result, a British-controlled company, incorporated under the British flag, may ship oil from its Middle East wells and refineries into Britain and sell it for sterling, without restriction. An American-controlled company, incorporated under American, British, or third country flag, offering oil produced or refined in the identical Middle East area, and willing to accept the identical sterling in payment, is subject to the ban.

American investments are thus clearly discriminated against by this British action in an unreasonable manner. Our State Department regards this British action as discriminatory and has so advised the British Government. Our State Department is on record that the proposed discriminatory action is not reasonably necessary to solve any current British currency shortage and that corrective measures should be taken.

Present discussions, looking toward a modification of the British action are now under way between our Government and the British Government, and directly between the oil companies concerned and the British Treasury. While everyone hopes that these discussions will result in a withdrawal of this discrimination it is likely under present circumstances that they will fail.

One important reason why the current negotiations may fail is that our Government lacks the power under present law to take effective action if the British refuse to modify their position of discrimination against American-controlled companies.

Under present law, the President may, if he finds a foreign country is discriminating against American commerce, act in three ways:

First. He may impose additional United States customs duties on the products of such country; or

Second. Withdraw tariff concessions previously granted to such country under a reciprocal-trade agreement; or

Third. Where the President finds a foreign country has placed any burden upon the commerce of the United States by discriminatory regulations, conditions, restrictions, or prohibitions the President can offset this burden by imposing additional rates of duty, not to

exceed 50 percent ad valorem on any products of the foreign country.

The British Government knows that these present methods of combating discrimination do not fit the newer designs of trade barriers.

Most of us are familiar with the now famous Nairobi letter of December 17, 1949, in which the British Government's Secretary of State for Colonial Affairs advised his subordinates of the new discriminations imposed by the British Government on American controlled companies, and stated that the Americans have, as expected, not gone beyond expressing regret at the action taken.

The only effective way of meeting discrimination against American investments is by treatment in kind. Our customs laws have embodied this principle for many years. The methods outlined above were designed to correct examples that had previously occurred but do not cover today's commodity wide discriminations against American-controlled companies.

They do not clearly authorize the President to retaliate in kind against the new types of discrimination that have been devised in recent years, such as the recent British ban on oil imports from American-controlled companies.

The bill I introduced today adds a new subsection to the tariff code. It authorizes the President to retaliate in kind against any foreign discriminatory action effecting American commerce. If the President should find, for example, that the British Government has placed improper restrictions upon imports by American-controlled companies into the United Kingdom, to retaliate by placing equivalent restrictions upon imports by British-controlled companies into the United States.

It is my earnest hope that the power granted by my proposed amendment would never have to be used. I am in full accord with the administration's policy of tearing down trade barriers and removing as many restrictions as possible to encourage multilateral world trade.

Unfortunately, unrestricted world trade is going to be difficult to achieve so long as foreign nations are free to discriminate against American commerce without fear of any retaliation of any kind. My bill would serve merely as a notice to the world that any foreign nation which hits American commerce below the belt can expect to be hit back. In my opinion, the mere existence of such a law on our statute books will discourage discriminatory measures abroad and make its use unnecessary.

CO's Gesture

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 7, 1950:

CO's GESTURE

Although the United States has prided itself that it respected liberty of conscience even during wartime, the House has cheapened the value of the work done by conscientious objectors. The relatively small number of men conscripted for "work of national importance" as an alternative to military service received no Government compensation or family allowances, and when they were hired out to private employers most of their wages was paid into a frozen fund held by the Treasury. Now the House has turned down the Judd bill which embodies a request of the CO's themselves that the money be given to CARE to provide scientific and professional publications for depleted libraries abroad.

The hunger for additional technical reading matter is most apparent in countries such as Germany, where the war interrupted normal contacts with the outside, and in the new independent states, such as India. The furnishing of such material under the auspices of CARE would have complemented existing programs and would have been one of the best ways of promoting friendship and understanding. Perhaps the poorest of all excuses for the House action is the one that seemingly received most attention—that the Treasury cannot afford the expenditure. The $1,300,000 involved is not Government money; it is money legally earned by the CO's themselves, who have renounced all claims to it. There could be no better use for it. One may suspect that the real explanation for the defeat was a hidden effort further to punish the conscientious objectors and to kill their gesture.

Speak Up for Peace

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. HILL. Mr. Speaker, under permission granted to extend my remarks, I wish to include the following radio speech I made to the constituents of my district:

Friends of the radio audience, this is your Congressman, WILLIAM S. HILL, speaking to you from Washington, D. C. Today I wish to speak on world peace.

If we are to continue at peace with the world, the people of the United States must speak up. Either we redouble our efforts for maintaining the peace we won at such a horrible price in lives, blood and treasure, or we continue a headlong plunge into world war III.

Dangers of the peace are increasing. The tip of the scale one way or the other, might touch off another war—a war more terrible and destructive than the last. It could be the war to end all wars. It could wipe out our civilization. The very thought is horrifying. Our finite minds are incapable of visualizing the consequences of an A-bomb or an H-bomb dropped on this country.

But the purpose of this warning isn't to scare you out of your wits. It is to awaken you to the idea that now is the time to speak up. Those of us who want peace must be heard. Our voices must ring out with an appealing force to halt the mad dash for superbombs and superduper death-dealing weapons of mass destruction.

Part of the guilt for the armament race is on our consciences. President Truman authorized the dropping of the atomic bomb on Japan. The late President Roosevelt initiated the scientific experiments and provided the finances for construction of the A-bomb during World War II. Now the President has given the green light for the building of the hydrogen bomb. We are out in front in the rearmament race, but it isn't, to my way of thinking, a thing to be proud of. We should be in the forefront of those in the world who want to maintain peace. Our leadership should be for moral and spiritual rearmament rather than military force.

In the world court of opinion, we have left our sincerity and high purposes open to question? The hopes and aspirations of the people, who overwhelmingly desire peace, must be brought out into the light for the world to see. Our diplomatic maneuvers and our military activities have cast a false reflection on the basic motives of this Nation. We are a peace-loving Nation; the majority of our people are most anxious and eager to spread to the four corners of the earth their expression of good will. But somehow this opinion becomes distorted and twisted by the actions of our political and military leaders.

It is time for a constructive call of the great political powers of the world to settle the problems of the cold war. Our leaders have attempted to assuage our conscience by rationalizing the use of the A-bomb and the H-bomb. Perhaps, they are entirely right in their assumptions. But, we should, with equal vigor and honesty to ourselves encourage a policy of world disarmament. All of our efforts politically, economically and otherwise have the single objective of stopping the Red tide of atheistic communism from engulfing the world. Russia is our enemy, now; in the war she was our ally. What caused Russia to change her attitude toward us? Admiral Leahy, who was President Roosevelt's adviser at the Big Five conferences, until the late President's death, attributed the difficulty last week in an article, as arising out of differences between Stalin and Roosevelt. But it was 5 years later before the people were advised of these conditions through Admiral Leahy's magazine disclosure. Why weren't we informed long ago?

Former Prime Minister Churchill of Great Britain has thrown another light on American entry into World War II as a result of Pearl Harbor, in his current writings in Life magazine and the New York Times. He established the fact that for a year and a half before Pearl Harbor, December 7, 1941, he had pressed President Roosevelt to come into the war on Great Britain's side. At the Atlantic conference in August 1941, he said he informed Roosevelt's party and I quote—"that I would rather have an American declaration of war now and no supplies for 6 months than double the supplies and no declaration."

Churchill said that he related this incident to General Smuts, Prime Minister of South Africa, stating—and I quote again—"We must not underrate his (Roosevelt's) constitutional difficulties. He may take action as Chief Executive, but only Congress can declare war. He went so far as to say to me—this is Roosevelt speaking—'I may never declare war; I may make war. If I were to ask Congress to declare war they might argue about it for 3 months.'"

It will be remembered that the attack on the fleet at Hawaii was presented to the American people, who knew nothing at the time of our American economic sanctions, our unyielding diplomacy with Japan, and our other secret maneuvering, came as a shocking surprise—an act of treachery on—and I quote President Roosevelt—"a date which will live in infamy."

Churchill had this to say with reference to Pearl Harbor. And I quote him again: "I do not intend in these pages to attempt to pronounce judgment upon this tremendous episode in American history. We know that all of the great Americans round the President and in his confidence felt, as acutely as I did, the awful danger that Japan would attack British or Dutch possessions in the Far East and would carefully avoid the United States, and that in consequence Congress would not sanction an American declaration of war.

Quoting Churchill further, he said: "Roosevelt, Hull, Stimson, Knox, General Marshall, Admiral Stark, and, as a link between them all, Harry Hopkins had but one mind. A Japanese attack upon the United States was a vast simplification of their problems and their duty. How can we wonder that they regarded the actual form of the attack, or even its scale, as incomparably less important than the fact that the whole American Nation would be united for its own safety. Moreover, they knew, earlier than we in Britain could know, the full and immediate purpose of their enemy."

The armed power of the world is again divided into two camps. Is there a war party in this Nation, as there is in the Kremlin? Communist dictatorship is not only designed for a surprise attack with all the arms it has, but the Kremlin can violate any agreement it signs to gain advantage and abrogate at will the agreements it makes.

But our free people have greater productive and moral powers. We can unite our strength, unless it is undermined and weakened by secret action of our political leaders.

We must make our stand for peace through the United Nations. We must declare our intentions and desires. We have no assurance from available public reports that Russia would cooperate in an effort at disarmament in the strengthening of the objectives of peace, but that should not stand in our way. We should look into every avenue for a way to lasting peace. If our sincerity is clear, our reasons and examples steadfast, then before the eyes of the world we have made our case.

WE CAN DO NO LESS

Are we going to let someone push us into world war III? Is fear of the A-bomb or H-bomb going to deter us from striving for what we know is right, and what the peoples of the world all believe in—peace? Regardless of the actions of their leaders—and this includes Russia, too—I believe that all peoples of the world want peace. But they must speak up; they must be heard before powerful influences get us so involved in political and economic circumstances that resulting action winds up in war.

At present the United Nations is the only world organization in operation. Through it let us urge the representaives of the United States to work for peace. The adoption of certain measures would augment the efforts of the people in presenting our case to the peoples of the world. In the past Russia has overshadowed the rest of the nations participating in the UN and have effectively used it as a propaganda agency. If necessary, let the United States assume the Christian responsibility for guiding the UN into discussions of big-power politics in controlling the A- and H-bombs; renewing the forces of religious and spiritual leadership toward a new birth of moral indignation into the depravity of a superarmament program. Men must learn to live together. War is not the economic savior of broken and decadent political philosophies. This fact must be impressed on those who seek to fasten its chains upon the people.

Unless there is a quick turn in the course of events, the intensity of the cold war will surely increase. It is time for us to unite and demand that every effort be exhausted to maintain the peace. The hour is late.

The expenditure of huge sums for defense weapons or for the purpose of winning friends abroad is not the answer. The answer will come from the deep-rooted desire of all peoples to live together in friendship. Exploitation by political leaders for momentary advantage will not assure a period of international tranquillity. But the earnestness and sincerity of the good peoples of the earth can bring about what selfishness, greed, and political chicanery cannot achieve. Until we have placed this country in the position of exhausting every possibility of peace so that our sincerity and honesty stand crystal clear before the rest of the world, let us not resign ourselves to the cynical attitude that the only solution to our problem is to arm ourselves to the teeth and develop an arms race which in the end can only mean the ultimate destruction of our civilization.

Repealing the Taxes on Oleomargarine

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. HOEVEN. Mr. Speaker, the approval of this conference report will write the final chapter in the long controversy between the small dairy farmers of America and the oleomargarine monopoly. A clever and highly financed oleomargarine lobby has done a good job of propagandizing the country. Some 28 oleomargarine manufacturers are now completely in the saddle and the liquidation of many small dairy herds will begin. The dairy farmers will most certainly lose their market if oleomargarine takes over the major portion of the demand for a spread. Some say that cannot happen here, but the fact remains that during the past several years per capita butter consumption has gone down and oleomargarine consumption has gradually been on the increase. The natural result will be that many of the 2½ million dairy farmers will eventually be forced out of business. Now for the first time the oleomargarine interests will be permitted to appropriate unto themselves the historical butter color of golden yellow. This can only mean the perpetration of great frauds upon the consumers of this country, in spite of the so-called protective provisions in the bill. The conference report should be rejected.

Who Won?

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Indianapolis Times of March 5, 1950:

WHO WON?

The coal strike that wasn't a strike is over.

The miners who wouldn't go back to work when John Lewis told them to, went back to work when John Lewis told them to.

The bitter battle that disrupted the whole industry for 8 months has ended—for a year.

Who won?

Not the coal miners.

Their pay goes up 70 cents a day. At that rate it will take 1,714 working days for a miner to get back what he lost in wages in the strike. In just a few days less than 7 years the man who never misses a day's work in the mines may break even on this pay raise. The contract is actually for 1 year, but might be stretched to 2 years.

Who won?

Not the folks on mine pensions and welfare.

The welfare royalty goes up 10 cents a ton, to a total of 30 cents. At the old rate it took three whole years to collect enough money to pay pensions and welfare for 14 months. At the new rate all the royalties collected over the next 3 years might possibly be enough to pay pensions and welfare for 18 months. And the spending of the fund is placed again in the same hands that recklessly squandered it before.

Who won?

Not the mine owners.

Their losses in the past 8 months of hit-or-miss operation already have been staggering. But they have barely begun. Millions of homes, thousands of industries have quit using coal because of this very battle. Every oil furnace that's gone into a home means at least 1 day's work a year a coal miner won't have. A good many thousands of coal miners have struck themselves permanently out of a job. There won't, in their lifetimes, again be work in the coal mines for all the men who were working there when this strike began. A big chunk of the market for coal is gone forever.

Who won?

Not the people who use coal.

They'll pay every dime of the increased wages and the increased pension royalties, added right on the price of every ton of coal they buy.

Who won?

Not the workers in other industries.

The thousands laid off from their jobs because there was no coal haven't even a pay increase to get them back part of the wages they lost in a dispute they weren't in. They do, though, have a higher cost in the factories where they work, which will make it harder for them to get pay increases themselves, in future.

Who won?

Not the general public, which suffered in the cold.

Not the school children, whose education was halted.

Not the Government of the United States, which was too weak to act when the crisis threatened national security.

Not, surely, the six women and children who died in Indianapolis trying to keep warm with makeshift fuel as a direct result of this mine strike.

Who won?

Not even John L. Lewis.

Clearly he lost what he called the strike to get—monopoly control of the whole coal supply of the whole Nation. He didn't get it. He had to give up the willing-and-able-to-work gimmick he's been using to regulate coal output and sign a contract that is a genuine contract, as the old one was not. The gains he got were no more than unconvincing face-saving, that substantially

could have been had for the asking before the strike even began.

Then who did win the coal strike?

Nobody won it.

Everybody lost: the miners, the mine owners, the school children, the union boss, the employers, and the workers in other industries, all the people of the United States.

There must be a better way to settle such things.

In fact there is a better way.

This Nation long ago learned what to do when business monopoly threatened to get bigger than the Government of the United States.

Now, maybe, we've learned that there is no real difference between a business monopoly and a labor monopoly.

John Crown's Legacy

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks, I include the following article by Howard A. Rusk, M. D., which appeared in the New York Times on March 5, 1950, entitled "John Crown's Legacy":

JOHN CROWN'S LEGACY—VETERAN LEAVES AN EXAMPLE OF COURAGE AND A PLEA THAT LOVE SUPPLANT GREED

(By Howard A. Rusk, M. D.)

(In 1946 a letter was published in this column from a young veteran in Halloran Hospital, a letter created by suffering, anguish, and bewilderment. Last week, after 4 years of struggle, the writer, John Crown, died. His legacy to the world was an example of courage and a philosophy of life which, in these troubled and uncertain days, plead even more eloquently for the necessity of understanding than the day on which his letter was written. In this era of precocious technology, hydrogen bombs, guided missiles and all the additions to the horrors of war that have caused an epidemic of anxiety and tension throughout the world, this pain-wracked boy's prescription for peace among men merits thoughtful rereading.)

My name is John Crown. I am a paraplegic at Halloran General Hospital. My physical wounds are very small in comparison with my spiritual wounds. I have come back from death to a world that I do no longer care for. I, who have been engaged in the great struggle to save the world from tyranny and having seen my comrades die for this cause, can now find no peace in the world or in my country.

Having lived close to death for 2 years, the reasons why there is no peace seem infinitesimally flimsy. Russia wants the Dardanelles, Yugoslavia wants Trieste, the Moslems want India, labor wants more wages, capital wants more profit, Smith wants to pass the car in front of him, Junior wants more spending money. To these, I say, is it necessary to kill and cripple human beings for these petty gains?

Anyone who thinks a human body is so cheap that it can be traded for a tract of land, a piece of silver, or a few minutes of time should be forced to listen to the moans of the dying night and day for the rest of his life.

All the troubles of the world originate in the common man. The selfish and greedy ways of nations are just the ways of each individual man multiplied a hundredfold. When the morals of the common man drop, so do the morals of the nation and of the world.

As long as our individual morals remain at a low ebb, so will be the world. Until each of us stops hogging the road with his car, stops fighting over the seat on the bus, stops arguing over who is going to cut the grass, there will be no peace in the world. If man wishes peace again, he must return to the great commandment, "Love thy neighbor as thyself for the love of God."

Suppression of Crime

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Chelsea Record, Chelsea, Mass., March 6, 1950:

FIGHT AGAINST CRIME

Proposals for some kind of Federal action against crime organizations are rapidly gaining adherents, both in Washington and in many cities and State capitals. A study of laws by a committee of municipal, State, and Federal officials is to be one result of a conference on crime held recently by the Federal attorney general, and the Senate Judiciary Committee has on foot an inquiry into gambling which could well produce recommendations for new Federal criminal laws.

There are many possibilities for real help by Federal authorities in the suppression of crime. At the same time there also are inherent political dangers against which careful safeguards must always be maintained. The larger a Federal police force becomes, the greater are the potential misuses of it by the unscrupulous. Every new Federal police control over citizens is a potential check on the individual's independence of action. A fine balance is needed between the safeguarding of individual rights and sufficient police power to control the underworld. The experience of some cities with crime syndicates indicates that we do not have the correct balance at the present time.

Another point which must be kept constantly in mind is that neither local responsibility nor local authority should be abdicated to Federal crime busters. It is the responsibility of local government to enforce municipal and State laws, and in the great majority of cases if this is done well and energetically even crime syndicates with powerful intercity and interstate connections will find themselves unable to operate. Local government should never welcome the intervention of higher government in dealing with local problems until after the utmost effort has been made to employ local authority against them.

Secretary Brannan

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. RICH. Mr. Speaker, it appears to me that Brannan and company are out to ruin the economy of our country in general and the economy of our farmers in particular. The following article is from the Sunday Times-Herald:

SECRETARY BRANNAN AND THE POST PLOT "SMEAR"

(By Philip Warden)

Agriculture Secretary Brannan has joined in a plot with Eugene Meyer's Washington Post, sole administration newspaper here, to smear successful Corn Belt farmers and making them the "whipping boy" for blocking congressional acceptance of the Brannan plan.

The conspiracy was exposed yesterday when copies of a letter sent by the Agriculture Department to its Extension Service agents accidentally fell into hands of newspaper reporters covering the Department.

DATA SOUGHT FROM AGENTS

The letter ordered the extension agents to send the Department at once the names and activities of the biggest farmers in their community for a Post series by reporter John Ball "to show how some farming is really big business." Ball has been Brannan's principal medium for circularizing Brannan-plan propaganda to Members of Congress regularly of late.

Big farms are ineligible for "benefits" promised in the Brannan farm price support plan. Brannan has emphasized that his plan is aimed at encouraging the break-up of big farming enterprises into family-size farms.

The material Brannan has directed the extension agents to send the Department for Ball on the biggest farmers could provide just the material he needs to make Congress believe the Brannan plan is opposed only by big business although the large farm groups have publicly expressed their opposition, congressional sources reported.

BALL LETTER SENT OUT

Brannan made an unusual exception to Department policy by using the Department's free mailing privileges to send a copy of a letter written by Ball to all the State extension agents. The wide circulation of the letter is best illustrated by Brannan's estimate this week that the extension agents contacted 6,500,000 farm families in 1949.

The Ball letter was enclosed in a packet which accompanied the weekly letter from Lester A. Schlup, chief of extension information at the Department, to State extension editors. Of the Ball letter, Schlup wrote the editors:

"John says he wants to show that farming is really big business. He is particularly interested in what the biggest farmers do that makes them successful, how well they follow the recommendations of the Department and State experiment stations, and so on."

GOVERNMENT STATIONERY USED

"John has syndicated a number of stories lately about the farm program. He hopes the stories he writes, based on tips from you, will have much wider circulation than in the Washington Post, although the Post reaches a large, important audience here."

The Ball letter, addressed to Schlup but mimeographed by the Department on Government stationery, said he wanted to get a list of the Nation's biggest farmers—either individual or corporative.

"For instance, I had in mind," Ball wrote, "the biggest corn planters in Iowa, Illinois, Indiana, Nebraska, and other States in the Corn Belt. Also the biggest wheat raisers in the biggest wheat States, Kansas, Nebraska, etc."

BALL OUTLINES PLAN

"I think I'd like to cover them in this order: 1. Those farming the biggest areas in each of the important States, in aggregate crops; 2. The biggest growers of cotton, corn, wheat, peanuts, soybeans, potatoes (I have

the figures for Maine), citrus fruit, sheep, cattle, and hogs. Also, in certain States such as California, the largest honey growers.

"I know this is a large order. I have in mind a series on the biggest in their lines to show how some farming is really big business. Maybe I'm asking too much."

The letter was signed "John Ball."

At the end of Schlup's letter under the words "actions requested" (printed in heavy black type) was a reminder that John Ball of the Washington Post wants tips for stories on large-scale successful farming.

Brooklyn's Woman of the Week

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks, I am very proud to call attention to an article which appeared in the Brooklyn Eagle on February 19, 1950, by Jeanne Toomey, honoring Brooklyn's "Woman of the Week," Elizabeth Goodman, general chairman of Brooklyn Week for the Blind, 523 Atlantic Avenue, Brooklyn, N. Y.:

BROOKLYN'S WOMAN OF THE WEEK; BLIND HAVE A REAL FRIEND AND SHE PROVES IT DAILY

(By Jeanne Toomey)

Boss of a man's business that most men would find quite technical, Elizabeth Goodman, general chairman of Brooklyn Week for the Blind, has made the plight of the sightless her own because, as she says, "I enjoy beautiful sights and love to read."

"Blindness has always struck me as a great handicap because I appreciate how much of our comfort and safety depends on good sight," Miss Goodman said the other day in her office at 523 Atlantic Avenue, where she spends 6 days a week from 9 to 6 as owner of the Safety Gas Main Stopper Co.

Since her brother, Francis, died in September 1938, she has headed the privately owned business started by her late father, Patrick, who invented the gadget manufactured by the concern.

The only survivor of seven children, Miss Goodman, who lives at 652 East Eighteenth Street, learned the details of the business early. As a child of 10 she typed her father's special letters, and has even invented new devices in connection with the product she describes as a "safety tool used to shut off gas in mains during repairs and alterations."

A blue-eyed, white-haired woman who holds her master's degree in philosophy from Columbia University, she started out with the intention of becoming a high-school teacher. She abandoned that purpose gradually and regrets it only when those long school vacations roll around.

IRELAND PREFERRED

However, she has managed to make four trips to Europe. Although she rode over the Alps in an open car, visited Venice, Rome, Monte Cassino, Scotland, England, and France, she remembers Ireland, home of her parents, as the country she most enjoyed visiting.

Each trip included a long stop-over on the Emerald Isle and she is now beginning to plan another trip there.

"It rests the spirit," she said. "It has a special atmosphere."

As an example of the friendliness of the Irish people, she recalls a stop made at a crossroads general store in Bally St. David, to ask for information about the road before her party attempted to drive over the mountain with a fog coming down.

"The owner of the store asked us in for tea because his wife had scones ready," she recalled. "He turned out to be a classical scholar who read Greek and Latin."

She particularly recommends a visit to the Blackwater in County Waterford in the south of Ireland where the dusk lasts until 10:30 at night.

A patriotic American, Miss Goodman is quick to point out that she toured her own country many times before visiting the land of her ancestors. The family came to Brooklyn from upper Manhattan and joined the parish of Our Lady of Refuge Roman Catholic Church, Ocean and Foster Avenues.

WORKED WITH MOTHER

Miss Goodman's mother, who died last August at 89, brought flowers from her garden to make into boutonnieres for the men during the first observance of the week for the blind. Mother and daughter were charter members of the board of directors of Anthonian Hall, a nonsectarian home for blind women under Catholic auspices, located at 107 Greene Avenue.

This enterprise is termed "my most beloved project" by Miss Goodman, whose workmen know the folks at the home by name since they frequently paint and do other work there. One of the workmen, Beni Lione, has been making Goodman stoppers for 42 years.

Ask Lione about the firm and he'll tell you: "I couldn't stay so long if I wasn't happy here. This is my whole life. I was 19 when I joined the firm, then located in the Bronx, and I'm 63 now."

Canvas, leather, felt, army duck, rubber, and steel are a few of the materials used in making the gas-main stoppers, which range in diameter from 3 to 48 inches.

In Miss Goodman's very feminine office are two framed certificates honoring her father for inventing the stopper. In 1904, at the Universal Exposition at St. Louis, he received a silver medal, while in 1915, at the Panama-Pacific International Exposition at San Francisco, he was awarded a gold medal.

VERY UNLADYLIKE

Although Miss Goodman says of her work that it is a very unladylike business, she proudly points out that it is a good, constructive, and necessary little enterprise, the oldest in its field.

Present goal of the drive for the blind, which has already opened although the special week will be in May, is $100,000. The Brooklyn Association for Improving the Condition of the Poor and the Brooklyn Bureau of Social Services are sponsoring the benefit campaign.

At their offices, at 401 State Street and 285 Schermerhorn Street, respectively, pillow cases, towels, aprons, ironing-board covers, woven floor mats, and all kinds of mops, as well as stuffed toys, and leather, and woven belts are now on sale. These articles are made by the blind and their sale insures the independence sightless persons desire.

Jewish temples and sisterhoods, Protestant churches, and Catholic parishes are all joining to make the drive a success. A total of 75,000 volunteer workers are giving their time to the project.

During the official Week for the Blind, May 9, will be Catholic Day; May 10, Protestant Day; and May 11, Jewish Day. All proceeds will be donated to the two sponsoring agencies that train and employ the blind.

Of the efforts of these agencies to make people who cannot see self-supporting, the general chairman of the drive says:

"The ability to work is very important and we feel that getting jobs for blind persons comes first so that they can earn their own money and feel that they are holding their own place in society.

"They want to feel they're contributing something for what they get."

The Soviet

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Christian Science Monitor, March 7, 1950:

STEADY IS THE WORD

We have never seen a time—not even after Pearl Harbor—when American thinking was more in need of calm steadfastness. Multitudes have been jumping not merely to atomic conclusions but into an abyss of H-bomb extinction. A most potent antidote for this fever is the article by George F. Kennan in the current Reader's Digest, reprinted in this newspaper March 2.

Mr. Kennan, who has been head of the State Department's policy planning, believes any early war with Russia is unlikely. He offers reasons that deserve attention. One is the Communists' confidence in their own doctrine, which leads them to expect capitalist countries to crumble without military attack. The Soviet is having more trouble than is commonly realized in chewing up what it has bitten off since the war. Another reason is the fear that retaliation would wreak damage which could not be hidden and might upset the Kremlin regime.

Moscow might by miscalculation or in desperation resort to war, Mr. Kennan says, but so far it sees pressures and propaganda as cheaper and safer. At the same time he offers no hope of early settlement with Russia, and declares an agreement would have only the value of the power required to support it. He is convinced that the situation will improve if the United States maintains its own strength, proves its own free system, and wisely supports other peoples who show themselves ready to fight for freedom.

Americans will do these things more effectively if they can keep free alike from atomic apathy and hydrogen hysteria. Those seeking assurance that war will not break out tomorrow need not depend wholly on Mr. Kennan's reasoning. Military experts believe several weeks of preparation would be required—preparation which could not be hid from American intelligence agents. Beyond all such material factors, many persons will find assurance in the power of prayer. And in this situation multitudes are ready to trust it.

Evolution in Aviation

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD

a statement entitled "Evolution in Aviation," prepared for me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EVOLUTION IN AVIATION

Our Government has recognized the need for a national system of airports for economic and security reasons. However, it appears that our civil aviation industry is now in a very unfavorable position to render the services upon which it may be called, in case of a national emergency, due to economic conditions forced upon it after the last war and to other conditions, which, if further aggravated, will close many of the Nation's smaller airports and bases of operations and thereby place our civil aviation industry in a chaotic struggle for survival.

The Civil Aeronautics Administration has recently named a 12-man committee to study and make recommendations regarding this and many other problems facing the Government relative to the establishment of a national system of airports contemplated by the Federal Airport Act of 1946. Their report represents the consensus of opinion of the cross section of aviation leaders in both industry and Government. Every segment of the aviation industry has responded with its carefully considered opinion and the result will be found consistent in principle with the many previous studies and treatments of the subject upon which very little or no action has been taken. It is the expressed opinion of both industry and Government that now it is time for more action and less words, and it is with this sincere hope that the following recommendations are submitted for your consideration and prompt action.

The airports of the Nation are divided in classes 1 through 6 and larger. For the sake of this report, we will not consider class 4 nor larger airports, inasmuch as they are usually located in metropolitan areas which have established good general aviation policies and programs which suit the particular need and their airport is financially sound and reflecting a satisfactory operating balance sheet, with very few exceptions which can be corrected. The No. 1 problem of this system of airports is the accelerated rate of airport closures in the more average-size communities throughout the Nation, and it would seem timely to direct our efforts toward the solution of this basic problem.

The specific causes of this serious problem are many and varied. A few of the airport closures are the result of overdevelopment, poor design, and bad location; however, these will be found to be the exception rather than the rule. The main underlying cause for abandonment of airports lies in the inability of the industry to have made a satisfied aviation customer of the general public and should be broken down into the psychological and functional factors involved. It is conceded that the aviation industry is a service industry and that good, safe, economical service must be made available before it can have public confidence and acceptance. Considering that aviation is now 46 years old and that it has been accepted partially by only 5 percent of the public is sufficient reason to warrant investigation and corrective action, and, though the Government has assumed the responsibility for development of aviation, the aviation industry must cooperate more fully and place its unified and complete support with its Government if the problems are to be corrected in the near future.

The psychological factors revolve around three distinct groups of people:

1. The people comprising the aviation industry proper whose principal interest, like that of any other free enterprise in this country, is evolved around the possibilities of rendering service for financial gain.

2. The local State and Federal Government agencies who have found the need for providing the general public with airport facilities in order that it may participate in the advantages of air commerce.

3. The general public in whom must be created a desire to use aviation, having been shown its convenience, economy, and other advantages.

Intraindustry relations have been consistently weak, inasmuch as the services of aviation are made available to the general public through the medium of an airport or fixed base operator who has his operation usually located upon an airport provided for by a governmental agency and inasmuch as the airport operator is generally conceded to be the liaison man between the aviation industry and the general public, his state of mind and psychology of aviation should be the keystone of this situation. Except in a very few isolated cases the airport operator has labored under the delusion that everyone was against him—that the airport manager was against the operator, the Government was against him as well as the general public when they would not buy his products or services. This state of mind and versus philosophy of aviation has not helped the cause of aviation.

It is recognized that certain segments of civil aviation have grown and prospered to an amazing degree in comparison to others. For example, our scheduled air carriers have given the United States the finest system of transportation known to the world. Its powers were ably demonstrated in the execution of the last war and its routes of commerce now extend all over the world. Likewise, our aircraft-manufacturing industry has adapted itself to the know-how methods of mass production and is capable of designing and building any number of any type of aircraft that our country may require. These examples would indicate that our system of Government assistance in the development of aviation could and has been successful. And of these developments, the entire industry as well as the general public, can be rightfully proud. However, the airport operator has not done so well as the scheduled air carrier or manufacturer. He, of course, is not strongly organized and although 6,000 in number his voice individually is very weak in places. The airport operator most certainly would have the most to gain by discarding his versus philosophy of aviation and making a sincere effort to understand better and to cooperate with the other segments of aviation. He should furnish the initiative in improving these relationships.

It is common for the local airport operator to attribute his failure to the lack of local support in his community. This, of course, is usually traced back to his reluctance to cooperate with the administration to assist them in the problems of airport design, construction, management, or operation. The average airport operator has usually done very little to help create or improve the civic interest in the local airport; nor has he offered to cooperate in studying the local problems with the other operators in, for example, an airport-users conference in which all users of the local airport make a serious study of the cost and revenue formulas for the apportionment of the various funds applicable to the certain areas of the airport. It is generally conceded that a properly designed and properly managed airport should break even from its aviation sources of revenue and reflect a profit from the nonaviation sources of revenue. It should be the airport operator's spirit which helps establish this policy in his community, for any airport rendering a service and which is not a financial burden to the community can and should have the civic interest and pride which will afford the airport operator the local support so necessary to his existence. It must also be recognized, however, that just the mere ability to fly, build, or repair an airplane does not necessarily qualify any person to have the proper training, experience, and abilities of an aggressive businessman. However, his attitude and active interest in civic matters, particularly those pertaining to the airport, will do much to overshadow any shortcomings the operator may possess.

Public relations constitute a basic factor in practically every business operation today. The conduct of an airport operation is a business. Public relations properly conducted can and will aid the operator in an exact ratio to the time and effort expended. The average airport operator or manager grossly underestimates the importance of his position as the focal point of the aviation world in the eyes of the general public, who get their first impression of aviation from his operations. This attitude relative to public relations has been caused in part by the flight training programs, CPT and WTS, and more recently the VA program which have encouraged an influx of new airport operators into the field and has created the illusion that there was much easy money to be made quick in aviation. Inasmuch as the airport operator is in direct contact with the public and therefore the first recipient of any gains in improved relationships, he should voluntarily assume the responsibilities for passing on any unsatisfactory service or product to his customers and is therefore in the most logical position to create the greatest improvement or to be responsible for the greatest damage.

The American traveling public all want to conserve more traveltime in order to do more business, have more recreation or more fully enjoy life. An equal effort should be concentrated on both the nonflying and the flying groups of the public. The nonflying groups have as their chief reasons for not using aviation that it is too dangerous, the cost is too high, and there is a decided lack of dependability and convenience. These reasons, of course, do not apply to the air lines, but are partially justified in the personal flying category who could well afford to follow the pattern of the scheduled air carriers in minimizing this public objection to their services and at the same time proceed to diligently find and remove the cause for these criticisms.

Another objection voiced by the public is its dissatisfaction with the general appearance, attitude, and service rendered by the airport operator, whose position is quite comparable to that of the operator of the early-day automobile garage and service station when faced with the same lack of public acceptance of his product and service joined with his manufacturer, the oil companies, the local public officials and others and greatly improved not only the utility of the automobile, but the service stations, garages, roads, and every other facility upon which the public depended for convenient automotive transportation. This was accomplished in a very few short years and with the proper attitude and effort this method appears to be the most logical procedure for cleaning up the civil-aviation industry which forcefully indicates the value and possibilities of a unified civil-aviation structure.

The aviation industry of this country cannot grow and develop in a piecemeal manner. Each segment thereof depends to some extent upon the others. Not unlike the development and growth of a tree, aviation also has its system of roots, branches, trunk, leaves, fruit, etc., each of which must discharge its functional responsibilities or, in its failure, will retard the normal over-all development and growth. There is no disagreement regarding the present unhealthy condition of

the airport operator's segment of civil aviation, which if not remedied will all too soon spread like a disease and affect the remaining healthy segments of our aviation structure and, if necessary, our every means and resource should be utilized to restore this segment of aviation to a position where it will be self-sustaining and ably discharge its responsibilities to the industry as a whole.

It is recommended that—

The Civil Aeronautics Administration continue the leadership in bringing together each of the several segments of civil aviation and to effect the coordination of a national policy and program for civil aviation.

The Civil Aeronautics Administration institute a program to indoctrinate and direct their agents to more adequately serve the industry in matters relating to public relations including the press and radio programs; civic responsibility improving the spirit and activity of the airport operator; adult and public school air age educational programs; general knowledge and promotion of good airport management and operational practices; and proper sales, safety, and accounting procedures, stressing the educational instead of regulatory methods of development.

A revision of our present concepts of pilot training be instituted taking full advantage of the existing utility in the present personal aircraft, concentrating upon the practical problems involved in cross-country flying thereby reflecting better training and pilot ability. It is most desirable that the present VHF radio facilities be revised to include voice identification and all procedures should be simplified as much as possible.

The utility of the personal type airplane must be programed by gradual improvement rather than by revolution and should include a procedure for assisting the manufacturer to make practical application of the research and technical developments of aeronautical engineering; it is important to increase the operating range of the present aircraft as much as possible with the greater emphasis being placed upon the stall and landing speed end of this range; automatic navigational and landing devices must be made applicable to the personal type airplane operated by the amateur pilot; aircraft engineering and production should incorporate to the final degree every combination of methods which will make the airplane extremely easy to operate to the extent that it will fly hands off in a straight level attitude for at least 15 minutes; the present marginal rate of climb requirements should be substantially increased and spiral instability characteristics should be eliminated in the interest of safety.

A concerted industry-wide national program should be activated to accomplish the following results:

(a) Improve domestic postal service by handling of more first-class mail by air.

(b) Improve domestic transportation system by certification of additional small feeder air lines.

(c) Improve the stature of the aviation industry with general public relation program adapted to national, State, and local levels.

Centenary of Birth of Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the occasion of the centenary of the birth of Thomas G. Masaryk, the founder and first president of the Republic of Czechoslovakia, issued by the Czechoslovak National Council of America.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ISSUED BY THE CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA

In this most critical moment of international tension over the menace of the new terrible weapons of war which is engendering deadly fear among all peace-loving peoples and threatens to involve the world in a new catastrophy, we declare for sincere exploring of all decent means and ways which might lead toward lessening of the tension and achievement of a real international understanding.

While ardently hoping and praying for peace we believe that a lasting and durable peace may be obtained only if it be based on righteousness and justice.

No matter how desirable might be achievement of some modus vivendi which might be negotiated between the western and eastern powers, it would bring about new tension, new uncertainty and would lead to another misunderstanding if it would be based on legalization of injustices and exploits of aggression in the past.

Without proper guaranties, any modus vivendi between east and west cannot be trusted to fulfill what mankind expects from it.

We believe that the first guaranty of good faith on the side of the Soviet Union should be the fulfillment of promises given the peoples behind so-called iron curtain in wartime agreements among the big powers, that they would be accorded the right to freely decide their fate for themselves.

Only free elections under the control of the United Nations offer fulfillment of those promises.

We firmly believe, with the President of the United States, Harry S. Truman, as he declared in his speech on Washington Day, on February 22, in Alexandria, Va., that, in the long run world's hopes for peace do lie primarily "in the growth and expansion of freedom and self-government."

On the occasion of the hundredth anniversary of birth of Thomas G. Masaryk of Czechoslovakia, great fighter for self-determination of nations and civil liberties guaranteed by the governments, we appeal to our American Government, to the United Nations, to all western powers and to the conscience of all civilized world to take or aid measures leading toward restitution of the right for self-determination to Masaryk's people. We demand that Czechoslovakian people be accorded the right to hold free elections under the control of the United Nations with proper guaranties of the freedom of expression during the election campaign and with elimination of any outside pressure or coercion.

We demand the same right for other peoples behind the iron curtain knowing that they desire nothing more than to become a peaceful neutral link between east and west instead of being a bone of contention among the big powers.

We also appeal to the Government and the peoples of the Soviet Union to demonstrate their good will, sincerity of intent by favoring this most peaceful solution of the great problem and thus enable us, as well as themselves, to use the new marvelous sources of energy and miraculous advances in science for the good of mankind instead of its destruction.

Story of Navy Secretary Francis P. Matthews and the Late Henry Monsky

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article concerning the story of the Secretary of the Navy Francis P. Matthews and the late Henry Monsky, written by Bill Schofield and published in the Boston Traveler of March 7, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAVE YOU HEARD

(By Bill Schofield)

It could happen only in America, that a Jew and a Catholic could live such parallel lives, win such similar honors and gain so many mutual friends.

It's the story of Navy Secretary Francis P. Matthews and the late Henry Monsky. It's proof of the fact that there still exists in the world at least one nation where a man's success depends upon what he is—not upon his religious beliefs, his forebears' homeland, or the way he spells his name.

And 1 week from tonight, on March 14, it will add one more stitch to its pattern of similarity, for that's when Secretary Matthews will be principal speaker at a veterans' night dinner given by the Brotherhood of Temple Ohabei Shalom in Brookline. Monsky, you see, was a speaker there, too, shortly before he died 3 years ago come May.

The story of these two men goes back more than threescore years to the State of Nebraska. There, in the town of Albion, Matthews was born on March 15, 1887. And there, in the nearby city of Omaha, Monsky was born on February 4, 1890.

To gain an education, each headed for the halls of Creighton University at Omaha. Matthews picked up his college diploma with the class of 1910. Two years later, Monsky left with a sheepskin in his hands.

Each man had his heart set on becoming a lawyer. Thus, in 1912, Monsky was admitted to the Nebraska bar, with Matthews following 1 year later. Their weddings came along within 6 months of each other, that of Matthews in November 1914 and that of Monsky in May the following year.

Then they began to climb, and the way their paths followed parallel ascending stairways might well have stamped them as identical twins, except that one went regularly to mass while the other worshiped in a synagogue.

They were among the first to recognize the great value of Father Flanagan's Boys' Town. It's been said that Monsky gave the priest his first $1,000 for that project, and it's recorded in Who's Who that Matthews and Monsky frequently sat together on the board of trustees. They were together on other groups as well, for each served on the board of governors for the Omaha Community Chest and each in turn put in a term as president of that organization.

They climbed high and they climbed fast. Being a Jew, Monsky joined the Omaha Lodge of B'nai B'rith and rose to be president of the Supreme Lodge by 1938. Being a Catholic, Matthews joined the Knights of Columbus and reached the office of Supreme Knight by 1939.

Meanwhile, their names could be found among the workers wherever there was a

welfare job to be done, whether the recipients might be Protestant, Catholic, or Jewish. The unswerving formula they followed was to help a man first and inquire about his background later, if at all.

The Catholic Church sent some of the highest lay awards of the Vatican for Matthews' acceptance. Jewish organizations wrote the name of Monsky on their most important boards. Their paths curved into national affairs, and Monsky worked with the first United Nations Conference in San Francisco while Matthews tramped the ragged roads of European towns to help war victims mend their broken world.

Then they were together one night in Monsky's home at Omaha, when Col. Elliott A. Niles of Boston was present as a guest. And stemming from that meeting, Matthews as Secretary of the Navy will be here next week to address the brotherhood to which Niles belongs, from the platform where Monsky once spoke.

This simple group, so capably guided by President Robert R. Gordon, has listened to other men of national prominence. But few have come here with a closer tie of sympathy than the friend of the late Henry Monsky.

Viewed from this point, it promises to be a colorful night. Maj. Gen. Carl R. Gray, Jr., Administrator of Veterans' Affairs, will be the guest of honor. Rabbi Dudley Weinberg, national chaplain of AMVETS, will receive a citation. There's a long list of familiar names scheduled to attend—men like Rear Admiral Hewlett Thebaud, Commandant of the First Naval District; Brig. Gen. A. Robert Ginsburgh, representing Defense Secretary Louis Johnson; Maj. Gen. Frank A. Keating, commanding general New England Military District; Rabbi Joshua Goldberg of the Third Naval District; Judge John E. Swift, supreme knight of the Knights of Columbus; Maj. Gen. Harry H. Vaughan, and others of rank and office.

The head table guests will get together for a reception at the Niles home in Brookline shortly before the dinner. And in the evening, the Navy band will show what it can do with Jewish music.

But through it all, for anyone who stops to think, there'll be a theme of human brotherhood that's too swiftly disappearing from the earth.

It will be the theme that made such warm friends of a Jew named Monsky and a Catholic named Matthews.

They proved the thing can work.

Freedom of the Press

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Mrs. Oveta Culp Hobby on Friday evening, February 10, before the Alabama Press Association. Mrs. Hobby is executive vice president of the Houston Post, and is the first woman president of the Southern Newspaper Publishers Association. She served with me as a member of the United States delegation, of which I was chairman, at the United Nations Conference on Freedom of Information, at Geneva, Switzerland, in April and May of 1948—a conference to which she refers in her most admirable paper. Her inspiring and constructive address will be most interesting, I believe, to the Congress, as well as to publishers and editors throughout the country. I, of course, deeply share her belief that the traditional freedom of the American press has a historic mission.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Hamlet's bemused "To be or not to be?" echoes today through many newspaper offices.

The New Yorker observes that "The first duty of a newspaper is to stay alive. And the most important single fact about any newspaper is that, it differs from the next newspaper and is owned by a different man or group of men. This fact (the fact of difference) transcends a newspaper's greatness, a newspaper's honesty, a newspaper's liveliness, or any other quality.

"The health of the country deteriorates every time a newspaper dies of strangulation or is wiped out in a mercy killing. The solemn fact about the absorption of the Sun by Scripps-Howard is not that we lose a conservative paper, or an ancient paper, or an honest paper, or a funny paper, but that we lose a paper—one voice in the choir."

The mortality rate of daily and weekly newspapers in the past decade suggests the necessity for more self-analysis on the part of publishers, editors, reporters, craftsmen, and the entire personnel of a newspaper establishment. Examinations have always seemed preferable to autopsies.

Admitting, then, that our hardest battle today is simply to be, to continue to exist, how can we win that battle? I believe the only way is by being genuinely excellent. Excellent in daily journalism, in editorial policy, in management, and in our business operations.

The newspaper world around us is changing constantly. It has always changed, but never so much as in the past decade. Because the daily and hourly notation of change is our life work, we in the profession sometimes find ourselves too absorbed with the pace to take heed of the direction, the technique, or the quality of our product. It is only at meetings such as this one that we can stop, review the local and world community which we serve, and analyze our quality of service.

For example, how good are we in daily journalism? The role of the daily and weekly newspaper has never before been so important as it is today; the press in all its expressions is the eyes and ears of the world. How well do we live up to this responsibility, especially in our reporting of world events?

The lawyer, the cook, the college student, the mayor of a town—none can go to Europe and study the economic conferences of the Benelux nations. None can inspect the operation of Allied occupation in Japan. None can stay at the United Nations to keep informed on its progress, its set-backs, and its achievements. They know only what they read in the newspapers, in news magazines, or what they hear in brief comments on the radio.

Because of the expert work done by news magazines, by the newsreels and the network commentators, editors sometimes feel that they can relegate the greater part of the national and international picture to others. Every paper has so many demands for its column space. Businessmen want more stock quotations, farmers more agricultural news. Women's clubs want pictures and feature stories. The PTA units want individual stories for each school, the better to pad the scrapbooks which they exhibit at State conventions. And, of course, the city desk has its own pet newsruns.

But today's newspapers have a duty to inform their people on world events, because in today's world, the citizens of Wetumpka or Selma or Talladega or Fort Payne may be called on to decide whether or not to continue the Marshall plan, or whether or not to relinquish Formosa; or he may even have some influence for world peace through his demands on his governmental representatives.

An Alabama Congressman once made this statement in Washington: "My people," he said, "never subscribe to Time, or Collier's or the New York Times. A lot of them don't even see the Birmingham News. They do see their home town dailies or weeklies and it is from these sources they must obtain their information. All they know about what's going on in the world comes from their home town papers."

If the American people are to be informed on world events, our newspapers, dailies and weeklies must do it. And it is also our job to make world events seem as real as those of our individual towns and counties. If the laundryman shoots the corner florist, that is something real and immediate and enormously interesting to everyone who has ever walked into the florist's shop or had his clothes picked up by the laundryman. Perhaps the United Nations daily schedule will not boost circulation quite so much as the town shooting—and I should be the last to ask any newspaper to strip itself of circulation—but somewhere there is a happy and intelligent blend of news which readers want to read and news which they should read. By skillful writing and presentation, even the most foreign and esoteric of articles can be made readable. That, I think, is part of our task. We must learn to evaluate the news we present in terms of its relative importance to the individual, as well as in terms of its relative interest.

An equally important question in this self-analysis is: How good are we in editorial policy—in our choice of causes to champion and community goals to be emphasized? Do we set objectives or do we, like Scarlet O'Hara, say, "I'll think of it all tomorrow." "After all, tomorrow is another day."

Conditions differ in different communities, and each publisher must answer this question according to his own judgment. There are questions on all levels from the local to the international confronting us. A newspaper attempting constructive leadership of the community will feel obliged to comment upon these questions in its editorial columns. In our town of Houston, for instance, the Houston Post is particularly interested in health and sanitation—a crucial problem because of our sudden growth. It is one which your city or town may have already solved.

In our State of Texas, the Houston Post is giving emphasis to the care of the aged. The State is rich in potentials, but this burden of care is one not easily solved. To solve it properly, we face the unpalatable accompaniment of deficit financing; we must decide whether or not we shall let ourselves in for a bonded indebtedness. We have done so only once before—during the depression. Shall we do so again?

On the national level, the Post considers that the Hoover Commission recommendations merit substantial coverage. The Federal Government is a bit like Humpty-Dumpty—a Humpty-Dumpty who has grown so corpulent and ungainly that he has lost his original agility. If he falls off his perch, all the king's horses and all the king's men cannot put him together again. It is nationally important—and therefore important to every citizen of Texas—that we reduce Humpty-Dumpty and put him back into efficient trim before he runs any danger of falling.

In the international field, the Houston Post is asking that we consider an Atlantic Union of the Free. A resolution to that effect is now before Congress. It proposes that the President of the United States call a conference of the Atlantic Pact democracies to

explore the possibilities of a Federal Union among them. We have already taken the dangerous step of military unity. Under an Atlantic Union, we would gain the economic benefits which we in America badly need and will need even more badly as the years of international spending continue.

These are some of the special points of the Houston Post's editorial policy. There are, of course, others; but all of them boil down I think, to a general question which should be that of every publisher: Is my paper first and foremost a witness for a free people, a true conscience for democracy?

We often hear about freedom of the press, sometimes almost as if it were a privilege given us for our special enjoyment. It is, rather, a sword for the protection of freedom of the people, and we have an obligation to use it as such. Of what use would a life preserver be in the hands of a sailor too lazy to throw it to a drowning man? What good is freedom of the press if we see injustice done and remain silent? Not only remain silent, but condone the injustice?

These are not just rhetorical questions, I am thinking, for example, of the case of Dr. Condon. A respected scientist and a public servant, he was labeled "one of the weakest links in our atomic security" in a report released to the press by J. Parnell Thomas, then chairman of the House Un-American Activities Committee. Though Dr. Condon repeatedly demanded the right to a public hearing and official denial, he was not granted his right. The American press should have demanded the right for him. Worse—we gave three and four times the amount of space to the charges than we gave to statements relating to his innocence. In other words, we have given equal display to unsubstantiated charges made against Dr. Condon, a distinguished scientist and an American citizen, as we have given to Dr. Fuchs, a German-born citizen and a naturalized British citizen, against whom formal charges were filed, and who was arrested, and who will be tried shortly for espionage.

There was a time when every citizen was adjudged innocent of a crime until legally proved guilty in court. This was a precedent we inherited from English common law. Now almost suddenly, in midtwentieth century, this long established protection of the ordinary citizen against possible injustice is being nullified. When sensational charges are made against anyone—not by a jury, not by a district attorney, but sometimes by vacant-minded or hysterical people—the charges are broadcast from coast to coast; and the public instinct is to accept charges as proof.

I realize these are pains that go along with democracy but it is a frightening tendency, to which the American press is contributing. We must resist it. We must set it in true perspective with a question mark. In the case of accusations such as those against Dr. Condon, we must incessantly ask, "What is your proof? Have you legal and unmistakable evidence that this is true?"

I sometimes think that the greatest single failure of the American press is its willingness to forget the question mark. If I could, I should like to build and endow a memorial to the question mark—of course with many people I have wished I could endow the period—but surely it is the duty of the press to question.

We—with all our fellow-Americans of the twentieth century—have lapsed into a dangerous tendency to accept things: To accept almost any statement as true once it has been printed; to accept any columnist as a good one; to accept institutions as things of virtue until a public charge is made against them; to accept minority government for the United States because the majority is either politically illiterate or refuses to accept responsibilities of citizenship.

Instead, we should question everything—good as well as evil. Under question, the good only stands forth more clearly revealed for what it is, and evil is bared for all to see.

Most specially, we newspaper publishers should question what goes into our own columns.

We who print our newspapers far from the scenes of Federal Government or internal crisis cannot cover major national or overseas events with our own staff, and so we draw on columnists and the news agencies. As was pointed out recently in the Economist, the good columnists—Walter Lippmann, the Alsop brothers, Marquis Childs, Doris Fleeson, and Thomas Stokes, to mention a few, have great value in a country where distance prevents any newspaper from getting more than a local—or at most a regional following. For a few dollars a day, an editor in a small town can get material he could not afford in any other way. "But there are also bad columnists," the Economist reminds, "and ignorant ones."

How true. All of us in this tremendous country have a tendency to respect as being authoritative anyone who writes from the source. We read and believe the Washington columnists and correspondents because they are in Washington and should know. We think they must be good, or they wouldn't be writing up there where the competition is stiff.

But if any of you read Our Armchair Correspondents, written by one of them, you will know how pitiful are our illusions.

Let us therefore form the habit of questioning the caliber and performance of all writers whose work comes to us from the outside, as we question those on our own staffs.

Finally, let us question ourselves. I believe that the newspaperman—be he publisher or cub—should take stock of himself every year, or even every month. In honest self-analysis, he should try to clear out fuzzy thinking, should try to outline his own principles or philosophy of Government and of living, should try to review his own store of information, and discern which is prejudice.

He should try to be very sure that he knows exactly what words mean before he uses them. For example, there is a great difference between socialism and communism. There is a greater difference between democratic socialism and political communism. But how clearly do we define and distinguish the differences for our readers? Have we fallen into the fuzzy-minded habit of labeling all Communists, Socialists, and Liberals together as "left wing," thereby implying that the United States is "right wing," reactionary, hide-bound, controlled? This kind of thing is playing directly into Russia's hands. As a matter of fact, the United States is the most liberal—in the true sense of the word—the most progressive, and the most un-hide-bound country in the world. False labels create false ideas, and we who are the American font of ideas should know their propaganda value and be more careful how we use them.

The American press is not bad. I never realized how good it is until I saw all the world's press represented at the United Nations Conference on Freedom of Information and the Press at Geneva. Not even our fellow democracies can equal us. The British press is crippled by newsprint shortages. The French press suffers from lack of advertising and from subsidy by political parties. And, of course, the Russian press is simply the voice of the Soviet Government.

If we are to serve our tradition and our function in a free government, we must grow in excellence. Nothing has ever stood still—except the sun that day—and we shall either merit a continued existence or we shall negate our historic guaranty, freedom of the press.

Ours is a terrifying responsibility for the happiness of the individual and the welfare of the country. We must remain in constant, hourly awareness of how important what we say is to little people and big ones too.

If we decide that our historic freedom of the press has a historic mission, then every one of us must judge for himself whether or not, at the end of 1950, he can say "objective sighted," or "mission accomplished."

Encouragement of Science

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on encouragement of science delivered by the distinguished scientist, J. Robert Oppenheimer, director of the Institute of Advanced Study, Princeton University, at the Science Talent Search Award banquet, held in Washington, D. C., on March 6. I believe the address is particularly relevant to national-science legislation now pending in Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are here tonight to honor you and to celebrate the high promise of your future as scientists. We are happy to be with you. We think of that future with respect and curiosity. We think of the discoveries which you will make. We think of the questions to which we today have no answer, and to which you will come to know an answer. Even more, we think of the answers that we have today, and of the new questions that you will put to those answers. We think of how altered and how deepened our knowledge of the world will be before you are through with it. My first wish to you is that you may make and that you may share in the making of great and beautiful discoveries which enrich our knowledge of the world of nature and of man. I have a second wish for you; but that must come at the end of my talk.

I do not propose to talk to you of such topics of the day as the hydrogen bomb and the statutory provisions of the National Science Foundation. If these matters are not in a very different state when you shall have come to assume the full responsibilities of citizenship, you will have reason to reproach you elders for your inheritance.

Science has profoundly altered the conditions of man's life. During the last centuries, the discoveries in science, and their applications to practice, have changed the material conditions of life. They have changed as well many matters of the spirit. They have changed the form in which practical problems of right and wrong come before us; they have changed the focus of moral issues, both for the individual and for governments. They have given us new methods for defining the meaning of problems that face us, and for judging whether or not our solutions are just.

The most manifest of the changes are the material ones. Yet even here it takes a certain perspective to see their true extent. Advances in the study of man and other

living forms have extended our life span by decades. Discoveries in physical science have immeasurably lightened our toil, and enriched our lives. They have given leisure to an ever-widening group of men. They have made a reasonable education not a special privilege, but a common right. They have made the world, in its physical dimensions, a small place, and established the means by which people in remote parts of the earth can communicate with each other, can get to know each other, and can learn to work together. They have put at the disposal of everyone the resources of physical power, of ease and of knowledge that were in the past reserved for the few.

Not all of the changes in material well-being that science offers are realities. Yet the very fact that they are possibilities has changed the nature of the responsibility which we bear, both as individuals and as a community of men and women banded together in government. In the Greek cities, political democracy, and civilization itself, appeared possible only on the basis of a slave economy. Technology, born of science, has altered that; it has enabled mankind, as it has forced mankind, to deal with the issues of slavery as a moral issue. Poverty has always been an ugly thing, and in its extremes a desperate one. Today, it is an evil, in the sense that it lies within human hands and human hearts to abate it. Science can provide us, for the first time in history, with the means of abating hunger for everyone on earth.

Perhaps nowhere has the impact of science more clearly altered the specific terms of a great political issue than in the effects of scientific development on warfare. This is a can of worms with which I have myself unhappily been engaged for some years. It would not be honest to say—as it would be folly not to hope—that the very terror of modern weapons would in itself put an end to war; it would not even be honest to say that because of this terror the abolition of war and the maintenance of peace have become the one absolute, final objective of all political decisions. There are other things in man's life: his freedom, his decency, and his sense of right and wrong, that cannot so lightly be subjected to a single end. But what we need to remember is that war today has become, and is increasingly becoming, something very different from what it was a century ago or a millennium ago. We need to recognize the new situation as new; we need to come to it with something of the same spirit as the scientist's, when he has conducted an experiment and finds that the results are totally other than those that he had anticipated.

Four months before Hiroshima, in the last days of his life, President Roosevelt's thoughts turned to these questions. In the last words that he wrote, in words he did not live to speak, the President looked to the future, to the atomic age. He looked to the past, to the days of the founding of the Republic. He wrote:

"Thomas Jefferson, himself a distinguished scientist, once spoke of the 'brotherly spirit of science, which unites into one family all its votaries of whatever grade, and however widely dispersed throughout the different quarters of the globe.'

"Today science has brought all the different quarters of the globe so close together that it is impossible to isolate them one from another.

"Today we are faced with the preeminent fact that, if civilization is to survive, we must cultivate the science of human relationships—the ability of all peoples, of all kinds, to live together and work together, in the same world, at peace."

Science has greatly extended the range of questions in which man has a choice; it has extended man's freedom to make significant decisions. Is there anything in the methods of science itself, or in the spirit of science, which can help in the making of these decisions? To what extent is there a play on the word "science" which can mislead us and take us up false roads when we speak of this science of human relationships? Is there anything we can learn from the relevance of science to politics?

If we are to answer these questions, and answer them honestly, we must recognize important and basic differences between problems of science, and problems of action, as they arise in personal or in political life. If we fail to recognize these differences, we shall be seeking magic solutions and not real ones. We shall delude ourselves into laying aside responsibility, which it is an essential part of man's life to bear.

In most scientific study, questions of good and evil, or right and wrong play at most a minor and secondary part. For practical decisions of policy, they are basic. Without them, political action would be meaningless. Practical decisions, and, above all, political decisions can never quite be freed from the conflicting claims of special interest. These, too, are part of the meaning of a decision and, of course, of action, and they must be an essential part of the force of its implementation.

Political decisions are unique acts. In politics there is little that can correspond to the scientist's repetition of an experiment. An experiment that fails in its purpose may be good or better than one that succeeds, because it may well be more instructive. A political decision cannot be taken twice. All the factors that are relevant to it will conjoin only once. The analogies of history can provide a guide, but only a very partial one.

These are formidable differences between the problems of science and those of practice. They show that the method of science cannot be directly adapted to the solution of problems in politics and in man's spiritual life. Yet there is relevance of a more subtle, but by no means trivial, kind.

In trying more fully to explore this relevance, I should like to start with a text. This text is a letter written by Thomas Jefferson to a young man who had inquired of him as to the usefulness of his studies of science. I am indebted to Dr. Julian Boyd, of Princeton University, for the copy of this hitherto unpublished letter. It was written in the middle of the year 1799, the year in which Napoleon abolished the directory and began to assume dictatorial power in France, the year before Thomas Jefferson was elected for the first time as President of the United States. Jefferson and the diverse brave and hopeful men who with him laid the foundations of our own Government had learned much from the peoples of other nations. Many of their highest political ideals and their most powerful political instruments were built on the experience, the insight and wisdom of European scientists and philosophers. Even today we need to remember that this was so, and that there may be much that we can learn from others, and that we should be glad to learn, as in turn by example, we should be glad to teach.

Jefferson's letter starts with a survey of the subjects in science which he believes young Munford ought to pursue. I will quote one characteristic passage which may strike a familiar and homely note for you:

"The science of calculation also is indispensable as far as the extraction of the square and cube roots; algebra as far as the quadratic equation and the use of logarithms are often of value in ordinary cases; but all beyond these is but a luxury; a delicious luxury, indeed; but not to be indulged in by one who is to have a profession to follow for his subsistence."

But that is not really the part of Jefferson's letter which I commend to you. Here it is:

"I am among those who think well of the human character generally. I consider man as formed for society, and endowed by nature with those dispositions which fit him for society. I believe also, with Condorcet, as mentioned in your letter, that his mind is perfectible to a degree of which we cannot as yet form any conception. It is impossible for a man who takes a survey of what is already known, not to see what an immensity in every branch of science yet remains to be discovered, and that, too, of articles to which our faculties seem adequate."

And later, in the same letter, still more explicitly:

"And it is still more certain that in the other branches of science great fields are yet to be explored to which our faculties are equal, and that to an extent of which we cannot fix the limits. I join you, therefore, in branding as cowardly the idea that the human mind is incapable of further advances. This is precisely the doctrine which the present despots of the earth are inculcating, and their friends here reechoing, and applying especially to religion and politics: 'that it is not probable that anything better will be discovered than what was known to our fathers.' We are to look backwards, then, and not forwards for the improvement of science and to find it amidst feudal barbarisms and the fires of Spitalfields. But thank heaven the American mind is already too much opened to listen to these impostures; and while the art of printing is left to us, science can never be retrograde; what is once acquired of real knowledge can never be lost. To preserve the freedom of the human mind, then, and freedom of the press, every spirit would be ready to devote itself to martyrdom; for as long as we may think as we will and speak as we think the condition of man will proceed in improvement. The generation which is going off the stage has deserved well of mankind for the struggles it has made and for having arrested that course of despotism which had overwhelmed the world for thousands and thousands of years. If there seems to be danger that the ground they have gained will be lost again, that danger comes from the generation of your contemporary. But that the enthusiasm which characterizes youth should lift its parracide hands against freedom and science would be such a monstrous phenomenon as I cannot place among possible things in this age and this country."

To me there are two striking impressions which this letter of Jefferson's makes, even beyond its eloquence and its beauty. The first is that the letter is pervaded with the idea of progress, that ideal that owes so much to the development of science and that in turn has provided the great enriching human faith in which scientific discovery and invention has flourished. Jefferson is confident that an increased understanding of the world will lead to progress; he is convinced that the barbarisms of the past cannot stand up against inquiry and understanding and enlightenment; he is confident in man and sure that as men know more they will act more wisely and live better. In our contemporary expressions of hope that catastrophe could be averted and civilization yet be saved, that confidence has lost much of its robustness.

The second point is that for Jefferson there is something in the ways of science that is relevant to political life. Even in religion and politics he holds that it is probable that better things will be discovered than what was known to our fathers. This conviction that new knowledge is possible and that not all the answers are known is, of course, the stuff of the day-to-day life of the scientist. Science itself does progress; new knowledge is possible; and new knowledge, because it does not destroy or ignore the old, can only increase our understanding. The very idea of the development of science is an example of progress, and of progress which in no true sense can ever be reversed. But this is only part of the story. It is true, as Jefferson knew, that in the large, science has flourished in conditions of human freedom, and that

its growth is parallel to the growth of democratic institutions. Today, looking back on more than a century and a half of further history, we can be even more sure of this. We have seen not only the inspiriting example of science and democracy flourishing together, but the tragic examples of their foundering together. We express the hope that of this tragedy we shall soon have seen the end.

What are these lessons that the spirit of science teaches us for our practical affairs? Basic to them all is that there may be no barriers to freedom of enquiry. Basic to them all is the ideal of open-mindedness with regard to new knowledge, new experience, and new truth. Science is not based on authority. It owes its acceptance and its universality to an appeal to intelligible, communicable evidence that any interested man can evaluate.

There is no place for dogma in science. The scientist is free to ask any question, to doubt any assertion, to seek for any evidence, to correct any error. Where science has been used in the past to erect a new dogmatism, that dogmatism has found itself incompatible with the progress of science; and in the end, the dogma has yielded, or science and freedom have perished together.

Our own political life is predicated on openness. We do not believe any group of men adequate enough or wise enough to operate without scrutiny or without criticism. We know that the only way to avoid error is to detect it, that the only way to detect it is to be free to enquire. We know that the wages of secrecy are corruption. We know that in secrecy error, undetected, will flourish and subvert.

Let me be clear. Science is not skepticism. It is not the practice of science to look for things to doubt. It was not by a deliberate attempt of skepticism that physicists were led to doubt the absolute nature of simultaneity, or to recognize that the ideas of strict causality embodied in classical physics could not be applied to the domain of atomic phenomena. There is probably no group of men who take more for granted in their daily work than the scientists. Common sense, and all that flows from it, are their principal basis for what they do in the laboratory and for what they make of it on paper. But for scientists it is not only honorable to doubt, it is mandatory to do that when there appears to be evidence in support of the doubt. In place of authority in science, we have and we need to have only the consensus of informed opinion, only the guide of example. No scientist needs to order his colleagues to use a new technique of experiment or to enter a new field of discovery. If he has done this, it will be an invitation to his fellows to follow.

These then are some of the attitudes of mind, these are some of the disciplines of spirit which grow naturally in the scientist's world. They have grown there in part as a result of a humane and liberal tradition in political life, and in part as a cause of that. The open mind, the reliance on example and persuasion, rather than on authority, these are the heritage of the centuries in which science has altered the face of the earth. Science can help in diverse ways in preserving and extending this heritage. Its very universality speaks across frontiers to make truth manifest in lands otherwise darkened; its material applications create the preconditions—in leisure, in education, in means of communication—for the converse of men with each other. Science provides the material and the intellectual basis for a world in which example and understanding can help all men to improve their lot and fulfill their hopes. Today we need to remember that our country, founded on these practices, and grown strong by their exercise, owes its strength to them. In this time of crisis, we need to cherish that strength.

And this brings me to my second wish for you. I wish you not only the joy of great discovery, I wish for you a world of confidence in man and man's humanity, a world of confidence in reason, so that as you work you may be inspired by the hope that what you find will make men freer and better—in which, working as specialists in what may be recondite parts of the intellectual life of the time, you are nevertheless contributing in a direct and basic way to the welfare of mankind.

Illusion or Reality

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. HAGEN. Mr. Speaker, in my hand I hold a document which, for a change, brings good news from western Germany where the future of democracy hangs in the balance. In that arena true democracy as we know it here is pitted against the godless materialism of the left and a resurgent materialism of the right.

The constructive forces in the new German Republic are being aided by a world-wide ideological movement known as moral rearmament, initiated by an American, Dr. Frank N. D. Buchman, of Pennsylvania. In a way that we had hoped might happen, and yet feared would never happen, this movement is creating industrial teamwork as an answer to class war. It has achieved the seemingly impossible by winning over some of the top Communist leaders of western Germany. These men who have for years been spreading their false ideology among the miners and workers of the Ruhr came last summer to the World Assembly of Moral Rearmament at Caux, Switzerland, to which this House sent an official committee. The Communists found there what they described as an ideology superior to that for which we have fought.

On their return to Germany they not only resigned from the Communist Party but devoted their militant energies to spreading this new ideology among their former comrades—with such effectiveness that they too have left the party in large numbers.

In Altenessen the chairman of the Communist Party, who had founded the party there 25 years ago, said that he so now believed in moral rearmament as the answering and uniting world ideology that if the Communist Party did not accept this ideology, he would take a third of the Communist Party of Altenessen, which has a membership of 10,000, out of the party with him in support of moral rearmament. He said "Caux is where we belong."

In fact, only a few weeks ago the executive of the Communist Party in western Germany were summoned to a special conference at which they stated they were going to reorganize the entire executive and secretariat because it had become tainted with an ideology inimical to the party.

The extent of the success of this movement and the strength of its opposition is illustrated by an editorial published in a Bremen newspaper. It was sent me by my son, Harold, who is over there learning at firsthand how to have a part in this strategic work of bringing a democratic ideology to Germany.

This ideology has taken hold and is assisting in the development of democratic processes in Europe, and this is clearly shown by an editorial entitled "Illusion or Reality," which appeared in the Bremen Weser-Kurier of Monday, February 6, 1950.

I thought it would be of interest to the Members of Congress and the readers of the CONGRESSIONAL RECORD, so I ask permission to insert it in the RECORD at this point.

An English version of the editorial is as follows:

ILLUSION OR REALITY

The presence of the cast of the movement of moral rearmament in Bremen, and the performances of the industrial play Der Vergessene Faktor, have found an echo in all the vital intellects of our city, that has by far exceeded the expectations of the skeptics. So what has happened in other cities has been repeated in Bremen. Whatever your point of view, negative or positive, no doubt can be left that through the moral rearmament movement the people have been touched by something for which they have long been waiting.

There is in the millions a latent readiness to devote themselves to a great uplifting idea; to direct their good will for an aim; to give their life and work a meaning without which they cannot carry on their existence. These millions are looking for something. They know also that mortal danger hovers over them, and that trying to meet the danger by material means alone is very questionable.

The people of Caux understand this situation. The danger that threatens Christian culture and thus Europe and all countries whose spiritual origin is in Europe, is not primarily dependent upon the means of power mobilized by the Communists, nor upon tanks, planes, and atom bombs, but upon people who have themselves subscribed to the Communist ideology. Neither are those who have been forced into the Communist sphere of influence by pressure and terrorism the dangerous ones, but the idealists who are deeply convinced of communism; not those who seek fame and power, but those who are willing to sacrifice and who have committed themselves body and soul. Indeed, the latter as idealists have a claim to the respect even of those who think otherwise.

Because millions know this danger, or in any case feel it unconsciously, they are not wholly reassured nor given a feeling of inner security by the might of the Western democracies and those peoples whose life is based on a God-inspired culture, even though this might is so immense as to lend a sense of outward security.

Why does not the power of the West reassure or, when it does, only partially? Because the inner foundation of real power is lacking—the ideology to which material power is subordinate; the ideology that in extreme emergency even gives the use of force a moral justification.

I am fully aware of the dangers of this last statement. The president of the Bremen KPD faction in a letter to the Kurier which

we published recently said: "They do not notice that President Truman and others are using them to rearm morally for new wars." In other words, that the movement of moral rearmament is an attempt of the war-hungry capitalists to find a moral facade for their offensive aims.

Now there is always the risk that idealists will be used by unsavory materialists. It would be foolish to deny such a possibility, especially in our time when Communist leaders are misusing the idealism of millions in a way that has alarmed the whole civilized world. But no one who knows or has understood the spirit and the people of Caux can really believe that impure elements could ever succeed in misusing their idealism.

We have said that millions of people today lack something, since democracy without an ideological basis loses itself in outward mechanics which cannot satisfy man, nor free him from fear, nor give him the capacity for sacrifice. The movement of Moral Re-Armament supplies this lack by giving the democratic system a moral foundation.

The head of the Parliamentary Communist faction, Mr. Rafoth, is quite right when he says that this idea was already born 1,950 years ago, but he is not right when he belittles as futile this world-spanning attempt to remake man from within. He and his ideological friends in the Kremlin know that in spite of all battles, in spite of all the progress and regress of Christianity and Christian culture, the edvelopment of the West and the New World has been determined by it, and that this ideology is still today the bulwark against the world victory of communism. Caux has set itself to the task of filling the Christian teaching with new lifeblood; of plunging into the middle of the problems of our time, saying to man that the changing of men and systems must always begin with man himself; that we must free ourselves from hatred and mistrust; that the road to reconciliation between the millions starts not with putting a moral challenge to your neighbor but with putting it to yourself, because only by your own personal example can you decisively affect the world around you.

Beliefs that come from inner conviction do not lose their value when someone rejects them as old. On the contrary, their age proves their indestructibility. The Bremen Communist Party does not say in its statement that the aim of Caux should be rejected, but that its realization is an illusion.

The people of MRA do not try to answer this argument by theoretical discussion. They prove the durability of their ideology by living it. Their world influence can be traced far beyond the expectations of so-called realist politicians, and it is this that gives them the happy inner certainty of being on the right road. Innumerable men and women who know the danger that threatens Christendom from the dedicated fanatics of the Communist ideology—far more than from their weapons—will follow on this road, because today the durability of the Caux movement is no longer an illusion but a reality.

FELIX VON ECKARDT.

A Reply to Mr. Truman

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Senator HARRY F. BYRD, Democrat, of Virginia, chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures, and member of Senate Finance and Armed Services Committees:

The President of the United States recently gave Mr. Arthur Krock an exclusive interview of universal interest. Mr. Krock is a brilliant journalist whose dispatches are meticulously accurate. The President has confirmed the accuracy of the report.

My name was mentioned in that part of the interview relating to the Federal fiscal situation. Under the circumstances, in the interest of both accuracy and clarity, I am compelled to comment on certain of the President's statements with respect to deficit spending, taxes, and reduction of Federal expenditures.

DEFICIT SPENDING

The President told Mr. Krock that in no sense does he tolerate deficit spending. He said he hates deficit spending as much as HARRY BYRD ever could, and it is only a temporary condition brought on by necessities which could not be removed by any genius of statecraft known or available to him.

In the five fiscal years President Truman has been in office the budget has been balanced twice and both of these occasions were during the Eightieth Congress. In 1947 there was a surplus of nearly $1,000,000,000. In 1948 there was a surplus of $8,500,000,000. For the coming year, beginning July 1, he does not even go through the formality of proposing a balanced budget, with or without additional taxes. In fact—in his budget message, in his economic report, and in his tax message—the President has advised Congress three times since January 1 against balancing his 1951 budget. From his record it would appear that he not only tolerates deficit spending but, in effect, he also recommends it.

If the President regards chronic deficit spending during peak prosperity as a fatal menace to our form of Government and free enterprise, as I do, the Federal budget would be balanced now with the full influence and prestige of his Office brought constantly to bear on this objective.

The President today is the chief obstacle to balancing the budget. I feel justified in saying this because he is now urging upon Congress the adoption of a budget more than $8,000,000,000 in excess of actual expenditures in 1948. This he calls a "tight" budget and he is resisting any reductions by Congress. In our fiscal affairs the President is taking the easy course of procrastination waiting for some unspecified time in the future to do what he should and can do now.

How many times have we heard that before? President Roosevelt used to say we'll balance the budget when we get out of depression and into prosperity. Now President Truman says we'll balance the budget when prosperity is greater.

If the Federal budget can't be balanced in years such as this when income and employment are at or near their peak, when there are no domestic emergencies, and when the need for economic assistance abroad is supposed to be diminishing, when can we balance it?

How long is "only a temporary condition" mentioned by the President in refering to deficit spending? If we follow the President's recommendations, a whole generation within the coming year will have reached its majority under a deficit-financed government. We have been on a deficit basis in all but 2 years since 1930 and the President proposes it again for the coming year. If Congress, at the insistence of the President, authorizes the expenditure of billions more than the revenue during the year beginning July 1 it is probable that the budget never will be balanced again until we go over the precipice of financial disaster.

How long can we pile new deficits on a postwar debt of more than a quarter of a trillion dollars and expect democracy and free enterprise to stand the burden? Neither can exist in insolvency.

Two years ago the Federal Government spent $34,200,000,000 in fiscal year 1948. We balanced the budget, and there was a surplus. In that year, which ended only 19 months ago, when we spent $8,000,000,000 less than the $42,400,000,000 expenditure budget the President is requesting now, our economy did not disintegrate, our national defense was not impaired, and we were spending more for foreign assistance than the President now proposes. In the field of foreign spending the President in his pending budget proposes to spend $4,700,000,000 as compared to $4,800,000,000 in 1948 when total spending was $8,250,000,000 less than he now recommends.

Of the $8,250,000,000 difference between these two budgets $5,300,000,000 is for increased domestic-civilian projects, excluding foreign assistance, excluding national defense, excluding interest on the debt, and excluding the cost of veterans programs. The President now proposes to spend $12,200,000,000 for domestic-civilian projects, with all of the exclusions just mentioned, as compared with $6,900,000,000 for domestic-civilian projects in 1948.

These figures show that domestic-civilian expenditure increases total more than the $5,100,000,000 deficit for the coming year as estimated by the President. It follows that the deficit may be attributed largely to increases in expenditures for activities and programs which are not related to past wars or future defense. Compilation of increases in the domestic-civilian categories explodes the President's contention that the budget cannot be cut because of fixed charges resulting from previous wars and the requirements of our defense in the future.

TAXES

The President told Mr. Krock that "there wouldn't be any (deficit) if the Republicans had not cut the incomes taxes in the Eightieth Congress." He said tax changes should not be made piecemeal at any time, but they should conform to a general plan. He told Mr. Krock "this was equally true when he approved the repeal of the excess-profits taxes, and he wishes he had not done this." But, he said, he was "new at the job."

In his February 16 speech the President repeated his reference to the Republican tax cut and said "much of our present financial difficulty is the result of it."

This is not the first time the President has said deficits this year and next are attributable to tax reductions by the Eightieth Congress. He has also said the same thing about the deficit last year. This is another red herring of which he has made frequent use.

What are the facts?

He admits his own indorsement of a $6,000,000,000 reduction in excess-profits taxes on corporations enacted in 1945 when there was a $20,000,000,000 deficit, but he blames all recent, current, and future deficits on the Eightieth Congress, which followed up his corporation-tax reduction with a $4,000,000,000 to $5,000,000,000 reduction in individual income taxes made effective in fiscal year 1948 when there was a surplus of $8,500,000,000.

As in his February 16 speech, the President now says the 1948 income-tax reduction was "ill-timed and irresponsible," but in his state of the Union message dated January 7, 1948, he justified a 1948 income-tax reduction proposal of his own as follows: "During this period in which the high cost

of living is bearing down on so many of our families tax adjustments should be made to adjust their burden." No tax proposal could be more piecemeal or conform less to a general tax plan than his scheme to reduce each individual's income-tax bill by $40, with its $3,200,000,000 loss in revenue to be compensated by an increase in corporate profits taxes.

This proposal urged by the President instead of the 1948 tax bill, which he criticizes so bitterly did not have a single advocate on the Senate Finance Committee and it never mustered sufficient appeal to be presented in the Senate as an amendment or otherwise.

Let us recapitulate the President's tax policy.

What tax proposals by the President have not been piecemeal? What tax proposals by the President constitute a general plan to which we may conform?

With respect to corporation taxes: In 1945 he endorsed the $6,000,000,000 reduction in corporation excess-profits taxes. In 1948 he proposed to restore $3,200,000,000 by increased taxes on corporate profits. In 1949 he proposed in the winter to increase corporate taxes by $4,000,000,000. In the summer he withdrew the proposal. By autumn he was talking again about increasing them. Now in the winter of 1950 he proposes to increase corporation taxes by half the amount he proposed a year ago.

With respect to individual income taxes: In 1948 the President proposed his own reduction of $40 per taxpayer, opposed the formula which was approved by both the Ways and Means Committee of the House and the Finance Committee of the Senate, ignored the community-property amendment which had the support of both parties in Congress, and vetoed the 1948 tax bill, as passed, including the community-property-tax provision.

With respect to social security pay-roll taxes on individuals as well as business: he proposed last year to increase them by $2,000,000,000, and this year he is proposing an increase of $1,750,000,000. In neither case would the pay-roll taxes requested for socialized medicine even begin to finance the program he proposes.

As to excise taxes, he now proposes to withdraw some, but not all, of the wartime levies.

How can private enterprise plan its expansion under such inconsistent and constantly changing tax proposals by the President of the United States? How can investors calculate their risks? How can heads of families assure their security? How can the Government keep its fiscal affairs in order?

Is it logical for the President to excuse his own approval of a $6,000,000,000 tax reduction in a deficit year and at the same time blame past, present, and future deficits on the Eightieth Congress, which reduced individual taxes by a lesser amount in a surplus year?

It would seem by the record that, if throughout future years we are to blame Federal deficits on the tax reductions in some prior year, the President must assume much of this responsibility.

EXPENDITURES

The President told Mr. Krock: Senators GEORGE and BYRD "call for a reduction of $6,000,000,000 in the budget. They know it can't be done." He said he is an old hand at budget making. He told Mr. Krock "he has cut" the budget for fiscal year 1951 "as much as can be done in consideration of the basic needs of the foreign program and the dynamic domestic economy he seeks to create and maintain."

It is gratifying to learn that the President knows "the economizers have a blueprint" for the budget. For years he has been saying no one would tell him where to cut it. Now the platitude is changed to say Senator GEORGE and I know our proposals can't be accomplished. As a former Senator the President knows how difficult it is for Congress to reduce Federal expenditures without at least a sympathetic attitude by the President, and he knows it is practically impossible against open opposition by the President such as he has voiced three times this year since he sent in his new budget. Perhaps the President had this fact in mind when he said Senator GEORGE and I know it can't be done.

To the contrary I am confident that a majority of Congress believes the budget can and should be reduced to a balance now and the fact that he is the principal obstacle will not deter determined efforts in Congress to bring this about.

I have suggested how it can be done in a budget outline detailing expenditures totaling $36,000,000,000. This reduction would be at least $6,000,000,000 under the President's requests. Senator GEORGE, a hand of nearly 30 years' experience at Federal budget making, has announced his support for such a reduction.

A $36,000,000,000 budget would be $2,000,000,000 more than the budget of 1948, which was balanced by the Eightieth Congress, whereas in comparison with 1948 figures the President proposes to increase expenditures by over $8,000,000,000, more than half of which—I repeat for emphasis—would be in domestic-civilian expenditures unrelated in all respects to wars or rumors of wars. In this period of less than 2 years what has developed on the home-front horizon to justify an increase in domestic-civilian expenditures of near 100 percent?

It is not enough to say these expenditures are less in proportion to the national income than they were 10 years ago. The fact that the Federal tax-take alone out of the national income has increased 500 percent in the same 10 years is only one of the many factors which must be considered along with such a statement.

The record shows that as such programs as foreign assistance begin to expire more domestic-civilian programs are added.

The prosperity we have is suspended dangerously from the unpredictable economics of a Federal debt already more than a quarter of a trillion dollars. The President proposes that we increase the debt at the rate of nearly a half billion dollars a month. Under such a policy how long can we expect to maintain the domestic economy, the private-enterprise system or our form of government?

Democracy and freedom here and throughout the world depends upon the preservation of our solvency which is being jeopardized by growing debt and chronic deficits.

A $36,000,000,000 budget for progress, in tabular form with comparisons

[In billions of dollars]

Expenditure categories	Fiscal year 1948 (which ended June 30, 1948), actual	Fiscal year 1950 (which will end next June 30), estimated, Jan. 9, 1950, revision	Fiscal year 1951 (which begins next July 1)	
			Byrd 36-billion dollar budget	President's Jan. 9 proposal
I. Domestic civilian (exclusive of veterans and interest)	6.9	11.4	8.9	12.2
Social welfare, health, and security	1.9	2.3	1.9	2.7

[3] Minimum estimate.

What the taxpayers of each of the 48 States would save by the adoption of the $36,000,000,000 Byrd budget for the fiscal year 1951 as compared with the cost to each State of President Truman's proposed $42,400,000,000 budget

	Percent of Federal taxes borne by State [1]	Cost of Truman budget	Cost of Byrd budget	Saving under Byrd budget
United States total	100.00	$42,439,000,000	$36,000,000,000	$6,439,000,000
Alabama	1.17	496,536,300	421,200,000	75,336,300
Arizona	.37	157,024,300	133,200,000	23,824,300
Arkansas	.72	305,560,800	259,200,000	46,360,800
California	8.32	3,530,924,800	2,995,200,000	535,724,800
Colorado	.80	339,512,000	228,000,000	51,512,000
Connecticut	1.67	708,731,300	601,200,000	107,531,300
Delaware	.40	169,756,000	144,000,000	25,756,000
Florida	1.29	547,463,100	464,400,000	83,063,100
Georgia	1.40	594,146,000	504,000,000	90,146,000
Idaho	.32	135,804,800	115,200,000	20,604,800
Illinois	7.59	3,221,120,100	2,732,400,000	488,720,100
Indiana	2.29	971,853,100	824,400,000	147,453,100

[1] The formula used in estimating each State's share of Federal expenditures consists of 3 factors: (1) The percent of individual income taxes collected from each State; (2) the proportion of corporate income taxes borne by each State, measured by the State's percent of the national income; and (3) the proportion of excise and miscellaneous taxes (excluding social-security taxes), borne by each State, measured by the State's percent of total population. Thus we get a picture of Federal taxes borne by rather than collected from, each State, which we believe more nearly reflects the true distribution of the Federal tax burden. Each of the 3 factors is weighted according to the percent each tax bears of the total Federal tax revenue (1949 figures); individual income taxes, 47.52 percent; corporation taxes, 30.42 percent; and excise and miscellaneous taxes, 22.06 percent; total, 100 percent.

What the taxpayers of each of the 48 States would save by the adoption of the $36,000,000,000 Byrd budget for the fiscal year 1951 as compared with the cost to each State of President Truman's proposed $42,400,000,000 budget—Continued

	Percent of Federal taxes borne by State [1]	Cost of Truman budget	Cost of Byrd budget	Saving under Byrd budget
Iowa	1.58	$670,536,200	$568,800,000	$101,736,200
Kansas	1.15	488,048,500	414,000,000	74,048,500
Kentucky	1.20	509,268,000	432,000,000	77,268,000

How Rent Control Operates

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include herewith a letter from an intimate friend of mine from Stockton, Calif. This man was one time an elected official of the State of California, voluntarily retiring from the office to devote his entire time to the practice of law. He is an able and respected member of the bar of California and a gentleman who is fair and equitable in all his dealings with his fellow men.

This letter shows what rent control does in specific cases, which probably could be multiplied by the hundreds of thousands in the United States.

During the war I believe that rent control was essential and for sometime thereafter I believed in rent control during the readjustment period due to the extreme shortage of houses, especially in my home State of California.

But that time has passed and we should now give those who have invested their life savings in real property and improvements thereon the same chance to obtain a return on their investments that other segments of our economy have. My experiences with the Rent Control Bureau have never been very satisfactory. I dealt with many specific cases, especially those of old people who had invested their life savings in rental property try to get adjustments but in practically every case were refused any adjustment. When the rent-control law went into effect they were renting their apartments and their flats at reasonable rentals. These figures remained in practically every case that I know about throughout the war and for some time thereafter, although the cost to the landlord in taxes kept getting higher and other things climbed higher. The instances cited in the enclosed letter illustrate the distortions that are practiced and can be practiced under rent control. For obvious reasons, I do not wish to disclose the name of the individual who wrote it—the main reason being that I have not received his permission.

I hope that everyone interested in rent control will read the letter, which is as follows:

Hon. J. LEROY JOHNSON,
House of Representatives,
Washington, D. C.

DEAR ROY: You haven't heard from me for some time, have you? I want to urge on you not to vote for any more rent control when the present act expires. The thing has never been fair, as it has practically frozen all rents on the 1942 level, during which time not only expenses of operation; taxes, etc., have risen, but the ability of the tenants to pay rent in terms of dollars has doubled. Oh, yes, in occasional instances, by fighting the tenants at the rent office the landlord is able to get at most a 15-percent increase, as compared with a hundred-percent increase in almost everything else in the same period, including the tenant's income. We could put up with all that unfairness for a while, as long as there seemed to be a great scarcity of rental units. That scarcity, however, has ceased, except in isolated spots. In others there is an apparent scarcity, because of families spreading out in large houses which they can get for low rent, and one or two people occupy places which would easily accommodate five or six, without crowding. I have a tenant, who, when rent control went into effect, was occupying a seven-room house, with a family of three or four children. She was paying $20 per month. Upon my petition, the rent has gone up to $27.50 per month. Her children are grown up and gone. She can't rent a single room with kitchenette at that low a rent, so she continues to occupy the seven rooms all by herself, and I can't get her out as long as she pays the rent.

Another illustration: We bought a house in Carmel for a summer home. With the furnishings, it cost $20,000. In order to get some income from it during the times we did not intend to use it, we proposed to rent it. We had the rent director look over the property, and he gave us a figure of $175 per month as maximum rental. It had never been rented before. A tenant was not secured until last November. At that time the rental period was pretty well past. We secured a particularly desirable couple, and, because of the lateness of the season, and the fact that they appeared to be very fine people, and would take good care of the place, and only wanted it for a few months, we let them have it for $125 per month. We were then required to register the maximum rental for the place at $125 per month, because that is the rent we allowed this couple to pay. We are told now that, in order to increase it from $125 to $175, which the director himself admits it is worth, we will have to file a petition showing hardship, etc. We are further told that, having once rented it by the month, we can never rent it by the week to summer vacationists at anything more than a pro rata of the low wintertime rental. The result of all this regulation is that, when we get that house back, we intend to take it off the rental market completely; thus, rent control helps create a scarcity of housing.

A client just came in. Through an estate he acquired a house which had never been rented before. He offered it for rent fully furnished. A real-estate firm advised him that $95 was a fair rental. They secured a tenant who was willing to pay that amount and signed a written lease for a year, agreeing to pay it. The tenant was represented as having a family consisting of his wife and a small baby only. The tenant took possession, moving in himself, his wife, his wife's mother, a grown son, and three children. Shortly thereafter, he filed a petition to decrease the rental from the $95, which he freely and voluntarily agreed to pay, to $52.50. It is probable that petition will be granted. That kind of fraud is perpetrated on the owners and countenanced by the rent office constantly. Under this law a tenant cannot be held for the most palpable fraud, but the landlord can be assessed triple damages for some technical violation.

You may place no value on my personal opinion in this matter, but you can't get around what happens in actual cases. I have heard that once a Government bureau gets its tentacles on the public, it never lets loose. I hope this is one bureaucracy which you can help abolish.

With best regards, I am

Yours very truly.

Union Hiring Halls in the Maritime Industry

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. KELLEY of Pennsylvania. Mr. Speaker, already there are signs of the undermining effect of the Taft-Hartley law on American industry. The recent action of the United States Supreme Court, sustaining a lower court ruling of the maritime union hiring hall as illegal under the Taft-Hartley Act, brings closer to realization the disruptive influence of this ill-conceived piece of legislation.

In the maritime industry, more than anywhere else the Taft-Hartley ban on the closed shop poses a problem that must be reckoned with immediately. Otherwise a virtual break-down of the industry's ever-increasing efficiency of operations looms large. For the Taft-Hartley closed-shop ban not only strikes at the heart of the seafaring unions, but it is an immediate threat to the stability of the industry of which they are a part.

Management, as well as labor, stands to lose if the outlawing of the hiring hall is not rescinded.

Undoubtedly that was not the intention of the proponents of the Taft-Hartley Act. Nevertheless that is exactly what the closed-shop ban is on the verge of accomplishing in the maritime industry at least.

Any objective study of the maritime unions' hiring halls will demonstrate the value to all concerned of the continued use of this method of employment. These hiring halls are at the very core of the industry's operations. Arbitrarily to knock them out would inevitably upset the entire pattern of operations and invite a return to chaos, confusion, and even corruption.

I have observed the hiring halls, as maintained by the seafaring unions, in action. As a result of these observations I am unqualifiedly in favor of giving them legal status—for the simple reason that they have accomplished much in behalf of the American seamen and the American shipowner, with consequent advantage to our Nation.

On a recent stopover in New York, I visited the headquarters of the Atlantic and Gulf district of the Seafarers International Union, A. F. of L., for the purpose of establishing in my mind how the hiring hall principle was applied.

In the seafarers' hiring halls the seamen obtain employment through what is called the rotary system of shipping. A man who comes in for a job is registered and is given a shipping card. His name is then placed at the bottom of the shipping list, and as jobs are called out they are offered to the men at the top of the list.

The men at the top of the list may accept the jobs or reject them—without affecting their prior claim when another job is called. In this way the list rotates. In other words, jobs are distributed on a first-come-first-served basis. No other consideration enters the picture. The only qualification is the required competence for the job, and all eligible applicants have certificates of endorsement issued by the United States Coast Guard.

The rotary system is democratic in principle, and at the seafarers hall I witnessed it as democratic in practice.

This, then, is the method of employment which the SIU and other maritime unions are defending in their fight against the Taft-Hartley ban. And they are morally justified in doing so.

Anyone even slightly familiar with the sordid hiring practices in the maritime industry prior to the advent of the union hiring hall will readily admit the justification for the unions' stand.

In the preunion hiring hall days ships' complements were filled by the most odious means. Men were drugged and hustled aboard ships by unscrupulous characters who received fees for their piracy. A detestable breed of parasites known as crimps sunk seamen deep into debt, then forced them to take jobs aboard vessels under any kind of conditions as a means of releasing them from financial indebtedness.

A man who went after a job on his own was subjected to discourtesies and abuses which he had to bear lest he jeopardize his chance for employment. Seamen were stripped of every vestige of dignity. Understandably, the merchant marine could not be expected to operate efficiently in the midst of such medieval treatment of the men handling their vessels.

Merchant seamen like those in the SIU are determined to keep the present democratic method of job distribution, which, they maintain, is only possible through the medium of their union.

But the clincher in the argument for immediate action to return the union hiring halls to their pro-Taft-Hartley status is the fact that the shipowners themselves have indicated their desire to continue present hiring methods. From management's standpoint, dispatching men to ships from the union halls has proved to be decidedly economical.

Under the present hiring-hall system the shipowners know that their ships will arrive and leave on time. They know that their ships are in the hands of responsible, competent seamen who are demonstrating an ever-increasing responsibility.

In the light of conditions in the maritime industry today, the Taft-Hartley Act's ban is a mistake. It should be recognized as such. To sit by and do nothing to ward off the damage it could reek would simply be compounding the error.

A frank, objective approach indicates that remedial legislation is essential to correct the injustice of the Taft-Hartley ban on the hiring hall to the American seamen, the American shipowners, and to the Nation.

The Case Against Mr. Truman

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Case Against Mr. Truman," published in the March 9, 1950, issue of the New York Herald Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CASE AGAINST MR. TRUMAN

The outcome of the coal strike confronts the Truman administration with serious charges, of which it is bound to hear much in the future. Seldom has a government engaged in a series of concerted moves more calculated to undermine the authority not only of a particular law but of law in general. Mr. Truman may congratulate himself upon what he assumes to be the breakdown of the Taft-Hartley Act. But he shall find, in the long run, that he, and not the law, is called to account.

The political campaign which Mr. Truman has waged against Taft-Hartley, echoing the empty cry of "slave law," could not have been better devised to induce the miners into disobedience. Did they not have every reason to suppose that a law which was thus attacked by the Chief Executive would be enforced, if at all, in a half-hearted way? Mr. Truman's repeated denunciations might have been excused had they been part of a sincere attempt to have the law improved. Yet he blocked amendment deliberately. He might have had written into the law a plan for seizure, giving him in advance the weapon he sought desperately at the last moment; he might have had written into it a provision for fact-finding boards empowered to make recommendations. These amendments, as well as many others, were approved by Senator TAFT and would have been enacted except that Mr. Truman preferred to keep alive what he supposed to be a profitable political issue. To have continued his slurs upon the Taft-Hartley Act was, in these circumstances, a course of utter irresponsibility.

Having thus weakened the law's authority, the President proceeded to delay invoking it until the last possible moment. An Executive whose freedom from partisan motivation was entirely assured might have been given the benefit of the doubt in choosing his own moment to ask for an injunction. But the tardiness, coming on top of Mr. Truman's previous behavior, could only be interpreted as one more indication that he did not take the law seriously. It had the additional result of bringing the country so close to a severe catastrophe that time was not available for bringing the necessary legal processes to their end. An earlier resort to the Taft-Hartley injunction would have made possible an appeal from Judge Keech's decision, which might have left the legal situation entirely different from what it is now.

To crown all this, the Government's prosecution of the contempt case against the union was notably lacking in vigor. It will be observed that Judge Keech held it to be entirely conceivable that the strike in the face of the injunction had been ordered, encouraged, recommended, instructed, induced, or in some wise permitted by means not appear-

ing in the record. The gist of his decision was simply that, evidence of this kind not having been presented, he could not convict on conjecture. But why was it not presented? Senator TAFT and others claim evidence to show that union officials recommended disobedience of the back-to-work order and that organized goon squads kept union members from the mines. It would certainly seem possible for the Government, where so clear an indication of union responsibility existed, to document the case effectively. Why was this not done? Or if it was done, why was the evidence not put in the record?

A persistent attitude and a long train of acts show the Truman administration to lie under the charge of having subverted the Nation's laws in the hope of gaining political advantage. That is as heavy a charge as can be made against a Chief Executive. It is inconceivable that a people conscious of the duties and the supreme responsibility of their President should soon forget it.

ITO Agreements

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by George Sokolsky dealing with ITO agreements, and with the effect such agreements are having on industry, especially the pottery and chinaware industry, particularly in the State of Ohio.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS
(By George Sokolsky)

While the State Department is pushing its multiple trade agreements and the internationalists are pressing for the adoption of the ITO agreements, another American industry is being squeezed to death by cheap-wage competition and dumping by dollar-anxious governments.

The item is chinaware and pottery.

This American industry is widely scattered and is held by comparatively small businesses. There is a concentration of pottery and chinaware manufacturing in the vicinity of Zanesville and East Liverpool, Ohio, but this is an unusual industry not only because it is widely scattered but also because there remain in it one- and two-man plants.

It is therefore difficult for chinaware manufacturers to exert great political pressures.

According to the Vitrified China Association, the wage scale of workers in this industry in 1948 was: the United States, $1.30 per hour; England, 43 cents an hour; Belgium, 31 cents; Germany, 30 cents; France, 26 cents; Italy, 25 cents; Czechoslovakia, 22 cents; Japan, 9 cents. And in this country, wages have gone up since then.

As labor costs are the biggest item in the production of this commodity, American labor cannot compete with low-scale wages, particularly when the tariff is manipulated to favor the foreign product.

I am told that over 100 small one- and two-man plants around Los Angeles have been driven out of business since the war, due to dumping from Japan.

Medium-grade chinaware is in competition with chinaware from Czechoslovakia. Considerable so-called Dresdenware is coming into this country marked Meissen, Czechoslovakia. But Meissen is not in Czechoslovakia; it is in Saxony, in east Germany, which is in the Russian zone.

In a word, our customs officials permit the Russians to fake a label. As there is no American consul in Meissen, the manifests are handled from our consulate in Prague as though it were Czechoslovakian goods.

Perhaps it really makes no difference, but there are Americans who would not buy Russian-made or controlled goods at any cost. Such persons are being fooled into buying this stuff on the assumption that it is Czechoslovakian and not Russian-zone goods, if it makes any difference.

Imports are on the constant rise. Although the total dollar volume of this generally low-priced commodity is not high, the effect of the imports on our industry is important and, in some places, disastrous.

An astonishing callousness toward American producers of chinaware was recently noted by Senator HUGH BUTLER, of Nebraska, who called attention to the fact that American embassies use German (that is, Russian) chinaware in preference to the American-made. This was done without a bid, without advertising, without giving the American manufacturers a chance.

Allen (Allyn?) Donaldson of the State Department is reported to have explained this unusual attitude toward American goods as follows:

"The reason why we didn't advertise this thing was because we didn't want commission men to come down here from New York."

It probably would inconvenience Mr. Donaldson—take his time and that sort of thing.

The British have some regard for their own manufacturers. Senator BUTLER's report includes this letter, which to me makes sense:

BRITISH EMBASSY,
Washington, November 8, 1949.

Mr. ROBERT F. MARTIN,
Vitrified China Association, Inc.,
Washington, D. C.

DEAR SIR: I have to acknowledge receipt of your letter of the 31st of October, and would point out that, as the United Kingdom is itself the manufacturer of some of the finest chinaware in the world, we are not in the market for china manufactured elsewhere; nor do I think that any of the other embassies in the British Commonwealth would be interested in your proposal.

Yours very truly,
F. A. DE MOLEYNS.

After what happened to the Waltham Watch Co. in competition with Swiss watches, American producers of articles which compete with European and Asiatic goods ought to study the various measures which the internationalists have cooked up against us.

They cry that those who need dollars should be permitted to dump their goods into this country. It is even being suggested that if our industries go broke, the owners of companies are to be given a subsidy and American laborers a dole on condition that they do not produce American goods.

Servicemen's Readjustment Act

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution adopted by the Revere City Council under date of March 6, 1950, at Revere, Mass.:

Resolution memorializing Congress relative to Public Law 346 of the Seventy-eighth Congress, Servicemen's Readjustment Act of 1944

Whereas Public Law 346 of the Seventy-eighth Congress, the Servicemen's Readjustment Act of 1944, more generally known as the GI bill of rights for World War II veterans, approved June 23, 1944, and specifically that portion which relates to readjustment allowances payable to honorably discharged veterans with 90 days or more of service, after September 16, 1940, was intended primarily to assist veterans to readjust themselves to civilian life by granting of security payments during the process of transition, up to a maximum of 52 weeks, with payment rates of $20 weekly; and

Whereas many veterans did not avail themselves of the benefits of said law because not in need during its life; and

Whereas many veterans are now in need, and whereupon others shall be in need in the future for like assistance as prevailed while the law was in force: Be it hereby

Resolved, That the Congress of the United States be memorialized that the provisions of said law be therefore revived and extended, such as to offer equal opportunity to those veterans who have not hitherto availed themselves of its provisions.

Proposed Benefits to Government Employees Who Retired Prior to April 1, 1948

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated February 6, 1950, addressed to me by George Cutler, president, Second Division, National Postal Transport Association.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL POSTAL TRANSPORT
ASSOCIATION, SECOND DIVISION,
Washington, D. C., February 6, 1950.

Senator WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: It has been with considerable regret and misgivings that I

have been following the slow progress of S. 878, a bill designed to give those employees who retired prior to April 1, 1948, certain deserved benefits which were unfortunately denied them under Public Law 426, Eightieth Congress.

All Federal civil-service employees are fully aware of the major role that you played in the enactment of the legislation best known to us as the Langer-Chavez-Stevenson Retirement Act, and appreciate that many of its most favorable features would not have been incorporated therein but for your efforts.

We are also cognizant of the fact that you felt, as we did, that Public Law 426, despite your best efforts, contained a glaring inequity toward those employees that retired prior to the effective date of the act. These men, after a lifetime of faithful and efficient service, trying to exist on completely inadequate annuities in a period of runaway inflation, were offered the unfair choice of either a $300 annual increase in their annuities or a provision for a widow's annuity should they predecease their wives.

We can well appreciate the dilemma of these men, forced to choose between the $300 they needed so desperately to make ends meet and the protection that their lifetime helpmates were entitled to have in the event of the annuitant's prior death. Surely this was a terrible choice to inflict upon a faithful employee after a lifetime of service. It should not be forgotten also that these men contributed to the retirement fund during all of their service in dollars worth 100 cents while their annuities were being paid in dollars worth less than 60 cents in terms of relative purchasing power.

This inequity has now persisted almost 2 years and should be corrected without further delay and we are certain that you will do all in your power to secure enactment of S. 878 in the interests of justice and equity.

In common with all postal employees, let me again take this opportunity to express our appreciation for your constant efforts in our behalf and to assure you of our sincere gratitude for your interest in our problems.

Sincerely,

GEORGE CUTLER,
President, Second Division, National Postal Transport Association (Formerly the Railway Mail Association).

Government Economy

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter signed "Sam Citizen," which appears in the February issue of the Swift News, published by Swift & Co. I believe the sentiments therein expressed are shared by millions of Americans. I am indebted to Joseph M. Nolan, a member of the City Council of Kansas City, Mo., for calling attention to this excellent little article.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EVERYTOWN, U. S. A., *1950.*

UNCLE SAM,
Washington, D. C.

DEAR UNCLE: Let's talk this thing over. Somehow I have had the idea you were working for me—that I gave you your job by my vote.

It looks now like the shoe is on the other foot. You've got me working for you. I don't quite know how it happened, but here are the figures:

	Days each year
To pay our debts for former wars I work	11
For defense and the cold war I work	24
For other Federal expenses, I work	12
Total	47

Now you're talking about spending more. If you put these bills across, they will cost me another 20 days per year. In addition, I have to work for State and local government expenses 14 days.

That is a total of 81 days. There are only 252 working days in a year. So, you and others are putting the bite on me in taxes for almost a third of everything I earn. And it hurts.

President Truman appointed a bunch of pretty smart people to study the problem of Government economy a while back. Their outfit was named the Hoover Commission. I'd like to see you follow their recommendations.

Now I know, Uncle, that I've asked you to do a lot of things for me. Too many, I guess, considering how much they all cost. If I depend on you to put aside more money for my old age and to meet my bills when I'm sick, somebody will have to pay. And if you're going to pay me whether I work or not, build me a house, and send my kids to college, there's just one thing that's certain. Your hand will be in my pocket all the time instead of just about one-third of the time, or else you'll be bankrupt. Credit is a great thing, but you can stretch yours too far just like I can mine.

So, what am I going to do about it? Well, Uncle, I'm going to let my Congressman know what I think we taxpayers can afford and what we can't pay for. And I'm going to tell him, too, that he has to limit spending to absolute necessities.

Yours truly,

SAM CITIZEN.

British Columbia—Forty-ninth State?

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. BUTLER. Mr. President, it is not my habit to insert personal letters in the RECORD, but I received yesterday one which I think contains an original suggestion with reference to proposed statehood bills, and I should like to have it printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ZION, ILL., *March 6, 1950.*

United States Senator BUTLER,
Member, Interior and Insular Committee,
United States Senate,
Washington, D. C.

DEAR SIR: Our local paper, the Waukegan News Sun, recently had an article referring to your stand on statehood for Alaska and Hawaii. The Chicago Herald American has been pushing this idea for weeks.

I believe definitely in your stand on blocking this action until we can use a more sane and realistic approach to our national safety.

My idea in writing to you is this. We Americans care nothing for the political angles, but what is best for all of us for our betterment as a whole and national safety problems. I have read many times of Canadians wanting to join us. Provinces or certain districts.

Why not start negotiations to see if British Columbia would vote to join us and make Columbia our forty-ninth State? Then Alaska would become the fiftieth State.

This is the best method to keep our borders contiguous and realistic in adding new States. Otherwise, to make far-away places or islands, States, is laughable.

This would make it possible to better build up our coast defenses of the west in radar and landing fields.

Hope this sounds sensible and await your kind consideration to your fellow Members. I am

Respectfully yours,

CHESTER G. ROSS.

The Real Damage Done

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an article by David Lawrence which appeared in the Washington Evening Star of March 8, 1950:

LAW SEEN DAMAGED MORE THAN ECONOMY BY LEWIS' VICTORY—SYSTEM OF ENFORCEMENT AND LABOR REGULATION LOST BY COURT RULING

(By David Lawrence)

A survey of the wreckage strewn by John L. Lewis and the mine workers' union shows much more serious damage to the fabric of law and order than to the Nation's economy.

What was lost in dollars and cents by the mine owners and by the miners and the disinterested public is not as great as the injury done to the whole system of law enforcement as well as to the field of labor-management regulation by law.

For from now on all union officers have a precedent encouraging them to defy court injunctions and court orders merely by claiming that the individual members act spontaneously and not by concerted decisions.

John Lewis readily gave up the clause in the contract declaring that his members would mine coal only when "able and willing." This clause became superfluous the moment Judge Keech's decision was rendered. Wildcat strikes and so-called unauthorized work stoppages now can be undertaken apparently without fear of the orders of a court which heretofore would have been expected to secure compliance with its orders to desist from violation of contract law or the provisions of the Taft-Hartley Act.

EVIDENCE SUPPRESSED

What is worse is the way the administration here, unchecked thus far by Congress, has suppressed evidence showing how the court's injunction was flouted by a conspiracy inside the miners' union. Thousands of words of affidavits told the Justice Department attorneys plainly how the mine unions held local meetings throughout the coal fields several days in advance of the expected issuance of a court injunction and how, by word-of-mouth arrangements, the plan was engineered to disregard the telegrams sent by their own officers at the behest of the court.

Now John L. Lewis boasts in the newsreels shown in the moving-picture theaters throughout the Nation this week that his union "discredited the Taft-Hartley abomination"—by which he means, of course, the injunction provisions that constitute its teeth. He is right—the union has discredited not only the law but the whole system of enforcement of the orders of the Federal courts of America.

The State courts have also been damaged in prestige. Although many suits have been filed alleging a violation of laws governing restraint of trade by means of the 3-day week and other controls over production, the operators, as a condition toward getting the Lewis signature on the contract, were compelled to agree to drop all such suits and in effect, withhold from the State authorities any evidence to prove law violations. Thus is economic duress used to break down the proper functioning of State courts.

GAINS NEW INFLUENCE

Most important is the new influence which Mr. Lewis gains over the whole labor movement. Though not in the AFL or CIO, he has begun to dominate them both. He offers $1,000,000 to Walter Reuther's auto workers, sends back the $500,000 which Philip Murray's steelworkers sent him and revives his idea of a mutual-aid pact for defense whereby the hundreds of millions of dollars amassed from workers' dues shall be used to buy legislation and influence the election of those who will do the bidding of union groups. Mr. Lewis frankly admits, in a recently published biography, that he paid $500,000 to the Roosevelt administration to buy the passage of the Wagner labor-relations law.

Mr. Lewis also has led the way to something else—far more significant. He is the first labor leader to achieve for his union a 2-to-1 control of the trustees of a big pension fund and involving shortly about $300,000,000 of money. Other union leaders will demand the same thing now.

Mr. Lewis bids fair by his challenges to make a last supreme effort to bring about a dictatorship by means of a working alliance among the big unions. The other leaders may be jealous of him, but he has demonstrated to the rank and file that he is bigger than Presidents or Congresses—they become putty in his hands.

The abuse of the public interest in the coal controversy brings nearer the day when an exhausted and desperate public will demand some form of Government control of both unions and industry.

Labor Curbs in Britain

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, March 9 (legislative day of Wednesday, March 8), 1950

Mr. BRICKER. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD, an article entitled "Labor Curbs in Britain," and an editorial dealing with the same subject, published in the Wall Street Journal of March 8, 1950.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

LABOR CURBS IN BRITAIN

(The following report on the extent and use of labor controls by the British Government was written by Allan Flanders, formerly an official of the Trades Union Congress of Great Britain. It is condensed from Labor and Industry in Great Britain, a quarterly review, published by the British Government. For a discussion of this report, see the editorial "Never? Well, Hardly Ever" in today's review and outlook columns.)

In discussing the controls over Britain's economy, there is usually very great misunderstanding over the extent to which labor is controlled.

It is true that Britain has retained in the years since World War II some statutory controls over the movement of labor from one occupation to another. Unfortunately, however, the purpose, nature, and extent of these controls are not always understood or even correctly reported, with the result that sometimes strange and unrecognizable pictures are formed of the industrial life of Britain's workers.

Let us first glance, however, at the reasons why it has been necessary in postwar Britain for the government—with the full support of the trade unions—to exert any influence on the movement of labor. Basically this is due to the maintenance of full employment. As long as the fear of unemployment forced most workers to keep to whatever jobs they could find, no industries were seriously bothered with the problem of a labor shortage. Full employment has given to the workers a new industrial freedom.

THE UNDERMANNED INDUSTRIES

According to their qualifications they can choose a job to their liking, one in which the wages and working conditions taken together seem likely to provide them with the maximum satisfaction. During a transition period this new freedom was bound to lead to the existence of undermanned industries. In the long run a relative improvement in the wages and conditions in these industries—which has already taken place to some considerable extent in agriculture, coal mining, and textiles—is likely to overcome their labor shortage. But this takes time and the rate of improvement is limited by many other considerations. In the meantime there is an urgent need to match full employment with full production and to ensure that essential work is not held up by the lack of essential workers.

The control-of-engagement order, introduced in October 1947, has been the main legal instrument employed for this purpose. Under this order workers within certain categories of employment (excluding most salaried occupations) and within age limits (18 to 41 for women and 18 to 51 for men) have to report to an employment exchange when they are out of work. Subject to the important qualification that it should be suited to their industrial qualifications, they are offered work in the essential industries, from a list of first-preference vacancies. They are not, however, compelled to accept any of these vacancies providing they look for some form of essential work.

Very often the employment exchanges receive applications from workers to take jobs which they have found for themselves, or from employers to engage particular workers. Although they may seek to persuade the workers concerned to accept first-preference vacancies, the exchanges are not allowed to use the order to prevent workers from taking employment of their own choice providing it is essential.

THE VALUE OF PERSUASION

The value of persuasion can be illustrated by the fact that in 1948 the total manpower employed in the principal first-preference industries increased by 3 percent (in textiles it was as high as 6 percent) as compared with 1.1 percent in other industries and services. The results since April 1949, however, have been less striking, partly because the requirements of many first-preference industries for additional manpower have become smaller, more specialized, and harder to fill.

It is true that the wartime powers of direction of labor are still retained by Britain's Government, but these powers have been used almost exclusively to prevent workers from leaving coal mining and agriculture. Since October 1947 in all 473 mine workers and 159 agricultural workers have been refused permission to leave their industries, but this particular control has now been withdrawn. Otherwise direction has been used in only 29 cases out of some 9,500,000 vacancies filled by the Ministry of Labor since the introduction of the control-of-engagement order.

The problem of the undermanned industries has been eased a good deal in the past 2 years, partly because of the influx of foreign workers into civilian employment in Britain. But some industries—notably textiles—are still short of manpower. Moreover, there is an immediate need following devaluation of sterling for measures which would help to secure some redistribution of labor in favor of the dollar-earning and dollar-saving industries.

NEW METHODS OF EASING LABOR MOBILITY

The National Joint Advisory Council to the Minister of Labor, on which the British Employers' Confederation, Britain's Trade Union Congress, and the nationalized industries are represented, has, in fact, been considering whether there should not be some overhaul of the present procedure under the control of engagement order. As yet no decisions have been announced, but it is most unlikely that there will be any attempt to use the powers of direction.

A tightening up of the administration of the Control of Engagement Order has also been considered. This may take the form of limiting the range of jobs offered to workers by employment exchanges to less than four or more alternatives usually provided at present. A shorter list of priority industries may be drawn up and employment exchange managers may be encouraged to consider the merits of individual firms in their districts in regard to dollar earning or saving.

In short, Britain is still confronted with the problem of moving workers to essential work, but encouraged by her past experience she continues her efforts to solve the problem without using the equally undesirable compulsions of outright direction or unemployment.

NEVER? WELL, HARDLY EVER

No government in history, Sir Stafford Cripps once remarked, has ever succeeded in managing an economy without using compulsion on labor.

But the British Socialist government, he added, was going to prove it could be done, that a free people could have a planned economy without compulsory labor. Britons never, never, shall be slaves.

In an adjacent column this morning we print a report on the compulsions used on British labor by the Socialist government to support its planned economy. This report is intended as a defense of the Government's labor policy; it was written by a former official of Britain's Trades Union Congress and a friend of the Labor government, and it was published by the official British Information Service.

This report speaks unintended volumes.

The Socialist government, says Mr. Flanders proudly, has used compulsion against British workingmen in a total of only 661 cases. These have been almost exclusively to prevent workers from leaving coal mining or agriculture; otherwise, compulsion has been used in only 29 cases. Furthermore, workers have never been compelled to accept a specific job provided they would look for some form of essential work, i. e., work the Government considered essential.

Now, this is a fine tribute to the moderation of the Socialist government. In all Britain only 661 persons have had to be put to forced labor to fit the plans, doubtless a matter of great comfort to the coal miners who could not leave the coal mines and to the farm hands who could not leave the land.

Once, it is true, there was an ugly name for the practice of chaining a man to a job. It was called serfdom. But now it is called "a new industrial freedom."

In this new industrial freedom the powers of compulsion are not used promiscuously or by whim. They are invoked only because it is at times "necessary to secure some redistribution of labor" and only when the Government's plans are "confronted with the problem of moving workers to essential work." The planners are proud that this is hardly ever.

It is most unlikely, says Mr. Flanders, that there will be any greater attempts to use the powers of direction in an absolute sense. The most that is now being considered is a limitation of the range of jobs offered to workers to less than four, the number usually provided a man at present. The worker can take any job he likes so long as he likes one of the two or three approved by the Government. The Socialist planners, encouraged by their past experiece, will continue their efforts to plan for greater freedom without using undesirable compulsions.

No government in history, Sir Stafford Cripps once remarked, has ever succeeded in managing an economy without using compulsion on labor.

Veterans' Hospital for South Texas

EXTENSION OF REMARKS

OF

HON. LLOYD M. BENTSEN, JR.

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. BENTSEN. Mr. Speaker, it has often been said that while the battle wages and the sacrifices of our patriots are fresh memories in the hearts of our countrymen, the soldier and veteran need not worry about the American Government doing its utmost to compensate him for his sacrifices; but that as war, with all its tragedies, becomes more distant in our memories, the Government tends to forget its responsibilities to these men.

A true example of this can be cited in the plight of the veterans in south Texas. They recently received an order from the Government eliminating 125 contract beds awarded to the Veterans' Administration for treatment of service-connected and emergency cases in the south Texas area. This is an area comprised of 30,000 square miles and having within its perimeter well over 170,000 veterans.

This is a new country and a rapidly growing country in which civilian hospitals have not been able to keep pace with the increase in population. Throughout south Texas all civilian hospitals are filled to capacity. A check of these hospitals in the area shows that they have no surplus beds that might be used for veterans even if reimbursement from the Veterans' Administration were possible.

The only facilities for treatment of veterans in south Texas are Brooke General Army Hospital in San Antonio and the Veterans' Administration Hospital in Houston. These two hospitals are approximately 400 miles from the valley and it is obviously hazardous for acutely ill patients to travel such long distances. In the case of mental patients who are often violent, they have to be confined in local jails until arrangements can be made to transport them over these vast distances to a veterans hospital that can accommodate them—a tragic reward for a man who has donned his country's uniform and through his sacrifices has become mentally or physically ill.

The hospital at Corpus Christi, although not in my district, is adjacent to it and the 125 beds therein which were designated for veterans use have been of considerable assistance in helping us meet part of our problem. The Veterans' Administration states that throughout the country we have an average of 1 bed available for every 423 veterans. Compare this with the veterans of our area who have over 170,000 veterans within a 30,000 square mile area and not one bed available for either service-connected or emergency cases.

The hospital at Corpus Christi was placed in operation on July 1, 1941. It is well constructed and could not be duplicated for twice the original cost of prewar construction. It has excellent planning, each ward having a glass-enclosed room for the nurse with every bed in sight at all times.

I have been told that the elimination of these 125 contract beds was for the purpose of economy, but I cannot believe that a careful study was made or the result would have been otherwise. A check of the daily food cost per patient shows an average of $1.08, which is an unusually low food cost. At present the daily patient cost is $13.53, and if the 125 contract beds are denied and it is reduced to 100 beds for naval personnel only the cost will rise to $20 a day or approximately 50 percent above the present cost of hospitalization. The hospital is now adequately staffed, but some specialists will still be required in various categories to serve the 100-men hospital. A reduction of over 50 percent in the beds will result in a reduction of only 4 doctors, 10 nurses, and 30 corpsmen. At the present time the hospital has a manager and medical assistant, 1 psychiatrist, 1 chief surgeon, 1 chief medical service, 1 EENT specialist, each having an assistant; 1 urologist, 1 laboratory specialist, 3 obstetricians, 1 dental officer, and 1 administrative assistant, a total of 23 medical specialists. There are 23 nurses and 124 corpsmen on duty.

At the present time there are 111 war veterans in this Navy hospital. A survey shows that 30 percent have service-connected disabilities and this is considerably above the national average. Eighty-one veteran patients are nonservice connected but were admitted as emergency cases. Of these 81 patients none could afford to pay for private hospitals.

One patient interviewed by the American Legion field representative is a Legion post commander from Bay City, Tex. He states that he was unconscious when admitted for pneumonia and came to while under an oxygen tent. He said he would have died if emergency hospitalization had not been possible.

Once more it appears that too often our Government departments look to the veterans first when they must economize in the Government. We have been told that the best prophet is a man with a good memory. We have but to remember the attack on veterans' services following the First World War to realize where this present trend is headed. The economy proposed in this measure is, indeed, a false economy, for a study of the facts shows that if these veterans are transferred to other hospitals, as is set out in the order, the cost to the Veterans' Administration will be considerably more. In turn, the taxpayer will suffer because of this ill-advised, so-called economy move. The total per diem cost for treating patients in VA hospitals throughout the United States averaged $15.41 as compared to the daily cost of $10.75 for VA patients in the Navy hospital. If the order is carried out, it will be an additional cost to the taxpayer of $4.66 per patient, or $552.50 a day more than would be expended in the present hospital at Corpus Christi. This amounts to $201,662.52 per year. The argument that this is an economy move just does not make sense in view of the figures shown. In addition to this, it will result in not only an inconvenience to the veterans of this area but the possible loss of life due to a lack of facilities for emergency treatment in the distance to hospitals that can take care of the patient. In addition to the increased cost to the Veterans' Administration for taking care of these patients at other points, the Navy, too, will bear an increased cost of $6.94 per patient, or $263,155 a year.

I want to commend the distinguished chairman of the Armed Services Committee in asking that this order, along with similar curtailments of hospital facilities, be delayed until a congressional

investigation of the matter can be made. I have been told by members of that committee that a subcommittee will personally investigate the proposed reduction at Corpus Christi and will visit the base hospital this month. In the name of the veteran and the taxpayer, I ask revocation of this unwarranted and ill-advised order for reduction of VA hospital beds at Corpus Christi.

Depletion Allowance Vital to Defense

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. LUCAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Worth Star-Telegram of February 24, 1950:

DEPLETION ALLOWANCE VITAL TO DEFENSE

An oil well is not like a factory. Except for normal wear and tear on buildings and equipment, a manufacturing plant can be expected to go on producing at approximately the same rate year after year without losing its productive capacity, and with only periodic need for new large-scale capital investment. But every time an oil well produces a barrel of oil it is that much nearer to exhaustion. Every barrel of oil brought to the surface drains away part of its capital assets and diminishes the value of the property.

So the oil producer, if he wants to maintain his producing level, must be constantly engaged in the search for new oil. That is roughly analogous to the problem that would face a manufacturing concern if it had to build a new plant, or add substantially to its present plant, each year. The cost of searching for new oil, with wells now being drilled deeper and deeper, is high. And, as anyone with even the most casual knowledge of the oil industry can testify, it is an extremely hazardous and uncertain business.

That, in substance, is the picture painted by L. F. McCollum, president of Continental Oil Co., in a Fort Worth speech before seventh district members of the Texas Bankers Association to show why the administration's effort to abolish or drastically reduce the present tax allowance for depletion of oil wells is unwarranted and dangerous. The theory of this allowance is that the oil industry should be given special tax consideration if the new capital required to seek out and develop new sources of oil is to continue to be available.

This depletion allowance of 27½ percent of the gross income of each oil-producing property is in no sense a loophole in the tax laws but a percentage fixed by Congress in 1926 as a result of actual experience in the rate of exhaustion of oil fields. It is entirely in accord with the principle that capital should not be taxed but only the income from capital. It is recognition also of the the high risks involved—risks which make it possible that the producer has sunk much money into drilling dry holes before he brought in the well on which he is allowed to recover his capital tax-free.

Even in proven oil territory, as Mr. McCollum pointed out, one out of every five wells drilled turns out to be a dry hole. For purely exploratory drilling, this percentage of failures naturally is much higher. In 1949, 82 percent of the wildcat wells drilled in the United States were dry. Of all the wells drilled in this country last year—wildcats and development wells (those drilled in supposedly proven areas)—more than one of three was a dry hole.

Money invested in such operations is risk capital indeed, and if the tax incentive is wiped out or substantially reduced there may be few who will be willing to take the gamble. The ultimate results of a sharp lessening of the effort to find new oil reserves are not difficult to see: Less domestic oil available, dependence of the United States upon foreign oil which could be cut off in the case of war and price-manipulation in time of peace, shrinking incomes of oil producers and the many businesses dependent upon the petroleum industry, lower State revenues which would have to be made up from other sources. These unwelcome prospects bear out Mr. McCollum's statement that not only would all the public be made to suffer from a change in the tax allowance, but the national security might be seriously menaced.

As Mr. McCollum also pointed out, the attack on the tax status of the oil industry comes at a time when it is harassed from other directions. The postwar demand for crude oil has slackened its rate of rise just at a time the industry has completed a $1,750,000,000 program to increase its productive capacity. A flood of foreign oil began to pour into the United States just at a time when domestic demand was dropping behind domestic supplies, and these imports show no sign of slackening. The British announced a policy which freezes American dollar oil out of much of the world market, thereby bringing the prospect of release of even more American-produced foreign oil into the United States.

All this, plus the threat of drastic revision of the tax law, falls with especial harshness upon the independent producers—the little fellows of the oil industry. They are the men who, according to Mr. McCollum's figures, in 1948 put down 78 percent of all the development wells drilled in the United States and who are responsible for most of the wildcat oil discoveries.

Texas, as producer of 40 percent of the Nation's oil, already has seen the effect of sharp production cut-backs upon its State finances. The $26,000,000 State deficit in prospect at the end of the current fiscal year is directly due to the tax loss resulting from lowered oil production. Further discouragement of production would deal a heavy blow to a tax structure which is already wobbly.

Mr. McCollum calls it a fantastic paradox that the Government on one hand is trying to curtail future oil production ability in order to increase tax revenues, and on the other is proposing to spend millions of dollars to develop means for producing synthetic fuels. Quantity production of such substitute fuels is still years in the future. Meantime the oil industry, if not hamstrung by a penalizing tax policy, is capable not only of producing to meet the Nation's peacetime needs but of building up the capacity which would be vital in the case of emergency.

If the ill-advised policies now being advocated in Washington had been in effect before World War I the United States could easily have lost that conflict instead of winning it. And if those policies had been put into effect prior to World War II the United States could not have won that war either.

It has been said many times that the ability of this country to produce enormous quantities of oil from reserves already located and proven spelled the difference between victory and defeat. Are we foolishly to close our eyes to the lessons of the past?

To adopt an unrealistic tax program that would discourage oil exploration, or to smother the domestic petroleum industry by unrestricted imports of foreign oil would be to trifle inexcusably with our national economy and the Nation's defense.

Address of Gen. Omar N. Bradley

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. Omar N. Bradley, Chairman of the Joint Chiefs of Staff, before the Women's National Press Club in Washington, D. C., on Wednesday, March 8, 1950:

It would have been easier for the American people if the mantle of world leadership had fallen across their shoulders in a time of peace and international harmony. Circumstances, however, have willed it otherwise. The economic, political, spiritual, and military leadership of the Western World has devolved upon us in the midst of a cold war of economic distress, political insecurity, and international tension.

For 4 years after World War II, Americans thought more about reconstruction than defense, more about peace than about war. In the background lurked the ominous shadow of the atomic bomb. But we alone held the atomic weapon.

However, in the past 6 months since the President's announcement of an atomic explosion in the Soviet Union, the American public has given more thought to the possibility of war. There has been increasing doubt about our own security, and continued preoccupation with Russian capabilities of aggression.

This international tension has fostered national confusion. If we allow this confusion to persist, we can only expect a future period of national frustration. In our bafflement, we could make errors in judgment and action that would do us irreparable harm.

American leaders, with the full support and understanding of the American people, can dispel the present confusion by thinking sensibly, calmly, and clearly about national security.

On the foreign policy of our Government, and its supporting military strength, rests the confidence of all friendly nations.

If Americans intend to pursue a course leading to an increasing security, it is essential that they give more attention to long-range plans for defense. This Nation has adopted a long-range policy of international peace, and international collective security. This policy needs the support of a sound, long-range military policy that cannot be bent by each shift in the wind, tempered, or softened from day to day.

If the military preparations behind the iron curtain become the barometer for our national policies, then the likelihood of peace becomes as unpredictable as the March weather.

The headline phrasing of the question for 1950 is this: Are the United States defenses adequate? This question may be an oversimplified statement of the confusion on defense matters.

If we believe that war is to be thrust upon us in the near future, a $13,000,000,000 budget fails to provide the air power, the naval power, and the ground units essential to waging it by ourselves.

But our question can no longer be applied only to United States defense. For in the studied opinion of any aggressor, the industrial, commercial, and cultural prize of the world is western Europe.

Our defense needs, and our appraisal of adequacy, must include all of the friendly nations of the North Atlantic Treaty organization, as well as those other nations in

Europe whose security is tied in with our own.

As we study the problem of our own security, we must realize that our first goal is the prevention of war. The program for gaining this objective is the responsibility of the President, the Congress, and the President's Cabinet advisers, among whom the most important is the Secretary of State.

At the same time, however, it is the responsibility of the Secretary of Defense and his military advisers to assist in the programs for peace. The Department of Defense must provide the military backing for these national policies.

Several hundred thousand men and women of the National Military Establishment are overseas engaged in such activities for the Nation. Our occupation forces in the Far East, and in Europe, and all the supporting naval and air forces, are engaged in carrying out national commitments which are a sequel to World War II, and a preface to the world peace which we hope to attain.

It is obvious that a great portion of the defense budget is expended in this role of the Defense Department. The Joint Chiefs of Staff devote a great part of their thought and effort to the support of these programs. Many of the papers handled by the Joint Chiefs of Staff from day to day are for these specific purposes, in order that we can advise the President, through the Secretary of Defense, on the military implications of the plans, programs, and actions involving national policy.

If these programs and policies of the peace offensive at any time falter or break down, then we are charged with the protection of the United States by armed force, and the ultimate protection of any nation or group of nations whom the American people acknowledge as allies.

Our basic military structure consists of two main elements—the forces in being, and the mobilization base. Because the United States will not make war of its own volition, a fact as apparent to any aggressor as it is to us, our forces in being are maintained at a strength which can prevent disaster in the event we are attacked, and which can strike a retaliatory blow that will be strong enough to slow down the aggressor while we mobilize. It would be economically foolhardy and politically inconsistent for us to maintain forces in being sufficient to win a major war.

Our mobilization base must provide the educational, training, and logistical facilities that will assure us of a quick expansion of the armed forces in order that we can eventually bring the full might of this Nation, in conjunction with allied nations, to bear upon the enemy.

The forces in being must be maintained at sufficient strength, and with sufficient weapons, to protect the United States and to hold the bases which we would need in case of war. The Navy must have the capacity of keeping the sea lanes open to these bases, and to our allies. At present, the greatest threat to this ability is the modern submarine. Admiral Sherman's submarine program and his antisubmarine program must go along as fast as our research and development facilities will permit. We must not stint on any well-conceived and coordinated plan for solving the submarine menace. I am glad to be able to tell you, from my personal observation, that we are progressing rapidly in this field.

The Army has managed to effect the savings demanded in the present budget and still provide 10 divisions of ground forces, plus additional regiment combat teams, with their essential combat-support and supply units.

The Air Force program at present is building toward 48 groups, which, in many respects, are larger and stronger than similar groups that were in existence 2 years ago.

The present forces cannot give the United States an absolute guaranty against a disastrous blow. But these balanced forces are a part of the longer-range plan to provide an optimum chance of withstanding an attack, to be followed immediately by mobilization.

Our stock pile of atomic bombs, and our ability to deliver them, affords us an immediate but inconclusive blow of retaliation. Our research and development program, not only in bombs and missiles, but in other weapons and techniques, if properly maintained and supported, should continue to improve the position of the United States and its friends.

Our mobilization base, which includes our industrial mobilization program, demands constant and careful evaluation. When budget economy cuts out an Army division, or a Navy ship, or an Air Force squadron, it is quickly apparent. But when a budget economy cuts sharply into the mobilization base, its effect is not so readily apparent. It is in this field that reductions may do us great harm for the long pull, and yet it is in this field that cut-backs can be most readily applied.

During the past year, the Department of Defense has reported a continuing program of economy to the people of the United States, and there have been publicly expressed grave doubts as to whether these economies had adversely affected our security. It is unfortunately true that no matter how hard we try, in many instances real savings can only be made by cutting down the funds allowed. To cut out the fat and build the muscle, you frequently have to cut out the rich diet. Wartime habits of operation in a hurry, at a greater expense, are hard to break, but once broken, improved efficiency with real savings is the result.

In some measure, this present $13,000,000,000 budget cuts the pocketbook for economy's sake, and, we hope, for improved efficiency in the next fiscal year. There are real evidences that duplications and extra expenses have been curtailed. For that reason, I went along with the present budget reduction, feeling sure that in the long run we could improve our security.

At the conclusion of World War II, with this Nation feeling sure that further combat was not required, the fighting units were demobilized faster than the service units and the shore stations. As we have moved further from World War II, and have taken care of as much property that was left over from the war as we could, having disposed of some and stored some, we can now cut back on service and shore establishments.

At present, I feel that the economies in our defense structure have not cut too deeply into our mobilization base. On the other hand, I also feel that further economies in some of the mobilization programs, including industrial preparedness, should not be effected without very careful consideration of what it may mean to the United States security in 5 or 10 years. Secretary Johnson and I agree on the importance of the mobilization base.

One of the most important duties assigned to the Joint Chiefs of Staff is the recommended allocation of funds to the three services. In this area, the defense plans come face to face with dollars, and with the basic question of whether or not we are providing adequate security. However, in the preparation of this budget for fiscal year 1951, cognizance has been taken of the fact that the size and expense of our armed forces must not be allowed to destroy the economy of this country. It is frankly acknowledged that this latter consideration is not within the purview of the Joint Chiefs of Staff, nor the Secretary of Defense.

In regard to our budget, I must refer once more to the concern of the American people with Russian military capabilities. Over a long period of peacetime, the United States should not expect to match the Soviet Union plane for plane, ship for ship, division for division without lowering its standard of living.

It is truly understood that forces in being, including ground, air, and Navy are not sufficient now to fight a major war. Nor would they be sufficient for such a calamity by the end of the fiscal year of 1951.

But I feel that we are going to achieve the necessary forces to prevent a disastrous attack from crippling this Nation. I also believe that our forces in being, and our mobilization base, will be sufficient, together with the forces and potential of friendly nations, to win a war if it comes.

Whenever we count up our armed forces, we must include the dependable forces of the friendly nations who are allied with us toward a common goal of prolonged peace and collective security. Even now, if we take account of our total planes, and ships, and of the ground combat units, the relative position is not as insecure as indicated at first glance. As time goes on, we will be able to count even more effective units in the air force, navy, and army units of friendly nations, if we continue present programs of mutual assistance and collective strategic planning.

If it is the desire of the American people to assemble forces that will statistically give the United States a preponderance of military power next year, then we shall have to become an armed camp. We will have to lower the American standard of living, and I am sure, permanently adopt large peacetime conscription. Eventually, such forces will be a drain, not only on the economy but on democracy and its many freedoms.

I have stated many times that, in my opinion, we may be able to work out a solution to this international conflict without a war; that I hope we can work out a solution for permanent peace; that we can combine our military potential and our peaceful intention in a strategy for peace.

These statements are based on the assumption that we, the American people, are always going to insist on remaining strong—economically, politically, and militarily. If we do not maintain this strength—and especially if we become confused to the point of disarmament—we will sacrifice any possibility that this Nation may finally forge a lasting peace.

In summary, I believe that: We are building toward sufficient forces in being to avert disaster and to retaliate vigorously in case we are attacked. We have a mobilization potential which will insure victory in the end; and we must combine with friendly nations for collective security.

Study of Monopoly Power

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. CELLER. Mr. Speaker, under permission to revise and extend my remarks, I am including herein a copy of a letter and enclosures which I addressed to the Federal Trade Commission and to the Attorney General of the United States as a result of recent hearings con-

ducted by the Subcommittee on Study of Monopoly Power:

MARCH 9, 1950.

Hon. J. HOWARD MCGRATH,
The Attorney General of the United States, Washington, D. C.

MY DEAR MR. ATTORNEY GENERAL: A case meriting investigation by the Department of Justice has come to my attention. I refer to the testimony adduced during the recent hearings on a proposed bill to amend the Webb-Pomerene Act when a representative of the Typewriter Manufacturers Export Association testified before the Subcommittee on Study of Monopoly Power. I have personal doubts as to the legality of the operations of the members of this association both in the export and domestic markets.

Although the Webb-Pomerene Act confines exemption from the antitrust laws to an export association "entered into for the sole purpose of engaging in export trade and actually engaged solely in such export trade * * *," this association, according to testimony, "has concerned itself primarily with agreements relating to trade practices and the gathering and dissemination of statistical information relating to typewriter exports," while "each of the members has continued to do its own selling as before." Has this been organized as a paper corporation seeking to obtain the benefits of the Webb-Pomerene Act while refraining from engaging in export trade as defined by that act?

What has been the attitude of the Department of Justice toward this corporate structure? Here are the words of the association's own representative:

"Before our association was organized we submitted a memorandum with respect to its purposes and a copy of its proposed bylaws to the Department of Justice, and they made certain suggestions as to certain changes that they thought were desirable, and those changes were incorporated, and they said they had no objection to it."

What has been the attitude of the Federal Trade Commission? The association's representative claims that the "Federal Trade Commission over the years has interpreted the statute as permitting associations of the type such as ours." It was also testified to that the Commission has never set foot within the association's office to examine its records or to subject it to close administrative surveillance.

The members of this Export Association have apparently not been content to take advantage of the deficiencies in interpretation and enforcement of the Webb-Pomerene law, as a glance at their behavior in the domestic market will reveal. The four members of this association, Underwood Corp., Remington Rand, Inc., Royal Typewriter Co., Inc., and L. C. Smith and Corona Typewriters, Inc., manufacture over 90 percent of the typewriters produced in this country. This Big Four was indicted by the United States on July 28, 1939, for engaging in many reprehensible practices, among them price-fixing. A civil complaint was likewise filed against them and a consent-decree entered perpetually enjoining them from fixing or determining the prices to be charged in the sale of typewriters. But almost 10 years after the entering of that decree, prices quoted by these concerns to the United States Government (1948–49 less tax) for a standard 11-inch keyboard machine were as follows:

Underwood	$107.52
L. C. Smith	107.52
Remington	109.17
Royal	109.02

The domestic consumer has apparently fared little better. Lowest prices to other than the Government in the domestic market for standard 11-inch keyboard models were the following:

Underwood	$121.10
Royal	121.13
Remington	121.30
L. C. Smith	119.48

The enclosed tabulation of these and other figures belies the existence of competition in the typewriter industry.

The profits of these monopoly partners have also swelled the tills of these corporations as a reading of the net profits of these four typewriter companies for several selected years, which I am including herein, will show.

I believe that the foregoing facts warrant prompt and thorough investigation by the Department of Justice and the Federal Trade Commission into the corporate structure of the Typewriter Manufacturers Export Association and a reexamination of the practices of its members in the domestic market with special reference to the provisions of the consent decree already entered against them.

Yours very truly,

EMANUEL CELLER, *Chairman.*

Typewriter prices, July 1, 1948, to June 30, 1949

British Shipment of Arms to the Arab States

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by me to the Secretary of State:

MARCH 7, 1950.

Hon. DEAN G. ACHESON,
Secretary of State, Department of State, Washington, D. C.

DEAR MR. SECRETARY: I have the honor to address you on behalf of my constituents, and, I believe, on behalf of the overwhelming majority of American citizens, in regard to the attitude of the Department of State concerning the continued and increasing British shipment of arms to the Arab states.

As the sound of gunfire after the last great war died away, the nations of the world began to examine their national economic wounds. Our closest ally, Great Britain, was in dire straits indeed. It became rapidly apparent that this nation must receive immediate economic therapy in the interest of our own security. This was begun in 1946 by granting to the British Government a loan of $3,750,000,000 at only a nominal rate of interest. In 1948, after huge loans and other forms of assistance to the various nations of Europe, we initiated the Marshall plan for aiding European economic recovery. This plan was necessary to stave off complete ruin for Europe and all of the horrible economic consequences that would have been entailed for us too. We wisely foresaw that the best way to resist the pressures of communism was to avoid the economic and political vacuum which this nefarious ideology so eagerly attempts to fill.

The cost of the Marshall plan to the American taxpayer has been tremendous. In 1948 we expended $5,055,000,000 for the ERP. In 1949 we paid out $4,702,380,000 in ERP assistance. The estimates of the ERP cost to us in 1950 reach almost $8,000,000,000. Great Britain receives the lion's share of this huge aid program. And to the extent that the economic recovery of Britain is consistent with the aims of the program this is not to be criticized. But let us examine the two major aims of this costly program and see if Britain's behavior in the political and military world has been consistent.

First of all, the Marshall plan aimed for European economic recovery on a healthy, productive basis. We have met with some limited success here, but we are hampered by the dissipation of Britain's production potential in the face of her own increasing economic precariousness. Secondly, the aim of the Marshall plan was to create, by, and along with, such economic recovery, conditions which would make for a peaceful world.

However, the behavior of Britain has been diametrically at variance with such an aim.

The new and progressive State of Israel signed the last of several armistices with the attacking Arab States in July of 1949. At that time the Security Council of the United Nations lifted the arms embargo to the middle eastern nations. However, in the debates concerning such action the spokesmen for several of the Security Council members, including, ironically, Great Britain, pointed to the great moral obligation to keep armament shipments to these nations at the minimum level consistent with national defense needs. But Britain, instead of honoring such moral obligation, has continued to supply heavy, offensive-type weapons to the Arab States at an ever-increasing rate. This fact is attested to by reliable observers and not denied by the British Foreign Office.

Thus it is that Britain dissipates her now-limited production capacities while unabashedly taking, almost demanding, more and more of our dwindling financial resources. Certainly this is no way to speed economic recovery.

It must also be apparent to all that this policy of fostering a Middle East armaments race runs counter to the aim of promoting world peace. Moreover, it contributes in large measure to the general instability of the Middle East and so works into the plans of the Communists. It would not be an unhappy situation for world communism if the Middle East, which should be devoting its energies to social and economic progress, were again torn by a disastrous war, which might this time so politically bankrupt the area that communism could easily usurp control in the best traditions of that ideology.

Therefore, Mr. Secretary, I urge that in the name of our Government you protest most vigorously any further shipment of arms which Britain makes to any of the Arab States. I further urge that you warn Great Britain immediately of the strong feeling of our citizenry in this regard, and indicate that the cessation of Marshall-plan aid to that country will certainly be the unfortunate but logical outcome of continued violations of her moral obligations.

Sincerely,

LOUIS B. HELLER,
Member of Congress.

Our Sick Coal Industry

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. MASON. Mr. Speaker, coal represents 95 percent of our supply of mineral fuels, or sources of energy. Gas and petroleum reserves constitute the other 5 percent. Other things being equal, therefore, coal should be supplying 95 percent of our energy and heat requirements. Coal today, however, supplies only 56 percent of those needs; petroleum, 25 percent; and natural gas, 7 percent. During the last 20 years the use of coal has been reduced by one-third, while the use of both petroleum and natural gas has increased by 500 percent. Why? Because "coal has been priced out of the market."

What about the wages paid to the coal miners as compared to wages paid in all manufacturing plants? In 1939 the average weekly wage in all manufacturing plants was $23.86 and the coal miner was getting an average weekly wage of $23.88. In 1949 the average weekly wage in all manufacturing had advanced to $54.41, but the coal miner received $76.84 as a weekly wage in 1949—a 128 percent increase in factory wages, and a 200 percent increase in coal mining wages.

What about the danger incurred in coal mines as compared to factory work or railroad work? Government figures, taken from the Bureau of Mines and the Interstate Commerce Commission, show that injuries in the coal mines are far less per man-hours worked than either in manufacturing or in the railroad industry. Accidents in the coal mines have been reduced 50 percent in the last decade; accidents in industry have been reduced 10 percent; while accidents in the railroad industry have increased by 50 percent. On the basis of Government reports, therefore, work in the transportation field is three times as hazardous as in the coal mines, and work in coal mining is only half as hazardous as in manufacturing.

Taking all these facts into consideration, the coal industry is a sick industry largely because first, coal has been priced out of the market, and second, the great inconvenience caused the public through coal shortages, artificially created by the ruthless exercise of dictatorial powers by one man, John L. Lewis.

Mr. Speaker, as a further explanation of the coal situation, I include as a part of my remarks the following editorial, Poststrike Inventory, taken from the Christian Science Monitor, of Tuesday, March 7, 1950:

POSTSTRIKE INVENTORY

Where does the coal settlement leave the Taft-Hartley Act?

John L. Lewis is quoted to the effect that had there been no Taft-Hartley Act there would have been no emergency—the operators would have settled long ago. Which makes exactly the same sense as remarks by some employers about strikes a few years ago: That had there been no Wagner Act there would have been no trouble—the strikes would soon have been broken.

Probably many Americans, not trade-unionists, are entertaining a troubled feeling that the law, somehow, failed.

While we are on record as favoring a number of changes in the Taft-Hartley Act, we would point out that had it not been for this law no court action whatsoever could have been taken against the mine shut-down until after a long trial. Furthermore, because of this law, the willing and able, and the unlimited memorial holiday clauses—both sources of difficulty—do not appear in the new contract.

But it is arguable that had the law permitted a fact-finding board with power to make recommendations, considerably more pressure could have been brought against both sides to make a settlement.

The application of the law by the administration and its interpretation by the courts are quite something else, however. And we would censure one and question the other.

Had President Truman invoked the injunctive procedures of the act before the Bureau of Mines warned that the emergency had come, he would have been interfering in behalf of one side of what was still an economic wrestling match between private parties. But once melting coal piles made the public interest paramount, he should have acted with speed and decision. He did not.

No one knows whether either a court order or Government seizure a month ago would have got coal mined. But action then would have put greater pressures at the Government's disposal and given the Nation a wider margin against calamity. It was the President's duty to try, at least.

Judge Keech's acquitting the union of contempt concerns less the Taft-Hartley than "judge law" as laid down by Judge Goldsborough and affirmed by the Supreme Court. Can a functioning union which is offering to contract for delivery of the collective labor of its members be absolved from all responsibility for failure to control its members in the face of a national emergency? Judge Keech so absolved the United Mine Workers, and we doubt that his decision will stand the test of future industrial strife. It still should be appealed, if for no other reason than to clarify the issue.

Where does the settlement leave the industry?

In a still poorer competitive position against other fuels. But also where it can hardly justify this time any boost in the price of coal beyond the 25 cents a ton added by the new wage and welfare costs.

Where does the end of the strike leave the miners?

Very well paid indeed, by the day. But we doubt any better paid by the year, because they are pricing more and more coal out of more and more markets—and there are too many miners. There is hope in the confidence expressed by operator-spokesman George H. Love—perhaps the industry is learning at last that unless it works to stabilize employment John L. Lewis will. And hope in the Senate's welcome to Mr. Truman's proposal for a thorough legislative study of the industry's problems.

Where does all this leave the public?

A bit baffled, we fear—baffled that no sure answer has been found to the anarchy of battles between giants in an essential industry.

An Educator's Viewpoint on the Smith Amendment to the National Science Foundation Bill

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. O'HARA of Illinois. Mr. Speaker, from Cyril Stanley Smith, director of the Institute for the Study of Metals, University of Chicago, and whose eminence as a scientist is attested by his service on the most important and respected engineering and scientific committees of national scope, I have received a letter on the subject of the Smith amendment to the National Science Foundation bill. Mr. Smith sets forth in such clarifying manner the sound objections of the scientists and educators of the Nation to this amendment that I think it should be brought to the attention of the House and receive thoughtful consideration of the Members thereof. The letter follows:

INSTITUTE FOR THE STUDY OF METALS,
THE UNIVERSITY OF CHICAGO,
Chicago, Ill., March 7, 1950.

HON. BARRATT O'HARA,
House of Representatives,
Washington, D. C.

DEAR MR. O'HARA: I have noticed with interest and approval the increased public

awareness of the importance of science to national welfare, and have been anxiously awaiting the establishment of a National Science Foundation which would permit the Federal support of scientific education and research on a less restrictive basis than is possible through the use of funds appropriated for the military services. I am therefore greatly distressed at the passage by the House of the bill carrying the Smith amendment requiring FBI investigation and clearance of all employees and recipients of funds of the Science Foundation. It must be obvious by now that anything short of an extremely detailed, painstaking, and expensive investigation will fail to detect an occasional person of Communist sympathies. I believe that the use of public funds to pay for the training or research of an occasional person of leftist tendencies is a very small price to pay for freedom, particularly when contrasted with the alternative, which is to introduce police-state paraphernalia and suspicion into the educational system of this country.

It must be remembered that the Science Foundation is not concerned with secret science, but aims to provide fellowships and scholarships to assist training in nonsecret fields and to support research in the fundamental sciences on which technological and military developments eventually depend. This will not be helped by the setting up of an elaborate mechanism to exclude all Communists. I believe that FBI investigation of college students and research men is exceedingly harmful and should be invoked only for those scientists engaged on secret military work. It will inevitably introduce an attitude of suspicion, breed spiteful informers, and tend to prevent the expression of diverse points of view and the free search for truth that it is the duty of the universities and of scientists to encourage.

It must be realized that an open and inquiring mind is an essential characteristic of a good scientist, and nothing is gained by demarking a whole field into which a young man cannot even inquire. I am personally convinced that the best answer to communism is the exposure of its fallacies by free discussion throughout the country, not the setting up of an environment wherein any man who expects to work in science or other domains of public service is afraid ever to mention the word in conversation and campus "bull" sessions.

FBI investigations do not seem to have prevented the presence of an occasional Communist agent even in high Government circles. The dilution of its efforts caused by making the Bureau examine the intimate associations and opinions of every young man who leans toward a scientific career will render it still less able to devote time to critically important security problems.

I believe most strongly that the atmosphere of suspicion and the restraint of free discussion that will inevitably result from the requirement of FBI clearance for a scientific career will discourage a large fraction of young men who otherwise would go in this direction, and is bound to have the effect of lowering the caliber of men remaining in science, and thus of weakening this country's competitive position in both industrial and military fields.

I am writing this letter as a private citizen. My opinion, however, is reinforced by my experience as Director of this Institute and by service on a number of engineering and scientific committees of national scope, for example the executive committee of the Institute of Metals Division of the American Institute of Mining and Metallurgical Engineers, the Metallurgical Advisory Committee to the United States Bureau of Standards, the Materials Subcommitttee of the National Advisory Committee for Aeronautics, and last but not least the Presidentially appointed General Advisory Committee to the Atomic Energy Commission.

The amendment tends to nullify the very purpose for which the foundation was proposed. If you wish a strong science on which to base future industrial and military advances, I sincerely hope that you will urge the committee to eliminate the restrictive amendment.

Very truly yours,

CYRIL STANLEY SMITH.

Chicago Will Hold First World Trade Fair

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. GORDON. Mr. Speaker, under unanimous consent I insert in the RECORD an article that appeared in the Chicago Journal of Commerce on February 28, 1950, entitled "Exhibition To Contribute to Prosperity and Peace."

This International Trade Fair is to be held in the city of Chicago, from August 7 to August 20, 1950.

After many months of planning by the leading manufacturers of this Nation and the nations of the world, Chicago was selected because it is the strategic geographic center of all the Nation's communications system and can be reached easily from every part of the country, and also because it is a buying center for the Nation's greatest industrial and merchandizing organizations. Chicago being the hub of the Nation, has held more trade shows and expositions than any other city in the world.

To illustrate the magnitude of this International Trade Fair, I would like to call to the attention of Congress, the fact that representatives of the Organization of European Economic Cooperation (OEEC) will participate and that already, Frederic Berbigier, Commissioner General of the Trade Fair Board of the OEEC, has met with Chicago's great mayor, the Honorable Martin H. Kennelly and Mr. I. S. Anoff, president of the First United States International Trade Fair. In addition, President Truman has indorsed the fair as being of significant help in improving economic and political relationship throughout the world and thereby contributing to the cause of peace.

Mr. Speaker, I am also inserting the copy of President Truman's letter commenting on this fair.

EXHIBITION TO CONTRIBUTE TO PROSPERITY AND PEACE

(By I. S. Anoff, president, First United States International Trade Fair)

Size notwithstanding, there's still plenty of the old pioneer spirit in Chicago.

The city that has always had a reputation for gettings things done quickly and directly has tackled the problem of world trade in its traditional quick and direct manner.

Chicago—not Detroit, Atlantic City, Philadelphia, or New York, all of which announced plans to hold a fair—is staging the First United States International Trade Fair in 1950.

Chicago, not these other cities, is establishing a reputation in every part of the globe as the market center for the entire world.

More than $15,000,000 will be spent by visitors and exhibitors in the fair in Chicago.

MAKING UNIQUE CONTRIBUTION

And with all of the benefits to the city and to its business, Chicago's First United States International Trade Fair will make a signal contribution to world trade, world prosperity—and we hope and pray—world peace.

The idea of an international trade fair naturally would appeal to Chicagoans, because they long have been familiar with the value of a giant market place where buyer and seller can meet and do business.

Chicago is the home of many commercial markets, which in the American economic tradition—unlike the August world trade fair—are vertical markets. But they are great markets and the merchandise mart, the largest building of its kind in the United States, and the furniture mart, one of the great commercial centers in the Nation, are evidences of Chicago's status as the market place, as one of the greatest buying centers for America's great industrial and merchandising organizations.

These are facts that everyone knows, but when Detroit and the other cities made their bid for the fair, they pointed out that Chicago was an isolationist city, unfamiliar with foreign trade.

INTEREST IN EVIDENCE

As a matter of fact, there is considerable evidence in Chicago already of an interest to build healthy trade with the world. It is the only city in the United States with its own import-promotion organization, and only 2 weeks ago, the Chicago Association of Commerce and Industry published an import directory that listed 487 importers in the city. At least 100 more could be added to the list. From January 28 to February 3, more than 30,000 persons visited the French travel and trade exhibit, where more than 100 potentially new importers were developed.

Chicago, therefore, has all of the natural advantages of the best geographical location, of being a market center, of being the world's greatest transportation center—and, in addition, it has already evidenced an interest in the problem of foreign trade.

These are the reasons why it was natural that Chicago—the commercial, industrial, and transportation center of the United States—should be the first host to the producers of the world's goods at the First United States International Trade Fair.

OTHERS PLAN FAIRS

Other cities—Detroit, Philadelphia, and Atlantic City—already have announced plans to hold fairs in 1951, and we in Chicago welcome their participation in the same manner as the government sponsors of the Canadian Fair in Toronto welcome our fair. Like the Canadians, we recognize that a number of fairs in all parts of the United States will enable foreign businessmen to make sort of a grand circuit of fairs and do a better job of penetrating more markets.

At the same time, by virtue of Chicago's exclusive advantages, and the fact that it is host for the first fair of this kind in the United States, we are confident that the Chicago World Trade Fair will be established as the one outstanding annual trade event around which all of the others revolve.

Chicago can anticipate a business boom as a result of the fair. Approximately $15,000,000 will be spent locally for incidental expenses, such as hotel rooms, food, entertainment, and local transportation, by the visitors and exhibitors to the fair.

The combination this summer of the First United States International Trade Fair and the great Chicago Fair of 1950 will do much to stamp Chicago as the dynamic city for spectacular worth-while expositions. The two fairs are certain to complement each other and to go down in history along with the Columbian Exposition of 1893, a Century of Progress in 1933 and 1934, and the recent Railroad Fair of 1948 and 1949.

THE WHITE HOUSE,
Washington, November 23, 1949.

I welcome the decision of Chicago's forward-looking businessmen to establish an International Trade Fair in their city next year. The interchange of goods among nations is an important means of improving political and economic relationships throughout the world. The Chicago Fair should be of significant help to this end—and the end, therefore, of establishing a firm peace in the world.

I know that the businessmen of the world will find Chicago a gracious and warmhearted host.

HARRY S. TRUMAN.

Great Britain Fights United States Oil Industry With American Dollars

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. RIVERS. Mr. Speaker, I am sure that you and the other esteemed Members of this House have read many news items in recent months about the conferences on oil and the dollar-sterling relationship which have been held between representatives of Great Britain and the United States.

I believe that it is high time that the Congress of the United States concern itself with this subject.

The Persian Gulf area contains almost unlimited quantities of oil which can sustain industrial development and raise the standard of living not only of the United States but of the entire world. However, I wish to invite your attention to the ownership or control of the oil-producing countries of that area.

The Anglo-Iranian Oil Co., which is 56-percent owned by the British Government, 22 percent by the Burma Oil Co., and 22 percent by individual stockholders, has the concession for the known oil-producing area of the country of Iraq.

The Iraq Petroleum Co.—which is owned 23¾ percent American, 23¾ percent Dutch-English, 23¾ percent French, 23¾ percent British, and 5 percent individual—has the concession for Iraq, Iran, Transjordan, most of Syria, two Trucial Sheikdoms, Oman, Hadhramut, and Dhofar.

The Bahrein Petroleum Co., which is United States owned but incorporated in Canada, owns the concession on the island of Bahrein.

The concession for Kuwait is 50-percent owned by the Gulf Oil Co. and 50-percent by the British-controlled Anglo-Iranian Oil Co. In the neutral zone of Kuwait both Pacific Western and American Independent have concession interests.

All of the above concessions are either owned or controlled by British companies, are incorporated under British or Dominion laws or the British have political control of the country in which the concession is located.

The sole company in that area which is United States-owned and incorporated outside of Great Britain or her Dominions is the Arabian-American Oil Co. which is owned 30 percent by SONJ, 30 percent by SOCAL, 30 percent by Texas Co., and 10 percent by Socony Vacuum Oil Co.

For the last 3 weeks the New York Times has published a number of interesting articles in its financial section on this subject in which it has been reported that the future and, in fact, the very existence of our oil interests outside of the United States are being threatened. They are as follows:

[From the New York Times of February 17, 1950]

UNITED STATES, BRITISH PACT ON OIL IS UNLIKELY—AVAILABILITY OF DOLLARS AFTER END OF MARSHALL PLAN HELD THE DECIDING FACTOR—MATTER VITAL TO BRITAIN—LIFE AND DEATH TO STERLING AREA, ONLY DIVIDENDS TO US, HER DEFENDERS SAY

(By J. H. Carmical)

Any long-range agreement with the British over the sale of oil by United States concerns in the United Kingdom and the sterling area appears virtually impossible at this time.

The position of the British Government is that it cannot now determine the number of dollars that will be available to pay for oil from United States companies when the Marshall plan expires in 1952.

A British Government source last week said that when the Marshall plan expired it would be necessary to review the entire field of international trade and particularly that between the dollar and the sterling areas. The policy then adopted with respect to oil and other imports, he said, would involve how much the United States bought from the sterling area, how much it invested there, how much it lends, and how much it gives away.

The latest proposal by the British Government on oil imports applies only so long as the Marshall plan is in effect. During that period the British agree to impose no further restrictions on oil sales by United States companies in the sterling area. This, however, will cost the British no dollars, since virtually the entire cost of such oil sales will be paid by the United States Government.

LACK OF DOLLARS SEEN

With the expiration of the Marshall plan, a British Government source said, it may be jolly difficult to get hold of dollars. He emphasized that the United States was the only creditor nation and that it virtually was self-sufficient, needing to purchase relatively little from foreign sources. Thus, he said, it would be most difficult to obtain enough dollars in the regular commercial way to buy essentials necessary to the industrial activity of Britain.

Oil is the largest single item calling for dollar payments in the sterling area. It is estimated that there is a dollar deficit of $600,000,000 a year from oil operations in the area. With the dollar deficit for the entire sterling area placed at $1,500,000,000 a year, oil alone accounts for nearly 40 percent of the total.

A large part of the expense incurred by the British and the British-Dutch oil companies in their operations must be met in dollars. Of the estimated 80,000,000 tons of oil these companies now are selling each year in the sterling area, there is a dollar cost of $275,000,000 for which exchange must be provided.

The cost in dollars of oil supplied by the British companies to the sterling area is said to be about one-fourth that for the United States companies. In view of the lower dollar cost to the British companies, it is pointed out that, with a dollar deficit, it would be folly for the British Government not to use oil produced by its own nationals to satisfy the needs of the sterling area. However, it was said, there would be no objection to the United States companies competing for this business if it could be done on a basis where it would cost no more in dollars than the oil produced by the British companies.

LIMIT TO SALES LIKELY

The whole question of the sale of oil by United States companies in the sterling area primarily is one of dollar exchange, it is maintained. Unless some device is arranged after the expiration of the Marshall plan to supply these dollars outside the regular commercial way, it is believed there will be no recourse other than to limit drastically the sale of oil from dollar sources in the sterling area.

In this connection it is argued that the sale of oil by United States companies in the sterling area is only a matter of dividends, but that it is a case of life or death to Britain, including the entire sterling area.

To the United States oil companies, however, more is involved than profits. For years the United States oil companies have been operating abroad and have huge investments, many of them made at the suggestion of the United States Government. These foreign oil properties are needed not only as a supplement to domestic oil operations but are considered vital for national defense.

Further, the royalty payments on the oil produced in foreign countries by United States concerns go a long way toward paying the cost of local governments. If the United States companies expect to hold their concessions abroad they must operate them at a reasonably high level and they can do this only by having a market for their product.

On an equal basis with the British companies, United States companies maintain that they would have no difficulty in meeting competition and holding their share of the world markets. However, through exchange controls and unilateral trade agreements made by the British, they maintain that they are being squeezed out of markets outside the sterling area.

There are some indications that the British may be easing their drive on markets outside the sterling group. One of these is Argentina, where the British more than a year ago negotiated an agreement through which a large amount of oil was exchanged for meat and other foodstuffs. One of the reasons for the possible change in attitude is understood to be the realization that, with the expiration of the Marshall plan, the British companies would not have sufficient oil to supply entirely the markets outside the sterling area.

With the British maintaining that they must have the oil markets in the sterling area if the economy of that group of nations is to be aided, it is becoming evident that the United States companies will have to depend on areas outside the sterling bloc for an outlet for their oil.

BRITISH OIL OFFER TIED TO WIDE RULE—AMERICAN EXECUTIVES SAY CALL TO ASSIGN CONTROL MEANS LOSS OF FOREIGN FIELD—RETURN FAVORS REBUFFED—STERLING RESTRICTION, DIVIDEND LIMIT, AND 50-PERCENT TAX ON NET CITED AGAINST PROPOSAL

(By J. H. Carmical)

The British Government's proposal last week that American oil companies operating abroad assign their concessions to British

corporations and submit to British control and taxes would result eventually in bringing international oil trade under the domination of the British, according to oil executives here.

For some time it had been rumored that the British would make such a suggestion. In fact, if such a proposal were accepted, the British Government said, it would relax its cartel operation, cease making barter agreements, stop the freezing of sterling exchange, and also refuse to recognize any nation that previously had not been recognized by the United States Government.

The British proposals, which generally are considered harsh and unreasonable are not likely to be accepted by United States companies holding oil concessions abroad. It is contended that the only thing they would receive in return was the promise that, so long as the Marshall plan continued, Britain would not impose restrictions on dollar oil beyond those previously proposed. Under this, it is said, about 65,000,000 barrels a year of dollar oil could be sold in the United Kingdom.

MAIN POINTS OF PROPOSAL

Generally, the British proposal would permit the sale of oil for sterling anywhere in the world only through corporations managed and controlled by Britishers and with ownership clear back to the oil source. In addition, the new British companies are to be subject to the British tax laws, which means a levy of a little more than 50 percent from net income.

The new companies may convert their sterling earnings into dollars only to the extent necessary to meet dollar expenses and to pay dividends at a rate prescribed by the British Government but not to exceed 6 percent on investments. The balance of the sterling earnings may be used only to pay labor costs and to buy items needed by the companies in their own operations. Any sterling not so used apparently would be "frozen" indefinitely.

In the oil industry here it is said that the British Government fully realizes the necessity that the American companies have virtually free access to the international oil markets if they expect to hold their foreign concessions. Some oil executive from the start have sensed that the imposition of exchange controls by the British was to get hold of concessions held abroad by the American companies.

DIFFERENCES IN DOLLAR COST

In its regulations the British Government arbitrarily has classified as sterling oil all petroleum produced or marketed by companies of beneficial British-Dutch ownership regardless of the dollars it might cost to produce or acquire the sterling oil.

There is a dollar cost in most oil whether produced by American or British companies. In some instances the dollar cost is greater when oil is produced by a British company rather than a United States concern. For example, it is estimated that the British company operating in Venezuela has an estimated dollar cost of around $1.50 for every barrel of oil produced. On the other hand, a United States company operating in the Middle East has a dollar cost of only 50 to 60 cents a barrel.

The discriminatory feature of the exchange control scheme is emphasized when the British company operating in Venezuela is provided a market in the sterling area for all the oil it may produce, while the United States company operating in the Middle East may not sell its oil for sterling, even though its dollar cost is only about one-third that of the British company in Venezuela.

The result of this action by the British has been not only to reduce exports from this country but also to increase imports here from foreign concessions held by the United States companies. This has greatly reduced the portion of the home market formerly held by domestic producers.

Last year, it is estimated that the domestic producers could have brought to the surface an average of 832,000 barrels daily more oil than was produced without overproducing the wells. The estimated shut-in domestic production now is in excess of 1,000,000 barrels a day.

So far, Texas has borne the main burden in restricting production so as not to upset the petroleum markets. However, there is some doubt as to how long the Texas Railroad Commission, the regulatory authority in the State, can continue "holding the umbrella" over the domestic petroleum industry.

If the commission should be successfully challenged, it is feared that the domestic industry might become demoralized. However, the importing companies are aware of the danger and recently have been reducing their schedule of imports.

The seat of the trouble appears to be a series of moves which have been made by the British as a part of a program to correct their unfavorable dollar balances. We in this country have been very much aware of Britain's dollar problem and through the fine work of ECA have made a considerable contribution toward rectifying the situation. But it must be obvious to all that it is unwise to single out the petroleum industry to bear the brunt of Britain's efforts to save dollars—particularly when the effect of that action may well be to deprive the United States of foreign-oil concessions which are, because of our mutual interest, vital to the security of both countries.

Britain's recent unilateral action in restricting the importation of United States oil into the United Kingdom has brought matters to a head. The British have informed the United States-controlled companies that their fuel-oil imports to the United Kingdom and certain other sterling-area countries are prohibited and their motor-gasoline imports reduced one-third. The only way these United States-controlled companies can continue to meet their marketing requirements in these areas is to purchase so-called sterling products from British-controlled companies. These sterling products have a considerable dollar-cost component that in some cases is higher than the dollar-cost component in so-called dollar oil. The logical conclusion is therefore that under the guise of saving dollars, the British are to gain commercial advantages for the British oil companies at the expense of United States-controlled oil companies.

This was followed almost immediately with similar restrictions imposed at the suggestion of the British Government by India, Australia, and the British Crown Colony of Kenya. Considerable publicity has recently been given to the letter ascribed to sources within the British Government, and never disavowed, which instructed the British colonial possessions to disregard all United States protests as, apparently, they were not seriously intended.

The British have struck another heavy blow at United States oil companies by means of a series of bilateral trade agreements made with Argentina, Sweden, and Egypt and there are further agreements in prospect with Denmark, Spain, and Portugal. These agreements are essentially barter arrangements. In each case it must be recognized that United States oil is being displaced by British oil with the direct assistance of the British Government.

It appears that Great Britain may be attempting to restrict American oil companies business by imposition of currency controls. For example Arabian-American Oil Co.'s production of 530,000 barrels per day a year ago is now down to below 450,000 barrels per day. Largely as result of British exchange controls and bilateral trade agreements with other countries that result in United States controlled oil companies not only losing business in the British Empire but also in such countries as Argentina, Sweden, and so forth. The British by means of operation of exchange control are even trying to get the business of United States-controlled oil companies in Japan.

It is not my purpose today to attempt an evaluation of the markets for United States oil which have been lost and will be lost in the future as a result of British encroachments. There are people in the State Department who are far better qualified for that purpose than I. It is apparent, however, that repercussions will be felt in the form of lost United States oil production in South America, the Middle East, and the Far East as well. The Government of Venezuela has already shown serious concern over the possibility of a reduction in the oil royalties which are so important a part of its total revenues.

In the last war this country needed every bit of oil it was able to get from South America, the Middle East, and elsewhere in order to supplement our own overburdened production in the United States. Frequently, our ability to obtain oil supplies in various parts of the world was valuable purely as a matter of logistics—permitting the saving of much valuable shipping space as the war emphasis shifted from one theater to another. If we ever become involved in another war, you may be certain that we will be tapping all available foreign oil reserves probably more heavily than ever before since new techniques of warfare require ever-increasing quantities of petroleum supplies.

I do not mean for a moment to overlook the importance of our domestic production to us. It is a matter of first importance that we maintain a high level of productibility in this country. There have been recent reports to the effect that the United States currently has a shut-in production of between 800,000 and 1,000,000 barrels of oil a day. This is as it should be. For our military security we need a shut-in production of at least that amount. We had a margin of 1,000,000 barrels per day when the last war started and it barely saw us through.

For 10 years I have been a member of the Naval Affairs and House Armed Services Committees and have often been concerned with the armed services petroleum supply. At present I have been reliably informed that Arabian-American Oil Co.'s crude is the source of at least 12,000,000 barrels of fuel oil,

5,700,000 barrels of Diesel oil and 2,000,000 barrels of gasoline supplied every year to the armed services of the United States. The price paid for fuel oil in particular is much less than going market prices and I want to see that continued.

But my people at home are also concerned over the cost of oil, gasoline, and oil products. I do not believe in the unlimited import of oil produced outside the United States but neither do I believe we should shut out all such oil and thereby force up or maintain an artificially high price at home.

Coal is important to us industrially but I remind this body that today when our mines are being operated, we mine and use approximately the same amount of coal we mined 30 years ago. Our ability to increase our industrial output and our standard of living over the past 30 years has been based on an oil and gas economy.

I consider that the retention of the United States oil concessions in the Persian Gulf area are of the utmost importance to us nationally. If through any means or for any reason, we lose control of our small part of the total oil available in the Persian Gulf area we will have lost a priceless asset and future generations of Americans can, in that case, say we have failed our country and them miserably and have been unfaithful to the trust placed in us.

Mercedes Didn't Get the Handbag

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent:

MARCH 4, 1950.

Hon. CARL HINSHAW,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN HINSHAW: Mercedes did not get the handbag.

Mercedes is a special friend of mine—going on three—who talks to me in Spanish, but sings Happy Birthday to You in English, kisses me when she sees me and otherwise brings sunshine to a gloomy world. So, when I was in the dime store this morning and saw that dashing red handbag for 50 cents I immediately knew that it would brighten the life of Mercedes. However, there was a 20-percent excise tax and a 3½-percent local sales tax, which brought the item out of bounds and so Mercedes did not get the handbag.

I wouldn't go so far as to say that because Mercedes did not get this handbag she will later become a problem child, a juvenile delinquent, a suicide, or anything else so gruesome; but I do say that the immediate result of that excise tax and others like them is pretty bad. True, the loss of one 50-cent sale will not make or break the dime store, but multiplied by similar instances throughout the country, it can result in such a drop in sales of handbags, for instance, that the manufacturer becomes overstocked and finally closes down for a period—or for keeps. That means folks out of employment—out of buying power—reduction in sales of other items—more lay-offs—more people looking for jobs—fewer jobs available—but you take it from there.

Mr. HINSHAW, the best thing Congress could do for the country today is to cut down on taxes. Suppose Harry does have to pass up some of his grandiose schemes. Let him. After all, he brags that he went bankrupt. Is that any reason why he should bankrupt everyone else? I don't think so, but he'll do it if Congress doesn't take a hand in it and limit his spending.

If we can keep what we earn—can have a personal exemption for income-tax purposes of not less than $1,500 each (you can't live on less in this country) and have taxes scaled so that no matter how much we earn we can keep two-thirds of it—individuals, corporations, and all—you'll be surprised how much better off the Nation will be. Right now we are headed for bankruptcy and when that happens, where will the money for all the free schemes come from? The golden goose may not be dead yet, but it's pretty sick.

There is no branch of Government today—no department or what have you—that cannot get along on less money. For instance, as you probably have read, Los Angeles has put on a sales tax on alcoholic beverages. My license is for a letter shop—not a grog shop—yet I get notice to collect the tax. Undoubtedly mine is not an isolated instance caused by misfunctioning of the sorting machine at city hall, so you can estimate the amount of wasted effort in mailing notices to the thousands of licensees who do not sell alcoholic beverages, plus the printing and postage required. Is it any wonder that taxes are mounting when such nonsense goes on.

This waste is not isolated. It is not peculiar to Los Angeles City or Los Angeles County. It happens in Sacramento, in Washington, in every Government office and department in the country, and the pity of it is that necessary and useful functions of Government was impeded by such waste.

Another thing, why can't you make it possible for us business people not to have to be tax collectors without compensation. Get this, I don't want to be compensated—all I want is to be relieved of the burden so that I can pay my help what they earn each week and not have to keep a lot of records for some grim-visaged, otherwise gruesome auditor to examine a couple years from now and become more grim-visaged and gruesome especially if he finds the records in shape and no fines applicable. Why should I have to collect taxes from a man and at the end of the year have part or all of it returned by the Government. It doesn't make sense.

Back in early 1941 I bought a good used car for personal and business use. Came the war. My work necessitated that I use the car. OPA kept my prices down, but my other expenses increased. Came the end of the war and my expenses sky-rocketed. Taxes remained at wartime levels, eating into my capital, as has been the case with many and many a small-business man. My car wore out last fall. Under a proper Government set-up and view of taxes, etc., I could have put aside enough to have replaced it. So far, I have not been able to do so. I really feel very bitter about that, Mr. HINSHAW, for I have worked very hard since 1941 and could have and should have had a new car long ago. But the money that I earn is being taken from me and spent by persons who never operated a business in their lives. Or, if they did, they went broke and think that qualifies them for mangement of the Nation's affairs.

I need a car in my business. In fact, I am losing business right now by not having it. Furthermore, I have earned the price of that car, and in 1 year have paid in income tax a very substantial down payment on a car, and since the war ended my income tax payments could have easily bought me a very good car. It's not because I have earned so much that I pay so much income tax, it is the insane manner in which it is figured and the quaint idea that I can live on $600 a year. It is not taxation any more—it is confiscation.

Anyhow, Mercedes didn't get the handbag.

Yours very truly,

HELEN LEE.

Report on Grazing Lands

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. HORAN. Mr. Speaker, for the past 3 years I have endeavored to assemble and bring before the Congress and the people an annual report on the extent to which our Federal Government is taking care of and improving the grazing lands upon which we depend greatly for livestock feed and soil conservation. At the conclusion of these remarks, I want to include a table comparing the acreage held by the nine Federal agencies controlling range lands, their revenue therefrom, and the amount spent on research and improvements on these lands for the last 3 years.

We have made some fine improvements recently and the estimates for 1950 indicate that we finally have awakened some Federal agencies to their responsibilities to care for the lands under their control, even though grazing may be of secondary importance on those lands. The Army and Navy, particularly, are investing greater portions of their grazing receipts in improvements of their gunnery ranges and other lands which are rented out for stock feeding. Fish and Wildlife Service, and the Tennessee Valley Authority spent less in 1949 for improvements than in 1947, the latter primarily because of reduced acreage. The Bureau of Reclamation and National Park Service, neither of which collects substantial grazing fees, spend nothing for improvements.

Research on grazing problems is handled by the Bureau of Land Management and the Forest Service, chiefly the latter, with the total amount spent in 1949 being 20 percent higher than in 1947. Information gained is disseminated to other Federal agencies but there is no over-all policy requiring those agencies to adopt new practices recommended as a result of the research.

Over-all receipts on the Federal range lands were $1,385,263 greater in 1949 than 2 years before, totaling $7,876,761.42. At the same time, total acreage was reduced from 303,964,126 to 298,057,159 acres. Of this amount, the Army lost more than 2,000,000 acres and the Forest Service more than 4,000,000 acres, while the Bureau of Indian Affairs, Bureau of Reclamation, and Fish and Wildlife Service substantially increased their holdings.

Seven of the nine agencies increased their revenue from grazing last year. The Army and TVA receipts dropped due to reduced acreage. Most agencies

raised their grazing-fee rates during the last 2 years.

The total amount spent in 1949 for improvements and research on grazing lands was approximately one-third of the total revenue received. This is almost exactly the same ratio as was indicated by the 1947 report. Results of the research, of course, are also made available to holders of privately owned range lands.

The tabulation follows:

United States grazing lands

[Compiled by Hon. Walt Horan, 5th District, Washington]

Department and bureau	1947		1948		1949		1950 anticipated gross revenue
	Number of acres	Gross revenue	Number of acres	Gross revenue	Number of acres	Gross revenue	
Interior:							
National Park Service	1,705,780.00	$13,776.67	1,718,880.00	$20,300.43	1,678,780.00	$14,779.69	Same
Indian Affairs [1]	44,311,000.00	1,438,000.00	43,933,000.00	1,525,000.00	45,203,000.00	1,710,000.00	(11)
Bureau of Land Management [2]	163,784,000.00	1,058,827.00	163,784,000.00	1,419,113.00	163,784,000.00	1,332,485.00	$1,413,000.00
Bureau of Reclamation	492,791.32	[4] 56,890.58	455,763.28	[4] 92,109.96	[5] 657,911.66	[4] [6] 119,319.43	Same
Fish and Wildlife Service	853,207.00	112,140.20	897,431.00	123,600.00	980,029.00	145,382.30	Same

Indian Affairs [3]	None	$146,000	None	$180,000	None	$230,000
Bureau of Land Management [3]	$15,540	794,350	$25,000	736,000	$25,000	1,123,000
Bureau of Reclamation	None	None	None	None	None	None
Fish and Wildlife Service	Incidental	40,000	Slight	50,000	None	25,800
Defense:						
Army	Nominal	Nominal	None	25,000	None	35,000
Navy	Nominal	Nominal	Nominal	Nominal	Nominal	4,500
Agriculture:						
Forest Service	330,000	535,000	365,000	521,875	[6] 390,000	[7] 436,040
Soil Conservation	None	550,000	None	480,000	None	487,625
TVA [9]	None	30,000	None	20,000	None	4,526
Total	345,540	2,095,350	390,000	2,012,875	415,000	2,346,491

[1] 342,000 acres of Army Department aerial gunnery range lands within the exterior boundary of the Pine Ridge Reservation of South Dakota, placed under the supervision of Bureau of Indian Affairs for grazing purposes pursuant to 25 CFR 73. Fiscal year 1949 receipts approximately $32,000; estimated receipts for fiscal year 1950, $32,000.

[2] Slightly higher.

[3] Exclusive of Alaska.

[4] Calendar year.

[5] 213,430.48 acres is acquired land; $35,283.01 gross revenue from acquired land.

[6] This amount applies to range research expenditures largely applicable to Federal range lands, national forest, and other; results of this research apply also to comparable range lands in private ownership.

[7] Exclusive of range reseeding expenditure of $730,828.

[8] Estimated revenue from grazing fees only on fiscal year basis.

[9] TVA does not administer any range lands as such. However, in developing the Tennessee River and its tributaries for navigation, flood control, and power, TVA has acquired some acreage along the margins of its reservoirs. On this land TVA has encouraged a variety of uses, including pasturing, raising hay, and row cropping according to standards advocated by agricultural agencies in the region. Such use of the reservoir land is, of course, subsidiary to the primary purposes of navigation, flood control, and power. Methods of administering these properties are probably quite different from situations where extensive land holdings are not subject to the needs of navigation, flood control, and power. For example, much of the land listed in (1) (number acres) consists of acreage which lies within reservoir flowage zones, and is not available for year-round pasture.

[10] Approximately 20-percent less.

NOTES.—Estimated improvements for fiscal year 1950: Bureau of Indian Affairs, $420,000; Bureau of Land Management, $1,190,000; Army, $35,000; Forest Service, $470,000; Soil Conservation Service, $527,900; Fish and Wild Life Service, Navy and TVA, all same as for fiscal year 1949. Total estimated improvements, $2,677,726.

(All information obtained from Federal sources.)

Our Constitution Needs Another Amendment

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. DAVIS of Georgia. Mr. Speaker, in the January 1950 issue of Inn Dixie, a magazine published monthly by the Dinkler Hotels, there appears an editorial by Editor William G. Hastings, entitled "Our Constitution Needs Another Amendment."

Under leave previously granted, I insert this article herewith:

OUR CONSTITUTION NEEDS ANOTHER AMENDMENT

A fine service was rendered in 1933 by the passage of the twentieth, or lame-duck amendment to the Constitution of the United States. This changed the expiration dates of the President, Vice President, and Members of Congress from March back to January.

Formerly those selected for such places in the November elections did not take office until the following March, which left Congress disorganized for months. This method has been in operation since the adoption of the Constitution in 1787.

It is time now for Congress to go a step further towards increasing the value to the country of our public officials.

This can be done by extending the term of office of a Representative from 2 years to 4 years. Senators are elected for 6 years but a Member of the House is limited to 2 years. This may have served in 1787, though we doubt it; certainly it does not serve well today.

Under a 2-year term a Member of the House of Representatives has to begin campaigning for reelection almost before he assumes his office. This forces him into commitments which many would not make if their terms were long enough for the value of their views to be determined. Partly because of this pressure groups practically control our country today. Most, if not all of them have no interest in the general welfare of the country. This self-interest is their only concern. They will oppose the greatest statesman in Congress if he should vote against any of their programs, regardless of his value to the Nation as a whole.

As a rule the people of a republic can be depended upon to form sage judgments on national issues. But not always. Mass hysteria and self-interest sometimes dull the judgment of the wisest and most honest. They are two things that are not amenable to reason at the time; time alone may rectify such false judgments.

In 1786, the year before the Constitution was adopted, the great democrat Jefferson said, "The animosities of sovereigns are temporary and may be allayed, but those which seize the whole body of a people (and a people, too, who dictate their own measures) produce calamities of long duration."

The bad judgment of the public was illustrated years ago in the matter of woman

suffrage. This was so ridiculed by the "hemen" of the time that some good officials found themselves in mighty hot water and were defeated for espousing it. If any Member of Congress proposed to rescind it today he surely would be unseated at the next election. This is just one case where the majority changed, but it took time for them to recognize their mistake. Whether the "hemen" opponents of woman suffrage were convinced by the reasoning of their wives, or by their rolling pins, is not known, but we do know that their minds did change.

Give Congressmen a term long enough for the public to properly evaluate their votes in Congress, and we will have infinitely more independence of thought and more independence of action than ever will be possible under 2-year terms.

Formosa—Another Munich?

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. LEONARD W. HALL. Mr. Speaker, the fear that Formosa may become another Munich, unless proper aid is given that anti-Communist island, is graphically told in the column of Eddie Zeltner, Over the River, of the New York Mirror.

Under the leave given me, I include a portion of Eddie Zeltner's column highlighting the present over-all situation as related to him by Elliott H. Simpson, an American of over 30 years of intimate contact with the Orient.

The article follows:

OVER THE RIVER
(By Edward Zeltner)
ORIENT-ATION

To one Brooklynite, China means more than a midnight snack of egg rolls and chicken chow mein. He's Eliott H. Simpson, rubber and commodities broker, with 30 years of probing the Orient behind him.

Eliott is one of our close pals. For years he has wowed us with tales from his storybook career. No one we know has a better insight on happenings in the Far East.

In the last war, Elliott beat it out of Singapore a half-step ahead of the Japs. A civilian with a couple of thousand Nippon yen on his handsome skull, he came back with worthy intelligence.

Now he has returned once more, after nearly a year of roaming through the necklace of territorial trouble which strings around the throat of the South China Sea from Hong Kong, Indochina, Singapore, the Straits Settlements and deep into Indonesia.

We sought an intimate view on what's happening in the heart of the world's No. 1 sore spot.

Right off, Elliott said that the United States, in by-passing aid to the Nationalists on Formosa, is bartering for another Munich. "We ought to send Chiang Kai-shek money, ammunition and food," he said. "MacArthur is strong for fortifying Formosa."

He though a moment, then added:

"All this talk about the Generalissimo being a wrong guy. That's rot. He was the victim of a sell-out by exploiters in his cabinet. He took the rap for a bunch of rich Chinese and carried too much responsibility on his own shoulders.

"No one believes we have to send soldiers to stop the Red movement which is rapidly strangling not only China, but Indochina, the Malay States and the East Indies," he continued. "But we must give arms now, or you'll have a third world war before the E bonds of the last one mature."

How do the Chinese look upon America now? we queried.

"The masses in China have an expression, 'that glorious flag' meaning the Stars and Stripes. They will have an affection for Americans. Only the younger student element is intent on causing a rupture. Of course, they're guided by an outside influence," he added.

"The Communists can never live up to their promises. In fact, they are nothing but a band of pirates, these war lords who now control China. I look for them to soon begin bedeviling the people worse than the misery dished out when the banking houses of the Kungs, and Soongs controlled the Chinese Republic."

He said the British hastened to recognize the Communist regime to protect Hong Kong, adding: "I fear that's another Munich too."

Elliott warns that Burma and Siam are being squeezed by the Communists. He takes a dim view of the rampant Reds being kept off the back of the Philippines. There's not a thing to stop them except a guy named MacArthur. He may be engulfed one day too, if we let Formosa go by the board," he warned.

"Take Singapore," Simpson explained. "Labor now controls this area and the leaning is toward communism. In Indonesia, the infant republic is not yet in position to govern itself. This would be a push-over too for the red-flagged legions in their drive eastward. It's so bad there that occidentals have moved into the cities from their inland estates, fearing murder."

As the only non-Chinese to be admitted to a club in New York's Chinatown, Elliott is sure where the sympathies of the local Chinese lie.

"There are one or two student groups who outwardly profess fealty to the Reds, downtown, but the FBI has them pretty well watched, even if they ever got away from the domination of their patriotic elders."

Public Opinion Poll Reveals Present-Day View of Residents of Central Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. VAN ZANDT. Mr. Speaker, with the cooperation of the daily and weekly newspapers in my congressional district comprising Blair, Centre, and Clearfield Counties in central Pennsylvania, a public-opinion poll was conducted during January and February for a period of 4 weeks.

Nearly 2,000 persons participated in the poll. A break-down of the vote by counties is as follows: Blair County, 768; Centre County, 570; and Clearfield County, 530.

The tabulation of the vote on the various issues is as follows:

Tabulation of the 14 questions representing the views of 1,876 residents of Blair, Centre, and Clearfield Counties

1. Should the Taft-Hartley Act be—	
(A) Repealed	232
(B) Amended	372
(C) Left alone	1,226

	Yes	No
2. Do you favor reenactment of the Wagner Labor Act?	358	1,200
3. Do you favor extending rent control?	866	932
4. Do you favor Federal aid to education?	684	1,064
5. Do you favor compulsory socialized medicine?	192	1,612
6. Do you favor voluntary health insurance?	1,258	458
7. Do you favor universal military training?	788	968
8. Do you favor 70-group Air Force?	1,170	498
9. Do you favor price control?	322	1,498
10. Do you favor an increase in personal income taxes?	196	1,598
11. Should wartime excise taxes be repealed?	1,398	490
12. Do you favor liberalization of the Social Security Act?	962	720
13. Do you favor the outlawing of the Communist Party?	1,358	440
14. Do you favor the so-called Brannan plan?	326	1,026

NOTE.—Many participants did not answer all questions giving as their reason that they lacked sufficient information on the subject to vote intelligently.

ANALYSIS OF POLL BY OCCUPATION

White collar	840
Housewife	276
Farmer	130
Labor	630

More than half of the questionnaires were accompanied by explanatory letters discussing many issues of national importance not covered in the newspaper questionnaire.

In connection with the vote on outlawing the Communist Party the 440 who voted in the negative qualified their votes by stating they were not in favor of the Communist Party, but believed it unwise to drive the Communists underground.

Every community in the three counties participated in the poll. In many cases the participants stated that this was the first time they had ever contacted their Representative in Congress.

Hazardous Treasury Demand

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Times-Picayune, New Orleans, of Wednesday, March 8, 1950:

HAZARDOUS TREASURY DEMAND

Our oil industry's major problem is the maintenance of production and reserves at nationally adequate levels. As oil wells in one field play out, new fields must be found and developed. With the new uses and constantly growing demands for oil and its products, the exploration for new supplies grows more urgent. It involves heavy financial risks, for many more wells come in dry than productive.

To meet this situation, Congress in 1918 set up percentage-depletion allowances for oil, gas, and related industries. Its purpose—to provide funds for discovery of "new reserves of vital natural resources which are being used up"—justified the experiment. With respect to oil and gas, the depletion allowances have justified themselves fully by practical results. Reexamined by Congress in the middle 1920's and in 1940, its reapprovals made them a part of the Nation's settled tax policy.

Now the Treasury Department demands their drastic reduction, to increase the Federal tax take and the present administration's spending money. If there is other and sounder reason, it does not appear. Wrote Representative BOGGS of the House Ways and Means Committee, in a recent letter to this newspaper, "I cross-examined the representatives of the Department at great length to ascertain whether or not studies had been made which justified the arbitrary reduction of the allowance. * * * No evidence could be presented along this line. I also questioned the effect the reduction would have on the continued expansion of the oil and gas industry. This matter too had not been studied."

Spokesmen for the oil industry warn that the Treasury demanded cut of the depletion allowance "will decrease the incentive necessary to the development of adequate productive capacity and reserves. That service is rendered chiefly by independents, called wildcatters. Its cost to them has been multiplied since the present depletion allowance was fixed. The loss risks are correspondingly grown. Of 6,728 wells drilled during 1948 in the search for new oil, 5,480—or 81.5 percent—were dry, and 78 percent were drilled by the wildcatters. The one think that has made it possible for this group to live or die by their own efforts, testified one authority, is the application of the percentage depletion as we know it.

Whether or not the Treasury Department is interested in long-run results, the defense services show both interest and concern in the maintenance of adequate oil production and reserves here in our own land. Slackened search for new fields would diminish the defense reserves also, and the margin of national safety. Not only so; a slump in oil discoveries eventually would bring a slump in oil production and thus diminish the Federal tax take from the industry, making the Nation's next position—financial, economic, industrial and defensive—worse than its present one.

Congress, responsible guardian of the Nation's welfare, must take all these things into its reckoning. As the case stands, the Treasury's demand for destructive alteration of a national tax policy vindicated by more than 30 years' practical experience should in our judgment be rejected both as unfair and harmful to a key industry and hazardous to the Nation's domestic economy and safety.

Congressional Committee Bares Facts on Alleged Di Giorgio Ranch Strike

EXTENSION OF REMARKS

OF

HON. THOMAS H. WERDEL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. WERDEL. Mr. Speaker, a matter of great importance to many Members of the House has just occurred.

After the adjournment of the first session of the Eighty-first Congress, a subcommittee of the House Committee on Education and Labor, entitled Subcommittee No. 1, investigated alleged agricultural labor disturbances at the Di Giorgio Ranch, in Kern County, Calif. The ranch belongs to the Di Giorgio Fruit Corp.

The committee's interest and the interest of this House was aroused by the release of a movie film and narrations which depicted deplorable conditions and physical disabilities of men purporting to result from the unconscionable actions of the employer, Di Giorgio Fruit Corp. The film was shown to the Committee on Education and Labor during hearings on pertinent labor legislation.

I recommend as the majority report of the subcommittee, signed by three members thereof, to all Members of this House who have any doubt about the libelous nature of the film as narrated by Mr. Harry W. Flannery. This majority report is conclusive proof that for 30 pieces of silver, more or less, Mr. Harry W. Flannery and his associates deliberately fabricated falsehoods. The officers of the National Farm Labor Union then admittedly used the fabrication to collect hundreds of thousands of dollars from workingmen throughout the country to finance a purported strike that did not exist. The majority report is another disclosure of corrupt men deliberately bearing false witness to do untold damage to employers and employees, as well as disservice to the legitimate American Labor movement, for a pittance by way of gain for themselves.

I am, therefore, including herein a copy of the majority report which has been signed by three members of the five-man Subcommittee No. 1.

My purpose in offering it today is that the Di Giorgio Ranch, referred to in the report, lies entirely within the Tenth District of California, which I represent. Public opinion in the area of the Di Giorgio Ranch is incensed over the falsehoods embraced in the said moving picture and narration and the fraud that has been perpetrated to the advantage of a handful of men. That area is desirous of immediately correcting the unfavorable publicity resulting from the libelous action. I am including the report in the RECORD today inasmuch as it may be several weeks before it is distributed in printed form by the subcommittee. It follows:

AGRICULTURAL LABOR AT DI GIORGIO FARMS, CALIFORNIA

Special Subcommittee No. 1, Committee on Education and Labor, House of Representatives, was constituted by the following authority:

The Honorable CLEVELAND M. BAILEY,
House of Representatives,
Washington, D. C.

DEAR COLLEAGUE: By virtue of the authority vested in me as chairman of the Committee on Education and Labor, and pursuant to House Resolution 75 of the Eighty-first Congress, first session, I hereby appoint you as chairman of Special Investigating Subcommittee No. 1 of the Committee on Education and Labor. Other members of the subcommittee will be the Honorable LEONARD IRVING of Missouri, the Honorable TOM STEED of Oklahoma, the Honorable RICHARD M. NIXON of California, and the Honorable THRUSTON BALLARD MORTON of Kentucky.

You are hereby authorized and directed to investigate conditions to provide for the education of children residing on certain nonsupporting federally owned property and children residing in localities overburdened with increased school enrollments resulting from Federal activities in the area and for other purposes as outlined in H. R. 4115.

You are further authorized and directed to conduct a thorough study and investigation of labor-management relations at the Di Giorgio Fruit Corporation known as the Di Giorgio Farms, in Di Giorgio, Calif.

You are further directed to hold such public or executive sessions as you may deem advisable, and you are hereby authorized and designated by me to issue and have served such subpenas as may be necessary in this investigation.

Upon completion of your study and investigation you are directed to prepare a report to the Congress with such recommendations for legislation or otherwise as in the judgment of your subcommittee the facts warrant.

Very sincerely yours,

JOHN LESINSKI,
Chairman, Committee on Education and Labor.

Pursuant to the authorization and direction of the whole committee, the subcommittee met on November 12–13, 1949, at Bakersfield, Calif. It heard sworn testimony from witnesses called by the National Farm Labor Union, the subcommittee, and the Di Giorgio Fruit Corp. It also viewed two motion pictures, one submitted by the union and one by the fruit corporation; and it visited the Di Giorgio Farms, Di Giorgio, Calif., and the surrounding area.

The hearing at Bakersfield and the visit to Di Giorgio Farms were for the purpose of inquiring into the background of a labor disturbance which occurred on October 1, 1947, at Di Giorgio Farms and thereafter. At least theoretically, it continues to the present day. There was a large volume of testimony on the part of the union concerning conditions of living and working on farms owned by corporations in general; and in a brief filed with the subcommittee the union took the position that such testimony was germane to the Di Giorgio Farms disturbance. There was also some testimony concerning conditions prevailing at Di Giorgio Farms in the past, going as far back as 1934. The subcommittee has been compelled, in order to report upon the issues involved in its investigation, to separate all such extraneous matter from that relevant to the question involved.

The subcommittee's view is that its authority and instructions were to investigate: (1) The hours, wages, working conditions and living conditions of the employees of Di Giorgio Fruit Corp. at Di Giorgio Farms during the period relevant to the labor disturbance there, i. e. roughly the period from June 1, 1947, to date; (2) the nature and history of the dispute; (3) consideration of proposed legislative changes suggested in connection with the foregoing.

I. THE DI GIORGIO FRUIT CORPORATION AND ITS DI GIORGIO FARMS

Di Giorgio Fruit Corp. is a Delaware corporation, with its principal office in San Francisco, Calif. Its business is the production and marketing of fruits and vegetables, and the activities incidental to that business. In 1946 its total assets were somewhat over $19,500,000, its total revenue over $18,000,000. Its founder and principal stockholder is Joseph Di Giorgio, who owns 43.9 percent of the class A common stock, 39.8

percent of the class B common stock, and 31.4 percent of the cumulative preferred stock. The remainder of the stock is owned by some 5,000 stockholders.

The corporation owns 11 orchards and one farm in Florida, and 8 orchards and vineyards in California. It also owns some interests in 3 fruit auction markets on the eastern seaboard, a box company and a wine company.

Joseph Di Giorgio is chairman of the board of directors of the corporation; his address is Di Giorgio, Calif. The president of the corporation is Philip Di Giorgio of New York City. One of the vice presidents, J. A. Di Giorgio, resides on Di Giorgio Farms. The other officers of the corporation reside either at New York or San Francisco; the directors in New York, San Francisco, Southern California, or Florida, and one in Cuba.

Di Giorgio Farms is a tract of almost 11,000 acres, or 18 square miles, in the San Joaquin Valley, about 15 miles southeast of Bakersfield, in Kern County, Calif. The development of the land to its present condition began with the purchase in 1919 of 2,000 acres of Kern County land by the fruit corporation's predecessor. At that time there was no significant agricultural production in Kern County; the land was dry and barren. Joseph Di Giorgio was active in the management of the company and the development of Di Giorgio Farms. By drilling deep wells for irrigation and experimenting with suitable crops, the land was brought to production and presently bears grapes, plums, potatoes, and asparagus, in order of importance.

Selection of crops by the fruit corporation has depended on two factors: (1) Individual crops which were suitable for the soil and weather of the area; (2) a combination of crops which would enable it to employ a relatively stable permanent labor force throughout the year. Employment ranges from approximately 1,200 permanent employees to 2,500 at harvest season; other growers in the area may have a temporary-permanent employment ratio of as much as 15 to 1.

II. THE DISPUTE OF THE FRUIT CORPORATION WITH THE NATIONAL FARM LABOR UNION

Early in 1947 the National Farm Labor Union sent Hank Hasiwar to Kern County as its western representative, to organize the farm workers there. He established Kern County Farm Union Local 218 and proceeded to organize some Di Giorgio Farms employees. In September of 1947 he requested the fruit corporation to recognize the local as the exclusive bargaining agent of its employees, claiming to represent a majority of them. The fruit corporation declined recognition, contending that local 218 did not represent its employees or any substantial number of them. Thereupon, on October 1, 1947, local 218 established a picket line at Di Giorgio Farms.

The evidence before the subcommittee, including the testimony of the secretary of the California State Federation of Labor, establishes that the sole issue in this dispute is recognition. Members of the union testified to various grievances concerning wages, hours, working conditions, and living conditions, but all of these were obviously afterthoughts and makeweights. This strike was solely one for the purpose of organization.

The National Farm Labor Union does not hold any collective bargaining contracts in the State of California. Yet it has maintained a picket line against a single employer for over 2 years, and its representatives and others have testified that the wages, hours, working conditions, and living conditions on that employer's farm are not inferior to those elsewhere; the subcommittee finds that they are, for the most part, superior. Wages, hours, working conditions, and living conditions have never been a real issue in the Di Giorgio strike.

III. WAGES AND WORKING CONDITIONS AT DI GIORGIO FARMS

Although these issues are not actually present in the dispute between the fruit corporation and the union, there is much testimony in the record concerning them, and the subcommittee deems it desirable to report on wages, working conditions, and living conditions at Di Giorgio Farms. The union presented its film, Poverty in the Valley of Plenty, which is designed to represent living and working conditions at Di Giorgio Farms. The fruit corporation presented its film, The Di Giorgio Story, relating to the same matters.

The union film was also shown to the committee during its hearings on H. R. 2032 in Washington on March 16, 1949. The committee has been seriously imposed upon by the union by the presentation of the film Poverty in the Valley of Plenty at that time. The film itself, and the president of the union in presenting it, represented to the committee that the conditions depicted in the film existed on Di Giorgio Farms and led up to a strike there. The committee's belief in the truth of these statements induced it to authorize and instruct this subcommittee to investigate the facts. The union's president now takes the position that the film relates, not to Di Giorgio Farms but to corporate farms in general. The educational director and the western representative of the union insist that the film is a true picture of the Di Giorgio Farms. The subcommittee finds that, insofar as it purports to represent conditions existing on Di Giorgio Farms, the film Poverty in the Valley of Plenty was made and was presented to the committee in disregard of the truth.

The film purports to relate the facts surrounding the wages, working conditions, and living conditions of employees of the fruit corporation at Di Giorgio Farms. The subcommittee finds the facts to be as follows:

Wages: The lowest wage paid at Di Giorgio Farms is 80 cents per hour for field work. The highest is $1.10 per hour for loaders. These wage levels are, if not the highest, at least as high as any in the area. Neighboring farmers testified that the fruit corporation had always been the leader in the matter of raising wage scales, which the other farmers followed in order to keep their employees. There is testimony in the record by a union witness to show that wages at Di Giorgio Farms rose from a depression-born low during the midthirties by steady progression to their present levels.

Wages are not a grievance or a strike issue.

Working conditions: Individual members of the union testified to various grievances over a 15-year period. One of these was that persons often came to Di Giorgio Farms seeking employment, and if not hired were not paid. There was no evidence that the fruit corporation ever called in a worker and failed to hire or pay him. Another grievance was that foremen were given the power to discharge field workers; another that foremen and supervisors were extended privileges not extended to field workers; that drinking water in the fields was not iced; that workers in refrigerating rooms were not given extra pay; that foremen had to supervise too large groups of employees.

Insofar as the afore-mentioned grievances are concerned, the subcommittee found that in some instances they were not supported by the evidence, in others they were inconsequential and that in no event did they constitute an issue in the strike.

In its motion-picture film, Poverty in the Valley of Plenty, the union said that the fruit corporation required its irrigators to work 12 hours, but paid them for only 11. This statement was wholly false, as witnesses both for the fruit corporation and the union agreed.

Living conditions: The union film also represents that living conditions on Di Giorgio Farms consist of disreputable, filthy shacks, and that the living habits of the occupants are substandard and squalid.

The film contains unmistakable innuendos that the houses pictured in it are on Di Giorgio Farms. None of the houses shown is fit for human beings to live in. They are in varying states of disrepair, unpainted and sordid. They are surrounded with junk and with undernourished children and dogs. Near one is a shower, said to be used by 25 or 30 families, lacking in hot water, and situated next to a cow pen. The film charges that the fruit corporation rents washing machines to employees for 50 cents per hour, and that women are compelled to heat water over open fires. No one could doubt that these charges are leveled straight at the corporation.

All of these representations are false. The shacks portrayed, said to exist on Di Giorgio Farms, are not on the farm. It is inferred that the fruit corporation charges its employees $26 per month for such housing; all the witnesses agreed that $3 per month is the maximum ever charged; and that at present all company housing is rent-free.

In fact, the National Farm Labor Union film, Poverty in the Valley of Plenty, insofar as it purports to represent conditions existing on Di Giorgio Farms, is a shocking collection of falsehoods, almost wholly unrelieved by any regard whatever for the truth and the facts. The subcommittee believes that responsible labor leadership will join with it in decrying the attempt of the National Farm Labor Union's organizers to win their case by dishonest presentation. The cause of organized labor is not aided when one group of union organizers are willing to besmirch the public reputation of labor as a whole, in order to advance their own interests.

The evidence and the subcommittee's visit to the premises demonstrated that the housing conditions at Di Giorgio Farms are at least as good as any to be found on similar properties in agriculture. The fruit corporation maintains several types of housing: cottages for supervisory personnel; smaller houses (2–4 rooms) for field and shed workers; apartments; and dormitories for single men. The houses are respectable, though not pretentious, enjoy modern facilities, including electricity, and in addition have garbage disposal service and fire protection at company expense. Separate facilities are maintained for workers whose backgrounds give them different dietary tastes, and they are provided with food which is acceptable to them. All the union witnesses agreed that the food furnished by the company is better than average.

Recreational, educational, and religious facilities: The union represented to the committee that Di Giorgio workers were deprived of all recreational, educational, and religious opportunities. The evidence shows that the fruit corporation provides swimming pools and tennis courts for all employees. It does not maintain any schools or churches. However, there are ample, modern well-equipped schools in the vicinity, including a new high school in Arvin. A new grammar school building near the farm was made possible by a gift of 40 acres of land and $150,000 cash by the fruit corporation. The fruit corporation supports these schools by payment of 64 percent of the taxes of Di Giorgio school district; and it has contributed land or cash or both to the churches in the area.

Welfare provisions: The union in its film represented that Di Giorgio workers were without any protection in case of accidental injury, and depicted a maimed worker in the fields who, it said, would receive no

compensation for his injuries from the Di Giorgio Farms. The evidence shows that this individual was not injured on the Di Giorgio Farms and that in fact the fruit corporation has always maintained full workmen's compensation insurance protection for all of its employees, though not required to by law. Such statements have convinced the subcommittee that the union did not make a fair and truthful presentation.

An official of the fruit corporation testified that the company did not provide unemployment insurance for its workers; had no pension plan; provided no old-age insurance. However, the fruit corporation offers employees of 1 year's standing a group life insurance policy, on which the company pays 60 percent of the premiums.

Mexican labor: The union in its film Poverty in the Valley of Plenty insinuated that the fruit corporation engaged in a program of smuggling Mexican aliens, wetbacks, across the border to work in its fields. At the hearing it did not charge smuggling but did complain at length of the hiring of Mexican nationals by the fruit corporation.

The fruit corporation had participated in the program instituted by the Federal Government during the war of hiring Mexican nationals to supplement the Nation's farm labor force. One hundred thirty of these nationals remained at Di Giorgio Farms when the union set up its picket line on October 1, 1947. After the situation was explained to them by a representative of the Department of Agriculture, they unanimously signified their desire to continue to work, and did so. The fruit corporation contends that the farm labor union brought pressure to bear on the State Department and, in violation of the Government's contract, these nationals were removed from Di Giorgio Farms.

Illegal aliens have from time to time been found on Di Giorgio Farms, just as they have been found on almost every farm in Texas, New Mexico, Arizona, and southern California. There is no evidence that the fruit corporation ever smuggled any alien into the United States, or hired an illegal alien knowing his status. The union's charges in this respect appear to be completely unfounded. In any event they throw no light whatever on the issues involved in the labor disturbances, and have no real place here.

IV. THE LABOR DISPUTE AT DI GIORGIO AND THE LABOR-MANAGEMENT RELATIONS ACT

After the picket line was set up at Di Giorgio Farms the work of growing, harvesting, and shipping the produce of the farm continued. A majority of the employees of the fruit corporation continued to work, or returned to work within a few weeks. There were allegations of a few isolated cases of violence by both sides in the early months of the strike; but the picket line may be regarded as a relatively peaceful one, and the subcommittee finds that the union made it its policy to discourage violence.

Since the picket line failed to affect the operations of the fruit corporation or to accomplish the organization of its employees, the union embarked upon a series of secondary activities. In this it had the aid of a few of the members of a winery local at Di Giorgio Winery, and of some other trade unions. The farm labor union picketed the winery; it picketed another distant winery, owned by a wholly separate company; it placed a mass picket line across the tracks of the railroads which serve Di Giorgio Farms, and it boycotted the produce of Di Giorgio Farms in southern California cities by picketing distributors in that area.

After an investigation of complaint, the general counsel of the National Labor Relations Board sued out an injunction against this conduct, which was granted by the United States District Court for the Southern District of California against the unions involved, including the farm labor union and other unions acting in concert with it, under section 10 (j) of the Labor-Management Relations Act of 1947.

The fruit corporation thereafter filed unfair labor practice charges with the Board against the same unions under section 8 (b) (1) (A) and 8 (b) (4) (A) of the act. The trial examiner found that all the factual charges in the complaint were true. He exonerated all the respondents under section 8 (b) (1) (A). He recommended that the Board's order issue under section 8 (b) (1) (A) against all the unions except the farm union and a teamsters' local, both of which purported to represent, for the purpose of the proceedings, agricultural workers only. The theory of the trial examiner was that the Board could not impose sanctions upon the farm union, since, he said, the act does not extend its benefits to the farm union. The fruit corporation and the general counsel of the Board filed exceptions to the trial examiner's report, and the matter has been submitted to the Board.

The farm union takes the position in its brief before the subcommittee that it is inconceivable that any group could be subjected to the sanctions provided by the act, unless it were extended privileges and benefits under the act. Counsel for the fruit corporation, in a statement to the subcommittee, said that the position of the fruit corporation is that Congress "need not purchase compliance with the laws of the United States at the price of benefits and privileges."

V. RECOMMENDATIONS FOR LEGISLATION GROWING OUT OF THE DI GIORGIO LABOR DISTURBANCE

The law, the strike issues, and the investigation: The hearing and investigation at Bakersfield and DiGiorgio Farms were held at the request of the National Farm Labor Union. The reason stated for this request was that a situation existed on Di Giorgio Farms which called for immediate action in order to prevent further unfair and ill treatment of agricultural workers at Di Giorgio Farms. The committee was told that legislation was required in order to correct the abuses of corporation farmers and their lobbies.

Relying on this request and these representations, the subcommittee came to Bakersfield and visited Di Giorgio Farms. Witnesses were called by both sides, and the subpena power of the subcommittee was made available to the union and the fruit corporation. The union called no pickets to testify; and there was no picket line at the farm when the subcommittee went there. No employee of Di Giorgio Fruit Corp. was called by the union to testify to his wish to become a member of the farm labor union, and to the fruit corporation's thwarting of his wish. The subcommittee interviewed Di Giorgio employees and no one of them signified a desire to become a member of the union or his acquaintaince with any other employee who held such a desire. No witness called by the union testified to anything which represented a substantial strike issue, or even approximated the charges depicted in the union's film, Poverty in the Valley of Plenty.

The contrast between that film, with the testimony accompanying it in Washington last March, and the case made by the union at the Bakersfield hearing and investigation, is most striking. The way in which the union presented its evidence shows that this committee has been induced to spend its time and the taxpayers' money to publicize the leadership of a labor organization which has no contracts, no grievances, no strike, no pickets, and only a handful of members; its only apparent reason for existence is its voluble leaders.

The processes of the Congress of the United States have been perverted and misused by the National Farm Labor Union in order to furnish a soundingboard for its claims. The committee should certainly not be without power to prevent the recurrence of this kind of abuse of its functions and impositions upon its energies.

Workmen's compensation: The question of workmen's compensation is not relevant here since, contrary to the charges of the union, the fruit corporation has always provided full compensation-insurance protection for all its employees, including agricultural workers of every description.

Fair-labor standards: This matter likewise has no bearing on the present issues. The undisputed evidence shows that the fruit corporation had a minimum-wage level of 80 cents per hour long before the Fair Labor Standards Act was amended to provide even 75 cents.

Old-age and unemployment insurance: The fruit corporation has not provided benefits of this character. However, the question whether its employees should be covered has been repeatedly considered by the Congress, and the Congress has repeatedly found that they should not be. Lack of coverage is the result of exemptions in the law, and not the action of the fruit corporation. The fruit corporation does provide low-cost life insurance as a measure of welfare protection.

The National Farm Labor Union recommends removal of the exemptions of agricultural labor from labor legislation. Agricultural labor has been exempted from all labor relations legislation ever written. The evidence before the subcommittee shows that it would be harmful to the public interest and to all responsible labor unions to legislate otherwise. The evidence shows that a strike of any serious proportions in agriculture would choke off interstate commerce in necessary foodstuffs, would cause incalculable harm to the public, and would antagonize public opinion to the cause of trade-unionism. It would not only result in temporary distress of a character more serious than has ever been experienced, it would result in permanent loss of farm employment and permanent loss to the public of farm production, and, of course, permanent ruin to the farmers of the Nation.

The union has suggested that the fruit corporation is of such a size and character that it should be differentiated from other farm producers. The union did not, however, suggest any valid basis for differentiation of small farmers from large ones, or of corporate farms from farms owned by individuals or other forms of business organization. In fact, the union disclaims taking the position that the mere bigness of the fruit corporation is a vice. This must be apparent to anyone who has seen Di Giorgio Farms. It is perfectly obvious that, were this acreage distributed to its permanent workers, none of the 1,200 could make a living on his 9 acres. If Di Giorgio Farms had not been developed and operated by a corporation, or some individual or organization possessing comparable capital, it could never have been developed or operated at all.

Mere size is not a sound basis for differentiating between farmers. It is evident that any condition imposed by law upon a large farmer, automatically becomes a condition under which every farmer, however small, must operate. It is idle to contend that 1 or 2 or 10 farms in Kern County may be subjected to congressionally imposed standards, without subjecting their neighbors to the same standards.

The subcommittee finds that the exemption of agricultural labor from the Labor Management Relations Act is sound, being based upon facts which clearly differentiate agriculture from industry in this regard.

Other legislative recommendations: The fruit corporation contended that the exemption of labor organizations from the antitrust laws resulted in serious abuses which

required repeal of the exemption. The evidence before the subcommittee showed that the farm union possesses no collective bargaining contracts, at least in California, and has created no labor disturbance except at Di Giorgio Farms. The only conduct of the union which violates the antitrust laws is its secondary boycott activity, and in this regard the exemption is created by Supreme Court decisions construing the Norris-LaGuardia Act. Since the secondary boycott is already made unlawful by the Labor Management Relations Act, as discussed above, no recommendation is here made with respect to this contention of the fruit corporation.

The union made certain recommendations for State legislation which the subcommittee does not deem it appropriate to discuss.

It also recommended certain Federal legislation, most of which is discussed above. The evidence shows that all of the union recommendations not previously discussed have no application to the facts at Di Giorgio Farms, and the subcommittee therefore considers them irrelevant.

Michigan Alumni in Congress

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. WEICHEL. Mr. Speaker, there is included herewith an extension of remarks covering a recent item in the Michigan Alumnus of January 14, 1950:

TWENTY-TWO ALUMNI ARE SEATED IN CONGRESS

From the earliest days of the university, Michigan's alumni body has produced many men and women who have contributed distinguished public service to their communities and to their countries. In years past, a significant number of former university students have become Members of the Congress of the United States.

It is doubtful if any information agency has ever attempted to tabulate a complete listing of all Michigan alumni who have been elected to the Senate and the House of Representatives, although Ira A. Campbell, 1900, '02*l*, in contributing a chapter to Michigan and the Cleveland Era (University of Michigan Press, 1948), presents an excellent summary of the former students who gained membership during two specific periods—the two Presidential terms of Grover Cleveland.

At times, alumni of the university have constituted 5 percent of the entire membership of the National Legislature. During the Cleveland era, which spanned the Forty-Ninth and Fiftieth Congresses (1885 to 1889) and the Fifty-Third and Fifty-Fourth Congresses (1893 to 1897), many Michigan alumni served in Congress.

Of the 76 Senators and 325 Representatives in the Forty-ninth Congress, the University was represented by one Senator and by 10 Representatives. The succeeding Congress again had one Senator who had received his education at the university, while the number of Representatives increased to 16. In the Fifty-third Congress, there were two Senators and 16 alumni representatives, and in the Fifty-fourth the representation again increased to 4 Senators and 18 Representatives.

Today, the membership rolls of the Eighty-first Congress of the United States list the names of 22 alumni of the university. Some of the legislators completed all of their higher education on the Michigan campus, while others took credit courses at Michigan as well as at other educational institutions. Two of the men attained alumni status although they did not pursue any degree work in Ann Arbor. Senator J. WILLIAM FULBRIGHT of Arkansas was a recipient of an honorary degree of doctor of laws at the 1948 commencement, while Representative ALBERT J. ENGEL, of Michigan's Ninth District, in 1937, was unanimously elected by the board of regents as an honorary alumnus.

A total of seven United States Senators are alumni of the university. The State of Michigan is represented by ARTHUR H. VANDENBERG, *l*'01–'02, A. M. (Hon.) '25, LL. D. (Hon.) '47, of Grand Rapids, and HOMER FERGUSON, '13*l*, of Detroit. The other Senators are CLINTON P. ANDERSON, '15–'16, LL. D. (Hon.) '46, of Albuquerque, N. Mex.; SHERIDAN DOWNEY, '07*l*, of Laguna Beach, Calif.; LISTER HILL, *ss*'14, of Montgomery, Ala.; ALEXANDER WILEY, *l*'04–'06, of Chippewa Falls, Wis., and Senator FULBRIGHT.

Senators VANDENBERG and HILL have both served their constituents for more than two decades. In 1928 Senator VANDENBERG was appointed to that body by Gov. Fred W. Green, '98*l*, to fill the remainder of the term left vacant by the death of Woodbridge N. Ferris, *m*'73–'74. In the fall of 1928, Senator VANDENBERG was elected to the post which he has held ever since. Senator HILL, who studied in the university's law school during the summer of 1914 following his graduation from the University of Alabama, first went to Washington as a Member of the House of Representatives. He served in eight successive Congresses, from 1923 until 1939, when he resigned to become a Senator.

Youngest of the alumni Senators, in point of service, is Senator ANDERSON, whose term began with the Eighty-first Congress, following the elections of November 1948. Prior to running for this office, however, Senator ANDERSON had a distinguished career in many responsible Government posts, including the Cabinet position of Secretary of Agriculture. Senators DOWNEY, FERGUSON, and WILEY are serving their second terms.

Last year Albert P. Blaustein, '41, New York attorney, wrote a series of articles for the American Bar Association Journal which required research on the legal background of the Members of the Eighty-first Congress. He found that there were 64 lawyers included in the 96 men comprising the Senate. In addition there were 15 ex-judges and 31 former city, county, State, and Federal attorneys. These men attended 99 different universities, Harvard topping the list with 9 alumni. Columbia contributed 7 of its former students; University of Alabama, 5; Yale, 4; Georgetown, 3; 2 alumni each from 15 more universities; and 1 each of the remainder.

As noted, 5 of the Michigan alumni Senators took courses in the university law school. Blaustein's report notes that the membership of the Senate represents 40 different law schools. In addition to the men who studied law in Ann Arbor, 6 men went to Harvard; 5 to Columbia; 3 each to Yale, Alabama, and Georgetown; 2 each to the universities of Virginia, Maryland, Temple, and West Virginia; and 1 each to the remainder of the 40 institutions.

Similar data was compiled for the membership of the House of Representatives. Of the 435 Members, 254 were lawyers. The 435 Members attended 208 colleges and universities and, in addition, the 254 lawyers attended 74 law schools. In both of these categories, the total of university alumni in the House of Representatives ranked near the top behind leading Harvard University.

Fifteen Members of the House have taken academic work at Michigan. Two of them, PAUL CUNNINGHAM, '14, '15*l*, of Des Moines, Iowa, and ALVIN F. WEICHEL, '22, '24*l*, of Sandusky, Ohio, gained both their bachelor's and law degrees from the university. Four more came to Michigan to complete their preparation for legal careers: WILLIAM W. BLACKNEY, 12*l*, Flint, Mich.; JAMES S. GOLDEN, '16*l*, Pineville, Ky.; FRANK B. KEEFE, '10*l*, Oshkosh, Wis.; and ROLLA C. MCMILLEN, '06*l*, Decator, Ill.

Representative GERALD R. FORD, JR., '35, Grand Rapids, Mich., played varsity football while completing his undergraduate work, and Representative RALPH E. CHURCH, '07, *l*'07–08, Evanston, Ill., attended law school for 1 year following his graduation from the College of Literature, Science, and the Arts. Other alumni now in Congress, all of whom received a portion of their education at Michigan, are: LEO E. ALLEN, '19–'21, *l*'21–'22, Galena, Ill.; FRED L. CRAWFORD, Saginaw, Mich., who studied political economy for 3 years, 1925–27, through the extension service; J. CARL HINSHAW, *g*'16–'17, Pasadena, Calif., who took graduate work; EARL C. MICHENER, *l*'00–'01, Adrian, Mich.; PAUL W. SHAFER, Battle Creek, Mich., who received some of his legal training through Michigan extension courses; and GEORGE H. WILSON, *l*'26–'27, Enid, Okla.

Of all the Michigan alumni now holding membership in the Eighty-first Congress, Representative MICHENER has been in office for the longest period. With the exception of one 2-year term, he has represented the Second Congressional District of Michigan—which includes the city of Ann Arbor—continuously since 1919.

Brannan Plan

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. HORAN. Mr. Speaker, under permission to extend my own remarks in the Appendix of the RECORD, I am pleased to include an article in the March 9 issue of the Washington Post on the Brannan plan.

I feel that it is an interesting article and points up some of the areas of thought and discussion that should be valuable to us in the present controversy over "What farm program shall we have."

Definitely it can now be established that Secretary Brannan would have been on better ground had he proposed his so-called Brannan plan for perishables alone and have allowed more time for a proper disposition of the War Board price support program on nonperishable and storable commodities.

THE BIGGEST TROUBLE, THOUGH A SUBTLE ONE, WITH ALL PROGRAMS IS THAT IT PUTS THE GOVERNMENT BETWEEN THE PRODUCERS AND CONSUMERS

It is because of my own introduction of this observation that I am pleased to herewith include the article by Ysabel and Robert Rennie:

BRANNAN PLAN MAY BE TRIED IF PRICE SUPPORT MESS GOES ON

(By Ysable and Robert Rennie)

If present farm supports continue to get out of hand, as they have been doing in the case of potatoes, Congress may yet give the Brannan plan a try.

Last year it was opposed by every major farm organization except the National Farm-

ers' Union, and Congress turned it down. Today farmers as well as Congressmen are beginning to wonder whether anything might not be better than the present mess.

Secretary Brannan's farm-support program is aimed primarily at the perishables which account for 75 percent of farm income. These are commodities which will spoil in storage—things like milk, poultry, eggs, meat, fruits, and vegetables.

Today we buy up nonperishable crops to keep prices at high support levels. But for perishables like potatoes the solution will not work.

Secretary Brannan would sell these products on the open market for whatever they would bring. If the market prices were below support levels, the Government would make up the difference in production payments to the farmer. The consumer would get the benefit of low food prices, the farmer of high incomes.

WOULD MAINTAIN BUYING POWER

Support prices would be set to guarantee that a bushel of potatoes or a box of oranges would have the same purchasing power as in the base period, whatever happened to the price of the things the farmer must buy. The base would not be an obsolete period like 1910–14, but rather the first 10 of the preceding 12 years. Each year the base would move forward.

The Brannan plan would put a brake on the farm prices during downswings. It would also prevent the violent year-to-year fluctuations which have characterized farm income in the past.

After all, the prices of things the farmer buys—cars, tractors, furniture—change very little from one year to another. But farm prices have risen and fallen with the sickening speed of a small boat in a heavy sea.

There is one other feature of the Brannan plan which should be mentioned. It would limit support payments to the maximum output of a family-size farm—at 1949 prices, about $25,000 worth of produce. Under present law, some farmers received hundreds of thousands of dollars in subsidy payments and at least one farmer received several millions.

OTHER POINTS OF DIFFERENCE

There are other points in which this program differs from the present Agricultural Act.

For one thing, the Government would not, on most foods, buy commodities to keep their prices up. Not only would food prices drop to free-market levels, they might actually drop below them. This is because high support prices encourage larger output, and the greater the production, the lower the market price.

To prevent a glut of food and a collapse in market prices, the Brannan plan would have to rely on direct controls like marketing quotas and acreage allotments. This is a feature farmers do not like.

If every wheat farmer was ordered to cut acreage by 20 percent, farmers with high-yield land would be forced to take much of it out of production. At the same time, the marginal farmer would be encouraged to sow on poor land. This is no way to raise farm productivity. It has quite the opposite effect.

Limiting benefits to the average output of large family farms would have the same result. Family farms are not as efficient as the larger industrialized ones.

By penalizing efficiency, we are confusing social and economic objectives. It may be socially desirable to keep the small-family farm as a way of life, but we should understand that the policy has its economic costs.

FARM SUBSIDY COSTS HIDDEN

Would the Brannan plan cost more than our price-support program? This is the question that bothers Congress. At present the cost of farm subsidies is pretty well hidden. Much of it is paid by the consumer at the grocery store. Only the minor portion shows up on his tax bill.

Under the Brannan plan, almost the whole bill would be paid by congressional appropriation. The amount probably would be higher than the present cost, in taxes and food prices, of the farm program. There are two reasons for this: the support level would be higher, and it would cover many products which are not now supported.

On the other hand, the average family would eat better because food prices would be much lower. For the same reason our agricultural exports would once more become competitive in the world market.

Secretary Brannan calls his plan an income-support program. It is, of course, nothing of the kind. No price subsidies can raise farm income where it is lowest, on the small-family farms which raise little more than what they consume.

Out of the 1,589,706 farms harvesting cotton in 1939, almost 80 percent reported less than eight bales. Obviously, neither the Brannan plan nor the present support law would solve their problem.

Price supports, however clever the formula, can only guarantee a higher living standard to the farmer who already has a reasonably high one.

Harry Outen Cole, Interoceanic Ship-Canal Engineer and Builder of the Pacific End of the Panama Canal

EXTENSION OF REMARKS

OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. STAGGERS. Mr. Speaker, on February 13, 1950, West Virginia lost one of her most illustrious sons, Harry Outen Cole, of Morgantown, who died at his home in the early morning of that day, ending a life of extraordinary distinction.

As an engineer of the highest order of ability his career transcended the confines of normal experience in that his constructive contributions covered a wide range of projects and interests and were international in scope. His greatest achievement was, as resident engineer in charge, the responsible supervision of the construction of the entire Pacific end of the Panama Canal south of Culebra Cut, 1908–14. This work included the two Pacific locks and the Pacific sea-level section of the Canal with the accessory features.

Though his activities carried him to distant lands on a variety of major undertakings, he always thought of his canal work as being the high point in his experiences, and he became a lifelong student of that tropical waterway, ever solicitous of its integrity and interested in its rational improvement.

When, in 1947, the old 1906 issue as to the form of the future Panama Canal, known in canal literature as the "Battle of the Levels," was resurrected under the guise of "conversion" by the recommendations in a report of the Governor of the Panama Canal under Public Law 280 of the Seventy-ninth Congress, Mr. Cole was deeply interested.

After studying the available new data he became seriously concerned about the recommendations of the Governor and undertook to enlighten the American people on the subject—to reveal what he considered the principal fallacies upon which the proposed sea-level project was developed and to outline what he felt was the best solution.

In that effort he was forthright and fearless in his approach. After a careful study he recognized the operational inadequacy of the present Pacific lock system, and the serious navigational hazards in the lock and channel arrangements which would have been produced by the third locks project. He instinctively recognized and accepted the terminal lake plan for the future Panama Canal as offering the soundest and most economical means for the modernization of the Panama Canal from every point of view, especially from that of the vessels which transit the canal. He did this in spite of the fact that—as he fully realized—such work would require the reconstruction of the Pacific locks whose building he had supervised. Hence it is clear that his judgment as an engineer was not clouded by any considerations of sentiment.

With respect to the sea-level proposal he was an implacable foe. His writings are replete with exposures of the unwarranted assumptions upon which that plan was promoted in 1947. He often expressed the opinion that the sea-level plan, as proposed, would be less satisfactory operationally and vastly more costly to construct and maintain than the canal it would replace, and that it is entirely unjustified from every point of view, especially national security and national defense.

In a moving address delivered on May 8, 1948, in Washington, D. C., before the Panama Canal Societies of the United States in tribute to the late Sydney B. Williamson, who from 1908 to 1912 was his superior at Panama, Mr. Cole declared in words which reflected his heartfelt sincerity:

Were Colonel Williamson with us today he would join with the late C. A. McIlvaine in saying, "The Panama Canal was the great love of my life, the one thing I have encountered worth devoting my life to." That is the way all the men and women who built the Canal feel.

I want you to know that some of us who had the unparalleled engineering experience of building the Canal and know at first hand about its serious problems and dangers have some very definite ideas in the recent recommendations for the conversion of the present Canal to sea level, and we know that the public is not being as adequately informed on this question as it should be. At the right time we shall be heard. It is your duty to write your views to your Representatives and Senators on the subject.

Many eminent engineers have from time to time expressed themselves in strong opposition to a sea-level canal at Panama for reasons based upon definite knowledge and experience. Among these statements the most eloquent, the most forceful, and the one most historically based was made by the former Chief Engineer, John F. Stevens, on July 13, 1927, before the American Society of Civil Engineers. When discussing the sea-level controversy of 1906 and the decision of Congress to build the high-lake-type canal, he stated: "I have been privileged to be of

some little service to my country, and the greatest service I ever gave to it was the part I took in preventing foreign votes from foisting a nameless, useless, sea-level canal (as proposed by the majority of the consulting board) upon a too-credulous American people."

These words of Stevens are just as true today as they were when he said them. We are now in another critical period for the Panama Canal.

I feel it my duty to warn you and the American people that, if this so-called sea-level conversion project is undertaken, it may prove to be the practical destruction of the Panama Canal and disruption of the world's maritime shipping for an indefinite period of time, to say nothing of the futile and wasteful expenditure of billions of dollars and the blot on the reputation of the American engineering profession that could never be erased. (Hon. Chapman Revercomb, Tribute to the Late Sydney B. Williamson. (Extension of Remarks. CONGRESSIONAL RECORD, 80th Cong., 2d sess., May 21, 1948, vol. 94, part 11, Appendix, p. A3191.))

Other recent writings of Mr. Cole of technical nature have been published in extensions of remarks by Members of Congress and are now listed as matters of historical interest:

Hon. Melvin C. Snyder, What Should Be Done To Improve the Panama Canal? CONGRESSIONAL RECORD, Eightieth Congress, second session, May 4, 1948, volume 94, part 10, Appendix, page A2743.

Hon. HARLEY O. STAGGERS, Panama Canal—the Sea-Level Project, CONGRESSIONAL RECORD, Eighty-first Congress, first session, February 9, 1949, volume 95, part 12, Appendix, page A662.

Hon. THOMAS E. MARTIN, Waterway Improvements, CONGRESSIONAL RECORD, February 14, 1949, volume 95, part 12, Appendix, page A760.

These papers set forth his views on the canal question in words of power. Together they form an important part of the technical record which restored national thinking concerning this grave subject to a sound basis. I am happy that I was privileged to include one of his writings in an extension of my remarks. The death of Harry Cole—especially at this time—is, indeed, a national loss; but, fortunately, his ideas are recorded in permanent form. They will remain vital and serve as an important beacon in the stream of future events.

A Practical Step Toward Better Education

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Courier-Journal for March 4, 1950:

A PRACTICAL STEP TOWARD BETTER EDUCATION

By a senate resolution, Kentucky has taken the first step to enter the plan of cooperation among Southern States for college education. It is natural that this will revive the debate over racial separation. Many see the plan to be an effort to evade the Constitution and the Supreme Court and to perpetuate segregation.

This newspaper believes, however, that if every State in the South broke down tomorrow all laws and customs on segregation, the regional college plan would still be a good and desirable one. The issue of segregation and the issue of better education and better opportunities for all are two different things.

It may be admitted that the cooperative plan was first thought up as a way of keeping segregation by building first-rate colleges, mutually supported and used, to which Negro students would be sent. In the early narrow contemplation this would comply with the Court's mandate of equal facilities for all and still avoid a supposed touchy situation. But the idea has gone far beyond that.

Today the aim is to pool resources to build strong professional schools in which all States may share. In many fields of education, no Southern State has been doing a good job. Money is notoriously lacking in a region of low resources. Southern educators long have seen that they could not hope to set up all the facilities needed on a State-by-State basis. At this rate, each State duplicating the schools of the others, no school would be really good.

The idea grew that if instead of 11 schools for teaching, say, veterinary medicine, one institution, or three or four institutions could be maintained, it would be better all around. The original idea was left behind. The broader idea was explained by Millard Caldwell, former Governor of Florida and chairman of the board of control for Southern Regional Education. "The plan is not intended," he writes in an analysis of the legal points involved, "to relieve the States of any responsibility under the fourteenth amendment of the United States Constitution; nor could it, for that matter."

In other words, if segregation were wiped out and jealous tradition laid aside, the result would apply to regional schools as well as State schools.

Negroes and white groups opposed to segregation in colleges are not opposed to the plan of regional education in itself. Their attitude was set forth in an editorial in the Journal of Negro Education last year, which said:

"Why are Negroes opposed to segregated regional graduate and professional work? The answer briefly is that they are opposed only to the segregated aspects of it. They have no objection to and see considerable advantage in regional services which are based upon a principle which looks forward to a greater educational future for the South, rather than backward to a decade or more ago."

As matters stand now, it is a fact that citizens of several States, white and colored alike, cannot get at home certain professional training. Segregation has no place in their situation. Florida and West Virginia, for example, have no medical schools. To remedy this situation would cost upward of 10 to 20 million dollars for buildings and equipment, and large sums for operation. The problem is solved for them under the regional plan. The regional compact, which 10 States already signed, opens to their citizens medical schools at Vanderbilt, Tennessee, Tulane, Louisiana State, Meharry (the Negro college at Nashville), Duke, and Emory. The States pay $1,500 a year a student. John I. Ivey and William McGlothlin, directors of the system, make it plain:

"A State shares the school it has in one field and buys use of a school elsewhere in a field in which it is deficient. The system adds up to a more efficient use of facilities and a practical application of the regional philosophy. It permits the region to put its combined strength into the development of a school that, through location and present growth, holds greatest promise for service to the region."

Package Freight Trade on the Great Lakes

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mr. POTTER. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I wish to include statement of Mr. Harry C. Brockel, Milwaukee, Wis., before the Subcommittee on Merchant Marine and Maritime Matters of the Senate Committee on Interstate and Foreign Commerce, February 11, 1950.

The problem of restoring our Great Lakes package freight trade is of major import and worthy of serious study on the part of the Congress of the United States. I hope every Member of Congress will read Mr. Brockel's very complete statement on the need for revitalizing package freight and passenger service on the Great Lakes. This is additional proof for the necessity of amending the Ship Sales Act of 1946 as provided for in bills introduced in this body by 28 Members, including myself and Congressman BLATNIK.

STATEMENT OF HARRY C. BROCKEL, MILWAUKEE, WIS., BEFORE THE SUBCOMMITTEE ON MERCHANT MARINE AND MARITIME MATTERS OF THE SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, WASHINGTON, D. C., FEBRUARY 11, 1950

I appear before your honorable committee as a public witness in behalf of the maritime interests of the Great Lakes region. I am municipal port director of the Board of Harbor Commissioners of the City of Milwaukee, and appear here as representative of that city.

I am also secretary of the Great Lakes Harbors Association, which represents some 25 to 30 Great Lakes ports, large and small, and my statement represents the views of that organization also. Further to qualify myself, may I say that I am immediate past president of the American Association of Port Authorities, which is vitally interested in the rehabilitation of domestic shipping, coastwise, intercoastal, and Great Lakes. I also represent the Great Lakes on the Joint Committee for the American Merchant Marine.

The net effect of World War II, insofar as our seagoing merchant marine is concerned, was to modernize our ocean fleets and to expand our off-shore fleet tremendously. In direct contrast, World War II had the effect of completely destroying some very vital segments of Great Lakes shipping. The recent war, in some respects a blessing to our ocean merchant marine, was directly the opposite insofar as the Great Lakes is concerned.

The Great Lakes are one of America's major transportation arteries. They serve an area which is one of the most highly productive regions of the globe, with a population of 50,000,000 people. No other nation or continent has been favored by inland seas of such magnitude and importance nor with such volume and value of commerce.

Although the Great Lakes serve an immense water-borne commerce, certain segments of Great Lakes water transportation have been seriously affected by competitive factors, and there has been considerable displacement of vessels as a result of World War II. The unfavorable conditions which confront the domestic merchant marine gen-

erally have been felt on the Great Lakes as well as in the intercoastal and coastwise trades. The problems which beset the domestic merchant marine are much the same on the Great Lakes as on salt water, and an adequate solution of the domestic merchant marine problem must take cognizance of the lake situation as well as the oceans.

HISTORICAL BACKGROUND

Unlimited space could be devoted to an historical discussion outlining the rise and fall of the Great Lakes package freight trade. To summarize briefly the competitive and commercial conditions which led to the progressive decline in the volume of package freight handled on the Great Lakes, mention several important factors. These include the prewar competitive attitude of the rail carriers, which permitted package freight services a mere existence and over a period of years progressively reduced the number of commodities available for water carriage; the new competition of truck carriers, which drove out of existence the so-called alongshore vessel services operating port-to-port services of regional importance; the gradual rise in operating costs even prior to World War II, accompanied by a parallel decline in revenues; and finally, the necessities of war, which resulted in the United States and Canadian Governments requisitioning of scores of lake ships for ocean service, thus forcing the suspension of all general cargo services available at the outbreak of the war.

Thus a trade which 25 years ago employed a large fleet of vessels and gave productive employment and profitable activity to seamen, stevedores, warehouses, terminals, shipyards, and other phases of the marine industry, gradually declined from its earlier importance and was barely existing when World War II placed the final quietus on these historical services these trades are dormant today, as steamship operators have either been unable or unwilling to reenter the trade, and there has been no constructive action by Government agencies looking toward restoration of these services.

ECONOMIC VALUE TO THE LAKE REGION AND TO LAKE PORTS

The Great Lakes were discovered, explored, and colonized by water transportation. The whole economy of the region is traditionally a water-transportation economy. The displacement of a large segment of the Great Lakes merchant marine is a distinct loss to shippers and to the economic structure of the entire Middle West. The Great Lakes package freight services offered transportation services at appreciable savings under all-rail freight costs; gave shippers the benefit of alternate routes during periods of railroad congestion, and maintained a competitive relationship between rail and water rates.

While the preponderance of lake shipping is devoted to the so-called bulk trades (coal, ore, stone, grain, and petroleum) which move tonnage in tremendous quantity, it is significant that comparatively few shippers can use this type of service to advantage; i. e., those industries which by their very nature can deal in cargo lots and which have the capital resources necessary to permit of full utilization of bulk shipping facilities by way of investment in docks, handling apparatus, large stock piles, and the ships themselves. On the other hand, the balance of the lake commerce available for movement by package freighters, passenger and freight vessels, and unscheduled steamers is of interest to an infinitely larger number of enterprises, numbering literally thousands, ranging all the way from small town merchants and manufacturers up to great national industries.

From the standpoint of port interest, important lake terminal facilities whose operations are predicated upon these commercial movements, may find economic survival difficult. Major port facilities require large initial investments and have substantial maintenance and overhead costs which cannot be supported unless they earn regular revenues. The disappearance of normal shipping services and of commodity movements, upon which these terminals depended for revenues, presents a serious question to public and private terminal operators. The entire economy of the Great Lakes area is affected by this situation.

In the event of any substantial business recession, the repercussions would be serious from the standpoint of employment. The removal of approximately a hundred ships from the American fleet as constituted prewar means that there are a hundred fewer staffs of officers and seamen employed on the lakes. Thousands of stevedores have had to find other occupations. In Milwaukee, for example, before 1942, we had a force of 500 stevedores continuously employed in handling general cargo. As of today, we find it difficult to maintain employment for 50 stevedores. The same condition prevails in the whole pattern of economic activity that springs from an active merchant marine.

RAILROAD COMPETITION

The present situation of the domestic merchant marine is due to abuses of long standing. For many years past, domestic water transportation has been progressively undermined by ruthless railroad competitive practices. This is not a mere accusation but a condition which has been recognized in official reports of the Maritime Commission, Interstate Commerce Commission, and other authoritative agencies.

The Transportation Act of 1940 vests in the Interstate Commerce Commission the duty of regulating both rail and water carriers so as "to preserve the inherent advantages of each * * * without unfair or destructive competition." It was hoped that this act would provide a solution to the rail-water competitive problem, but after 9 years of operation under this act, the situation has deteriorated steadily, and, in fact, has reached the point of crisis.

While the Maritime Commission has taken some encouraging steps to initiate a complete investigation of rail-water rate structures in the intercoastal and coastwise trades, this proceeding has lagged and thus far there is no indication as to when a final conclusion by the Interstate Commerce Commission may be forthcoming.

No study of the domestic merchant marine can be complete without full recognition of the rail-water competitive situation and the demonstrated determination of the railroads to capture Great Lakes, coastwise, and intercoastal traffic even though on noncompensatory rates. Unless the Interstate Commerce Commission takes appropriate action to terminate these ruthless competitive practices and to restore a reasonable balance between rail and water services in accordance with the several congressional declarations of policy, it will be necessary to seek congressional consideration of the problem and to secure a legislative mandate of a character which will permit the domestic merchant marine to exist. It can neither operate nor exist under present conditions. Depressed rail rates are an effective barrier to the increase of water rates, and the water carriers are thus unable to recapture the added cost of operation under present inflated conditions. The railroads, through the maintenance of depressed rates, have made it impossible for water lines to operate on a compensatory rate basis. As long as this situation continues, domestic water lines are in a hopeless condition.

EFFECTS OF WORLD WAR II

The following table showing the status of the United States Great Lakes fleet as of 1939–46, shows graphically the decline in the Great Lakes merchant fleet as a result of World War II:

United States Great Lakes fleet (over 500 tons registry)

Type	1939		1946	
	Number	Gross tons	Number	Gross tons
Bulk freighters	414	2,170,486	350	2,103,402
Package freighters	24	87,169	0	0
Car ferries	32	80,782	27	74,543
Passenger steamers	19	70,557	12	42,564
Total dry cargo	489	2,408,994	389	2,220,509
Oil tankers	28	58,245	26	65,370
Total dry cargo and tankers	517	2,467,239	415	2,285,879

Percentage 1946 of 1939:	*Percent*
Number of vessels	80.3
Registered tonnage	92.6

Between 1939 and 1946, the United States Great Lakes fleet of more than 500-ton registry declined from 517 ships to 415 ships, a decrease of 102 vessels. In numbers of vessels, the fleet declined approximately 20 percent and in registered tonnage, it declined approximately 7 percent as shown by the table. The Canadian Great Lakes fleet declined from 274 ships in 1939 to 212 ships in 1946.

Of the 102 vessels removed from the Great Lakes fleet during this period, a few were lost by disaster or retirement. However, the vast preponderance of the reduction is represented by ships taken from the Great Lakes for war service, which have in no manner been replaced.

The entire fleets of the principal package freight services were ordered into ocean service upon the outbreak of World War II. Whereas 24 package freighters were operated in 1939, none are in postwar operation. Two of the largest passenger ships on the Lakes were converted into aircraft carriers for naval aviation training, while other passenger ships were taken from the Lakes for use as transports or for conversion into freight carriers. Motorship services which formerly operated between the Atlantic seaboard and the Great Lakes were forced to discontinue cargo service to lake ports. Automobile carrying vessels were converted into bulk carriers to meet wartime demands.

The Maritime Commission, during World War II, built 16 large modern ore vessels for the Great Lakes trade. As a condition of the construction and acquisition of these ships, lake shipping companies were forced to surrender 36 moderate-size Great Lakes bulk freighters, of obsolescent types, which immediately after the war, were sold for scrapping. The 16 large ore carriers added to the Great Lakes fleet are of such dimensions that they can be safely and economically operated only into a few of the principal Great Lakes ports, primarily the ore ports. The Great Lakes fleet thus gained 16 large ships whose usefulness is limited to a few ports and lost 36 ships of moderate size which were capable of operating into practically any lake port. As a result of this transaction, lake shipping lost much of its flexibility and while the ore trade may be well served, many of the

smaller ports are now at a disadvantage in securing vessel space.

The demands of World War II thus caused the removal from the Great Lakes of nearly 100 ships of all types, including passenger ships, bulk carriers, motorships, tankers and other useful vessels, large and small, which furnished a flexible transportation service adaptable to most lake ports. The removal of these ships by the Federal Government has automatically terminated the movement of many commodities economically important to the Great Lakes region and has caused great injury to the commerce of the Great Lakes.

After the First World War, the Great Lakes area was fortunate in securing the services of small salt-water ships built on the Great Lakes for ocean service. After World War I, many of these so-called lakers came back into the Great Lakes and were an important transportation asset between the two world wars. During World War II, the shipbuilding program concentrated on vessels of dimensions too large to enter the Great Lakes unless and until the St. Lawrence seaway is developed. Few if any small cargo ships suitable for Great Lakes operation were built during World War II, and the result is that the pool of Great Lakes shipping is considerably smaller after World War II than before the war. This condition is in striking contrast to the wealth of tonnage now available for foreign service.

To summarize the present status of the Great Lakes fleet, it is admirably served from the standpoint of bulk commodities but is totally lacking in vessels suitable for general cargo trade and in small flexible types of bulk carriers adapted to various trades and to serving the smaller ports. The lake fleet is much less flexible than before World War II, and its tonnage is now largely concentrated in the bulk trades (coal, ore, and grain) leaving great deficiencies in other aspects of Great Lakes commerce.

To the best of my knowledge, Mr. Chairman, we on the Great Lakes have had exactly two acquisitions in the way of vessels out of World War II. Those are two LST's one of which is hauling pulpwood from Canada to a Wisconsin paper mill and the other is carrying new automobiles across Lake Michigan. These two LST's represent our net replacement for the 100 or more ships lost to the area during World War II, as a result of Government action.

MARITIME COMMISSION POLICY

The Great Lakes situation was forcefully called to the attention of the Maritime Commission by the Milwaukee Board of Harbor Commissioners as early as September 1943, as the radical effect of the war upon lake shipping already was fully manifest. The Milwaukee presentation received wide support throughout the Great Lakes area.

Admirals Land and Vickery, formerly Chairman and Vice Chairman of the United States Maritime Commission, both verbally and in writing committed the Maritime Commission to the rehabilitation and restoration of Great Lakes shipping. Continued negotiation between lake interests and the Maritime Commission over a 7-year period has, however, produced nothing substantial and not a single vessel of the entire vast surplus fleet has been assigned to the Great Lakes by the Commission.

Admiral W. W. Smith, Chairman of the United States Maritime Commission, on March 24, 1947, addressed a letter to the Honorable John R. Steelman, Assistant to President Truman, discussing in some detail the domestic merchant marine crisis. He said in part, "The problem of reestablishing domestic water carrier services, which before the war played a vital part in the distribution and marketing of commodities in interstate commerce, is the direct concern of Government agencies responsible for orderly reconversion to peacetime economy. Moreover, there has been an indisputable obligation upon the Government since it disrupted the business of these steamship lines by requisitioning their ships for war uses, to do its best to help them recapture their position in the transportation industry."

This is an admirable statement of policy and an admirable recognition of the Government's moral obligation to the domestic carriers. However, 5 years have elapsed since the end of the war without a single substantial forward step having been taken either by private enterprise or Government agency to restore the hundred ships diverted from the Great Lakes to the war effort. In the meantime, vast numbers of surplus American vessels have been disposed of to foreign purchasers under preferential terms, and the American merchant marine languishes while foreign flag fleets rapidly rehabilitate themselves.

Canadian shipping enterprise is moving to provide modern vessels and expanded service on the Great Lakes and in the St. Lawrence River. Unless American enterprise keeps pace with Canada, the inevitable result will be foreign domination of many segments of the Great Lakes trade, bolstered by modern and efficient vessels, in contrast to an aging American fleet, marked by great gaps in our shipping services as a result of wartime requisitioning.

Comprehensive reports on the Great Lakes problem have been presented to the United States Maritime Commission, to the President's Advisory Committee on the Merchant Marine, and more recently to the Merchant Marine Committee of the House. We are most appreciative of the interest which the House and Senate committees are demonstrating with regard to the Great Lakes problem and are grateful to General Fleming, Chairman of the Maritime Commission, who, at the request of Great Lakes interests, initiated a complete study of the Great Lakes shipping problem, which we understand is nearing completion. Some of the specific measures recommended to the Maritime Commission include the following:

1. The initiation of studies looking toward development of one or more vessel types designed for the special conditions of the Great Lakes package-freight trade, with special reference to low cargo-handling costs, fast turnaround, lowest fuel costs consistent with reasonable speed, and minimum crew requirements.

2 Pending design and construction of vessels dedicated specifically to the Great Lakes trade, it was recommended and requested that the Commission allocate to Great Lakes service suitable types of vessels in sufficient numbers to permit reestablishment of the Great Lakes package-freight and miscellaneous freight services, upon favorable terms consistent with Government policy, recognizing the public interest involved in the restoration of these important services.

3. It was requested and recommended that the Maritime Commission aggressively support legislative and rate policies which will permit the operation of Great Lakes package freight and general cargo carriers on a sound, healthy, and economical basis. The rate history of these trades indicates that Great Lakes package freight and general cargo operations have not had the support of the Federal Government and that there has been a progressive decline in these trades over a period of years through encroachment by rail and truck carriers.

The Merchant Marine Act of 1936 was enacted at a time when the greatest danger to the American merchant marine was its inability to compete with foreign operators. Construction and operating subsidies were provided by Congress to overcome these handicaps and to assure that the American flag would continue to fly the seas. The economic dislocations caused by World War II have entirely reversed the situation. The foreign trades now enjoy an improved position as compared to its prewar status, and the domestic trades are now in demand of public attention and assistance.

GREAT LAKES SHIPBUILDING

Closely allied to these questions is the problem of an adequate Great Lakes shipbuilding resource. During the war, approximately 20 shipyards on the shores of the Great Lakes built ships under Maritime Commission, Army, and Navy contracts. Some of these yards did not exist before the war and most of them have since gone out of existence. Prior to the emergency, Great Lakes shipbuilding was in the doldrums, with little activity in the way of new vessel construction.

The national interest requires that Great Lakes shipbuilding facilities not be allowed to fall into a state of disuse and disrepair. Policies should be formulated for development of Great Lakes, coastwise, and inland waterway transportation, which will utilize these shipbuilding resources on a regular and consistent basis, to insure their continued operation and maintenance. In time of peace, the Great Lakes shipbuilding industry, so maintained and supported, would constitute an economic asset of great value to the Great Lakes area and to the Nation at large; and in the event of future wars, would be able to produce ships speedily and efficiently for the national defense. When the St. Lawrence seaway becomes available, Great Lakes shipyards will be able to build and deliver ships of much greater capacity than at present, up to and including vessels of 10,000 tons in size; but in any event, these resources should be utilized consistently and maintained in working condition.

Most of the materials required for modern vessel construction are to be found on or near the shores of the Great Lakes, in close proximity to the industrial machinery and the skilled labor required for vessel production. In this sense, the Great Lakes shipyards are probably in a position to deliver ships at cost equal to or lower than other shipbuilding areas because of their central location, which minimizes transportation requirements in the way of materials and machinery and tends to eliminate cross hauling of materials and equipment.

The maintenance of lake shipbuilding on a sound and healthy basis should be closely integrated with programs for restoration, rehabilitation, and expansion of Great Lakes shipping and commerce. To the maximum extent possible, ships intended for lake service should be built in Great Lakes yards, thus tying together the entire shipbuilding, ship-operation, and ship-repair economy of the region.

We recommend and request, therefore, that your committee, in the course of its studies looking toward rehabilitation and modernization of Great Lakes shipping, give consideration to the suggested liaison and integration of Great Lakes shipbuilding and Great Lakes shipping services.

THE NATIONAL DEFENSE

It is self-evident that an adequate domestic merchant marine is essential to our national defense. There can be no quibbling on this point in the light of the record of the domestic fleet in World War II. The intercoastal, coastwise, and Great Lakes fleet bore the first brunt of the war and provided this country with shipping capacity at a time when our national security hung in the balance. The ships were readily available, were manned by experienced crews, and furnished our first line of defense, until the wartime shipbuilding program swung into action and began producing tonnage in quantity a year or more after the outbreak of World War II.

One may well ask what the situation of the United States would have been after

Pearl Harbor has there been no intercoastal, coastwise, and Great Lakes fleet. The answer is obviously that national disaster might have ensued. Yet, in the face of this record, there are those who would gamble with our national security by arguing that domestic shipping has served its role in our national development, that the railroads need the traffic, and that domestic shipping must go the way of the horse and buggy.

In 1937, 517 merchant ships plied the Great Lakes under the American flag. Four hundred and fifteen ships were in this trade as of 1946. The disappearance of 102 ships from the Great Lakes fleet means more than the loss of actual bottoms. It means that 102 fewer skilled crews of seamen and 102 fewer sets of capable officers will be on call during the next emergency. If these ships and their commerce are not restored it means a proportionate reduction in seamen, stevedores, marine personnel, and terminal facilities generally. These vital facilities will be found lacking in some future national emergency.

The national defense demands the restoration of these ships not only as a matter of actual bottoms but in the matter of maintaining a pool of trained officers, seamen, and port facilities. It has been repeatedly stated by our top military authorities that an adequate merchant marine is essential to our national defense, that the Navy cannot function without it, and that the Army cannot convey expeditionary forces to distant battlefronts without it. No detailed discussion on this point should be necessary. Similarly, little discussion should be needed to emphasize the vital role of the domestic merchant marine in this over-all picture.

CONCLUSION

The vessels of the Great Lakes and the thousands of skilled officers and seamen manning these ships form a vital part of the American merchant marine—although the limited recognition extended to lake shipping thus far by the Congress, regulatory commissions, and ocean shipping interests raises the question as to whether the Great Lakes are so recognized.

Great Lakes shipping has been largely self-sufficient during the past century, which is probably the best reason for its lack of prominence in congressional consideration of merchant-marine matters. The Merchant Marine Shipping Act of 1936, the basic law prescribing the functions of the Maritime Commission and establishing our national merchant-marine policy, makes only passing reference to "domestic" and "inland waterway" transportation. The phrase "Great Lakes" occurs only two or three times in 30 pages of fine print in this act. The foreign-trade policies prescribed by the act refer specifically to offshore shipping. A considerable degree of legislative indifference to the Great Lakes is apparent in this act, which is the fundamental merchant-marine law of the land.

The American people have a tremendous stake in Great Lakes commerce and in its ports and harbors. The Nation has no greater avenue of water transportation and no cheaper form of transportation. Its contribution to the national welfare and economy both in war and in peace cannot be challenged. A great public investment has been made in navigation and harbor improvements on the Great Lakes, the full benefit of which cannot be realized unless lake shipping is fully restored.

Maintaining the strength and vitality of Great Lakes commerce is just as important to the citizens of the Middle West and to the entire Nation as is the development and promotion of seaboard and foreign commerce. All phases of the Nation's commerce are as deserving of aid and recognition as our foreign commerce.

The Maritime Commission has a vast fleet of 5,500 vessels to dispose of, in accordance with congressional policy for the fostering and promotion of both our foreign and domestic trade. Thus far the Commission has not seen fit to assign so much as one ship of this vast fleet to the Great Lakes as even a token replacement of the many vessels sacrificed by the Great Lakes toward victory in World War II.

The Great Lakes area has traditionally supported the establishment of ocean shipping on a sound and healthy basis. It earnestly feels, however, that the Great Lakes problem as well as salt-water shipping problems should have responsive and liberal treatment by the Federal Government. While the distressed condition of Great Lakes shipping is only one of the major problems confronting the Federal Government, we submit that it is a problem requiring the best thought, and much more speedy and aggressive action than it has received heretofore.

In your consideration of national merchant marine policy, we sincerely hope that the Great Lakes situation will receive your earnest consideration. We hope that this report will in some measure assist you in your deliberations. The restoration of Great Lakes commerce is one of the most vital problems confronting the Middle West and the entire Nation.

In connection with your hearings relative to ship sales and charters and the extension of the Ship Sales Act of 1946, Great Lakes vessel operators will make certain legislative recommendations to your honorable committee, which we hope will have your serious and careful consideration. We hope sincerely and devoutly that from the deliberations of your committee will come a realistic program for restoration of common carrier shipping services on the Great Lakes, a vital but overlooked segment of the American merchant marine.

The Great Lakes region is interested in recognition as part of the American merchant marine. Sound and useful shipping opportunities will again be offered by the Great Lakes. Lakes shipbuilding, ignored in peacetime and suddenly valued under the stress of war, should receive greater recognition. With 8,000 miles of shore line and scores of fine harbors, with great natural resources and a reservoir of skilled labor, the Great Lakes were allowed about 3 percent participation in the wartime shipbuilding program, in terms of tonnage.

A fleet of 500 vessels, manned and officered by tens of thousands of competent seamen capable of moving more than 200,000,000 tons of freight in an 8-month season cannot be ignored in surveying the national landscape. The Lakes demand recognition of these shipping and human resources which together constitute a great national asset.

States' Rights and Lefts

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. HÉBERT. Mr. Speaker, the shocking conduct of Philip B. Perlman, employed by the people of the United States as their solicitor general but, who, in fact, obviously represents other interests and not the people who employ him, was the subject of a recent column by William H. Fitzpatrick, editor of the New Orleans States.

To be more accurate I might say that Mr. Perlman's actions became the subject of Mr. Fitzpatrick's column after Mr. Perlman had become the subject of the American Bar Association. I make this distinction in order to point out that Mr. Perlman also became the subject of the American Bar Association after he, Mr. Perlman, had become the subject of most serious discussion and action on the part of the Judiciary Committee of this body.

Let me fill you in.

As Solicitor General, it is Mr. Perlman's job to act as the trial attorney for the people of the United States and the various agencies of the Government.

When the chips were down in an important case, however, Mr. Perlman unblushingly declared himself on the opposite side of the people from whom he draws his salary.

So unparalleled was his action that the Judiciary Committee of this body took unparalleled action and by a majority vote of the majority and minority sides of the committees denounced Mr. Perlman's action and said, in effect, that since Mr. Perlman had abandoned his client and had deserted to the other side it was time that the Congress, the elected representatives of the people, have somebody to speak for them. One of this body's most distinguished Members, SAM HOBBS, of Alabama, the ranking majority member of the House Judiciary Committee, was selected to represent the Congress and the people since Mr. Perlman had taken a run-out powder on his client.

It is almost unbelievable but it is a fact.

Such action on the part of any run-of-the-mill lawyer would have brought down immediate action by the ethics committee of any bar association in any State.

Of course Mr. Perlman's action was no surprise to Members of Congress who were familiar with his previous action in New York where he read into the housing legislation certain rules, regulations, and restrictions which the Congress on several occasions had specifically rejected.

This is the gentleman who is the subject of Mr. Fitzpatrick's column in the New Orleans States and New Orleans Times-Picayune.

Now Mr. Fitzpatrick himself is no ordinary run-of-the-mill, fly-by-night editor. He is editor of a newspaper which long ago established its integrity and its right to be heard. On two occasions the New Orleans States has been nationally recognized by being awarded the Theta Delta Chi medal for distinguished service and courage in journalism. This newspaper has every right to be proud of these two awards.

In view of the high standing in the community of the New Orleans States and recognition of the fact that the New Orleans States is not a propaganda sheet or an apologist claptrap, nor a carrier of imported and foreign ideas, Mr. Fitzpatrick's article on Mr. Perlman is of more than passing moment.

STATES' RIGHTS AND LEFTS

(By W. H. Fitzpatrick, editor, New Orleans States)

The papers last week revealed that some of our lawyers are upset about the way a Washington lawbooks named Philip B. Perlman has been carrying on, and so there will

be no misunderstanding at the outset, they are right as rain.

Perlman is one of these hot-eyed zealots who wants to reform—according to his own chosen ideas of what reformation means—the whole structure of the Federal courts, the ethical concepts of the American Bar Association, and the mores of a people.

I have had pieces before about how intolerant upper-case Liberals really are. If you can't see things their way, brother, you're lucky you're not living with them in Salem in the seventeenth century.

All of this was a bit too much for Cuthbert Baldwin of New Orleans and Le Doux Provosty of Alexandria. They have asked the bar group to cool Perlman down.

They charge Perlman with maligning Federal judges of the fifth circuit court and with abandoning clients, and if the committee on grievances and ethics finds him guilty, the board of governors can kick him out.

This gentleman under discussion isn't just a night court lawyer—he's the Solicitor General of the United States. As such, he filed before the United States Supreme Court petitions for writs of certiorari last October alleging that the Court of Appeals of the United States Fifth Circuit was following a pattern of denial in cases before it involving the National Labor Relations Board.

Along with these petitions he filed a chart showing how many NLRB cases the fifth circuit had enforced, how many it had modified, set aside or remanded, and compared its record and results with other circuit court decisions. This formed his pattern. In Perlman's book, the fifth circuit is an also ran.

But even to a layman like me, there is a certain respect for evidence and facts. I say nuts to his patterns. What was the evidence in each of the cases he complains about? That's what I want to know and that's what every lawyer ought to want to know, including the bookish boys on the Supreme Court.

For this fearsome scatter shot, which has left the judges of the fifth circuit visibly unimpressed, the American Bar Association is going to decide whether or not Perlman has violated its ethics through a pursuit of "unjust criticism and clamor."

This isn't the only charge resting against the honorable Solicitor General. There is the little matter of abandoning a client, too.

This latter criticism of Perlman arises from a suit filed against the Interstate Commerce Commission by Elmer W. Henderson, attacking an ICC ruling setting up separate but equal dining facilities for whites and Negroes on railroads. Perlman, who ought to be defending the ICC, his Government client, hopped the fence and filed a brief supporting Henderson's position.

For this, the bar association's committee on ethics is studying the charges of Messrs. Baldwin and Provosty that Perlman has "abandoned its (the ICC's) defense and espoused the cause of its alleged adversary."

These are not the first evidences of the attempts of Perlman, through his office, to centralize control in the executive branch of the Government for purposes of his own and to run roughshod over the judicial and legislative. In those cited above he has tried to break down the lower courts in the NLRB cases and nullify Supreme Court and ICC rulings upholding segregation in the Henderson case.

There was the time on December 4 last, when in New York, for political purposes, he made a speech in which he said that the Federal Housing Authority would no longer lend funds to projects which sought to enforce racial restrictions.

This was in direct contravention to the wishes of Congress which has refused, each time Federal Housing has come before it, to adopt similar restrictions. The Congress is wise enough to know that local law and local customs ought to determine whether segregation should be enforced.

This is the record of Mr. Perlman. It comprises disregard of the Congress, disregard of Supreme Court and ICC rulings, charges of abandonment of clients and unjust criticism of Federal courts and violation of the basic ethics of his profession for his own designs.

Maybe from this evidence you can follow the pattern being woven by this ideological ambulance chaser now holding the high office of Solicitor General of the United States.

Oleomargarine

EXTENSION OF REMARKS
OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I desire to submit some additional comment on the conference report on H. R. 2023, the bill to repeal the taxes on oleomargarine, and on the statement of the managers on the part of the House which accompanied that report.

The oleomargarine bill as amended carries a provision designed to make clear the intent of Congress that the raw oils destined for human consumption in the form of oleomargarine shall be required by the Food and Drug Administration to measure up to the same sanitary standards applied to the milk and cream used in the manufacture of butter. The statement of the managers on the part of the House states that this provision adds nothing to section 402 (a) (3) of the Federal Food, Drug, and Cosmetic Act as that act has been interpreted and construed by the administrative officials charged with its enforcement.

I think it would be well for the record to show what that interpretation is. An official of the Food and Drug Administration has assured the conferees that under section 402 (a) (3) the raw oils intended for use in oleomargarine could and would be subjected to the same sanitary standards presently applied to the milk and cream used in the manufacture of butter and also that the plants extracting oils for use in oleomargarine could and would be required to meet the same sanitary standards applied to creameries handling milk and cream to be manufactured into butter.

The amendment therefore serves as a ratification or approval of that interpretation and as a directive to the Food and Drug Administration to bring about this equality of standards in actual operation. The amendment does not increase the standards for butter, milk, or cream, or for oleomargarine or the refined oils used therein, as such, but merely requires that the raw oils intended for human consumption in the form of oleomargarine shall be kept clean and sanitary from the time of the original extracting of the oils to the same extent that milk or cream is required to be kept clean and sanitary from the time it reaches the creamery until it is used in the manufacture of butter.

Another amendment in the bill prohibits advertisements which represent or suggest that oleomargarine is a dairy product.

This amendment is intended to put an end to the use in oleomargarine advertisements of grade labeling similar to the grade labeling authorized by law or regulation for butter. Specifically it is intended to reach at the present time the use of grade designations in oleomargarine advertisements such as grade AA, grade A, grade B, and so forth, or the use of grade designations which are similar to the score system of grading butter, such as 92 score, and so forth. This amendment would also prevent the use in oleomargarine ads of dairy scenes or dairy terms, such as pictures of cows or dairy farms or equipment, or such terms as dairy breed names, churned, and so forth. The amendment would also prevent the grouping of oleomargarine with dairy products in advertisements, particularly where such grouping occurs in a box or under a heading entitled "Dairy Products," or suggesting that the products so grouped are dairy products.

Social Security

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mrs. DOUGLAS. Mr. Speaker, in connection with the bill I introduced yesterday, I would like to include a statement of my position on social security:

I believe in the right of all people to a good and decent life when they are no longer able to work because of age, disability, or responsibility for young children.

I believe this right is most secure under a social-insurance program in which a person unable to support himself receives benefits as a matter of equity right because he and his employer have contributed during his working years. This is the self-respecting American way.

I have always been a supporter of the Social Security Act, great pioneering measure of the Roosevelt New Deal, which established that right in our law.

I have supported every recommendation of President Roosevelt, President Truman, and the Democratic platform for making this program more adequate to the needs of all people.

I voted for H. R. 6000, the social-security amendments passed by the House last year, which extended this program to 11,000,000 more workers, greatly increased its benefits, and added insurance against permanent disability. This bill was a great forward step as far as it went but it didn't go nearly far enough.

I, therefore, have urged a further liberalization and extension of the Social Security Act to make security, on an adequate level, a reality for every person who works or has retired. I have introduced a bill for this purpose, H. R. 7617, which would add to the steps already taken, these further provisions.

My bill extends social-insurance protection to everyone who works, whether for himself or another, whether in agriculture or industry, whether in a big enterprise or small. All working people not covered under other Federal systems would, through their own and their employer's contribution, be entitled to benefits as a matter of absolute right without any means test, when they retired.

My bill further increases the social-insurance benefit level. It sets as a minimum monthly payment the $75 which we in California decided at the polls was the least on which any individual could maintain a decent life. Above this basic amount the person retiring would receive 15 percent of his average monthly earnings up to a maximum of $400 of earnings, plus 1 percent for each year he worked in covered employment. His wife would receive the $75 monthly minimum. Thus a worker and his wife retiring after 20 years of covered employment with average earnings of $300 a month would receive a monthly benefit payment of $219.

Men would be entitled to retirement benefits at 65, women at 60. But if a worker became permanently disabled before that time he would be immediately entitled to his retirement benefit. If he should die, his widow and children would receive proportionate monthly payments.

My bill recognizes the justice of the plea for similar treatment from those who have already retired by granting them insured status at the minimum level of $75 a month. All men over 65, all women over 60, and all those permanently and totally disabled would receive the minimum social insurance benefit of $75 a month if they had retired. The Government would purchase this insurance for them as a part of the transitional cost of launching this universal program.

It is no fault of this retired group that they were not able to make pay-roll contributions during their working years. It is the accident of their birth date that has deprived them of the protection of a dignified social insurance program and forced them to submit to the indignity of the public assistance means test.

I believe that the contribution they made to the economy, to the building up of our young and still growing state, entitles them to social insurance on at least this minimum basis. To recognize the just claim of this group will strengthen the social insurance system and thus help to protect the equity of the younger workers.

I do not believe that security is an end in itself. It is the means to all other values. Who can fulfill the creative and spiritual promise that lies within every man when he is obsessed by the uncertainty of how he and his family will live when he can no longer work? Fear is the enemy that corrodes human dignity; insecurity engulfs the human spirit. We who are rich in resources must make ourselves equally rich in the human values which can only fulfill themselves when we have banished fear and insecurity.

I am committed to that battle.

Society of Friends Endorses United States Participation in International Trade Organization

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. JAVITS. Mr. Speaker, recognizing the secure economic base necessary for world cooperation to achieve peace, and the need for fair rules in international trade as a precedent for the permanent and sure settlement of international differences in other endeavors, the Friends' General Conference of the Religious Society of Friends has recommended approval of the Habana Charter for an International Trade Organization. Appended hereto is the statement issued by this religious body whose roots are deep in American history and culture supporting the ITO and giving reasons why the United States should accept the charter:

THE HABANA CHARTER FOR AN INTERNATIONAL TRADE ORGANIZATION

The Friends' General Conference of the Religious Society of Friends wishes to record with the Committee on Foreign Affairs its recommendation that the Habana Charter for an International Trade Organization be approved by the committee and reported favorably to the House of Representatives.

Until an organization is established to deal with the many difficult problems that arise in the field of trade relationships, the structure of cooperation for the peaceful settlement of international differences will be incomplete. The Habana charter would establish such an organization. It is a product of protracted negotiations. It affords a basis upon which the nations of the world can now agree.

The charter embodies the principle that nations, instead of taking action in their own interest without regard to the harm that may be done to others, must first enter into consultation in an effort to achieve a solution that will be in the interest of all. It would create an instrument for the promotion of mutual understanding and the reconciliation of conflicting purposes. By inaugurating a process of continuous accommodation, it would hold in check the ever-present temptation to resort to the weapons of economic warfare.

The creation of an international trade organization was first proposed by the United States. The charter that is now before you is a product of American initiative. If our country were now to turn its back upon it, it would appear to all the world to be abandoning the principles of peace and freedom that it has long espoused. American leadership is desperately needed in the troubled times in which we live. But if it is to be respected, it cannot afford to falter. It must be steady, sure, and strong.

As a practical and constructive contribution toward the organization of a peaceful world, the Habana charter should be approved.

Eighth National Banquet a Significant Occasion—Declaration of American Citizens of Hellenic Descent—Constitution of the Order of Ahepa

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 4, 1950

Mr. DOYLE. Mr. Speaker, on the evening of March 7, 1950, at the Hotel Statler, Washington, D. C., Mrs. Doyle and I were among several hundred other guests on the occasion of the eighth national banquet of the Order of Ahepa.

We were guests of the chapter of this order consisting entirely of American citizens of Hellenic descent of my home city of Long Beach, Calif.

It was announced that the Order of Ahepa holds such national banquets here in the Nation's Capital every other year.

Following is the text of their constitution, to wit:

CONSTITUTION OF THE ORDER OF AHEPA

PREAMBLE

We, American citizens of Hellenic descent, desiring to form, institute, and perpetuate a fraternal order and promote its objects and principles; to effect a perfect and harmonious understanding between ourselves and others; to inculcate loyalty and patriotism to and for the country in which we live; to stimulate the spirit of good fellowship and cooperation; and to aid in the solution of social and civic problems, do hereby establish and ordain this constitution.

OBJECTS

The order of Ahepa, and every member thereof, shall always strive to teach, exemplify, and achieve the following objects, principles, and ideals:

To promote and encourage loyalty to the United States of America; allegiance to its flag; support to its Constitution; obedience to its laws and reverence for its history and traditions;

To instruct its members, by precepts and examples, in the tenets and fundamental principles of government, and in the recognition and respect of the inalienable rights of mankind;

To instill in every one of its members a due appreciation of the privileges of citizenship, and the sacred duties attendant therewith; and to encourage its members to always be profoundly interested and actively participating in the political, civic, social, and commercial fields of human endeavor, and always to strive for the betterment of society;

To awaken in every member an abhorrence of all political corruption—the destroyer of free institutions—and pledge its members to do their utmost to stamp out from this country every trace and influence of this evil;

To arouse mankind to the realization that tyranny, wherever it may exercise its baneful power, is a menace to the life, property, prosperity, honor, and integrity of every nation; and that the preservation of our liberties can be assured, only as this country becomes the champion of liberty and the defender and protector of all oppressed and downtrodden peoples;

To promote throughout the world, and especially in the United States of America, a better and more comprehensive understanding of the Hellenic peoples and nation, and to revive, cultivate, enrich, and marshal into active service for humanity the noblest attributes and highest ideals of true Hellenism;

To labor in every manner possible, and to utilize every means available for the perfection of the moral sense in its members; to promote good fellowship among them; to endow them with a spirit of altruism, common understanding, mutual benevolence and helpfulness; and to point out to them, in unmistakable methods, the advantages of education, the beauties of sacrifice and the deformities of selfishness;

To champion the cause of education; to support the American system of public schools and keep them free from religious prejudice; to promote and augment the educational advantages of this country; and to open, establish, and maintain new channels for facilitating the dissemination of culture and learning; and

To resist, by lawful means and methods, any tendency toward a union between the civil government and any church or religion, and to repel the interference of any religion in governmental affairs.

Mr. Speaker, the beautiful and appropriate printed program set forth the supreme lodge of the Order of Ahepa as follows:

The supreme lodge: John G. Thevos, supreme president; Constantine G. Economou, supreme vice president; Peter N. Derzis, supreme secretary; Charles Preketes, supreme treasurer; Peter L. Bell, supreme counselor; Pantelis Lambros, supreme governor; Constantine Verinis, supreme governor; Nick Strattin, supreme governor; Peter Grammar, supreme governor; Arthur H. Lalos, executive secretary.

The district governors: Speros Zepatos, Peter V. Paulus, George J. Margoles, John Priggooris, George Kapetanakis, Steve E. Pepps, Chris A. Politz, Gus Rakus, C. G. Morgan, James Argyros, John Rusomanis, John Kras, George M. Paradise, Gus Callas, Leo G. Athans, Paul Destun, Bill Simopoulos, Leon J. Marketos, William Genimatas, George A. Speros, V. C. Beskas, Gus Marinos, Stephen Berdalis, Constantine Vlassie.

The mother lodge, Order of Ahepa, is as follows: John Angelopoulos, Harry Angelopoulos, George Campbell, James Campbell, Nicholas D. Chotas, George A. Polos, Spiros Stamos, James Vlass.

The committee for this significant and happy occasion was as follows:

Basil Anargyros Thomas, chairman; Peter C. Charuhas, vice chairman; Andrew D. Vozeolos, vice chairman.

Arrangements: Luke Carmen, Spiros Gianaris, Anthony Raptis, Charles Charuhas, Caleroy Panos, Dr. Harry S. Sembekos, Arthur H. Lalos, executive secretary.

The program for the evening was one of enriching information and inspiration, and was as follows:

Presiding chairman: Basil Anargyros Thomas.

National anthem: The Star-Spangled Banner.

Ode to Liberty—National Anthem of Greece.

Invocation: The Most Reverend Michael, archbishop of the Hellenic Orthodox Church.

Toastmaster: V. I. Chebithes, past supreme president, Order of Ahepa.

Speakers: Hon. Maurice J. Tobin, Secretary of Labor; Senator Homer Ferguson, Michigan; Senator Brien McMahon, Connecticut; John G. Thevos; supreme president, Order of Ahepa.

Benediction.

Dinner music by Jack Morton.

Mr. Speaker, in the Eighteenth Congressional District of my native State of California, these American citizens of Hellenic descent, are the most stable, industrious, active, particular and practicable citizens of our State, and contribute substantially to the progress of the State and the Nation. They contribute substantially and vigorously to the perpetuation of the America we all love. You will note that paragraph 2 of their constitution states that one of their objects is "to promote and encourage loyalty to the United States of America; allegiance to its flag; support to its Constitution; obedience to its laws, and reverence for its history and traditions."

Live for Liberty

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. PLUMLEY. Mr. Speaker, under and by virtue of permission heretofore granted, I extend my remarks which I made by letter Tuesday last, town meeting day in Vermont, as of my annual custom, heretofore followed, to the people of my home town assembled in town meeting at Northfield. That convocation is really the savior and the fortress of every American and of the constitutional liberties which, so expanded, we do now enjoy, as well as the guarantor of the perpetuity of those liberties we, of the blood of our ancestors, all propose to protect and to defend against all comers from within or from without.

So I said:

DEAR MR. MODERATOR AND NORTHFIELD FRIENDS: Of necessity, my annual letter must be brief. I am a member of the subcommittee of five men to whom is entrusted the responsibility of undertaking, originally, to say just how much of dollars and cents of the taxpayers' money shall be appropriated to defend this country to maintain the armed services both against attack and for necessary defense. The figure presented to us was $13,500,000,000, which is some money even in Northfield. I am very busy.

"When I was young and in my prime," as some of those who are listening to me will recall I once was when we sang that song while I was ringing Northfield fire alarms and church bells, in celebration of Hallowe'en or Fourth of July (in those days of quite some long ago) I never thought I would come to this.

That should be a threat as well as possibly an inspiration to every single boy born in Vermont, particularly Northfield.

I am never unmindful of the fact, nor am I ever ungrateful, as I recall that beastly cold day of the latter part of December some years ago when 900 and more of you sent me to Congress; without regard to partisan political affiliation. I shall never forget it. I hope I have never made any of you who supported me sorry for what they did.

So I presume to say to you that these really are desperate days in which we are permitted to live and to play a part.

The burden is on us to undertake to transmit to those who follow us, not a burden, nevertheless a responsibility, and better, an opportunity such as no people ever had the chance to enjoy since the world began.

I am much concerned to do my part to see to it that the United States adopts a stabilized program free from and not disrupted by those who call themselves Free Thinkers, Liberals, Progressives, or those, too cowardly to brand themselves as registered Communists, or who undertake to avoid the fact that they are Socialists, as subversively together they have been undertaking to socialize Vermont and in effect to reduce it to the situation similar to that in which Great Britain finds herself today.

I am proud of the fact that I am said to be as reactionary as the Ten Commandments. Call me what you've a mind to. I still thank whatever Gods there be for the enemies I have made amongst those groups to whom I refer which undertake, subversively, cowardly and under a blanket supported and publicly endorsed by the Communists and the anarchists and the Socialists and the leftists, to destroy this America of mine and my State.

Five civilizations have been buried by people in Mexico and elsewhere under exactly such theories as are today advocated by those who would undertake to tell you in Vermont that I am a reactionary. That is a part of their program.

Some of my very best friends are being misled. They do not appreciate nor realize the end which these folks seek to attain, nor see the method they employ. My friends should put every ounce of effort, back of the United Nations in an endeavor to see and to insist that it shall be given the police power to enforce its edicts, without which it will be as powerless as was the League of Nations. It is time to realize that fact. The fact is obvious there can be no world federation so long as Russia undertakes to maintain and still insist, as it does, upon its position. So why waste effort?

The American ideal which has been idolized and idealized is not only an ideology but a fact. Privileges greater than ever before in the history of the world have been offered to the average person in America to make a living and to live a life in these United States such as none ever enjoyed heretofore, yet there are those in the groups to which I have referred who would undertake, subversively and persuasively, to destroy the very sources which would deprive you, as individuals, of every chance and of every right which you now enjoy.

Unless we, you and I, wake up and shake off and deny and defy those with fallacious and subversive theories offered as incentives to get an easy living off us which would destroy all individualism, all industry, all enterprise you and I are going to be held responsible for burying not only a possibility for life, liberty, and the pursuit of happiness, but the greatest Republic God ever gave man an opportunity to create, in the first place; in the second place, to develop; in the third place to continue; the last of which opportunties is the burden of your responsibility. This is a country of free people so long and only so long as we maintain that right to be free. See to it that you keep it free. That's your job. It is the job of nobody else. It is time that you recognize that fact before it is altogether too late, if it is not already and altogether too late. It is later than you think.

Sincerely yours,
CHARLES A. PLUMLEY,
Member of Congress.

New Worcester Diocese Proudly Installs First Bishop, Most Rev. John J. Wright

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. DONOHUE. Mr. Speaker, in extension of my remarks, I should like to include an article, by staff members T. J. Sweeney and P. J. Cogswell, which appeared in the March 7 issue of our newspaper, the Evening Gazette, describing the color and ceremony attendant upon the installation of Bishop John J. Wright as the first ecclesiastical head of the

newly created Roman Catholic diocese of Worcester, Mass.

Citizens of every faith and creed joined with church dignitaries, national leaders, and community officials in welcoming this distinguished prelate to his papal assignment in the heart of the Commonwealth.

At the age of 40, Bishop Wright comes to us as one of the youngest residential bishops in the entire country. His diocese now comprises 95 parishes with 365 priests. Within his jurisdiction will be 8 orphanages, 2 colleges, 1 hospital, 15 high schools, 48 grammar schools, and 12 missions.

A brief history of John Wright as layman and priest will reveal the justification of his choice for such uncommon responsibilities at an age when most of his contemporaries are being entrusted with their initial mature duties.

John Joseph Wright was born in the Dorchester section of Boston on Sunday, July 18, 1909, as the first of six children.

When old enough to go to school, he attended the Trescott School in Hyde Park, Mass., and subsequently entered Boston Public Latin School. At Boston Latin this young man began to show his real prowess. He excelled in his studies, in debating and in public speaking. He was graduated with honors in 1947.

After high school he attended Boston College, where he was awarded the Fulton medal for oratory, and in his senior year was elected as the one who had done most for Boston College during his studies there.

Following graduation from Boston College, feeling called to serve God in the holy priesthood, a call now gloriously confirmed in his elevation to the Episcopate, John Wright enrolled in the department of senior philosophy at St. John's Seminary, Brighton, Mass. Following his course at Brighton, he attended the Gregorian University in Rome, where he was graduated with high honor at that most advanced Jesuit institution in the world.

Upon his return to this country, Father Wright taught in the philosophy department of St. John's Seminary at Brighton, Mass.

At this time, also, Dr. Wright inaugurated the English course in the new minor seminary, St. Clement's Hall. In his spare time he conducted the Italian Academy, wrote innumerable articles and pamphlets, gave a great number of sermons and addresses, and served as retreat master in various houses of recollection.

In 1943 Cardinal O'Connell appointed Father Wright his secretary. Following the death of His Eminence in April 1944, Auxiliary Bishop Cushing was named archbishop. His first official appointment was that of Father Wright as his secretary. In December 1944, Father Wright was named a papal chamberlain, and in May 1946 elevated by His Holiness to the rank of domestic prelate. In May of 1947 Monsignor Wright was named as auxiliary bishop of the Boston archdiocese. Bishop Wright's elevation to the hierarchy made little change in his routine except to add to it the extra duties which a bishop may perform and by which an auxiliary bishop can assist his superior. He became widely known throughout the country, especially for his eloquence and remarkably diversified learning.

No greater testimony to Bishop Wright's promise can be given than to quote directly from Archbishop Cushing's sermon on the occasion of the elevation of Bishop Wright at the Cathedral of St. Paul, in Worcester, on Tuesday morning, March 7, 1950:

Bishop Wright's love for God and for his neighbor will not be left on any abstract level, nor find its expression in empty platitudes or unfruitful principles. I can promise the people of Worcester County, Catholics and their neighbors alike, that their new bishop is a doer of the law, not a hearer and a preacher only His love for God and neighbor alike will be made manifest in good works, kind deeds, generous self-dedication. He will eloquently preach God's love and will lift his voice in constant teaching of the need for love among men. But he will ever be mindful of the wisdom taught by his patron and name-sake among the Apostles: "Let us not love in word alone nor in tongue, but in deed and in truth" (1 John 3: 18).

Resonare Christum, to be the echo of Christ, is the motto under which the first bishop of Worcester takes up his work in central Massachusetts. Fulfilling the Scripture eulogy—"in a short time he has accomplished much," a happy augury for the conduct of his new responsibilities in the church. As Archbishop Cushing said in his address, "May the Lord preserve him, and grant him length of days and give him every grace, and never deliver him into the hands of enemies. Amen."

The article by the Messrs. Sweeney and Cogswell follows:

(By Thomas J. Sweeney and Philip J. Cogswell)

Bishop John J. Wright today was enthroned as first ruler of the new-born Roman Catholic Diocese of Worcester.

The ceremonies, at St. Paul's Cathedral, fused ecclesiastical elegance and high humility in a gripping pageant governed by ancient formulas still intact.

Officially, Bishop Wright, 40, became the spiritual leader of 225,000 Catholics of the diocese at that precise moment of the ceremonies when, while he was seated on his oaken throne, Archbishop Richard J. Cushing, of Boston, presented him with a crozier.

This shepherd's staff, symbolic of the authority vested in him by Pope Pius XII, indicated he had acquired formal jurisdiction as the youngest diocesan head in the United States.

The cathedral proper bulged with 1,400 witnesses to the ceremonies. Their number included prelates and parish priests, nuns and dignitaries from all walks of life, political, business, civic and educational, and the bishop's parents, brothers and sisters.

CLERGY OF NEW DIOCESE

At the right of the church, their eyes fixed on their new spiritual leader, to whom later, one by one, they pledged their loyalty, sat the clergy of the new diocese.

Nearly a thousand other persons, attracted by the historical and religious significance of the occasion, filled the lower church of the cathedral, where they followed the ceremonies as transmitted by loud speakers by the narrator, Rev. David E. Sherin, of St. Ann's Church.

Hardier persons huddled outside the cathedral, on High, Chatham, and Main Streets, in reverent silence to listen.

A description of the ceremonies came to them, too, by loud speakers.

Muted by the solemnity of the services, they heard Bishop Wright chant the pontifical blessing and they heard Archbishop Cushing, in his sermon, extol the virtues of Worcester's new spiritual leader.

They heard, also, the liturgical prayers, linking the past with the present, sung even as they were sung centuries ago.

Handfuls of spectators were drawn to the scene of the ceremonies as early as 8 a. m. and despite chilly temperature, they remained to be joined by increasing thousands of others.

CHIMES PEAL FIRST TIME

The procession, with an estimated 900 in line, started at 9:40 as the cathedral chimes pealed for the first time. By this time the onlookers were numbered in the thousands.

Piety and pomp were blended in perfect proportions in the procession as it began to wend its way in quiet dignity from the rectory and school to the cathedral.

But when Bishop Wright, toward the rear of the line, came into view, a burst of handclapping shattered the stillness.

He was vested in white mitre and robes, setting off his dark features.

Again, when Archbishop Cushing, preceded by the bearer of the metropolitan cross and wearing his cappa magna, symbols of his rank as chief of the bishops of New England province, drew near the cathedral, applause sounded.

The bishop and archbishop, who brought up the rear of the procession, nodded and smiled to acquaintances among the spectators.

Several women rushed forward to kiss the episcopal ring of Archbishop Cushing.

RICH, COLORFUL SIGHT

The procession offered rich contrast between the parish priest, most of them bareheaded and wearing white surplices over their black robes, monsignori and bishops in their purple raiment, and Trappist Fathers from Cumberland, R. I., in their flowing white garments, their close-cropped hair focusing attention on them.

Two eastern rite prelates also were in the procession. They wore large black headpieces.

Only four nuns were in line. But hundreds of others—somber-robed in black, brown, and gray—occupied seats in the cathedral.

BISHOP MOVED BY CEREMONY

Bishop Wright was visibly affected on his entrance into the vestibule of the cathedral. His face paled.

Together with his attendants, he withdrew to the left of the vestibule, while Archbishop Cushing knelt and prayed at a small desk covered with a green drape.

Bishop Wright stood with hands cupped. His eyes alternately swept upward and downward.

Archbishop Cushing accepted from Rt. Rev. Msgr. John P. Phelan, temporary administrator of the diocese and pastor of Blessed Sacrament Church, who had awaited his, and Bishop Wright's arrival in the vestibule, an aspergil, or holy water sprinkler. He made the sign of the cross.

He extended it to Bishop Wright to touch. The archbishop then sprinkled nearby attendants.

Monsignor Phelan offered incense to Archbishop Cushing to complete the ceremonial entrance to the cathedral without so much as a word spoken.

SEMINARY CHOIR HAILS LEADER

As Bishop Wright and Archbishop Cushing entered the cathedral proper and walked toward the altar, the St. John's Seminary choir sang the joyous notes of Ecce Sacerdos Magnus in acclaim of the new spiritual head.

All in the cathedral stood.

After they paid homage to the Blessed Sacrament, Bishop Wright was seated on a faldstool, or small chair, at the foot of the main altar and Archbishop Cushing was seated on his throne on the Epistle side of the sanctuary.

They retained their seats during the reading, first in Latin and then in English, by Rev. John F. Gannon, of Leominster, notary, of the papal documents decreeing the erection of the new See of Worcester and appointment of Bishop Wright as first head of the Diocese of Worcester.

The bishop knelt at the faldstool before the altar after conclusion of the reading. Monsignor Phelan approached the altar and chanted a prayer for the bishop, with the choir making responses.

After the choir sang in honor of St. Paul, titular saint of the cathedral, Bishop Wright ascended the steps, kissed the altar reverently, and chanted the prayer of St. Paul.

The prayer completed, Bishop Wright descended from the altar, was clasped by the hand by Archbishop Cushing and Monsignor Phelan, who led him to his throne, where he was seated.

ACCEPTS CROZIER, SYMBOL OF OFFICE

The archbishop placed in his left hand the crozier, symbol of pastoral office.

Bishop Wright held it with both hands.

He now had been formally installed as first bishop of Worcester.

He rose and gave his first solemn blessing in that capacity.

Then the archbishop intoned the first words of the hymn, Te Deum, and the choir and clergy joined in. As the music swelled through the cathedral, priests under Bishop Wright's new jurisdiction made their formal act of obedience to him.

First the officials on the altar, then the priests of the diocese filed slowly across the sanctuary, kneeled before the episcopal throne, grasped the bishop's right hand, and kissed the ceremonial ring.

It was half a handshake and half an obeisance. To each the bishop spoke a few words of greeting.

One priest, who walked across the sanctuary with a decided limp, prepared to kneel before his superior. But the bishop raised his hand so the priest would not have to bend over in what obviously would have been a painful effort.

PROCESSION OF PRIESTS TO ALTAR

The Te Deum ended, but still the procession of priests to the altar continued. It was nearly 20 minutes before all the clergy had fulfilled their obligations.

Through it all, Archbishop Cushing stood, hands folded on his breast, easily the tallest and most imposing figure on the altar.

The altar itself was simply decorated with six vases of red roses contrasting with the gleaming marble. A single altar cloth of white lace was the only other decoration.

The ceremony of obedience indicates the promise of the clergy to obey and revere Bishop Wright and his successors in the See of Worcester. Its completion marked the end of the installation ceremony proper.

Bishop Wright then prepared to resume celebration of the mass for the first time in his cathedral church. While seated on his throne, his assistants went through the ages-old ceremony of vesting the priest for the mass.

The glittering white and gold cope was removed and the bishop donned white buskins, or shoes, and long white stockings. Then he put on the heavily encrusted gold and white chasuble, or outer garment, which was worn by the late William Cardinal O'Connell at his first pontifical mass in Rome in 1906.

WHITE AND GOLD FOR JOY

Vestments of the assistant priests, the deacon and subdeacon were all white and gold, symbolic of the joyousness of the occasion. The day marks the feast of St. Thomas, a doctor of the church.

Midway through the mass, after recitation of the Gospel, Archbishop Cushing moved to a reading stand at the center of the altar rail to deliver his sermon.

His powerful voice and clipped diction carried his voice to the high-vaulted corners of the cathedral. The archbishop read from a manuscript, his hands placed quietly on the reading stand, depending for emphasis only on his inflection.

CALLS FOR PRAYER FOR NEW BISHOP

For the most part his voice boomed loudly but he spoke softly at one solemn moment. That was when he called on the Catholics of Worcester to pray for their new bishop.

"A mitre can be a crown of thorns," he said. "A crozier can be a sorry support to weary limbs. A cappa magna can conceal a broken heart."

After Archbishop Cushing's sermon Bishop Wright continued the mass. The Gospel was sung by the deacon, Very Rev. John A. O'Brien, S. J., president of Holy Cross College, and the Epistle by the subdeacon, Very Rev. Henry J. Moquin, A. A., president of Assumption College.

The seminarians of St. John's choir sang the responses to Bishop Wright's prayers. Included was a chant for the well-being of the new bishop.

"Let us pray for John, our bishop. May the Lord watch over him and grant him length of days and happiness upon this earth, and deliver him not into the power of his enemies."

CEREMONIAL KISS EXCHANGED

After the solemn moment of the consecration all the clergy in the cathedral exchanged the pax, or ceremonial kiss of peace. One by one, bishops, monsignori, abbotts, and priests turned to their neighbors, embraced, and said, "Pax tecum," or "Peace be with you."

At the end of the mass the bishop left the altar and returned to his throne where he removed the mass vestments and donned for the first time the cappa magna.

The length of the scarlet train necessitated a train bearer to help the bishop move unencumbered. It is trimmed over the shoulders with a white ermine cape.

The cappa magna is the symbol of the bishop's authority in his diocese.

From the lectern at the center of the altar rail, the new bishop of Worcester then spoke his first words in his cathedral.

"Let our first words this day be words of gratitude," the prelate said. He asked for divine guidance and strength for his task as spiritual leader of the diocese, and called on church and saints to second our earnest petition to God that faith in these parts will never fail.

Then he expressed his thanks to Pope Pius XII who appointed him bishop of Worcester, to the apostolic delegate, Archbishop Cicognani, of Washington, D. C., to the visiting prelates, to the civic officials present, and to those of the Catholic faith and those not of it who have made him welcome.

Finally he declared he could not forget those blessed dead who gave so much of themselves for the establishment of the church here.

He cited the French, Irish, Italian, Lithuanian, Polish, Syrian, and faithful of all the other national origins "out of whose work this diocese has been born. We are prayerfully conscious of our debt to them."

At the end of the bishop's talk, the line of clergy re-formed and the recessional began.

GIVES BLESSING TO FAITHFUL

As Bishop Wright left the altar he gave his blessing with upraised hand to those on either side of the center aisle.

As he passed his parents, on his left side, he gave them his blessing but did not pause.

The archbishop brought up the rear of the procession.

As the new head of the diocese left the center door of the church and walked slowly toward the rectory, the throng of spectators who had waited patiently since the beginning of the long ceremony, broke into cheers and pressed forward.

The bishop raised his hand and gave his blessing to those surrounding him. The crush of onlookers was to great, many seeking to kiss the episcopal ring, others to snap his picture, that it took him nearly 20 minutes to reach the quiet of the rectory.

Act Now or It Will Be Too Late—Millions of Dollars of Perishable Surplus Commodities Will Be Lost Unless Quick Action Is Taken

---

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD and include a newspaper article, I submit an article by John W. Ball, Post reporter, published in the Washington Post of Sunday, March 5, 1950.

Mr. Speaker, on February 3, 1950, I introduced H. R. 7134 authorizing the Secretary of Agriculture to dispose of surplus potatoes and eggs, gratuitously to the people of the United States, and no action was taken.

On March 1, 1950, learning that there was also 100,736,962 pounds of butter that also was in surplus and about to spoil, I introduced House Joint Resolution 430 to include butter and all other surplus commodities which the Secretary of Agriculture could not otherwise dispose of under the existing law, and the method and arrangement was fully outlined in the said resolution.

From the article which I am quoting below, it is my opinion that the cost to the Government to distribute these precious commodities to the States of the Union for the use of the people, on a basis of population, would be negligible in comparison with the amount that the Government is paying for the storage of these commodities, many of which will spoil and be lost unless they are utilized quickly.

Mr. Speaker, while some of those in Washington may not know—the fact is that there are literally millions of our people who are in need of these foods and are unable to purchase same, and I sincerely believe that the same should be distributed to the people rather than pay these millions of dollars for storage and be lost by spoilage.

The article referred to is titled "Four Billion Dollar Pantry" and is as follows:

[From the Washington Post of March 5, 1950]

FOUR BILLION DOLLAR PANTRY—STORAGE OF FARM SURPLUS COSTS UNCLE SAM $25,000 AN HOUR OR $200,000,000 A YEAR

(By John W. Ball)

America's surplus of farm commodities—the things that food, clothing, and shelter

come from—is so great that it is costing from $25,000 to $30,000 an hour, 24 hours a day, just to store it.

In other words, the storage costs of the $4,000,000,000 worth of commodities Uncle Sam has taken off the market in order to keep their prices high, runs to a staggering $550,000 to $600,000 a day or about $200,000,000 a year. If interest charges and deterioration are computed, the total cost would run at a rate of about $1,000 a minute.

The Commodity Credit Corporation, which handles the Government's vast price-fixing program, revealed the $4,000,000,000 storage total last week. Commodities in storage under price supports amount in value to about $30 for every man, woman, and child in the country. For an average family of four, that means there is about $120 worth of stuff in Uncle Sam's pantry.

There is enough wheat to meet all our domestic needs without raising a single grain this year—and another crop is growing in the winter wheat belt now. There is enough cotton to carry the country through a full year if necessary. Other things are in abundance in varying degrees.

In addition to the storage costs there is the tremendous charge for interest.

Agriculture Secretary Charles F. Brannan testified this week that CCC pays the Treasury 1¼ percent for the money with which it operates.

That adds up to $50,000,000 a year for the $4,000,000,000. That is almost four and a quarter million a month, or about $150,000 a day.

On top of that is piled the loss through deterioration. Actual loss, charged off in the last 7 months was $96,000,000—about $450,000 a day.

CCC officials freely admit that doesn't in any degree cover the loss. Most of this year's tremendous $100,000,000 anticipated loss in potatoes has not yet been realized. Also, deterioration would run to another immense sum. A lot of dried eggs and dried skim milk—together they total one hundred and thirty-three millions—is getting to an age where it soon won't be of great value.

Thus storage costs, interest, and deterioration is running at a daily rate of above a million and a quarter dollars a day—or more than $50,000 an hour. In other words, roughly around $1,000 a minute.

The tremendous growth of the price program is best realized when compared with a year ago. In 12 months the total more than doubled. A year ago it was only $1,873,000,000.

In fact, this increase points out eloquently the need for the additional $2,000,000,000 that CCC recently asked of Congress. Last week several Congressmen suggested adding riders to this CCC measure, such as "trial runs" for the Brannan plan, and limitations on individual benefits from price supports. Each time Agriculture Secretary Charles F. Brannan urged them not to do anything that might delay action.

At the present rate of increase in the Government's investment in price supports, CCC is in danger of running out of funds before this calendar year is out. Even the two billion additional now asked may not last more than a year.

The Government's far-flung storage bins contain an amazing assortment of more than 30 commodities. Its investments range from $84,000 in flax fiber—the kind from which linen is made—to more than a billion dollars in each of two items, wheat, our chief bread grain, and cotton, our chief source of clothing. We have an enormous $880,000,000 tied up in corn, with the season far from over.

Although the fiber flax is a small item, the total flax program is tremendous. Uncle Sam has almost a quarter of a billion dollars invested in flaxseed and linseed oil that comes from it.

Few taxpayers realize that a lot of tax money has been put up to maintain a high price for ship's stores—rosin and turpentine. CCC has $30,000,000 in rosin and almost two and one-half million in turpentine, both agricultural products.

If, as now appears likely, a support program for hogs becomes effective. Government's total storage cost will go up much higher proportionately.

National Defense

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. WHERRY. Mr. President, Secretary of the Air Force W. Stuart Symington made an address before the Yale Alumni Association at Yale University on February 22, 1950, appraising the national defenses.

While the junior Senator from Nebraska does not now pass upon Secretary Symington's conclusions, he believes the address is of timely interest.

I ask unanimous consent for insertion of Secretary Symington's address in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am grateful to President Seymour for asking me here today. Memories of 4 years at Yale are among the happiest of my life. In fact a little envy was mixed with the pleasure of seeing my two sons this morning, both members of the class of 1950.

A famous American once said:

"There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness. If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war."

Those words sound as if they were stated recently. Actually they were spoken 172 years ago by the man whose birthday we observe today.

In other words, at the beginning of our existence as a nation, George Washington warned that the price of peace is adequate preparedness—that weakness invites aggression.

Today the price of peace remains the same—preparedness. But this air-atomic age no longer allows us the luxury of building up defenses over a period of time, after either we or our Allies have been attacked.

The United States is a peaceful democratic nation. Hence our military plans do not embrace the thought of being an aggressor. But our policies for national security must emphasize what America will do if and when attacked by the only nation that now has the power to launch such an attack.

The more one studies this critical problem, the more one becomes convinced that the greatest defense America can create for its protection is capacity for instant and sustained devastating retaliation against any aggressor. This is true because under modern methods of warfare there can be no sure defense.

Picture the change in this situation even since the last war. In 1941, the British were confident that if they could destroy appreciably more than 5 percent of the attacking Nazi bombers on each raid, the latter could not continue their air offensive against England; and after the RAF did knock down some 10 percent on the night of May 10, 1941, for several years thereafter the Nazis never seriously bothered England from the air; only starting again in 1944 after they had developed the V–1 pilotless missile.

Today, however, in this air-atomic era, if America was successful in knocking out 25 percent of the first surprise raid, or even 50 percent, where will our cities be when the other 50 percent get through?

The practical urgency for full recognition of this problem was brought home to every American at the time the President announced last September that an atomic explosion had occurred in Russia.

It is not significant to realize that the atomic explosion occurred in the land of a dictatorship which has reiterated many times, both to its own people and to the rest of the world, that it is conducting the modern equivalent of a holy war against all who do not believe in the Godless faith of communism.

In every issue of Communist dogma, under the title "Problems of Leninism," published over the signature of Stalin, appears this basic Communist tenet:

"We are living not merely in a state, but in a system of states; and it is inconceivable that the Soviet Republic should continue for a long period side by side with imperialistic states. Ultimately one or the other must conquer. Meanwhile, a number of terrible clashes between the Soviet Republic and the bourgeois states will be inevitable."

That statement of Communist policy has been repeated by Stalin since the close of World War II in 1945.

All this is self-evident in current Russian policy, a policy which so far has frustrated every effort of the United Nations to eliminate war—particularly the use of atomic weapons—as an instrument of settling disputes among nations. This blockade of peace has been successful despite America's conviction that the only war which can be won is the war that never starts.

These words of the leaders of the Communists speak for themselves; but their actions speak even louder than their words.

As illustration, since World War II Russia has engaged in an armament building program which overshadows the combined programs of all the Alantic Pact nations put together.

That country, Russia, today maintains a ground army greater in numbers than the combined armies of the United States and its allies.

Following World War II Russia demobilized to some 30 percent of its peak wartime strength. In contrast, the United Kingdom demobilized from 39 army divisions to their present strength of about four divisions; and the United States demobilized from 90 war strength divisions to a 10 division peacetime structure.

Today Russia has the world's largest submarine fleet, several times larger than the number Hitler possessed when he started World War II.

In terms of air strength, the situation is comparable. Today Russia has an air force whose strength, in nearly all categories, is the largest in the world, and growing relatively larger month by month. Since World War II, Russia has produced far more combat aircraft than have the United States and all other Atlantic Pact nations combined.

As part of its program for air supremacy Russia is steadily increasing the strength of its long-range strategic-bombing force—a type of plane it did not have in World War II.

The Communists do not need long-range strategic bombers in order to conquer Eurasia. Should we not ask ourselves therefore, why are they being built?

Those are the simple truths about the world in which we live; and they should be correlated with the revelation of that atomic explosion.

As our President so ably pointed out in his recent state of the Union message, we have now come to a crucial point in world history. In statesmanlike words he said:

"The human race has reached a turning point. Man has opened the secrets of nature and mastered new powers. If he uses them wisely, he can reach new heights of civilization. If he uses them foolishly, they may destroy him. * * * The swift pace of events promises to make the next 50 years decisive in the history of man on this planet."

The President was referring in part to developments in the field of atomic energy. In that connection, this Nation is fortunate in having at the head of the Joint Congressional Committee on Atomic Energy your distinguished senior Senator from Connecticut, BRIEN MCMAHON, whose awareness of the magnitude of this atomic problem, and whose capacity to deal with it, have been so clearly demonstrated.

Based on the above facts, it is not difficult to reach the following conclusions:

1. As the result of recent developments, real security can be assured only by the elimination of war itself.

2. If all our efforts to prevent war fail, then the United States must win. Defeat means slavery.

3. Victory now requires we not lose the first battle—in that a surprise atomic offensive might inflict a mortal wound from which no nation could completely recover, no matter how long and how desperate the ensuing struggle.

4 In all defense preparations for modern total war, the United States must live within its means—must not destroy its economy and its way of life. To do otherwise would invite defeat from within, nearly as fatal as defeat from without.

As to the latter point however, namely, the necessity of building armed strength this Nation can afford—both the President, in his latest state of the Union message, and the Secretary of Defense in repeated statements, have emphasized that security must come ahead of economy.

But Secretary Johnson also rightly insists that "our armed forces must be organized so as to give the maximum degree of security we can get for the money we have to spend. There can be no luxuries. We cannot afford anything we do not need."

With the premise we must have that economy of efficiency, the great and relatively growing military strength of Russia must be recognized by those who clamor for a balanced budget. Such balance is both logical and desirable. But surely these critics should realize that during this current year 50 cents of their tax dollar goes for security, 34 cents to the Pentagon and 16 cents for foreign aid; and that, despite this vast expenditure, Russian military strength meanwhile grows relatively greater as against the strength of the United States.

Russia's economic problems are negligible, because the coin of their realm is the order of the dictator. Nor do they have a labor problem, because their military and political prisoners, in fact all their citizens, are but slaves to their state.

So when critics of the administration demand that we balance or further slash our budget, we should ask them to seriously consider the need for that calculated military strength provided for in the President's budget, which strength is so essential to the preservation of our freedom, our Nation, and ourselves.

In a democracy it is important that everyone know the truth. The people of this country have demonstrated many times that, given the truth, they will meet the problem.

Keeping Alive the Spiritual Ideals of Home

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. JOHNSON of Texas. Mr. President, 40 years ago a group of progressive educators, recognizing that American girls wanted and needed an organization of their own, dedicated to their special interests and desires, helped establish Camp Fire Girls.

Since that time more than 2,500,000 girls have passed through the experience and training and association of Camp Fire Girls. Each of them profited, I am sure, from the belief of the group's first national president, Dr. Luther Halsey Gulick, that girls learn best by doing.

Today, more girls than ever before—more than 360,000 of all ages from 7 to 18, and of all races and religions—are enjoying the fun, friendship, and high ideals of Camp Fire.

Camp Fire Girls' program is both practical and inspirational. The leisure-time training supplements wisely the training of home, church, and school. Camp Fire Girls learn the arts of homemaking, of baby and child care, of outdoor living, of furthering friendships through pen-pal letters and gifts. All the work is in the spirit of Camp Fire's two purposes: "To perpetuate the spiritual ideals of the home," and "To aid in the formation of habits making for health and character."

Camp Fire Girls, a nonprofit, nongovernmental group, is doing a great work for all of us, the adults of America, and for our Nation. It is instilling in the hearts and minds of our girls a sense of the meaning of democratic ideals and it is equipping them for greater service by keeping alive the spiritual ideals of home.

We in Texas are especially proud that a charming and gracious Texas lady, Mrs. Richard W. Blalock, of Marshall, is national president of Camp Fire Girls, in this fortieth anniversary year. I ask unanimous consent to include in the Appendix of the RECORD three letters of greeting to Camp Fire Girls from the President of the United States, the Vice President, and the Speaker of the House of Representatives.

All Members, I am sure, will want to join in extending to Camp Fire Girls, past and present, congratulations in this fortieth birthday week, March 12 through March 18. We wish for the organization many more years of useful service.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, March 8, 1950.

Mrs. RICHARD W. BLALOCK,
President, Camp Fire Girls, Inc.,
New York, N. Y.

DEAR MRS. BLALOCK: Please convey my congratulations and best wishes to the Camp Fire Girls as they celebrate their fortieth anniversary.

Since their founding, the Camp Fire Girls have given some two and a half million girls the opportunity to make the most of their leisure time, to perpetuate the spiritual ideals of the home, and to aid in the formation of habits that make for health and character. Civic organizations know that they can always count on the Camp Fire Girls to give generously of their time and efforts in working for deserving community projects. Even international organizations such as UNESCO and the International Children's Emergency Fund have enjoyed the support of the Camp Fire Girls, who have done their part to promote friendship with children of other countries through donating gifts and exchanging letters.

The task of fostering the well-being of our citizens and stimulating international good will does not fall to adults alone. The vigor and inspiration of young people who will face tomorrow's problems are also required. The Camp Fire Girls not only espouse our American ideals—they put them into practice. I urge all who wish to encourage young people in promoting the American way of life to continue to insure the success of the Camp Fire Girls through their active support.

Very sincerely yours,

HARRY S. TRUMAN.

OFFICE OF THE VICE PRESIDENT,
Washington, March 2, 1950.

Mrs. RICHARD BLALOCK,
President, Camp Fire Girls, Inc.,
New York, N. Y.

DEAR MRS. BLALOCK: I am particularly happy to have the opportunity of extending greetings to the Camp Fire Girls on the occasion of their fortieth anniversary, not only because of the fine work being done by that organization, but because of the excellency of the leadership which the organization enjoys.

Those of us, who are concerned daily with the current problems which face our country, are cognizant of the fact that the future of this Nation rests upon the young people who will some day occupy positions of responsibility. Today, as never before, it is essential that these young women have an opportunity to learn through their daily activities their responsibility of citizenship and service.

The Camp Fire Girls for four decades have sought not only to provide a means of worthy recreation and training for girls between the ages of 7 and 18, but at the same time be instrumental in putting them into

contact with the more serious aspects of the society which we have sought to maintain.

Reaching as it does into the lives of girls in every station of life and every type of background, the Camp Fire Girls organization has a unique opportunity to build friendship throughout our country and among the youth of other lands in promoting democratic principles.

Sincerely yours,

ALBEN W. BARKLEY.

THE SPEAKER'S ROOMS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 10, 1950.

Mrs. RICHARD BLALOCK,
Marshall, Tex.

DEAR MRS. BLALOCK: It is a pleasure to extend my hearty congratulations to you and through you to the hundreds of thousands of girls who are fortunate enough to constitute the membership of the Camp Fire Girls of America on the fortieth anniversary of that splendid organization.

It is well known that millions of our finest women today have benefited from the fun and the training and the experience that they enjoyed as members of the organization during their younger days. You and your coworkers are entitled to the thanks of our entire people for the unselfish service of love which you are giving to these young people and for the contributions which you are thus making to future America. Each of the 360,000 girls who presently are members are to be congratulated upon the opportunity which the organization is now giving them to build character and to prepare for a more useful life while enjoying the play and the friendship of their girlhood days.

With cordial good wishes to you and to your organization, I am,

Sincerely yours,

SAM RAYBURN.

Food and Politics

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Food and Politics," from the Minneapolis Star of Monday, March 6, 1950. In my opinion, this is a very good editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOOD AND POLITICS

Two of the best talks at the Minneapolis Farm Forum last week urged a nonpolitical or bipartisan approach to agricultural problems.

Philip W. Pillsbury, chairman of the forum, suggested a food organization of the stature of the Hoover Commission to develop an intelligent program. Food is too important to too many people—and to world peace—to be in politics any longer.

Albert S. Goss, master of the National Grange, would abolish much of the power of the Secretary of Agriculture over price supports and instead let a bipartisan 12-man board run the program.

At the present time Democrats and Republicans are growing hoarse trying to outbid each other for the farm vote. Their chief offering is an easier approach to the Public Treasury.

In a sense, bipartisanship is working along these lines. It went into action very effectively in the Senate the other day. Senator LUCAS, majority leader, had proposed that price supports for potatoes be cut off unless growers abided by severe acreage and marketing controls. The Nation has spent more than $400,00,000 since the war to bolster potato prices.

Republicans and Democrats defeated the plan for those rigid restrictions in 1950. But in order to win their point, the potato State Senators had to vote for increased acreage for cotton, peanuts, and wheat, all of which are in surplus. The Government already has more than $600,000,000 tied up in cotton and our high support level has priced us out of world markets.

That sort of bipartisanship is dangerous to the economy and, in the long run, to the farmers. The kind that is needed would reconcile the various farm-program suggestions without new unwarranted raids upon the Treasury.

Pillsbury's plea to lift the Farm Forum beyond the realm of party politics was scarcely heeded, and maybe the sessions were more interesting because so many controversial issues were raised. But his suggestion of a national food commission, headed by a Bernard Baruch or a Herbert Hoover, should not die.

The best thinking of the Nation needs to be employed so that the question doesn't lick us.

The Fuchs Case

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Got Tipped on Fuchs in 1946," published in the Washington Daily News of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES GOT TIPPED ON FUCHS IN 1946, BUT NOTHING WAS DONE, MAGAZINE SAYS

Dr. Klaus Fuchs, it was stated today by the Canadian news weekly, the Ensign, was suspected of being a spy by the Canadian Government in 1946, and this suspicion was passed on to both the British and United States Governments.

Nevertheless, nothing was done about him, and Dr. Fuchs was allowed to work in the highest branches of atomic research in Britain and to have access to top United States and British atomic secrets. Dr. Fuchs confessed his spying activities and was sentenced on February 28 to 14 years in jail by a London judge.

The Ensign is a national news weekly published in Montreal. It is a Catholic paper but is not an official publication of the church. Its lead story date lined Ottawa and published today stated:

"Positive proof that the Canadian Royal Commission on espionage had ample reason to suspect that Dr. Klaus Fuchs was involved in the Russian spy ring, and that these suspicions were passed on to the United States and British authorities in 1946, was disclosed to the Ensign last week."

WARNINGS IGNORED

Despite these clear warnings, Fuchs was permitted to continue working for 4 years in atomic research. It was during this period that he passed most of the atomic information to Russia for which he was sentenced.

Until last week, all that was publicly known, apart from Fuchs' trial confession, was that his name had appeared in a notebook belonging to one of the men accused in the Canadian spy trials of 1946.

A United Press cable from London that a Russian agent's notebook containing Fuchs' name and the word "Nash" (Russian for "ours") was found in Canada last year was inaccurate.

This notebook, belonging to Col. Vasily M. Rogov, Soviet Embassy Director of Atomic Espionage, was shown to Igor Gouzenko, Soviet Embassy cipher clerk, who broke the spy ring, and its contents reported to the Royal Commission 4 years ago.

SPY ROLE REVEALED

Last week the Ensign learned that the Royal Commission knew in 1946 that Colonel Rogov revealed Fuchs' spy role to Igor Gouzenko. Both Fuchs and Dr. Allan Nunn May were considered for assignment to Canada to collect and report atomic secrets. Dr. May was selected but Fuchs was held in reserve. Then Fuchs was sent to the United States in 1943.

These facts were passed to United States and British authorities in 1946. The Federal Bureau of Investigation in the United States wanted to make further investigation of Fuchs, and a number of other suspects, but was not permitted to investigate atomic espionage until 1947. Actually, they have been working on the Fuchs' case for less than a year.

Why British authorities did not inquire into Fuchs' activity in 1946 and prevent him from passing atomic secrets to Russia during the last 4 years remains a mystery. MI (War Office counterespionage branch) knew that Fuchs had fled Germany in 1933 as a self-confessed Communist.

They had the reports from the Canadian Royal Commission in 1946.

VISITED EMBASSY

They knew also that Fuchs openly visited the Russian Embassy in London, a curious practice for an atomic scientist.

Other evidences of grave weaknesses in Britain's security system alarmed the United States last year and undermined British efforts to persuade the United States to share more of its atomic secrets. The Fuchs' case merely confirmed earlier fears.

In Ottawa, one indignant official told the Ensign: "Unless the authorities in Canada, the United States, and Britain quickly realize that every Communist and every fellow traveler is a suspect, our security measures will not give us much protection. The least we can do is to clean them out of places of authority and trust."

Sesquicentennial of Establishment of the Capital in Washington

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a statement by State Senator P. H. McEachin, of Florence, S. C., at the Departmental Auditorium, Washington, D. C., on March 9, representing South Carolina at the exercises celebrating the sesquicentennial of the establishment of the Capital at Washington, D. C.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On behalf of the people of South Carolina I want to express our deep appreciation for the honor bestowed upon us by the dedication of these sequicentennial exercises to our State, of whose record we are so proud and to which we are so ardently devoted.

South Carolina's importance in the making of the new Nation over which this Federal Capital was to preside can hardly be said to have been excelled by that of any other. For more than a hundred years befor Washington was established South Carolina had borne the principal burdens of defending the southern frontier against the encroachments of Spain and France, thus holding a vast territory that later became part of the United States. In the movement leading to the separation of the Thirteen Colonies from England, South Carolina was the first to embody the new principles of self-government in a thorough and complete Constitution. In the long war that followed no other State was called upon to make greater sacrifices of life and property. The very mention of such names as Rutledge, Gadsden, Hayne, Laurens, Jasper, Moultrie, Sumter, and Marion, bears witness to the extent and worth of these sacrifices.

South Carolina was no less interested in the new Federal system than she had been in the war that made the union possible. To the Federal Convention of 1787 they sent John Rutledge, Pierce Butler, Charles Cotesworth Pinckney, and Charles Pinckney. Each contributed in some important way to the drafting of the Constitution. It is now admitted, after much controversy, that Charles Pinckney laid before that convention a plan which anticipated a greater number of the provisions of the finished Constitution than did any other. I cannot resist calling attention to one of these provisions, which concerned the establishment of the Federal Capital. It was Charles Pinckney, I am proud to say, who first proposed article I, section 8, paragraph 17 of the Constitution which is now the basic law of the District of Columbia, and the city of Washington.

I think Pinckney was influenced in this by the fact that South Carolina, a few months before, had decided to transfer its capital from Charleston to a spot near the center of the State. In the procedure the State followed, there are striking similarities to the procedure used in arrangements for the Federal Capital. In both cases, the site selected was in open country, not in a populous town. In both cases, the name of Washington was proposed for the new city. South Carolina did not choose that name, but it is interesting to note that the name it did choose, Columbia, was later given to the Federal district around Washington. Finally, I should also point out that the architect who designed the South Carolina state house, James Hoban, later drew plans for the White House and other buildings in Washington.

Such were the ties between the State of South Carolina and the early history of the Federal Capital. They were surface ties, it is true, but they were indicative of the deeper bonds of devotion to the great dream of a federal republic in which men could be equal and free under a system of government the world had never known before.

End the Secret Snatching

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. WILEY. Mr. President, last night it was my pleasure to deliver by transcription a radio address over the great prairie farmer voice, Station WLS, Chicago, a message on the subject of the staggering cost of hidden taxes. I emphasized the importance of the American public being made aware of the huge amount of taxes which they are paying and which most of them do not realize are snatching pennies, nickels, dimes, and dollars from their purses. On a single loaf of bread there are 151 hidden taxes, all along the line from the wheat in the farmer's field to the time the bread is placed on the family kitchen table.

I ask unanimous consent that the text of this radio address over Station WLS be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

END THE SECRET SNATCHING—A REPORT ON ENDING HIDDEN TAXES

Wise old Benjamin Franklin told us Americans that "Nothing is certain but death and taxes."

Well, folks, at this time of the year, Ben Franklin's comment seems particularly appropriate. Every March 15 or thereabouts, over 45,000,000 American taxpayers make out their returns for Uncle Sam.

It is not an easy thing, of course, to part with the dollars which you have earned by the sweat of your brow, to part with savings which a man or woman wants to use for his or her own enjoyment, or for the children, or for putting away for a rainy day.

WE ARE GLAD TO PAY OUR WAY

Nevertheless, we are glad, as patriotic American citizens, to meet our responsibilities and to carry our share of the Government burden. We recognize that America, in these times, has many responsibilities to her own people and abroad. This necessarily involves a lot of money.

Our total budget, as you probably know, is around $43,000,000,000. Around 70 percent of that sum is devoted to the payments for past wars or preparations against (God forbid) future wars—for interest on the national debt, for aid to veterans, for defense, and so on.

WE MUST CONCENTRATE ON DEFENSE

Now, folks, these vital budget needs must be met. We dare not leave our country undefended, because we might have squandered our budget money for other extravagant trifles—for unnecessary items.

Just look abroad at this dangerous world situation, the menace of world communism, at the Soviet Union, which already controls a major proportion of the world's peoples. We note that Russia has 157 divisions, and we have but 10. Russia has 14,000 first-line planes. We have less than 2,000. To guard our own shores right now—to guard 150,000,000 Americans—we only have only about four divisions. Why? Because the rest are overseas or are noncombat troops. Those are important facts, serious facts, my friends. These facts emphasize that the greatest responsibility of the Federal Government is to preserve the Union, to protect it from would-be aggressors, to prevent another Pearl Harbor.

Yet, you and I know that the Federal Government, instead of concentrating on that one main problem, seems is going haywire. It wants to expand its field into just about every other insignificant problem under the sun.

CONGRESS MUST NARROW ITS FIELD

You know, folks, Congress has over 10,000 bills. Some of those bills are 100 or 200 pages long. It stands to reason that your Senators and Representatives cannot possibly handle all 10,000 bills adequately. The result is that many important items are considered in too brief a time, while piddling matters—mere trifles—often take up too much of Congress' time.

And, so we see, my friends, that instead of asking the Congress to expand Uncle Sam's field of operations, instead of asking the Congress to have Uncle Sam poke his nose into the field of medicine or poke his nose into purely intrastate matters, we—you and I—ought to be taking Uncle Sam's nose out of those affairs. We ought to have Uncle Sam devote his major attention to the crucial problems of the atomic age—defense, self-preservation.

But there's another major reason why we ought to decentralize Federal operations, so to speak, and return them to the States and localities. And that reason is what we might call secret snatching. By that I mean that your pennies and your nickels, and your dimes and dollars are being snatched in secret without your knowing it. You are paying a fantastic burden of secret taxes. Now, friends, if some racketeer or hoodlum were to snatch your money openly or in secret, you'd call a policeman, and you'd call him fast, because you have a right to protect your money against theft. But how can you protect your income from hundreds of hidden taxes on everything from diapers to tombstones; yes, taxes, from the "womb to the tomb."

When you go to buy a bottle of milk which costs, let us say, 21 cents, the milk cost is only about 13 cents; whereas, taxes, all along the line from the farmer to the man who picks up the milk, to the milk processor, the truck hauler, the retailer, and so on, account for 8 cents. If you buy a pack of cigarettes for 19 cents, 11 cents of that is for hidden taxes. If you buy baby powder for 29 cents, the hidden tax bite—that is, additional taxes—account for 18 cents. Just imagine that, my friends—18 cents for hidden taxes and 29 cents for the baby powder.

Your telephone bill is taxed, your home is taxed, your electric light bulb, your refrigerator, your wife's hosiery, your alarm clock, your auto and auto equipment in particular are taxed. That is what I mean by secret snatching—hidden taxes which cut your purchasing power. I'm referring principally to Federal taxes of course. Well, I say Uncle Sam must cease soaking the taxpayer.

WE MUST ENACT TAX REPEAL BILLS

For that reason, I have introduced a considerable amount of tax-repeal legislation. I have previously discussed with you over the microphone of WLS this question of repealing nuisance taxes. I mean the direct taxes on photo equipment, on furs, jewelry, theater admissions, cosmetics, and hundreds of other items like that.

SOME PEOPLE THINK THEY GET SOMETHING FOR NOTHING

But we've got to attack this whole idea of secret snatching. I can think of no more insidious danger to our American way of

life than these hidden taxes. Why? Well, the reason is obvious. So long as some people think they're getting something for nothing they'll continue the ruinous policy of demanding more Federal aid without realizing that in the long run, they themselves will be paying through the nose for them.

The Federal Government can't give you anything, unless it first takes something away from you. Namely, your money, and, in fact, your liberty.

SUMMARY

Now, friends, let me sum up the various points thus far:

1. The major business of the Federal Government is to look out after our national defense. Remember, experts have warned us that if a surprise atomic attack should come, 50,000,000 people in American cities could be destroyed in a matter of minutes. We must be calm, cool, and eternally vigilant.

2. In order to concentrate on problems of national defense, on problems of decentralization, Uncle Sam must get rid of those State and local functions which he took over during the war and depression emergencies.

3. If Uncle Sam does succeed in turning back some of these functions to the States and localities, then, he'll be able to cut your taxes. Not only cut your direct taxes, but most important of all, cut hidden taxes.

4. Now, fourth, we note that the whole history of taxation reveals the fact that once a tax is imposed, instead of being repealed, it is usually increased.

In other words, it's going to be a hard job to cut taxes. What we need, therefore, are specific techniques to end this secret snatching. We need a specific program. And that is what I should like to suggest now.

SET UP A LITTLE HOOVER COMMISSION

1. Right now, there is pending before the Senate, legislation to set up a little Hoover Commission on Inter-Governmental Relations. The purpose of this legislation is to end the overlapping and duplication between Federal, State, and local authorities by setting up a commission which would analyze the problem of Federal, State, and local powers and taxes. This Commission could do as wonderful a job in this field as the Hoover Commission on Government Reorganization has done.

2. Congress should immediately proceed to act. Every single committee of the Senate and House of Representatives should confer with the Federal agencies under its jurisdiction and direct those agencies to prepare a program for getting rid of certain of their less important functions and returning them to the States and localities.

It is not going to be an easy job to get them to do this. These agencies will probably try to sabotage this decentralization program; but if you, the American citizens insist on it, you can accomplish this purpose.

BUSINESSMEN SHOULD PRINT HIDDEN TAX COSTS ON PRODUCTS

3. Now, third, I suggest that manufacturers of various business products voluntarily try to compute, for example, the cost of hidden baby-powder taxes, the cost of hidden soap taxes, and bread taxes, and so on. Then, if possible, those tax figures should be printed on the product that you buy. The American public should be informed about this secret snatching. If, for example, a woman buys a purse for $10, she should be aware of the fact that hidden taxes on that purse are going to cost an additional $5. Now, obviously, the cost of those taxes can't be printed on the purse itself. But it wouldn't take very much effort to attach a little label to state that the cost is going to be increased by $5 because of the secret snatching.

Newspapers and radio stations can voluntarily cooperate by emphasizing the significance of those hidden taxes, the harmful effect of this secret snatching on business and on consumers.

Some years ago, we had a tremendous problem of kidnaping. There was secret snatching of youngsters that horrified the Nation. We ended that crime by the efficient action of the FBI. Well, today, fortunately, our children are not being kidnaped, but our money is being kidnaped—not illegally, but legally by some so-called public servants. I say it is time that these public servants begin to cut down on this secret snatching—on the kidnaping of your income.

CONCLUSION

Well, ladies and gentlemen, if you agree (or for that matter, if you disagree) with the ideas I have expressed, I hope that you'll drop a note to me in Washington, D. C., care of the Senate Office Building. Just write a penny post card to Senator ALEXANDER WILEY, of Wisconsin. But more important, write to your own Representatives in the Halls of Congress, or write to other Senators. Let them know how you feel. Let them know, as I believe you want them to know, that Uncle Sam must cut down on spending, must cut down on unnecessary functions, and most of all, must cut down on ruinous direct and hidden taxes.

Thanks for your kind attention, and good luck to you all.

Statehood for Alaska

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. MAGNUSON. Mr. President, the House has passed a bill to grant statehood to the great Territory of Alaska, and it now comes before the Senate committee. So that Senators may be informed regarding the salient facts, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the Seattle Post-Intelligencer, entitled "Bright New Star From the North," and an article from the Los Angeles Examiner, entitled "More Oil Than Arabia, 'Glacier Priest' Says."

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Seattle (Wash.) Post-Intelligencer]

BRIGHT NEW STAR FROM THE NORTH

Heeding the aspirations of a vigorous young American Commonwealth, and echoing the desires of the American people as a whole, the House of Representatives has voted to admit Alaska to the Union.

Now the long-awaited dawn of the forty-ninth star needs only the approval of the Senate to become fact.

What has been acknowledged a necessity long ago, solemnly promised by the platforms of both Republican and Democratic Parties and by the formal avowals of their leaders, is thus at last near fulfillment.

Nevertheless, there are forces and influences at work in the Senate that would deny, and will strenuously attempt to frustrate, the legitimate ambition of Alaska for statehood and the great benefits it would present to the safety and economy of the entire country.

These denials, evasions, and objections must immediately give way to the just demands of the national interest.

It is only too clear and urgent why admission to the Union of Alaska now, and Hawaii as soon as possible thereafter, is of vital importance to the Nation.

Alaska is, beyond question, the most valuable strategic position on the globe today. It needs adequate representation in Congress to achieve full development as a frontal bastion of our defense.

Alaska is potentially one of the richest areas on earth. Statehood would stimulate growth of population, increase investment, strengthen industry, and enlarge commerce. These are historically the results of newly won State rank.

Obviously these tangible values would accrue as much in proportion to the 48 States as to the forty-ninth.

There is besides an intangible factor of inestimable importance.

Alaska is an American land, explored, settled, and civilized by Americans. It is as patriotic and progressive, as full of zeal to create and build as were every one of the once pioneering States that are now principal partners of the federation.

To deny the title and rights of full American citizenship, to withhold rightful representation, to maintain this critically situated and richly promising part of America in the status of a ward, is to deny every principle of our democratic doctrine.

In the light of these incontrovertible reasons for Alaskan statehood, technical objections whose very technicality is highly questionable, promise to make the debate in the Senate acrid and prolonged.

They are already foreseen in the coming hearings of the Interior and Insular Affairs Committee, which must precede senatorial vote.

Whether in committee or on the floor, the carping objections must be overridden, so that the broad and glowing certainties of the future can stand out in the full light of reality.

As Alaska Delegate BARTLETT said to the House:

"Give us statehood and we will give you before long a mighty State whose population will grow constantly, whose business and industry will develop in harmony with the resources upon which they are based. * * * Statehood should enable the pioneer hands in Alaska and those who will go there to carve a mighty new State for this Union from our most western frontier."

[From the Los Angeles (Calif.) Examiner]

MORE OIL THAN ARABIA, "GLACIER PRIEST" SAYS—FARMS BETTER THAN DENMARK AWAIT SETTLER, HE DECLARES

Statehood for Alaska will throw open a vast frontier of tremendous resources to a new surge of colonization and development.

Statehood will facilitate defense of America's key bastion of the north, which lies in Communist Asia's back yard.

It will grant a basic right of democracy—representation—to fellow Americans who are now denied it in Congress.

So believes the famed "glacier priest," Father Bernard R. Hubbard, one of the world's foremost authorities on Alaska.

In an interview at Loyola University yesterday, Father Hubbard drew upon a quarter century of knowledge of that land.

PROSPERITY

"Alaska," he declared, "has everything any State could have for tremendous prosperity.

"The oil resources alone of the Alaska-Canada arc are greater than Saudi Arabia's.

"There are great regions of arable land, comparable to central Europe or Denmark, awaiting farming and dairying.

"I believe statehood will speed up its development.

"Settlers will be attracted first, and industry will follow. I know plenty of capital is waiting to come in with proper assurances of local protection for private investment."

Such expansion and civilization will facilitate defense, too, he said.

"Alaska is of paramount strategic importance. From bases there, B–36's could fly over the polar-ice pack by the shortest routes, to let any nation in the world feel our weight and power."

Alaskans themselves want statehood, he said, because it will give them elected representatives, responsible to them, instead of laying their problems to "voteless Delegates" in a Capital 4,000 miles away.

Ultimately, he said, successful statehood will be bound up with more cordial trade relations with Canada.

With the State of Alaska, Canada, and other United States working closely together, he said, "We will truly have a glorious North America."

Balancing the Budget

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Greater Peril Than Bombs," from the Indianapolis Star of a recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GREATER PERIL THAN BOMBS

Indiana Democrats sat back from their $25-a-plate feast Saturday night and heard Gov. Adlai E. Stevenson, of Illinois, voice his grave concern about a problem which the head of the Democratic Party pretends is nonexistent.

Governor Stevenson warned fellow Democrats that they must devote more of their attention to balancing the national budget. "If we can't balance our budget now, when will we?" he asked. He called the problem of balancing the budget while living sanely and making the required total effort in the cold war as urgent a question as this country has ever faced.

Gen. Dwight D. Eisenhower expressed similar concern Sunday night in a New York address. He counseled Americans to worry more about averting national bankruptcy and less about the hydrogen bomb. "We can do something about the possibility of bankruptcy," he said.

Mr. Truman's attitude is in alarming contrast to that of Governor Stevenson, General Eisenhower, and numerous other influential Americans, many of them leaders of Mr. Truman's party. These Americans see the dark peril of continued deficit spending. The President, however, remains blithely indifferent to his projected $8,000,000,000 deficit. Instead, he continues to demand social programs which would greatly increase the deficit.

Atomic warfare, as General Eisenhower implied, is a threat over which we do not have full control. A part of the initiative here belongs to the Russians. But national bankruptcy is a peril which Americans can control fully through their elected representatives. Atomic warfare is still in the if-and-when stage.

That is why General Eisenhower urged us to worry more about bankruptcy and less about bombs. That is why Governor Stevenson injected what might be called a sour note into a happy gathering of Democrats here in Indianapolis. If he succeeded in denting the complacency of some of his fellow party leaders, the result will be worth $25 a plate for every man, woman, and child in Indiana.

"He Made Me Think"

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, March 10 (legislative day of Wednesday, March 8), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Two Fine Addresses," from the Delphi (Ind.) Journal of February 23, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO FINE ADDRESSES

HOMER E. CAPEHART, senior Indiana Senator, made an appearance in Carroll County last week and gave two addresses—one to a group of avowed Republicans at their annual Lincoln Day banquet and the other to a gathering of Delphi Rotarians and their farmer guests.

In those two talks Senator CAPEHART left more food for thought in Carroll County than has many a speaker in many a month.

Speaking with the earnestness of a man who has been in the shadow of death itself, CAPEHART left more people wondering about our American form of government than had probably even considered the matter in the past year.

A young man said later, "He really made me think about some things that I had passed over lightly before." The young man has a young daughter and he added that he wants his youngster to grow up in America—America as he knew it before and while he was helping fight a world war.

Senator CAPEHART laid English socialism out for inspection and then showed how dangerously close the United States has drawn to that same situation.

Make no mistake, Democrats who heard the Senator's address at Rotary-Farmer meeting were impressed and have something to ponder. It's not a political question where capitalism, socialism, and communism are concerned. It is a question of self-preservation, of individual freedoms and the right to own a home, a business, a farm, and the opportunity to manage them in the way one sees fit.

If you didn't hear the Senator, you missed hearing one of the best food-for-thought addresses given in these parts recently. A second best would be to take a suggestion made a week ago and read the popular Road Ahead, a wonderful condensation of which appeared in the February issue of Reader's Digest.

Report to the Second District of Illinois on the FEPC Fight

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I think it is proper that from time to time we who serve as the Representatives of the people in the Congress of the United States should report to those who sent us here in what manner we have used our influence and our votes to advance the sort of legislation in which our constituents are interested.

Furthermore I think such reports to our constituents should be made publicly in this Chamber that our distinguished colleagues, whether of our party and our own convictions or contrariwise, should the better understand our sincerity and the fidelity with which we seek to represent the public sentiment of the voters in our respective districts.

In the Second District of Illinois there prevails a strong dislike of anything in the nature of discrimination because of differences in race, color, creed, or station. We believe that equality in opportunity is as essential to a functioning democracy as impartiality in the administration of justice.

In the Second District of Illinois men and women of all religions and all denominations, of all racial groups and of all stations of life, believe that they and all other men and women should have equal opportunity in the obtaining and the holding of employment. To say to a worker that he cannot apply for employment on his own qualifications and his own character and on an equal footing with all other qualified applicants to the people of the Second District of Illinois is abhorrent. To say that he cannot be considered and subjected impartially to the same tests because of his religion, his color, or even his race, to us in the Second District of Illinois is to question democracy itself. We feel that in a real democracy there must be among citizens, united with the common purpose of making that democracy function, a sense of cooperating brotherhood at least to the extent of according to all an equality of opportunity.

EXPERIENCES OF THE MELTING POT

Why do we feel as strongly as we do on the matter of the proposed Fair Employment Practice Act? A few of our distinguished colleagues from the South have said in the debates in this Chamber that our motivation was one of political interest and not of conviction. How little they know us. How scant is their understanding of the experiences of life in a great melting pot from which peoples of all races and of all religions have come to contribute by hard work and loyalty their part to the strength and the greatness of the land of liberty.

Fair and equal opportunity for employment has not always been accorded the Irish immigrant, the Jewish immi-

grant, the Scandinavian immigrant, the Italian, the Polish, the Lithuanian, the Croatian—I could go on down the call of the nations and the races and I could not omit the Anglo-Saxon because against some of the later immigrants from the British possessions has there been directed by some employers that which amounted to discrimination.

If we are opposed, uncompromisingly opposed, to signs in factories and on the walls of offices reading, "No Negroes may apply," one reason may be found in the experiences that are a part of our background.

"Jews not wanted"—there have been such signs to bring tears to the eyes of honest men and women, and of children.

"No Irish need apply"—is it not understandable by our southern colleagues that one in whose veins Irish blood does course would ever wish on men and women of any race the doors of employment to be shut?

"No Polish workers wanted"—yes, in our Chicago, the greatest of the inland cities of America, the metropolis carved in the very center of the American melting pot, we have known that affront to be thrown into the faces of good and God-fearing people who came to America to work and ask only for the chance.

"No Italians wanted," "No Scandinavians hired here"—on down the list of immigrants who came to make their homes with us and to join with us in making our city and our land a place of happiness for all.

Yes, Mr. Speaker, in Chicago we learned our brotherhood in the experiences of our own kind. Even those who were born in America, but came from the farms, and were inexperienced in the ways and manners of urban life, had, too, at the beginning some measure of discrimination to combat.

MOST DEMOCRATIC OF CITIES

Chicago never would have become the great city that she is, perhaps the most democratic large city in the world, if from the very first our people had not seen to it that whenever discrimination showed itself, and upon whomsoever visited, that discrimination was crushed under an avalanche of populous disapproval. We of all racial groups and of all religions have worked together as a team in tolerance and in mutual understanding to bring to our Chicago, and all the people who dwell therein, the greatest possible measure of human contentment.

We apologize to no one for placing the quality of character ahead of the circumstances of birth. I suppose that you might call us a religious people, judging from the many churches and synagogues, always filled during the hours of worship. The point that I wish to emphasize here is that in our daily lives in Chicago we seek to give a practical expression in our contracts with our fellow men to the teachings of our religions. To us in Chicago the brotherhood of man is something more than a bit of vocabulary.

I may say to my distinguished colleagues from the South, and especially to the gentleman from Tennessee [Mr. SUTTON], who in the debate on FEPC raised the cry of hypocrisy against Members from a North that he does not know, from an East that he does not know, from a West that he does not know, that long before the wounds of an intersectional war were healed in the South there came to Chicago and to Illinois many fine southern men and women, who by us were received with open arms as friends and neighbors to work with us, without prejudice or discrimination because but recently the States from which they came were at war with us. We do not believe in discrimination. You cannot live long in the democratic atmosphere of Chicago until this passion for recognition of human rights, and their enjoyment by all without any taint of discrimination anywhere, becomes a part and parcel of your being.

I do not think any of the fine southern men and women who were the first to join our Chicago family after the close of hostilities in the sixties would have had it in their hearts to charge us with hypocrisy because we neither believed in nor practiced discrimination.

SINCERITY OF SOUTHERNERS

I should add, in all fairness, that the great majority of our colleagues from the South, who debated with us on FEPC, refrained from the charge of hypocrisy. They joined with the great majority of the advocates of FEPC in keeping the debate on a high level of logical argument advanced in a spirit of mutual respect. The fact that the delegations from the 12 southern States, including Members ordinarily of liberal trends of thought and many Members of lofty and spiritual character, voted as a unit against FEPC we from the North, East and West could not leave unnoticed. It was not so much a matter of geography—because, Mr. Speaker, we are all one people and we in this chamber find in commingling together that there is little fundamental difference among us—rather, I would say, the explanation for the division along sectional lines lay in the fact that our democracy in such a city as Chicago has longer been under the refining tests of personal experiences. They have been the experiences of the great melting pot into which have come one wave of immigrants after another, each perhaps with its own nationalistic customs and usually under the handicap of learning a new language and the habits of new ways. We have found from our personal experiences, and those of our own kind before us, in the great melting pot in which we became as one team the goal of which was the contentment of all, that human hearts and human minds are pretty much alike, and that race and color and religion and station cannot divide when there is brotherly desire to understand and a sincere willingness to accord to others that exact equality in opportunity expected and demanded for oneself.

Meanwhile, as we were going through the cycle of these experiences, which reached, as I have said, into the "groupal" backgrounds of all of us, the Southern States, emerging from the difficult problems of reconstruction years, continued under a social order only slightly altered. Toward those of a race not too long ago released from the status of slaves there remained an attitude of protection, guardianship, and undoubtedly what was deemed helpfulness. But in the melting pot of many races we had found that you can give all of these—protection, guardianship, helpfulness—and if you have omitted recognition of the dignity of man you have given nothing. It is that recognition of the dignity of man, which all human nature craves and which is of the very spirit of religion, that brings out the finest attributes in the individual and spurs each race to develop within its members those graces of manners and qualities of character that best recommend them in the society of the members of other races and of other groups.

Suffice to say, Mr. Speaker, that in return for the recognition of our sincerity, which most of our southern colleagues generously accorded us in the FEPC debates, we gave to them with equal generosity and in equal measure recognition of their sincerity.

A new order is supplanting an old order, and neither the advocates of a new that is destined to prevail nor the defenders of an old that cannot continue in a modern world can serve any good purpose, either in advocacy or in opposition, by raising a question of sincerity.

DISCRIMINATION IS A POISON

To all in the Second Congressional District of Illinois, to the men and women, and even the children who in their generation will carry the torch for democracy, humanity, and brotherhood, do I make this report of how, with humbleness of spirit, but I hope with that driving force which sincerity gives to our words, I have tried in the halls of Congress to make my voice the sounding board of their voices and my vote truly expressive of the universal sentiment of tolerance, understanding, and brotherhood prevailing among the people I represent in the Second District of Illinois.

On July 1, 1949, I said in the House of Representatives:

> I abhor discrimination of any kind being directed against law-abiding men and women who walk in the image of their God, doing the share of the work of the world that is given them to do. All my adult life, actively expended in championing the causes of ordinary men and women who too often have too few to speak for them, I have fought discrimination wherever I have found its ugly head.
>
> On coming to this Congress, a new Member and at an age where there could be no ambition except to be true to myself and the philosophy by which I had lived my life, I made to myself the pledge that wherever I found discrimination my vote would be withheld and wherever I found that which in sound legislation would eradicate in some measure some form of discrimination there would my vote be and there would it be counted.
>
> Discrimination, Mr. Speaker, in a democracy such as ours is the poison that destroys; slow-working poison, it is true, and for that reason the more insidious and to be guarded against.

USE OF RADIO IN FEPC FIGHT

As a Member of the Congress, active in the fight for FEPC legislation and eager that behind us in that fight should be the strength of an aroused public interest, I appeared frequently on radio programs, both local and national. On January 8,

1950, over Station WWDC in Washington, I said:

Should Congress enact a Federal fair employment practices act? You couldn't expect me to answer that except in the affirmative. The platform of my party, which in all good conscience is binding upon me, declared in no uncertain terms for such an enactment.

If I had been defeated in November of 1948 and my Republican opponent had been elected to represent the people of the Second District of Illinois, I do not see how he could have answered the question except in the affirmative. The platform of the Republican Party, which, in all good conscience, should be binding upon the Republican members of the Congress, declared in no uncertain terms for the enactment of a Federal fair employment practices act.

Who am I to say, or who else has the right in the presumption of wisdom above his fellow men to say that both the Democrats and the Republicans were talking nonsense in their respective platform pledges and that the American people, having declared their overwhelming approval of legislation to end discrimination in the opportunity for employment, should be put in their place by the Members of Congress they thought they had elected to be their representatives and not their masters?

I cannot lose sight of the fact that this is a representative Democracy, that its proper functioning rests upon party responsibility and that, in the absence of a conflict with individual conscience or preelection pronouncement to the contrary, the men and women sent as Senators and Representatives to the Congress are morally and in all decency and honesty obligated to vote in the Congress according to the directions of the voters as expressed in party platform.

There are probably some in the Eighty-first Congress who are honestly fearful of democracy itself just as there were those among the early Americans who were fearful of extending the right of suffrage to those who owned no property and who possessed no superior education. They would have discriminated against men of their own color, of their own religion, of their own national origin, even to the extent of depriving them of a vote and a voice, and only because they were poor and the circumstances of their early lives deprived them of educational opportunities.

There have always been those who were afraid of the competition of equality in opportunity. They have preferred the comfortable cushions of a convenient status quo to the exertion of rolling up their sleeves and meeting their fellows on an equal footing.

They have always been a negligible minority in these United States of America. Their number in the Eighty-first Congress—I mean those who honestly find in their consciences something revolting and terrifying in the concept of equality in the opportunity of employment—is so piteously negligible that as a bloc it would not dent a pat of butter.

Equality in opportunity for employment in a democracy is so essential that where it does not exist there is no democracy. To deny equal opportunity in getting and holding available jobs is nothing less than holding to the discarded concept of master and servant, of classes determined by circumstances of birth, of superior races and of superior religions.

CHURCHES JOIN THE BATTLE

In the extension of my remarks I placed in the CONGRESSIONAL RECORD of February 6, 1950, my reply to the request of the Church Federation of Greater Chicago that I support the FEPC bill and also sign the discharge petition of the gentleman from New York [Mr. ROOSEVELT]. My reply as it appears in the CONGRESSIONAL RECORD of February 6, 1950, to this great federation of all the Protestant churches in the metropolitan Chicago area follows:

DEAR SIRS: This is to acknowledge receipt of your form letter concerning H. R. 4453. I am happy to note the position taken by the board of trustees of the Church Federation of Greater Chicago in support of legislation aimed at removing discrimination in the opportunity to obtain and hold employment.

Such legislation, reflecting as it does the Christian concept of brotherhood of man under the fatherhood of God, could not fail to inspire deep sympathetic interest among the men and women whose spiritual strength is maintained and augmented by attendance and worship at the many Protestant churches of all denominations comprising the membership of the Church Federation of Greater Chicago.

It is heartening that your board of trustees has responded to this universal sentiment among Christian people in our community by officially declaring the support of H. R. 4453 by your federation, truly representative of and the spokesman for the United Protestant Churches of Greater Chicago.

You request me to sign discharge petition 20. I am happy to inform you that I was one of the first to sign this petition and that I also signed discharge petition 21, which is of a similar nature. Discharge petition 20 was filed by Representative FRANKLIN D. ROOSEVELT and discharge petition 21 by Representative ADAM CLAYTON POWELL. It is significant to note as indicating no division among those supporting FEPC that ROOSEVELT signed POWELL's petition, as well as his own, and POWELL signed both his own and ROOSEVELT'S petitions.

As the 1948 national platforms of both major parties pledged support of a Federal Fair Employment Practices Act, I see no good reason why any individual Member of the House should not feel free to sign any or all discharge petitions the objection of which is to bring an early vote on proposed legislation redeeming the pledge of both parties. Certainly, if each individual Member applied to his own actions the test of fidelity to campaign pledges of his own party it is inconceivable that a discharge petition for H. R. 4453 would fail of the required 218 signatures.

Regardless of the fate of the discharge petitions now on the Clerk's desk, I can assure you with the utmost confidence that H. R. 4453 will reach the floor of the House early in this session and be passed by a substantial majority. The sincerity and determination of the President and of the House leadership is beyond question, and I am sure there is equal sincerity and determination that the FEPC bill shall be passed among sufficient numbers of the opposition party.

The action of the board of trustees of the Church Federation of Greater Chicago has been a stimulating contribution, of real value, to a good fight for the good cause of a functioning democracy geared to the conception of the brotherhood of man under the fatherhood of God.

VOTED AGAINST ALL AMENDMENTS

I remained on the floor during all of the 15 hours and more of that historic February 22, 1950, the anniversary of Washington's birthday when the good, the long, the gruelling fight was made for recognition of the human rights of all our people. I opposed and voted against all the amendments that were offered. I wanted not only the principle adopted but also the enforcement provisions that would make the principle respected in its application as intended.

You will find on page 2200 of the CONGRESSIONAL RECORD of February 22, 1950, my reply to the contention of a southern Member that there is a distinction between civil rights and human rights. My remarks in the Halls of Congress on the occasion of that great debate, I quote:

Mr. Chairman, the distinguished gentleman from South Carolina [Mr. SIMS], whose sympathy with many liberal viewpoints has won him the friendship of liberals from the North, has sought in his presentment of the southern viewpoint on the pending bill to make a distinction between civil rights and human rights. His opposition to that bill he bases upon his conclusion that its effects would place civil rights in priority to human rights.

I am afraid I cannot agree with the distinguished gentleman. That which for convenience in reference we call a bill for civil rights stems from the human right of all men and women to live. Men and women in a complex industrial society, unless born of families of means, cannot live unless they have gainful employment. Shelter, food, clothing, everything necessary to keep body and soul together, must come from the proceeds of that employment.

This bill aims at affording all persons within the jurisdiction of the United States an equal opportunity in obtaining and holding such employment without any discrimination based upon racial and religious prejudices.

I fail to see where there could be any human right more fundamental than the right to live, and it is to establish that right to live on the part of millions of our countrymen now discriminated against that this proposed legislation has been presented. I don't care what you call it—civil rights, as is the easy term in the vocabulary of its proponents, or something sought to be forced upon us in priority of human rights, as the gentleman from South Carolina says. I do not think the good men and women in the galleries above us are interested in labels. No matter what you call it, this is a bill to give human beings the right to live and to enjoy equal opportunities in employment when possessed of equal qualifications.

I can conceive of a situation when a period of great unemployment, such as was visited upon us in the early thirties when the policies of a reactionary government brought us to a wreck, those men and women in the groups discriminated against, being the first to be dismissed and the last to be reemployed, would be doomed as individuals and as a group to unwarranted privations, and in many instances to actual starvation.

No, Mr. Chairman, the right to live of all human beings, without regard to color or race or religion, can never be inferior to any of the rights of a more fortunate and numerous group. I know of nothing in the Constitution of the United States, certainly nothing in the law of God, that establishes the right to discriminate against one's brother in priority to the brother's right to live.

Mr. Chairman, this day in this Chamber, where so many great battles have been fought and won for human rights, will long be remembered. Today an old and passing order made its last stand.

The galleries in this Chamber have been filled for the many hours that we have been here. Until the general debate began, 5 hours after we convened at noon, there was little of excitement to command the interest of those packed galleries. The monotonous calling of the hundreds of names on one roll call after another was all that we, the representatives of the people in what has been termed the greatest deliberative body in the world had to offer.

Yet, Mr. Chairman, those galleries have remained packed hour after hour, and they will be packed, I venture to say, all night and all day tomorrow if it takes that time to bring this bill to a vote.

I ask my colleagues to look upward at the faces of the men and women looking down on us. There is nothing of idle curiosity in those faces. I have never seen reflected in the faces of any gathering more sincerity of feel-

ing, more intensity of emotion, the greater marked because restrained. With rapt attention from the galleries above they look upon everything which is transpiring.

If I read aright the expression in their faces it is one reflective of their joy that on this day and in this Chamber the good fight has been made and is on its way to triumph—the good fight to end discrimination in the opportunity to get and hold a job—the good fight for the human right to live of everyone, even those of other races, creeds, and color.

Mr. Chairman, I am happy to say that in the Second District of Illinois, which I have the honor to represent, the sentiment for the passage of this bill is overwhelming. In Chicago we do not like any sort of discrimination.

I HAVE REPRESENTED MY DISTRICT

I have the faith that the people I represent, the great Republican rank and file as well as the Democratic, men and women of all religions and creeds and of all races and nationalistic derivations, will approve of what I have done. I repeat, we in the Second District of Illinois do not like discrimination. We like all men to stand on their own feet, to enjoy equal opportunity and to measure up in the esteem of their neighbors by the quality of their individual characters without seeking an unfair advantage in the circumstances of birth.

Moral Rearmament

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 13 (legislative day of Wednesday, March 8), 1950

Mr. WILEY. Mr. President, several weeks ago, in commenting on certain matters under discussion on the floor of the Senate, I called attention to the fact that there appeared in the galleries at that time a group of young people from overseas representing 12 or 15 countries. I also made the statement that the Chaplain of the Senate had written several fine editorials in the Washington Sunday Star, which I understood had been incorporated in the RECORD. I find that I was mistaken in that respect. I therefore ask at this time that the two editorials one entitled "A Rainbow Over the Alps" and the other entitled "At the End of the Rainbow," written by Dr. Frederick Brown Harris, Chaplain of the Senate, be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SPIRES OF THE SPIRIT—A RAINBOW OVER THE ALPS—MORAL REARMAMENT IDEAL SEEN AS A WAY TO WORK NECESSARY CHANGE IN HUMAN CHARACTER

(By the Reverend Frederick Brown Harris, D. D., Litt. D.)

Spanning the sky like a radiant scarf of blended colors, I saw a rainbow overarching the majestic peaks of the Alps. Under that sign in the heavens lay a little town perched on the mountainside 3,000 feet above the city of Montreux and that liquid-blue gem which is Lake Geneva. As a blazing star once hung over Bethlehem of Judea so a rainbow hangs over a little town in another small land, lovely Switzerland.

That spot, high and lifted up, is a modern Mecca which, as a magnet, has been drawing to its spacious Mountain House pilgrims from all parts of this fear-haunted earth. For during these crucial months, when it is later than we think, the paths of peacemakers who are to be called the children of God have led to Caux, pronounced in our English tongue Co.

All for which Caux has become an inspiring symbol fits in perfectly with that opulent word, "cooperation." Here is an enchanted mount where the Sermon on the Mount is being put into practical operation in this very year of crisis and chaos. That mountainside has been called by a distinguished Member of the United States Congress "the brightest spot in the dark picture of Europe." In many aspects that somber picture is dismal indeed. One of the world's most profound thinkers, whose frank telling of unpleasant truth has earned him the title of the "Gloomy Dean," Dr. Inge, of St. Paul's, London, has just emerged from retirement after much brooding over the present ominous world situation with this startling warning: "Either the nations must surrender some fraction of their independence to a supernational authority which will have the power to settle disputes peaceably or peace will be restored as in the Roman Empire by a knockout blow by the strongest power. This last looks painfully like a Tartar domination of Europe and Asia. Shall we have the sense to choose the former alternative?" But the fatal trouble is that the "former alternative," namely, just adjustments of the differences dividing mankind cannot be chosen unless men and nations change. Above political, diplomatic, and economic levels, earnest men and women weary of frustrated mechanical shuffling of the same old cards of fate, are frankly facing the fundamental necessity—change, changed hearts, changed desires, changed attitudes, changed motives, changed objectives.

A Burmese leader at Caux, speaking for the teeming east, declares: "We need money. We need about everything. But we need most of all changed people, a change which will enable us to trust one another."

Communism is out on a world-wide scale to liquidate one class and put another unchanged class at the top of the heap. Socialism, often sincere enough in its attempts to eliminate exploitation in order to bring the good things of life to all people, is still dealing with unchecked selfishness which can wreck any social scheme. Even in a chastened capitalism, management and labor confront each other with belligerent bitterness and suspicion in a constant tug-of-war. With legislative bricks, a sorry attempt doomed to futility is being made to build an altruistic edifice on the sinking sands of an unchanged society. It is self-evident that the utopian plan will not work without the utopian man.

The only escape from catastrophe is to change human nature. That diagnosis is as old as the Matchless Figure who enunciated the Sermon on the Mount and who insisted, as He fronted the deepest needs of the individual and of society, "You must be changed." "Born again," He called it. That is the working gospel of Caux—change, not in some sweet by-and-by, but in the here and now. That is the rainbow over the Alps. Here men and women by the thousand, representing all walks of life, from more than half a hundred nations, are finding the secret of actually practicing the presence of God—the God who did not cease to guide and to speak when some holy book was closed centuries ago, but who is speaking now to those who will but listen. Here at Caux, in a hostile world longing for peace but preparing for war, is an arsenal of the spirit where the invincible instruments of moral rearmament are being put into the hands of eager crusaders who are marching forth with the old cry which once rang through the embattled hosts of Europe, "God wills it." Here is the laboratory proof that human relationships, individual and social, dull, defeated, and divided, may be changed to relationships radiant, victorious, and united. Seeing that rainbow, parliamentarians, diplomats, legislators, cabinet members, labor leaders, capitalists, Communists, miners, and ministers—Protestants, Catholics, Jews, Moslems—are climbing the path to Caux, to carry back with shining faces the answer.

Next week the Spires of the Spirit will point to the pot of gold at the end of the rainbow.

SPIRES OF THE SPIRIT—AT THE END OF THE RAINBOW—MORAL REARMAMENT CONFERENCE AT CAUX REGARDED AS A SIGN OF HOPE FOR THE WORLD

(By the Reverend Frederick Brown Harris, D. D., Litt. D.)

High up in the Alps at Caux inspired men and women, having been shown the pattern in the mount for a new world, are going out with the leaven which must leaven the whole earth, unless a new Dark Age is to emerge, with the split atom as its nemesis. The fight whose strategy Caux plans is not a war against something. It is primarily a fight for something, for a master ideology which is superior and supreme. After a visit to Caux, a United States Congressman exclaimed: "The unmatched ideology here offered to a frustrated world is undoubtedly the Gibraltar of hope to which we must all cling."

The creed of Caux is: An evil idea can be stopped with only one weapon, a better idea. The basis of its ideology is to build a quartet of virtues and values into every human relationship—purity, honesty, unselfishness, and love. That combination in action is irresistible. In the struggle between class and class, and race and race, it offers the healing balm of an understanding and a mutual trust which bridges all gulfs. It is all happening now at Caux, for Marxists and capitalists, for captains of labor and of management, for men from the Orient and the Occident, for white and black and brown. With old hates and hurts forgotten, clenched fists have changed to clasped hands.

Under the spell of Caux once rabid Communists have utterly renounced the Marxian gospel of hate. One who had followed the party line for 30 years testified: "I see now that Marxists carry in their minds a great deal of rubbish." And so do Socialists and capitalists. They all need to be changed.

A labor leader, heading unions influencing over 200,000 members, beholding selfishness change to altruism, competition to cooperation, conflict to concord, ownership to stewardship, in that human laboratory in the Alps, declared: "They have the spiritual atom bomb. Here is the secret for building the new world that we Socialists have always wished for."

Yes, it is no illusion. There is a rainbow over the Alps. It speaks of one more chance for men to turn pending catastrophe into a flowering renaissance which will bring a new Eden for all.

Twelve thousand from 50 nations, reaching Caux by land, sea, and air, have found there the headquarters of the hope of the world. Our own Department of Justice, speaking for America which backs the Marshall plan and all other bulwarks against the threatened flood of communism, noting this rainbow in the sky, has issued this statement: "Moral rearmament is a world force, and its objectives are recognized by the Department as worthy and helpful in the strengthening of democratic forces throughout the world."

No wonder our Congress sent at Government expense this summer a delegation, who left its busy session to fly to Caux and see for themselves this great thing that has come to

pass. One high official speaks for all in reporting what they saw and how they felt, as he testifies: "No man could attend the conference in Caux and watch the emotions of a new hope light the faces of the people and not come away convinced that the organized forces of good in this world can defeat the organized forces of evil."

As we left that mount of transfiguration, far down beneath us lay the city, emblem of the busy haunts and restless hearts of men. Peering earthward from our eerie balcony, naught could be seen below but billowy clouds shutting out all sign of the valley. But we could see plainly that the blue sky was the truth, for we were above the clouds. They seemed only symbols of the suspicions and misunderstandings which hide the vision splendid from the men of the valley.

But, descending to the lake level and looking up to the everlasting hills, lo, at that moment the sun broke through and, like a vast searchlight, poured its glory on Caux. And from the dizzy heights of Mountain House the turrets flashed and flamed like a bouquet of diamonds. And then, across the Alps arched as brilliant a rainbow as our eyes ever had beheld. And the pot of gold at the end of that promise flung across the heavens is beauty in blended unity.

Yes, there was a rainbow across the Alps. And above this world which lieth in darkness there is a rainbow of hope.

Continuation of Rent Control

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, March 13 (legislative day of Wednesday, March 8), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I made last week in connection with the deficiency appropriation for the Office of the Housing Expediter.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. WILLIAM BENTON, OF CONNECTICUT, URGING THE CONTINUATION OF RENT CONTROLS

There is growing alarm among tenants throughout the country over the possibility that Federal protection for the ceiling price of their shelter rent may soon be suspended.

The national policy regarding this basic element in the cost of living for millions of our citizens is being determined in a manner which is equally alarming.

Last year the Congress passed an extension of rent control until June 30 of this year. The Senate Appropriations Committee has now denied additional operating funds to the Office of the Housing Expediter for the balance of the current fiscal year. The result is that the country faces a premature termination of this whole program.

This is an unsound procedure. I do not believe that the appropriation process should be used to thwart the expressed intention of the Congress. The action of the Senate Appropriations Committee is an indirect method of rendering the Housing and Rent Act of 1949 inoperable and ineffectual. It takes the teeth out of a law which was designed to give fair and equitable treatment to tenant and landlord alike.

Failure to restore these operating funds in the deficiency bill now before the Senate means the end of effective rent protection for tenants of 12,000,000 rental housing units throughout the United States.

Law enforcement is jeopardized in 74 American cities with populations of 100,000 or more which have deliberately elected to enjoy the benefits of Federal rent control. Public service to both landlords and tenants will soon be suspended or drastically curtailed in 1,000 United States communities where rent ceilings are now being maintained.

The stage will thus be set for a sudden and ill-considered disruption of landlord-tenant relations in 43 of the 48 States. Even before the Congress has fully considered the grave implications in the expiration of rent controls on June 30 next, this serious change in national policy will be accelerated in a reckless and irresponsible way.

This prospect is before us at a time in my own State when a shortage of over 70,000 homes still persists and when over 50,000 workers have exhausted their unemployment benefits.

Only last month, for example, the Board of Aldermen of the City of Waterbury, a key Connecticut industrial center, sent me a resolution requesting the extension of Federal rent control "for at least 1 year", because "there still exists a serious shortage of housing adequate to the needs of our citizens." Rent advisory boards in Hartford, New Britain, New London, and Middlesex and Tolland Counties have voted against rent decontrol in any part of these areas at this time. An acute shortage of low-rent housing is indicated by waiting lists in New Haven and Bridgeport.

Gov. Chester Bowles has unequivocally stated that the lapse of Federal rent control poses the most serious consequences for the economic stability of the entire State of Connecticut.

I concur in these misgivings, not only as they involve Connecticut but for the Nation at large.

I see no element of reasonable doubt to the statement that an acute shortage of moderate-priced rental housing continues to exist. There is every reason to believe that the elimination of rent controls will result in a lower standard of living for those who can least afford further strain on the family budget. I am not at all persuaded that the rental emergency is over, or that the Congress can lightly cast aside its obligations to face up to that emergency.

British Health Seen Slipping

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 13 (legislative day of Wednesday, March 8), 1950

Mr. McCLELLAN. Mr. President, my attention was called this morning to an article in the Washington Times-Herald entitled "British Health Seen Slipping." The article is date lined London, March 12. It points out that a recent national survey shows a 7-percent increase in sickness and an 8-percent increase in visits to doctors and hospitals among persons between the ages of 16 and 64, compared with last year. For persons over 64 years of age sickness rose 20 percent. I do not know just how the increases are related to the present socialized medical system in England, but I believe that the appropriate committees of Congress which are considering socialized medicine and so-called compulsory health legislation might follow through on the information contained in this article and ascertain what the cause for the increase is. I ask unanimous consent that the article be printed in full in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITISH HEALTH SEEN SLIPPING

LONDON, March 12.—A striking increase in sickness among Britons of working age, apparently indicating the health of the nation is declining, is disclosed in the latest survey by the Ministry of Health, published today.

A Conservative Member of Parliament, R. S. Russell, will ask Aneurin Bevan, Minister of Health, in the House of Commons what steps he intends to take to deal with the "serious trend disclosed by the official figures."

The survey shows a 7-percent increase in sickness and an 8-percent increase in visits to doctors and hospitals among persons between the ages of 16 and 64, compared with last year. For persons over 64 sickness rose 20 percent.

Statehood for Alaska

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, March 13 (legislative day of Wednesday, March 8), 1950

Mr. MAGNUSON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an excellent well-thought-out editorial from the New York Journal-American, on the subject of statehood for Alaska.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REDEEM THE PROMISE

The power to strengthen this Nation immeasurably against the greatest potential enemy in its history rests with 13 men in the United States Senate.

As members of the Committee on Interior and Insular Affairs, theirs is the power to report out of committee, for a full Senate vote, the Alaska statehood bill.

The bill was passed by the House March 3. There is a strong reason to believe that the Senate, if given a chance to vote, would pass it by a substantial nonpartisan majority.

Alaska wants statehood with the fervor men and women give to a transcendent cause. An overwhelming number of men and women voters in the United States want statehood for Alaska. This Nation needs Alaskan statehood to advance her defense, sustain her security, and discharge her deep moral obligation.

The 13 Senators should not delay.

There should be no delay for the reason that delay weakens our Pacific security by permitting Soviet Russia to strengthen her Siberian redoubts while also influencing the native population of western Alaska and of the strategic islands of the Bering Strait.

Published in the Saturday Evening Post of February 4 was a revealing article by Sally Carrighar.

This informed writer told what is going on.

The Russians have fortified adjacent Siberia with heavy guns and other coastal

equipment to guard their airfields—airfields from which they may seize our air bases at Anchorage and Fairbanks, establishing themselves to bomb our Pacific areas and our internal centers as far east as Detroit.

The Russians have set up an Eskimo espionage system.

The Russians are suborning the Eskimo settlements in Alaska by collectivizing the primitive industry of their Siberian neighbors and kinsmen—giving them doles while making them state chattels—and by using them as emissaries of Communist paternalism.

If, through neglect or indecision or timid partisan considerations, we withhold statehood from Alaska we shall have dealt a devastating blow to the morale of Alaska's white population.

We shall have injured immensely our world prestige.

We shall have assisted communism in its enticement propaganda designed to win the support of the Eskimos.

We shall have reneged shamefully on our long-promised rights of statehood to one of our most valuable possessions.

We shall have weakened our defenses possibly beyond repair.

For these reasons the 13 Senators in a very real sense hold the fate of Alaska—a fate joined inseparably with the security of this Nation—in their hands, and hold also a tremendous responsibility.

Let us hope fervently that they discharge it well.

Tribute to Wilton E. Hall

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, March 13 (legislative day of Wednesday, March 8), 1950

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Augusta Herald of March 2, 1950, paying a well-deserved tribute to Mr. Wilton E. Hall, of Anderson, S. C., the publisher of the Independent and Daily Mail.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A DISTINGUISHED CAROLINIAN SPEAKS TO WORLD EDITORS

A fine recognition, and one well deserved, came to Wilton E. Hall, of Anderson, S. C., a few days ago, when he was invited to address the opening session of the Columbia University Journalism Seminar in New York City.

While his newspapers are not published in the largest city in his State, Mr. Hall's papers are among the best known in the country, having been cited by many outstanding organizations for their signal services to the city of Anderson and to the State of South Carolina.

Mr. Hall has been publisher of the Independent (morning) and the Daily Mail (evening) for a number of years. He has served his country as United States Senator, but his most conspicuous services have been in the field of journalism.

Augusta civic leaders were given yeoman assistance by Mr. Hall in the development of the Clark Hill project, and today he is sparking the movement to bring about a similar development on the Savannah River near Hartwell, Ga.

Mr. Hall knows and understands the South as probably no other person and his address and round-table discussion at Columbia University was no doubt most illuminating.

Another southern man spoke in New York about the same time. He was Judge J. Waites Waring of the United States court of Charleston, who is temporarily sojourning in the big city.

Judge Waring and Mrs. Waring are vying for public attention at the moment by belittling their own people and their own race.

These people have already had more publicity than they deserve, but since the judge, in New York, was moved to tell a Negro audience that, "The white people of my part of the country are sick mentally, obsessed with the false doctrine of white supremacy," we cannot resist the opportunity for writing about a really distinguished South Carolinian, Wilton E. Hall, who is not mentally ill and who holds none of the views being espoused by the Charleston judge.

It was a Scotsman, we believe, who said something about feeling that everybody is crazy "except thee and me and sometimes I fear that thou art a bit queer."

If everybody is mentally ill down this way save the judge and his wife, what is to hinder us feeling that they, too, are a bit queer?

Public Library Service Demonstration Bill

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. VURSELL. Mr. Speaker, I am opposed to this library demonstration bill. First, it sets up another unnecessary bureau in Washington and starts by appropriating $150,000 to the Federal Security Agency to handle the initial cost of administration necessary in this Department.

Secondly, it offers to appropriate out of the Federal Government $40,000 a year to each State on a matching basis. That is the first plan.

The second plan in this bill would permit the Federal Government to appropriate the difference between $40,000 and a hundred thousand dollars a year to States which would match that amount. The bill is supposed to run for 5 years and could cost the Federal Government in 5 years under the plan $40,000,000.

Not a person in my district has written me asking me to support this bill, and probably not 20 people in my district know that the Federal Government is trying to force this bill on to the States. If we pass this legislation, we are assuming that the people out in the various States are not sufficiently interested in education and libraries to manage their own business; that we of the Congress and the bureaucrats in Washington know better what the States and the people should have than they know themselves.

I am against this legislation because to enact it would be a waste of the taxpayers' money that should be left with him to spend for books and periodicals for his children as he so desires.

When this Congress opened I made up my mind I would not support any new legislation that would add additional expense to the Government unless I was convinced it was absolutely necessary. I know this legislation is not necessary in any way, and a majority of the Members of this Congress must feel the same way about it. For that reason I ask you to join with me in defeating this legislation that would add more millions to the cost of government. I ask you to help defeat this legislation because all of the 48 States are in good shape financially and are more able to pay any educational expense at the present time than is the Federal Government.

The Members of this Congress know, and the people should know, that you cannot cut the cost of government, you cannot stop deficit financing; yes, you cannot prevent bankrupting the Federal Treasury unless the Congress has the courage to stop voting to spend money that we do not have, but will have to borrow from the people.

This legislation is unnecessary. Let us do our duty and defeat it in the interest of all the people.

Long-Range Housing Research Will Strengthen America and the American Home

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I am keenly interested, as I know also are many of our colleagues, in the research work in home construction for which we provided in the public housing bill of the first session. The goal of a decent roof over every American family, and within the means of that family, can be reached. It is not something only to dream of and to talk about. Until we have attained that goal we have not assured the permanent security of our country from the chaos and the ills that attend discontent. Those who are homeless, or are forced to shift about from place to place to find shelter they can afford, often finding it in atmospheres not conducive to healthy family existence, cannot be expected to furnish that stout foundation in a contented citizenry upon which any State must rest.

There is only so much that we in the Eighty-first Congress can do, constructively, to meet the problem of residential structures being priced too high for most people. We made a fine start in providing for public housing and slum clearance. We shortly will have before us the middle-income housing bill, and if we pass that, which I hope we will, we will have made another real contribution to the solution of the problem. But the real solution is in research. In research we will find new and better ways

of construction, new and better materials, new and easier ways of financing.

Because this is a subject in which all of us are so much interested I am inserting in the Appendix a most informative and constructive letter which I have received from James Prestini of the Armour Research Foundation of Illinois Institute of Technology, Technology Center, Chicago. The letter follows:

MARCH 6, 1950.

HON. BARRATT O'HARA,
House of Representatives,
Washington, D. C.

DEAR SIR: Your support of a vigorous Federal housing research program is needed. I realize that Federal housing is a relatively new concept in this country which has come about only because of the dire needs which exist. Your support and the support of everyone to this effort assumes more than normal importance in that what is done will set the pattern for several years to come.

There are few if any matters more urgent, more involved, or nothing more varied than the housing problem. To solve this problem the United States must set up a Nation-wide, long-range comprehensive program of research which is concerned with fundamental knowledge of the technical and design factor as well as the social and economic factors of housing research and which is comparable to the research work done by the Department of Agriculture. This much needed comprehensive housing research program should not be bypassed by substituting a small technical program which struggles from year to year to survive and produces immediate results of little long-term value.

Sound technical research ultimately develops new materials, new structural systems, and leads to reduced construction costs. Research gives data whereby we can anticipate the loadings and the deteriorating influences which building materials must withstand, establish useful properties of construction materials, and develop efficient assembly methods. Greater emphasis must be placed on developing mass-production techniques as related to housing construction. Only through extensive research can this be achieved and reduced building costs assured. The following serves as a sample of some of the technical research problems to be solved:

Development and improvement of methods of testing materials, structures, and components. Design and development of equipment for the conduct of tests.

Design and development of instruments for measurement.

Development of standards for evaluating performance.

Development of materials, structures, and structural design.

Design and development of building equipment.

Establishment of criteria for building and safety codes.

Establishment of specifications for purchases.

Studies in the problems of maintenance.

Development and improvement of techniques to increase production. Some of the design research problems are:

An approach to the problem in its town-planning aspect, in order to determine the most economical and rational type of local settlement for any given population.

Architectural design to determine the best type of plan and form of house.

A study of human conduct is probably the most difficult phase of housing research. Because of its complexity, it has been avoided for the most part. Exhaustive studies need to be made on the human physical and psychological relations to fatigue and comfort of such physical environmental factors as acoustics; illumination; forms; space and size; heating and ventilation; materials, finishes and surfaces. Research techniques need to be developed which will measure and determine conclusively consumer tastes, attitudes and behavior in terms of housing.

Research in economics would include studies in costs of financing home building. There is need for simplification of procedures relative to the transfer of property. The variety of provision of State laws which control foreclosures and registration of titles creates unnecessary confusion and cost. The creation of national systems of mortgage guarantees and supervision of local lending agencies bring out the need for clarification and simplification.

These parts of the technical and design factor as well as social and economic factors of housing research which are mentioned are not intended to be complete but rather a sample of what is meant by the problem being urgent, involved and varied. Setting forth these parts serves to emphasize the belief that only a government agency, such as the Housing and Home Finance Agency, could coordinate a nation-wide basic research program in housing.

It is obvious that the building industry has not been able and is not able to coordinate a nation-wide housing research program of a long-term value. To a degree the building industry has itself to blame for this inability. The industry is impeded by thinking and construction methods which grew out of a craft type of industry. The resulting house has not produced savings commensurate to those in other industries which have integrated twentieth century research, mass production methods, and mass distribution. The very nature of basic research does not produce immediate returns and this discourages the building industry from financing such a program. Research must be based on new systems and not on the old which merely mitigate and perpetuate the shortcomings of the current building industry.

The Government's position is one of supplementing—not sublimating—the efforts of private enterprise. Since the over-all housing research field is such an immense and complicated problem it is reasonable to believe that no one individual, no one organization, neither the building industry nor the Government alone, can completely solve it. The problem is of such magnitude that the help of all is needed for a solution. To fit our system of private enterprise a Government program of research under the able leadership of Dr. Richard W. Ratcliff, director of research, Housing and Home Finance Agency, could do much to foster a coordinated program for basic research in housing by universities, independent research groups, and other existing not-for-profit organizations. This agency could furnish the incentive and crystallization which are necessary. It should be authorized to undertake such a program to correlate the results of both public and private research and to disseminate the results in such a way as to encourage a modernization of the building industry. Such a research program would supplement rather than duplicate private research efforts. Though it should be undertaken in cooperation with all segments of the home-building industry, basic research should be an independent operation to be assured of the best and unrestricted results. By using the existing and established facilities to carry out the work, we would be assured the fastest, most efficient and most economical solution and at the same time hold to a minimum the criticism of Government participation. Another advantage is that the universities could develop personnel through a teaching program which would integrate theory and first-hand experience. In fact, utilizing the existing established facilities would lessen the amount of criticism, and might be the necessary margin of difference to make an extensive research program possible.

The financing of a program of research of the nature which has been briefly reviewed here will require extensive funds. The Federal request for $3,300,000, most of which will be used for current operations is insignificant. It is not in keeping with the billions in Federal commitments for current housing insurance, guarantees, and subsidies. Large amounts are needed if we are to have a real, broad focusing of the research effort on the manifold aspects of housing.

I hope that through this letter I have made a little clearer the magnitude of the housing-research problem to justify your active support for extensive appropriations and to assure that the program will get the favorable hearing it deserves.

Respectfully yours,

JAMES PRESTINI.

Statehood for Alaska Is Declared Vital for West Coast Defense

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Monday, March 13 (legislative day of Wednesday, March 8), 1950

Mr. MAGNUSON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a very excellent article on Statehood for Alaska, written by Dorothy Thompson, and published in the Washington Star of March 11, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATEHOOD FOR ALASKA IS DECLARED VITAL FOR WEST COAST DEFENSE—MANY IN AREA BELIEVE UNITED STATES CONSIDERS TERRITORY "EXPENDABLE" WITH WAR

(By Dorothy Thompson)

Several months have elapsed since an article by Gov. Ernest Gruening, of Alaska, in the United States News and World Report, attracted wide attention by its unfavorable report of Alaskan defenses.

So absent-minded are our citizens about Alaska that not long ago a distinguished journalist after visiting northeast Norway described the area as "the only frontier of the Atlantic powers on the Soviet Union," forgetting the frontier on this continent, separated from Soviet Siberia only by a narrow strait.

Recently, in Seattle, an energetic visiting Alaskan told me that many Alaskans believe the United States considers Alaska "expendable" in case of war.

Alaskans are acutely aware that the Territory once belonged to the Russian Empire, whose widest limits Stalin has showed himself determined to restore regardless of how the territories were originally acquired or by what agreements they were subsequently relinquished.

SEMICOLONIAL STATUS

These factors, and others, demand the entrance of the great northern Territory as a full-fledged State into the Union. It is absurd for the United States to support anticolonialism everywhere while retaining a semicolonial status for integral parts of American Territory.

The opposition to Alaskan statehood has come, in the first line, from grasping economic interests who want the Territory as a

privileged market, but not as a producer even for its own needs. It comes, in the second place, from Members of Congress representing populous States who protest against two Senators for a State with only 100,000 inhabitants.

In a letter to the New York Herald Tribune, Mr. Paul H. Whitney reminded such congressional critics that some of them represent States which entered the Union with much smaller populations than Alaska's, among them the great States of California, Illinois, and Michigan, and that, all together—apart from the original 13—21 States have been admitted with under 100,000 population.

Senators are United States Senators, and in our history small States have often furnished superior statesmanship. The United States of America is represented in UN by a former Senator from Vermont, whose entire population does not exceed that of a middle-sized city. The present Vermont Senators—GEORGE D. AIKEN and RALPH E. FLANDERS—are among the most respected members of the higher legislative body.

RAPIDLY GROWING AREA

It by no means follows that a community of a million will produce 10 times as many men of brains and virtue as a community of 100,000. Athens produced immortal sages when its population was, in present-day terms, that of a large village. Washington, Jefferson, Hamilton, Madison, and Franklin appeared when the largest American State was a tenth the size of present-day Greater New York City. And if there are now any of their like about, we could certainly use them.

The population of Alaska will stagnate as long as Alaskans have only second-rate citizenship—despite the fact that the Northwest States are the most rapidly growing part of the Union, and the Northwest Passage probably the most important global air route. During the war, the heaviest air traffic was through Edmonton in Canada's Alberta.

But Americans have not been north-minded. Many conceive of Alaska as an icebound waste. Alaskan experts, however, insist that it could absorb and support at least 2,000,000 people in areas where the climate is as favorable as in several well-settled States of the Union and Canada.

The neglect of the north may cost us dearly one day. Such neglect is not shared by the Soviets, who rank first in Arctic science. Eskimos, who often have family ties on both sides of the Strait and pass back and forth, have reported greatly increased activity on the Siberian side, near and beyond the frontier.

Finally, it is practically a natural law that no nation, in the long run, holds territory it fails to colonize and develop. Russia became the vast power she is largely by colonization, in which she has had no historical rival. And with growing population pressures, this law is not likely, in the next generations, to fail to operate.

Surplus Potatoes Defeat Communism

EXTENSION OF REMARKS

OF

HON. ANTHONY CAVALCANTE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. CAVALCANTE. Mr. Speaker, everybody is hearing a lot of talk about the communistic activities in this country and very rarely is any credit given to the American public for their constant vigilance against this terrible menace. During the recent work stoppage in the soft coal mining areas, various communistic-inspired outfits attempted to worm their way into favor of the coal miners. They lost sight of the fact that Americans of the best stock come from the coal-mining areas and I am pleased to report the Commies were unsuccessful in their attempts.

Under leave to extend my remarks in the RECORD, I include a letter from my secretary in Somerset County, Pa., Mr. Gerald N. Zeigler, pointing out one of the unsuccessful Communist missions in the mining regions of his county. The contents of this letter are self-explanatory and should be read by every Member in this House so that he can see how constant is the vigil of the real American.

WINDBER, PA., *March 5, 1950.*

Hon. ANTHONY CAVALCANTE,
Old House Office Building,
Washington, D. C.

SIR: This past week we had a contact with what we believe is a Communist-inspired outfit.

The United Electrical Radio and Machinist Workers Local, No. 418, of East Rutherford, N. J., contacted the local United Mine Workers saying they wished to help the plight of the miners with some financial assistance. The local secretary wrote back and in comes a check for $207.26 to the Eureka Stores to furnish food to the miners.

The letter from local 418 was signed by William Steinman, secretary, and that part of the letterhead which previously showed the CIO label was scratched off.

When the local boys saw what was brewing, they asked the Eureka Stores to return the check as not wanted.

Mr. Finko, the Democratic central committeeman, tells me that some food baskets have come into Central City from the Communist outfit in Pittsburgh. You can readily see the merits of the surplus potato distribution which took the pressure off hungry families and made it unnecessary for them to accept food relief from any of the Communist outfits. Mr. Finko also said he thought there were about 50 Commies in Central City. Mr. Zahurak says that in the Windber local he knows of two.

Mr. Brannan, the Secretary of Agriculture, deserves the gratitude of the American people for his foresight and his American way of combating communism.

As your secretary in Somerset County, I forward you this matter in accordance with your instructions to report all visible communistic activities in this county.

Yours very truly,

G. N. ZEIGLER.

Award to Hon. Oscar R. Ewing

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. MULTER. Mr. Speaker, on Saturday, March 11, 1950, the Sidney Hillman Foundation tendered a luncheon to the Honorable Oscar R. Ewing, Federal Security Administrator, at the Commodore Hotel in New York City. The purpose of the luncheon was to present to Mr. Ewing the foundation's annual award for meritorious public service.

The function was presided over by Jacob S. Potofsky, president of the Amalgamated Clothing Workers of America, CIO, who is also president of the foundation. His remarks on that occasion, in presenting the award on behalf of the Foundation to Mr. Ewing, were as follows:

Mr. Ewing, honored guest, ladies and gentlemen, once a year, in my capacity as president of the Sidney Hillman Foundation, it becomes my happy duty to introduce to a distinguished audience and to the American people generally, the recipient of the annual Hillman Award for meritorious public service.

A year ago it was my pleasure and honor to introduce the first recipient of this award, Dr. FRANK P. GRAHAM, the distinguished United States Senator from North Carolina.

The trustees and directors of the Sidney Hillman Foundation believe that we set a high standard, indeed, by naming Senator GRAHAM as the first to receive our award. The man we name today has also lived and worked in the highest and best tradition of human welfare. I am sure that Sidney Hillman, were he alive today, would approve our choice of Oscar R. Ewing—a fighting liberal.

As you know, the Sidney Hillman Foundation was established, among other purposes, to recognize Americans consecrated to the public welfare. Sidney Hillman's whole life was so dedicated, and the founders of the Hillman awards were determined to carry on in his spirit and to recognize those men and women who felt as he felt concerning the plain people of America—workers, farmers—the professions, and others who have contributed to the greatness of our beloved country.

Sidney Hillman was especially interested, during his public life, in creating opportunities for the dispossessed and disinherited. He was concerned about racial discrimination and the denial of minority rights. He fought for an ever-increasing standard of living and for genuine industrial political democracy. He fought for world peace.

Those of us who were privileged to live and work with Sidney Hillman knew his passionate concern that no man, woman, or child be denied his birthright as a human being.

In honoring Oscar Ewing today with the Hillman award, we acknowledge the acts of a great public servant. As Federal Security Administrator, and before, Mr. Ewing has fought for the underdog. Perhaps, even beyond the call of duty, he has fought for civil rights and FEPC.

He has opposed discrimination in all its forms. He has fought for an adequate housing program and Federal aid to education. He has opposed the Taft-Hartley Act. He is a fearless crusader for the common man.

He has made a determined campaign to extend old-age and survivors insurance to millions of persons not now covered. He has fought for increases in social benefits. He is making a fight to aid unfortunate Americans who do not presently qualify for insurance benefits. Most Americans are in debt to this great public servant for his fight in behalf of comprehensive welfare programs, including public assistance and family welfare services to safeguard mothers and children.

But most of all Oscar Ewing has earned the gratitude of millions of Americans because of his stand in support of national health insurance. Though staunchly supported by millions of neglected Americans suffering from inadequate medical care, he has been the object of bitter, unscrupulous

attacks by organized professional and big-business interests. He has been the principal target of their attacks. He has won, in our eyes, the highest accolade when called by his enemies, the American Medical Association, "Mr. Socialized Medicine" himself.

Of course, it is not socialized medicine. It is nothing of the kind. It is national health insurance, paid for, just as social security is paid for. It destroys the curse of charity and would bring to millions of Americans, not now adequately protected, the latest and best medical aid known to science.

It is for these reasons, ladies and gentlemen, that we honor Oscar Ewing today. He is a public servant in the very best and noblest sense. He has set aside considerations of personal gain. He has devoted his heart and his talents to the greatest good of the greatest number. He is the kind of man we are proud to call an American and a true liberal.

And, so, in recognition of your faithful service to the citizenry of our great country, I present you, Oscar, with the Oscar of the Sidney Hillman Foundation, with our sincere good wishes for your continued good health, and for the ultimate victory of your crusade.

I hand you this medal drawn by a great artist, Mr. Rustolo and this citation which reads:

"The Sidney Hillman Foundation has the honor to present its 1950 award for meritorious public service to the Honorable Oscar R. Ewing, Federal Security Administrator. His courageous fight for the Nation's health in the face of powerful opposition; his concern for the widows, the orphans, the sick, the disabled, and the aged; his warm and lively interest in those who toil and make our country great; his enlightened stand on Government's responsibility to its citizens, place Oscar R. Ewing in the forefront of our great public servants and have earned for him the esteem and affection of millions of his countrymen."

From One Great American to Another

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. KLEIN. Mr. Speaker, last Saturday the Sidney Hillman public-service award was presented to a great American and a great Democrat, the Honorable Oscar Ewing, Administrator of the Federal Security Administration.

A popular magazine recently referred to Mr. Ewing as "Mr. Welfare State himself"; but it is no exaggeration to say that without the profound influence of Sidney Hillman, Oscar Ewing might not, in his lifetime, have had the opportunity of wearing that nomination.

It is certainly fair to say that this award came from one great American to another, from one great democrat to another, and here I use the small "d," for both Sidney Hillman and Oscar Ewing have been noted for democratic qualities which transcend party lines.

Mr. Ewing is the second recipient of this award which was created to perpetuate the memory of Sidney Hillman's achievements and contribution to America; it would be hard to imagine a more perfect choice.

It is my pleasure to insert, under leave, Mr. Ewing's address in receiving the award:

ADDRESS BY OSCAR R. EWING, FEDERAL SECURITY ADMINISTRATOR

An award for meritorious public service, presented in the name of a great American, Sidney Hillman, is a very rare and precious honor. I am proud to have been chosen to receive this award, and I accept it with genuine emotion.

Every liberal-minded person in this country has, in one way or another, felt the influence of Sidney Hillman's leadership, his idealism, and his intelligent realism. In making this award to me, you are in a sense touching me with the torch of his intense liberalism. You are handing me, not a diploma for past behavior, but a spur to future action—not a compliment but a challenge.

Sidney Hillman himself put this challenge into words. He died less than 4 years ago, in the summer when the infamous Eightieth Congress was playfully engaged in ripping apart the fabric of American progress. But Hillman was not among the weak-kneed. He had not lost faith in the future of America, or in the wisdom of our people. A few weeks before his death, at the convention of the Amalgamated Clothing Workers of America, he said:

"We want a better America, an America that will give its citizens, first of all, a higher and higher standard of living so that no child will cry for food in the midst of plenty.

"We want an America where the inventions of science will be at the disposal of every American family, not merely for the few who can afford them—where it will be possible for all groups, regardless of race, creed, or color, to live in friendship and be real neighbors—an America that will carry forward its great mission of helping other countries to help themselves, not thinking in terms of exploitation, but of creating plenty for all everywhere."

That was the kind of America that Sidney Hillman wanted. It is the kind of America I want. And the only way to approach this ideal is to fight for what we believe in.

It is the fate of the American liberal to be a scrapper. He cannot sit back and say that things are wonderful, so let's go to sleep. Instead, he is spurred by the desire to change things that are bad so as to make them good; to keep pace with the progress of ideas and science; to move forward. Hillman was a great and patriotic American; that is precisely why he wanted America not to stay just as it was at some distant point in past history but to be a better America. Hillman knew that our standard of living was higher than anywhere in the world, but he also knew that some among us were not enjoying the fruits of that high standard. He knew that we had made giant strides in scientific research and development, but he also saw that many among us could not afford to make use of the great inventions of our time. He was familiar with the magnificent American tradition of liberty and equality, but he could not overlook the fact that this tradition has not always been applied to all our citizens, regardless of their color or their faith or their origin.

Sidney Hillman, as a liberal, could not help but be a scrapper. He fought for something real—for the advancement of the workingman, in his own trade and throughout the country; for the emergence of a mature labor movement that would accept its responsibilities for statesmanship in the pattern of our national life; and for the betterment of all America.

These are reasonable goals. But they demand eternal vigilance if they are to be approached; and every one of us who believes in the expanding future of the free world is engaged in the struggle for their achievement. We are in the front lines of politics—as we were in the past under the leadership of Franklin D. Roosevelt, as we are today under the leadership of Harry S. Truman, as we shall continue to be so long as there is room for improvement in the human condition.

When I accepted the President's invitation to serve as Federal Security Administrator, I knew that I was walking into an exposed salient of the political front line. The Federal Security Agency is the one portion of the executive branch of our Government which deals with people as people—with their health, their education, their social security, their children, their capacity to go into a grocery store or a drug store and feel that what they buy will not harm them. Inevitably, our task is controversial. That is because the well-being of the people is always controversial. I am not afraid of controversy. I like it. It does something to my glands—so long as I am sure I am on the right side of the controversy. My glands have been thriving during the past 2½ years.

There are two kinds of battle lines in America today. One is the line drawn between those who are by inclination and judgment liberals and those who are by inclination and judgment conservatives. It is possible to be a sincere conservative; although as a career it has little to be said for it. Between the honest liberal and the honest conservative there can be worthwhile debate, to the everlasting benefit of the people as a whole. Since 1932, the majority of our people have shown that, when they know the facts, they choose the liberal position.

But they do not always know the facts, because on the second battle line we are confronted, not by facts, but by distortions and half-truths and phoney appeals to emotions. A few weeks ago, the Republicans rallied in Washington, in an attempt to show that they were just plain folks, after all. After great labor, they announced to the country that their issue in 1950 would be "Liberty or Socialism." They would have done better to leave this nonsense in their lunch boxes and to have concentrated on the cold chicken.

What kind of a political slogan is that—"Liberty or Socialism"? Do they mean that only a Republican is dedicated to liberty in America? Do they dare to say that American liberals, who have produced men like Roosevelt and Truman and Hillman, do not know the value of individual liberty, of human dignity, of American freedom?

And as for socialism—at a time when American industry is a hundred times healthier than at any point during the last years of the last Republican administration, these lackwit leaders of reaction presume to raise the scarecrow of socialism.

I do not often give advice to opponents. But, in a spirit of generosity, I urge them to look for something more imaginative, something more positive, something more honest, than so empty a slogan.

Do not misunderstand me. I believe in the clash of ideas. I believe in politics. I think it is a noble profession, and a healthy one. But I believe in the kind of politics that deals in honest ideas. I think we have a right to suspect those who shy away from honest facts and ideas, and resort instead to the strategy of error.

Let me give you an example of what I mean. The American Medical Association is spending $3,000,000 this year to fight the President's plan for national health insurance. The plan itself is a simple one, designed for the sole purpose of removing the financial barrier to adequate medical care in the United States. It would collect a small wage deduction from the earnings of all employed people, which would be matched by an equal contribution from employers—under a system very much like social security. Out of this money would be paid the bills

for medical, hospital, and other care. What it does, in brief, is to make sure that no American would be confronted with bankruptcy if he became seriously ill—because his bills would be paid out of the fund which he himself had helped to create. That is what it does, and that is all it does.

Now, the trade association of the doctors does not like this idea. I am not sure I understand its true reasons for opposing national health insurance, because its expressed reasons make very little sense. I have in my hand an expensively printed little pamphlet, in several colors, which puts the AMA's case. It starts off, "If you value your health—and if you value your liberty—help keep politics out of medicine." Underneath is a full-color reproduction of the well-known painting, The Doctor, by Sir Luke Fildes. It shows a little child lying ill on a bed made from two chairs, in a small and obviously impoverished home. Near the window, the child's mother sits at a table, her head cradled in her arms. Behind stands her husband, with one hand on her shoulder, looking distractedly at his child. Next to the bed sits the doctor. He is leaning forward, with his chin resting on his hand, looking fixedly at his little patient.

When Sir Luke painted this picture, I am certain that he intended to give us the impression of the good family doctor, in the old tradition, whose single concern was to bring the child back to health. But the AMA has put a different interpretation on the painting. In a little box in the upper left-hand corner, like the balloon in the comic strip, the AMA has irserted a slogan—"Keep politics out of this picture." And as a result of the AMA's recent action, most of us are now given the distinct feeling that our good country doctor is not thinking about what he must do to cure his patient, but rather about how he must word his next letter to his Congressman.

In the pamphlet itself I find at least 19 misstatements or misrepresentations. If the doctor in Sir Luke's picture were to practice medicine with the same disregard for painstaking accuracy that the doctor's lobby uses in practicing publicity, the little child would have small chance for survival.

I think it is important, on occasions like this one today to shove to one side the distortions, inaccuracies, lies, and sensationalism, and to return to the bedrock of honest principle. We have no need to be on the defensive. We are proud of our concept of America's destiny.

In our concept, the key to our future lies in the protection and extension of equal opportunity for all our people—opportunity to live, to advance, to think, to achieve. We do not want to hand life on a silver platter to every newborn child in America. Nobody can do that, and it would not be a good thing if it could be done. But we do want to make sure that every person in the United States is given a fair chance: a fair chance at education; a fair chance at health; a fair chance to enjoy his declining years; a fair chance to keep his home together in times of economic distress.

Freedom is meaningless, in our time, unless we can provide this kind of equal opportunity. What you or I may make of these fair chances must depend on ourselves—on our ability, our talent, and our initiative. But what good is ability to the child whose home town is too poor to provide him with adequate schooling? What good is talent if it is smothered by the oppressive burden of paying off debts incurred because of an unexpected serious illness? What good is initiative if it is overwhelmed by fear of an impoverished old age?

These are our new frontiers today. They lie in the human person. This is our new responsibility—to the individual. I believe in the human being. I believe in his infinite capacity to improve, to grow and prosper. I believe that, if he has the equal opportunity to a decent job at a fair wage, to as much education as his ability and his desire may warrant, to adequate medical care when he is sick, to minimum protection against the hazards of old age or economic distress—I believe that if he has these opportunities he will make for himself a greater freedom than has ever before existed. I believe this because I have faith in mankind.

And I will tell you what is wrong with our conservative opponents. The trouble with them is that they do not trust the individual American. They are afraid to provide America with the fruits of the American tradition. They cannot understand that we must use the community machinery which we call government if today we are to guarantee equality of opportunity to all in our complex society. They measure a Federal budget—or a State budget—in terms only of dollars, and they overlook the most important items of all, the items marked humanity and fredom.

Their idea of a better America is that of a left-over America from the last century, before there were corporations and automobiles and atomic piles and any of the vast interconnecting networks of our American economy. They hear the child cry for food, and they say, give him charity—but never, no, never give him the opportunity to enjoy in self-respect the equal opportunity to our country's high standard of living. They wonder at the inventions of science, but they are willing for these inventions to be at the disposal only of the relative few who can afford them. They pay lip service to the concept of American neighborliness and equality, but too often they are ready to team up with the forces that stand for unfair unemployment, discrimination, and segregation.

Why? Because they are afraid. They are afraid of the present, and they are even more afraid of the future.

This is a time when all of us on this planet have good reason to be concerned about the future. We live under the threat of war from an aggressive Communist imperialism. We know that today weapons exist which can annihilate hundreds of thousands in one sudden explosion. We have accepted leadership in a free world where many nations are not yet able to provide their people with the minimum demands of human life anywhere. These are heavy burdens for all of us, and we cannot afford to consider our domestic progress as being separate from them. You and I know that the only protection that makes sense today is what Sidney Hillman stood for.

You and I know—as Sidney Hillman knew—that only those who believe in their fellowmen are equipped to cope with these problems and to fulfill the promise of America. Hillman had unyielding faith in the people of the United States. He lived by that faith, and died by it. You who are gathered here today share that faith. It is my faith as well. And I am proud to accept this award as your challenge to me to help perpetuate the ideals for which a great American lived and died.

Price Supports for Hogs

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. HOEVEN. Mr. Speaker, on February 24, 1950, 18 Members of the House of Representatives addressed a joint letter to Secretary of Agriculture Brannan urging that the support level on hogs after March 31, 1950, be announced at once. Copy of that letter was printed on page 2500 of the CONGRESSIONAL RECORD of February 28, 1950. Under date of March 7, 1950, the Secretary replied to said letter and thereupon 32 Members of the House of Representatives, including those who signed the original letter, dispatched a further communication to Mr. Brannan under date of March 11, 1950. Under leave to extend my remarks, both of these letters are submitted herewith, as follows:

MARCH 7, 1950.

Hon. CHARLES B. HOEVEN,
House of Representatives.

DEAR CONGRESSMAN HOEVEN: This is in reply to the recent public letter to me which was signed by you and 17 other Congressmen, each of whom will receive a copy of this answer. I disagree with you as to there being confusion among hog producers by reason of the fact that we have not announced a support program for hogs after March 31 of this year. I have assured farmers by public statements that price supports will be continued, even though hogs are no longer in the mandatory category.

However, I concur with your view that the announcement as to level of support should be reached at an early date, and you may rest assured that such a decision will be made as soon as circumstances will permit.

In the meantime, if you have any recommendations as to whether there should be hog-price supports for the coming year or portion thereof and the level of support, either in parity terms or in dollars, I would be happy to receive them.

Sincerely yours,

CHARLES F. BRANNAN,
Secretary.

MARCH 11, 1950.

Hon. CHARLES F. BRANNAN,
Secretary of Agriculture,
Department of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: We have at hand your letter of March 7, 1950, in reply to a letter addressed to you on February 24 by 18 Congressmen requesting an early announcement of the support-price level for hogs after termination of the present program on March 31.

Your reply amounted to little more than a proposal that if we "have any recommendations" on the support program you would be happy to receive them.

This attitude on the part of responsible Government officials charged with administering the programs enacted into law by the Congress is becoming increasingly open to question. In your own case, you have repeatedly attempted to pass the buck to Congress on problems which you were appointed by the President of the United States to meet and which the Department of Agriculture is adequately staffed to handle.

The fixing of the support-price level for hogs should not be a matter of guess, hunch, or wishful political thinking. It should be based on information and data gathered from experts in the field with regard to the whole economy.

The Agriculture Department which you head enjoys the following:

A. An appropriation for the current fiscal year of $2,671,000,000.

B. A full-time staff of 59,556 employees and 12,274 part-time employees, or a total of 71,830 people to assist you in arriving at decisions. In addition, there are 137,037 people serving as State and county committeemen either on a per diem basis or at no salary at all, to supply the Department with information. Thus, in all there are 208,867 persons

channeling information into your office on various agricultural problems.

It would appear that you, as Secretary of Agriculture, with a budget of $2,671,000,000, and a staff and field force of 208,867 persons, should be equipped to arrive at decisions on vital agricultural matters promptly, fairly, and without delays that depress the market or otherwise injure agriculture, and without employing the device of pleading helplessness in asking Members of Congress for their recommendations.

Members of Congress are elected to enact laws which members of the executive department, including you as Secretary of Agriculture, are supposed to administer. A member of Congress does well to have an average of three people employed in his office. A member of Congress naturally has many sources of information, but the staff of the entire Congress is no more than a fraction of the staff that you have at your disposal.

Naturally there should be close cooperation between the executive and legislative branches of our Government, but under the policy of passing the buck to Congress which you are following, the line between "cooperation" and "buck-passing" is becoming far too thin in Government today.

You have attempted to dump the potato problem and the grain storage question in the lap of Congress when you have had ample authority under laws enacted by Congress and under appropriations made by Congress to proceed at all times. Therefore, it would appear desirable in the instance of the support price level for hogs, that you move at the earliest possible moment to make an announcement without further effort to shift responsibility which is yours.

Sincerely yours,

CHARLES B. HOEVEN, Eighth District of Iowa; ROY O. WOODRUFF, Michigan; PAUL CUNNINGHAM, Iowa; CARL T. CURTIS, Nebraska; HAROLD O. LOVRE, South Dakota; KARL M. LECOMPTE, Iowa; CLIFF CLEVENGER, Ohio; AUGUST H. ANDRESEN, Minnesota; BEN F. JENSEN, Iowa; HENRY O. TALLE, Iowa; FRANCIS CASE, South Dakota; JAMES I. DOLLIVER, Iowa; H. R. GROSS, Iowa; CHARLES H. ELSTON, Ohio; THOMAS A. JENKINS, Ohio; THOMAS E. MARTIN, Iowa; CLARENCE J. BROWN, Ohio; HAROLD C. HAGEN, Minnesota; JOHN W. BYRNES, Wisconsin; J. HARRY MCGREGOR, Ohio; JESSE P. WOLCOTT, Michigan; ALBERT M. COLE, Kansas; A. L. MILLER, Nebraska; LAWRENCE H. SMITH, Wisconsin; GLENN R. DAVIS, Wisconsin; RICHARD M. NIXON, California; THOMAS H. WERDEL, California; LESLIE C. ARENDS, Illinois; GARDNER R. WITHROW, Wisconsin; JOHN PHILLIPS, California; WILLIAM S. HILL, Colorado; CHARLES W. VURSELL, Illinois.

Peat Resources

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. BARTLETT. Mr. Speaker, last week the Members of the House of Representatives voted to admit Alaska into the Union as a sovereign State of the United States. For this, the citizens of Alaska are most grateful and we all sincerely hope that the other body of this Congress will not hesitate to uphold this vote. It will mean the achievement of a goal that our Delegates have brought before Congress since 1916 and which the people of Alaska have had in their hearts since Alaska became a Territory of the United States.

During the debate on this bill, many of my friends continually emphasized the importance of Alaska's strategic location as our last frontier and most forward outpost in the North Pacific. But military considerations alone do not make Alaska important to the United States. Of equal importance are our vast expanses of valuable undeveloped natural resources. Neither in agriculture nor in industry have we begun to tap the wealth of resources that wait only to be put to productive use.

As Alaska's political institutions have progressed toward statehood under the tutelage of the United States, so the development of its resources under the tutelage of industrial and agricultural research will make it a State economically secure and prosperous.

Its varied climatic conditions, soils, and land forms have accounted for numberless resources, among them large deposits of various types of peat peculiar to the different regions of Alaska. For this reason, I was happy to see that my friend the gentleman from Minnesota, Hon. FRED MARSHALL, has introduced H. R. 7330 to stimulate research and development of peat production and its industrial and agricultural by-products.

Research into the effective and economical production of peat products can mean much to the economic growth of Alaska and to the national security of the United States. Preliminary research has convinced scientists that new products and technological methods can even be of benefit to the fishing and canning industries of Alaska, as well as the establishment of new industries. The development of all of Alaska's resources to their fullest extent will be in the interests of the United States as a whole.

Some research made with Alaska peats by Dr. A. P. Dachnowski-Stokes, Dr. Leopold Pistner, and Dr. Derso Shybekay, registered professional engineers, indicates even in their preliminary surveys that proper utilization of these peat deposits will be a valuable asset to our agriculture and growing commerce. New industries will mean new employment opportunities and an increase of permanent inhabitants in Alaska who will contribute economically, socially, and politically to the growth of their new state.

Only a program of thorough and directed research will show us the number of products that can be derived from our peat. As the members from Minnesota have already pointed out to the House, other countries have outstripped the United States in the utilization of peat and some with remarkable success. Russia, with the world's largest peat resources, has found it not only a source of low-cost fuel but industrial chemicals, building materials, insulations, and fertilizers. And in the United States, it has been used in the production of heat-insulation packing materials and fertilizers.

What other chemicals or uses can be found for the various peat deposits of Alaska, can be determined through further research. Many of the processes which have already undergone laboratory experimentation can be turned into manufacturing practice.

Particularly since I know first-hand the importance of a sound program of developing natural resources in building the economic strength of a Territory or a State, I hope every Member will give serious thought to the proposals made by my colleague in the Committee on Public Lands. I am sure that he will welcome the advice and assistance of all who are concerned with making the best use of every natural resource for the citizens of the United States.

Commercial Natural Gas in Marion County, Ala.

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. ELLIOTT. Mr. Speaker, it is my happy privilege to announce that natural gas, in commercial quantities has been found in Marion County, Ala., in the congressional district which I have the honor to represent here.

This discovery was made by Mr. Harry L. Cullet, on a location which he calls No. 1–A Lewis on the southwest quarter of the southeast quarter of section 23, township 11 south, range 14 west, of Huntsville Meridian. It was what is commonly known as a wildcat venture.

The initial gage of the well showed a flow of 620,000 cubic feet of gas per day, through a 20 by 64 inch choke.

According to press reports, Dr. Walter B. Jones, State geologist of Alabama, has stated that this Marion County gas well is the first high quality commercial gas producing well to be completed in Alabama since 1914.

This new gas well is located within a few miles of the enterprising towns of Hamilton, Guin, and Winfield. It is near United States Highways 43 and 78, and Alabama State Highways 118 and 167.

Mr. Speaker, it is my judgment that this new commercial gas well is the forerunner of widespread exploration, drilling, and development of the gas resources of Marion County. These resources, when developed, will contribute greatly to the industrial development of the county.

This new gas well is a real addition to the resources of Marion County, which already include wonderful climate, a 50-inch annual rainfall, large deposits of coal, fine farming lands, good hard working people, large timber resources, an excellent highway system, commercial clays and chalks, and large groups of far-sighted people, scattered all over the county who are interested in bringing new industry and enterprise to the county. Interest in better housing, more

paved roads, better schools, and rural telephones is high.

The opening of a new gas field in Marion County will help the county to attain the fine objectives that its citizens have set for it.

Abduction of Greek Children

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. GRANT. Mr. Speaker, on March 7 it was my pleasure and honor to attend the eighth national banquet given by the Order of Ahepa here in the city of Washington. This organization is composed of American citizens of Hellenic descent, its purposes being to promote and encourage loyalty to the United States of America, support of its Constitution, obedience to its laws, and reverence for its history and traditions; to instill in every one of its members a due appreciation of the privileges of citizenship and the sacred duties attendant therewith; and to encourage its members to always be profoundly interested and actively participating in the political, civic, social, and commercial fields of human endeavor and always to strive for the betterment of society.

The order has many other worthy objects, but from those quoted above we can see that this great organization serves a most useful and worth-while purpose.

The American citizens of Hellenic descent have proven their good citizenship and have contributed much to the intellectual, social, religious, and business life of this Nation. They have set an example that others might well emulate.

The heart of America goes out to the Greek Nation; that brave nation which made such an heroic stand against the Fascists and Nazis and, since the war, against the Communist guerrillas. In this connection I hope that all of you will read a letter written by Mr. Chris Katechis, president, Greek Orthodox Community of Montgomery, and published in the Mongomery Advertiser, Tuesday, February 28, 1950:

EDITOR, THE ADVERTISER:

As president of the Greek Orthodox Community of Montgomery, Ala., and citizen of the United States of America and Montgomery for 30 years, I am constrained to comment on the subject of the kidnaped children.

Thousands of Greek children have been forcibly abducted from their homes. They are being detained in Yugoslavia, Bulgaria, Rumania, Poland, Hungary, Czechoslovakia, and the Soviet-occupied zone of Germany.

I visited Greece in 1946, and remained there for a period of 6 months. I saw the situation as it then existed and it has not been remedied. I know from first-hand observation the sorrow and anguish which these Greek mothers and fathers have suffered and endured. Some 28,000 children snatched from their homes and held as hostages by the Soviet Government and its satellites, to be trained, so the Communists hope, to be the fifth columnists of tomorrow.

Why haven't these children been returned to their homes? The answer is: Russia will not give her consent for them to be returned.

If heartaches and tears would bring them back they, long ago, could have returned on a river made navigable by the tears of Greek mothers and fathers. However, grief and sorrow, tears and heartaches, loneliness and homesickness, have little appeal to Russia and her communistic satellite countries.

I appeal to my friends in Montgomery, of every race, creed, and color—Greek, Jew, Catholic, and Protestant—everyone in whose breast beats a heart filled with the love of humanity, of justice, of righteousness, of home, country, and family. I appeal to all my friends everywhere who are appalled at so heinous a crime as that which has been perpetrated on the Greek people, many of whom are kinspeople of Greek-Americans, some of whom live in Montgomery, by Russia and her satellite countries in the kidnaping of these Greek children.

I say to you, friends, please join with me in sending a message to the President of the United States of America—the greatest, most wonderful, and most powerful country in the world today—urging him, as President, to call upon the United Nations to insist on the resolutions which requested the prompt repatriation of these children, and to urge the International Red Cross and the League of Red Cross Societies to continue their noble efforts toward implementation of the United Nations resolutions pertaining to the return of these Greek children.

The people of Greece cannot stop these crimes. They are powerless to do so; they are suffering the aftermath of an awful war. They must look to humanity in general and especially to Christian America for help in stopping these heinous acts which are so revolting to humanity. They have been loyal to America in the past and will be in the future. Their cup of appreciation would run over if America and the United Nations would say to the Soviet Union and her satellite countries: "Stop those crimes and return those children and we don't mean maybe."

That is the language even a bully understands.

Wire or write the President about this matter, please.

CHRIS KATECHIS,
President, Greek Orthodox Community of Montgomery.

I am sure that the Members of Congress join with Mr. Katechis in demanding that these children be returned to their homeland. We cannot, as a Christian Nation, further tolerate such atrocities.

Poage Answers Star-Telegram Intimation That REA-Financed Cooperatives Are a Drain on Federal Treasury and Pay No Local Taxes

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. POAGE. Mr. Speaker, on March 1, it was my privilege to speak at the dedication of the Bob Poage steam plant, which has been erected by the Brazos River Electric Transmission Cooperative, Inc., between Temple and Belton in my district. On that occasion, among other things, I said:

I look upon this plant as far more than simply a rather ugly building with some large and strange machinery. I look upon it as far more than just a power plant—more indeed than the source of essential power to light the homes and lighten the work of thousands of men and women throughout central Texas. I look upon it as a concrete emblem of our American way of life. This plant does not represent the Russian idea of state ownership. The Government does not own this plant, nor does it own the great system of transmission lines with which it is connected. The farmers of Texas own those lines and they own this plant. True, they could not have owned them had it not been for the enlightened policy of our Government which seeks to help our people help themselves rather than doing the job itself. The Government provided a source of credit open to power cooperatives and private power companies alike. A source of credit where all who will provide service for rural areas can go and borrow money at the same low interest rates just as banks and railroads can borrow from the RFC.

This has been branded as socialism. I want to believe that those who so brand it are simply uninformed as to our rural electric program. Actually this program is the very antithesis of socialism. This program makes it possible to maintain basic competition in the electric field. I don't mean competition as to who will serve an individual house. I don't mean the kind of competition that involves two sets of wires down every road. I mean basic competition. The kind of competition that makes each producer and distributor know that he must give a satisfactory service at a fair price or see someone else give it. I mean the kind of competition that enables the consumer to always receive the benefits of all technical advancement. I mean the kind of competition that makes monopoly impossible.

The existence of this kind of competition is the distinguishing mark of our American economy. More than any other one thing competition distinguishes our American free enterprise from the foreign type of controlled enterprise where favored instrumentalities, cartels, and outright government monopolies are not only tolerated but even encouraged.

Monopoly inevitably follows the lack of competition. Monopoly characterizes both the communistic and the fascistic systems. Under fascism private interests monopolize industries vital to the welfare of the nation. Under communism the government itself operates similar monopolies. I consider monopoly a dangerous evil in either public or private hands. A generation ago our country approached perilously close to fascism. The great trusts led by the old Standard Oil sought and were fast securing monopolistic control of many of our vital industries. Both our State and our Federal Government acted vigorously. We recognized the truth of and applied the provision of our Texas Constitution which declares that "monopolies are contrary to the genius of a free people and are hereby prohibited."

Our approach in the trust-busting days of Teddy Roosevelt, Woodrow Wilson, and R. V. Davidson was essentially negative. We pretty well broke up the threats of 40 years ago, but we did not always assure service for the people. Today the people of the United States demand service in every line. If private industry does not supply it, and at reasonable prices, there is certain to arise a ground swell of public opinion which few legislators could or would resist, demanding that the Government itself provide the desired facilities. Of course, if the Government does provide the services we are, in fact,

traveling down the same road which our British cousins have followed so far with such disappointing results, and we will, in fact, be headed to the same destruction to which the Russian people traveled some years ago. I want to avoid such a course as I know it can only lead to ruin.

On the other hand, when the private power companies said 15 years ago that they had already served practically all the rural customers who were worthy of service; when the private telephone companies said just a year ago that they were adequately meeting the need of rural people for telephones, in spite of the fact that there were less rural phones in the United States in 1940 than there had been 20 years before; when I see and hear of such situations I realize that the only alternative for public ownership and ultimate socialism is to foster and strengthen competition. The American people will never again submit to private monopoly. I don't want to see them simply exchange the ruthlessness of private monopoly for the inefficiency of public monopoly. I consider public monopoly equally as dangerous as the private variety, but I know it is inevitable unless we can offer our people a way of making free enterprise meet their legitimate needs.

This steam plant is a symbol of the determination of our people to follow the road of free enterprise rather than the road to socialism. This steam plant, together with the hydroelectric plants with which it is connected, and with the transmission lines which connect them all, make it possible for the rural people of central and north Texas to supply their own electric needs regardless of the attitude of the private power companies. They make it possible to do this without creating a monopoly of any kind. I therefore look on this plant as of tremendous significance in shaping the course of our economic policies. I look on it as a bulwark for the protection of both the private power interests against nationalization of their industry, and of the public against exploitation at the hands of monopolisitc private interests.

The effect of competition as a factor has been amply illustrated by the expansion of private power companies into rural areas as soon as a competitive agency came into being. Just as the power companies are today serving nearly 2,000,000 rural homes which they had said were unprofitable, so the private telephone companies are daily extending service to thousands of rural homes, even though the first rural telephone loan was just approved last Friday.

Nor need there be any ill feeling between the older private companies and the more recently organized REA-financed cooperatives. Just last week the Brazos River Electric Transmission Co-op signed a contract with the Texas Power & Light Co. for a mutual interchange of power which I believe will work to the decided advantage of both parties. The cooperative happens to need firm power. That is power that they can use at any time any day in the year. The power company has this kind of power but it needs "peaking power"—that is power for a few minutes or a few hours during the peak of demand each day or season. This type of power is especially valuable to the company because if it has to fire an entire steam unit to provide for its power needs for only a 30-minute peak, that power is tremendously expensive. The water at the Morris Sheppard Dam can be turned on and power is immediately available. By using this power the company saves money. By using power from the company's great steam plants around the clock the transmission cooperative saves money. By using each other's transmission lines both systems save money and in the long run the public benefits. This is the basis of the contract recently signed between the cooperative and the company. I think the officials of both are to be congratulated on putting away any feelings of jealousy and working for their mutual benefit and the benefit of the rural people of this great area. I am encouraged to believe that we are seeing the sunrise of a new and better day in industry relations.

Some days later the Fort Worth Star-Telegram published an editorial referring to my speech as follows:

POWER COMPETITION

Congressman W. R. POAGE, of Waco, was the honor guest and principal speaker the other day at the dedication of a new rural electrification power plant on the Leon River between Temple and Belton.

Mr. POAGE was technically correct when he stated that the new plant belongs to the farmers who own the 19 rural-electrification cooperatives which make up the Brazos River Transmission Electric Cooperative. But it is hardly the private-business enterprise which Mr. POAGE's statement might lead some to think it is.

The transmission cooperative did build the plant, but with money supplied by all the taxpaying citizens of the United States through the United States Treasury and the Rural Electrification Administration.

Mr. POAGE also was technically correct when he said power plants such as this provide the kind of competition which makes monopoly impossible and distinguishes American free enterprise from the foreign type of controlled enterprise. Mr. POAGE failed to mention that Government-financed plants such as this also provide the kind of competition that is rather unfair to privately owned power plants which carry their full share of the local, State and national tax burden.

By coincidence the news item carrying Mr. POAGE's remarks at the dedication of the Leon River plant appeared in some editions of the Star-Telegram adjacent to an item about the Texas Electric Service Co.'s annual report having been filed with the city of Fort Worth and the secretary of state at Austin. Among other things the report showed that during 1949 TESCO's city, county, school district, State, and Federal tax bill totaled $4,218,263.

Plants like the one the Waco Congressman helped dedicate provide the kind of competition that makes it difficult for privately owned companies such as TESCO to continue making such tax payments.

I feel that this editorial shows a lack of understanding as to the taxpaying status of all REA financed cooperatives and a similar lack of understanding of the fact that these cooperatives are neither Government owned, nor Government subsidized. On March 8, I addressed the following letter to the editor of the Star-Telegram:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 8, 1950.

HON. JAMES M. NORTH,
Editor, Fort Worth Star-Telegram,
Fort Worth, Tex.

DEAR MR. NORTH: A friend has just sent me your recent editorial entitled "Power Competition," but inasmuch as the date of the paper was not shown, I cannot refer to the specific issue. In this editorial you stated that I "failed to mention that Government-financed plants such as this (the Brazos River transmission electric cooperative plant near Belton) also provide the kind of competition that is rather unfair to privately owned power plants which carry their full share of the local, State, and national tax burden."

You did not in so many words state that this plant would not pay its full share of local, State, or national taxes, but I think you will agree that that was the plain implication of the article, particularly in view of the fact that you referred to the tax bill of the Texas Electric Service Co.

I have long been at a loss to understand some of the criticism and attacks that have been made on these farmer-owned, REA-financed, cooperatives. I do not intend any offense, but I have been forced to the conclusion that many of our editors throughout the country are not familiar with the fact that these electric cooperatives do pay taxes on exactly the same basis that the private power companies pay. It is, of course, perfectly true that very few of these cooperatives have reached a point where they have any net income because the very reason for their existence is that they are selling their product and rendering their service at as near cost as it is possible to do.

I recognize, therefore, that you will be able to substantiate the intimation that little, if any, Federal income tax is paid, but certainly little, if any, income tax would be paid by a privately owned industry that was operated on the same profit principle. When it comes to State and local taxes, these cooperatives are subject to exactly the same taxes that any private power company pays.

True, the valuations on their property are fixed by the county commissioners of each county. That is also true of the valuations on the profit-making plants. Some counties have doubtless given their own cooperatives an advantage in the matter of valuations just as many counties give local merchants an advantage in valuations as compared with out-of-town firms, but leaving aside the personal equation which is present in the matter of fixing valuations on all property in every county in the State of Texas, these REA-financed, farmer-owned cooperatives pay exactly the same rate on the valuation of their property to the cities, counties, school districts, and the State as do privately owned profit-making concerns of the same type in the same area.

I think that there have been abuses of the cooperative method of doing business. I think some people have used it to escape proper taxation, but I am afraid that these "shot-gun" attacks on all cooperatives with the intimation that these farmer-owned organizations are escaping local taxes that are being paid by stock companies can only result in extending unwarranted protection to those who have abused the cooperative system. My plea to you, therefore, is the same as I have made to business organizations and to cooperative associations; that we try to determine just where the cooperative form of organization is being abused and to correct the abuses, but at the same time that we carefully avoid any blanket condemnation that might stigmatize the cooperatives that were not guilty of any abuse or special privilege.

Another misunderstanding of equal importance arises from your statement that "The Transmission Cooperative did build the plant but with money supplied by all the tax-paying citizens of the United States through the United States Treasury and the Rural Electrification Administration." Nowhere did you suggest that this money was made available in the form of a loan and that these loans are being repaid with interest and that the record of repayment is far better than any bank in Fort Worth can cite over a comparable period.

Actually, as of December 31, 1949, REA had loaned $1,999,279,707. Of this, $203,346,158.58 had become due and payable. Only $88,872.94 or about two-fifths of 1 percent was delinquent as much as 30 days; $20,714,203.49 of principal and interest, or about 10 percent, had been paid in advance of maturity.

I submit that with such a record of repayments, it is hardly fair to give your readers the impression that the United States Government is footing the bill for the construction of the power plant on the Leon River or for any other farmer-owned cooperative in the United States.

You suggested that this plant helps provide the competition that makes it difficult for privately owned companies. Undoubtedly such plants have made it difficult for privately owned companies to maintain their previously established rate schedule. In fact, when the first steps were taken to organize the Brazos River Transmission Electric Cooperative, Inc., the rural wholesale rate to all the electric cooperatives in north and central Texas was 15 mills. Today it is slightly more than one-third of that amount. Of course, no comparable reduction in rates has occurred in Fort Worth or any other city in this area because the competition that these rural plants and distributing systems have provided is effective in rural areas only.

On the other hand, there were 12,000 rural homes electrified in Texas at the time the Bartlett Rural Electric Cooperative was energized 15 years ago whereas today there are approximately 301,746 rural homes enjoying this service. Most of the power used for these homes is sold either directly or through a local distributing cooperative by the privately owned power companies of Texas. These cooperatives that you condemn as destructive of the privately owned corporations have developed a tremendous market for these very companies.

I think that this record completely justified my statement that these REA-financed cooperatives have provided competition which has been helpful not only to the rural people of Texas, but to the privately owned power companies themselves.

Yours sincerely,

W. R. POAGE,
Congressman, Eleventh Texas District.

A Lesson From Chickens

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an article by my good friend, Robert L. Kincaid, president of Lincoln Memorial University, Harrogate, Tenn., appearing in the October 1949 issue of the Lincoln Herald, a publication issued by that fine institution.

This article can be read with profit. It contains a lesson to us of this day and generation when the Government attempts to provide for people who come to believe that Government owes them a living—people who believe that they can get something for nothing.

In this editorial, chickens provide us with a healthy example of the fallacy of indolence. I commend it to the reading of every Member of the House.

CHICKENS THAT SCRATCH

(By Robert L. Kincaid)

Not long ago I was talking with a farm woman about her chickens. She said she was getting about 24 dozen eggs a week from her hens. At 55 cents a dozen, that made a tidy little income without too much outlay of cash for feed. I asked her if she used an incubator to hatch her young chickens, of if she bought them from hatcheries. "Neither," she replied emphatically. She said that chickens raised in brooders were lazy and shiftless, and would wait around all day to be fed.

"But when a hen raises a brood of chickens, she takes them out each morning and teaches them to shift for themselves. She weans them in about 6 weeks, and then they are on their own. You ought to see how these young chickens shift for themselves. After I feed them in the morning they scatter in all directions. They hustle out to the fields and the little patches of woods about the place, and are busy all day long, scratching and rustling. When I call them in the late afternoon they come running. The young pullets grow up into fine healthy hens and make good layers. No, I would not have any of these incubator chicks. They are too lazy and depend too much upon me for their feed."

I came away from my visit with my farm friend deeply impressed. She had learned a valuable lesson. Life can be made too easy even for a chicken.

We hear much these days about the welfare state in which every citizen is guaranteed security from the cradle to the grave. We in America are being lured by such promises of a life of ease and prosperity, regardless of our own efforts. Many of our political leaders seem to think all we need to do to achieve such a Utopia is to set up bureaus in Washington and to dip into the Federal Treasury to equalize benefits for all. It is a laudable goal, but the great danger is that in creating such a welfare state we will destroy the initiative and self-reliance so vitally necessary to a strong nation.

Wealth is created by production. Production comes only from hard work. Every citizen should give an honest day's labor for an honest day's reward. True security can come only to those who work for it and exercise thrift. Too much dependence upon a benevolent government will destroy the very thing which makes us strong. What our country needs is less promise of absolute security without work and more of an overwhelming resurgence of the spirit of self-reliance and personal effort. Only those willing and able who "scratch for a living" can be assured of a decent, comfortable security and the blessings of a happy and contented life.

Our young people have grown up in this universal atmosphere of more favors for less work. Our colleges and universities face a grave problem in training leaders for the next generation. We must reverse the trend, and teach them the dignity of honest labor, and quicken within them the ambition to become producers rather than dependents. That is the primary objective of Lincoln Memorial University.

S. 1411 and H. R. 3942

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. BIEMILLER. Mr. Speaker, the Wichita Pediatric Society, of Wichita, Kans., is the source of a number of errors of fact with respect to past and projected Government maternal- and infant-care programs. They can be found in a widely circulated appeal for letters to Congress against S. 1411 and H. R. 3942.

I want to take this occasion to correct the errors in this paragraph from that appeal:

A similar measure called emergency maternal infant care that was enacted as a war-emergency measure for the care of the younger children of servicemen only, cost the taxpayers of this country approximately $175,000,000 in the year 1945 alone. Of this sum approximately 60 percent went for administrative purposes only. How does this compare with a business anywhere?

First. The program was not for the children exclusively. Under the program a total of 1,223,000 wives as well as 231,000 sick infants were cared for. They were the wives and children of servicemen in the four lower-pay grades and aviation cadets.

Second. The total cost of the program to taxpayers was $127,000,000, not for 1945 alone, but for the entire period of the program, in effect from April 1943 to June 1949.

Third. The cost for 1945, the year in which the circular claims $175,000,000 was spent, was only $46,000,000. That was the program's peak year. Over-all, the average cost of maternity cases was $92 and sick-infant cases $64.

Fourth. The administrative expenses amounted to 2.3 percent of total expenditures rather than 60 percent. The remaining 97.7 percent was paid by State health departments to hospitals, physicians, and other professionals rendering services to servicemen's wives and infants.

How, I might ask, do these figures compare with business anywhere—if business is what interests you when the health of women and children is involved.

On that subject, I might point out that in 1942, before the EMIC program was in effect, the maternal mortality rate among the group treated was 25.9 per 10,000 live births. By 1948 this had been reduced to 11.7. The infant mortality rate in 1942 was 41.2 per 1,000 live births. By 1948 this had been reduced to 32. Figures are not available for 1949.

All these figures are authentic, compiled by the American Parents Committee, a nonprofit, public-service association. They may be checked in the Children's Bureau of the Federal Security Agency by anyone with the time and interest to do so.

This may seem an isolated example of a bona fide medical group acting on misinformation without checking its sources. Actually, it is just one flagrant incident in a whole series. The advertising hatchet men of the American Medical Association have discarded the fact and logic as weapons belonging to the advocates of better health programs. Bald misstatements of this kind are getting more frequent by the day. This is by way of putting Congressmen on their guard against them.

This happened to be contained in an assault on the school-health program. The others may touch on aid to medical education or research bills or even the social security bill now that the AMA has expressed its opposition to portions of that legislation.

I serve notice that these errors will be brought to the attention of the House whenever and wherever they may be discovered.

S. 1008 Analyzed by Hon. Robert Elliott Freer, Former Chairman of the Federal Trade Commission—This Impartial Analysis Worthy of the Attention of Every Member of Congress

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. PATMAN. Mr. Speaker, the Honorable Robert Elliott Freer, of Ohio, former Chairman and Republican member of the Federal Trade Commission, has made a very fine analysis of S. 1008, as it will come before the House on Tuesday, March 14. A careful reading of this analysis by my colleagues should resolve any doubts they may have as to the deleterious effects S. 1008 will have on our antitrust laws should it be enacted. Mr. Freer's statement, made at the request of the president of the National Congress of Petroleum Retailers, has, I understand, been mailed to each Member of the House. I trust it will be given careful consideration.. The statement in full follows:

WASHINGTON, D. C., *March 8, 1950.*

Re second conference committee report on S. 1008.

Mr. RANKIN P. PECK,
President, National Congress of Petroleum Retailers, Detroit, Mich.

DEAR MR. PECK: In response to your request, the following brief analysis is submitted of the provisions and probable effects of S. 1008 in the form in which the second conference committee will report it,[1] as indicated by an announcement[2] of the conferees' agreement published in the Daily Digest of the CONGRESSIONAL RECORD of March 2, 1950:

SECTION 1

Intended apparently to be a legislative declaration of that which the Federal Trade Commission states the present law to be, section 1 would amend section 5 of the Federal Trade Commission Act so as to legislatively declare the right of sellers to absorb freight in the absence of conspiracy or collusive agreement. The question is whether such legislative declaration is necessary. No decision of the Commission challenges that right, nor can freight absorption, competitively employed, logically be challenged as an unfair method of competition under section 5 of the Federal Trade Commission Act. In denying a motion to modify count II of the order in the Rigid Steel Conduit case (D. 4452), the Commission, on July 12, 1949, specifically stated that that order did not prohibit independent as distinguished from collusive use of freight absorption.

While sections 2, 3 and 4 of S. 1008 would amend the Clayton (Robinson-Patman) Act, their inclusion in S. 1008, along with section 1 which would amend the FTC Act, might tend to add to rather than to dissipate any confusion existing as to the status of freight absorption under the latter act.

Additional construction of the new law by FTC and the Court's would be required before the Commission could speak with the assurance it did in its previous statements, as to the legality of individual use of freight absorption under the FTC Act and the illegality thereunder of industry-wide employment of freight absorption (or other geographic system) as a means of matching delivered prices to all customers at any given destination.

SECTION 2

Section 2A would exempt from possible challenge under the Clayton Act the limited-zone method of delivered pricing as well as the one-zone or so-called postage-stamp method.

Dicta in the late Chief Justice Stone's opinion in the *Staley case* (324 U. S. at p. 751) indicates that the postage-stamp method may be exempt without necessity of this amendment.

The test applied by FTC under the Robinson-Patman Act to geographic pricing is injury to competition. In the *Cement case* (333 U. S. 683) it was destruction of competition between sellers; in the *Staley case* (324 U. S. 746) the injury was to those buyers paying phantom freight charges. Section 2B would exempt from challenge under the Clayton Act, freight absorption employed to meet the equally low price of a competitor. What has been said about section 1 and section 2A is applicable here also. If freight absorption is neither collusively employed as a device for eliminating price competition among sellers, nor systematically used to the injury of mill-side purchasers in competition with their more distant competitors, it is not subject to challenge under the Robinson-Patman Act.

SECTION 3

Section 3 apparently would legislatively reverse not only the decision of the United States court of appeals in the *Standard Oil of Indiana case* (173 Fed. (2d) 210), but also the considered judgment of the Seventy-fourth Congress regarding the effect of meeting competition in good faith as a defense to a charge of discrimination injuring competition. In the Standard Oil case, if Standard had only reduced its price in good faith to meet the equally low price of another major oil company the result would have been competition. Standard, however, gave unjustified quantity discounts to four customers and not to several hundred other competing customers. The defense was that other oil companies either had offered to meet or would have met the demands of these four favored customers for a jobber classification and a lower price. The good faith of such a meeting of a lower price might have been a defense, despite the resulting injurious discrimination, under the good-faith proviso of old section 2 of the Clayton Act prior to the 1936 Robinson-Patman amendments; Congress, however, deliberately changed that proviso's status to a procedural status by the Robinson-Patman Act.

Section 2B did not provide that such good-faith lower price would justify an injurious discrimination only that it might serve to rebut the prima facie case made by a mere showing of price differences. Section 3, despite the Carroll amendment, not only might restore this defect in enforcement of the old section 2, but also might add even more difficulties of enforcement than existed in the administration of old section 2. For example, predatory price cutting, a tool of monopoly rather than that of healthy competition, is presently hard to reach because it is defended as a defensive meeting of local competition; under section 3, it might become almost impossible.

SECTION 4

Sections 4A, B, and C provide definitions of some but not all of the new terms employed in sections 1, 2, and 3, and are of importance in appraising the changes wrought in the law by use, in those sections, of the terms which are here defined.

Section 4D provides a definition meriting somewhat greater consideration since it would reverse the United States Supreme Court's decision in the *Morton Salt case* (334 U. S. 37) which interpreted the phrase "effect may be" in the act as meaning "a reasonable possibility." Section 4D's definition is that this phrase shall mean "reasonable probability" of the specified effect.

In practice, the FTC has neither employed the "reasonable possibility" interpretation nor indicated any disposition to do so. Adoption of section 4D, therefore, appears to be a matter of legislative discretion, depending on whether Congress deems it necessary to take positive steps to prevent "possible" rather than "probable" FTC implementation of this Supreme Court interpretation of the term "effect may be."

To fully appraise the changes in substantive law which S. 1008 would produce there is submitted the following brief recitation of the decisions which led to its introduction:

GEOGRAPHICAL PRICING

Uniform delivered pricing systems: In any industry where transportation charges are of real importance, some systematic method of equalizing transportation costs must be employed in determining the laid-down cost of the product to the customer so as to enable each seller to be able to match exactly his delivered-price quotation to a distant customer with those of all his competitors. The key to this geographic-price-matching problem under the FTC Act is collusion. Various systems found to have been collusively used are: (1) Single basing point, involving both phantom-freight and systematic-freight absorption, for example, the *U. S. Steel* (Pittsburgh plus) (U. S. Court of Appeals (3d) Oct. 5, 1948 and *Rigid Steel Conduit* (168 Fed. (2d) 175) cases; (2) multiple-basing point, likewise involving both phantom-freight and systematic-freight absorption, for example, *The Cement Case* (33 U. S. 683); (3) freight equalization, involving systematic-freight absorption and similar to the multiple-basing point except that technically no phantom freight is involved, since every mill is a base, for example, *Milk and Ice Cream Can* (152 Fed. (2d) 478) and *Bond Crown & Cork Cases* (176 Fed. (2d) 974); (4) zone pricing, another variation of the multiple-basing point used to obviate any natural advantage of location from price determination, for example, *Fort Howard Paper* (156 Fed. (2d) 899) (crepe paper) case.

In all of these cases the evidence before FTC has been held by the courts to have established collusion in the maintenance of such geographic-pricing systems contrary to section 5 of the FTC Act. None of the cases forbids individual or competitive employment of freight absorption. It is the fixing of prices by collusion which is held to be

---

[1] A comprehensive analysis of S. 1008 as reported by the first conference committee (and still applicable except as to sec. 4D) is found at pp. 609–615 of the CONGRESSIONAL RECORD of January 19, 1950.

[2] The announcement reads as follows:

"PRICING PRACTICES

"In late session yesterday the conferees on S. 1008 to define application of Federal Trade Commission Act and Clayton Act to certain pricing practices, legalizing the basing-point system in the absence of conspiracy to lessen competition, agreed to file a second conference report on the differences between the House- and Senate-passed versions of the bill, the first conference report having been recommitted by the Senate on January 20, 1950. The second conference report, as approved by conferees last night, reaffirms the action of the first conference committee except in the case of House amendment No. 4, an amendment to section 4 (*d*) of the bill, to which the Senate conferees receded, accepting the House amendment. The report is not expected to come up in the House until after March 13, with the House acting on the report first."

per se illegal, not the means (system) employed in the particular case, despite intimations in some of the cases that those particular systems were so complex as to warrant a doubt that they could have been employed at all in the absence of the established collusion among the sellers.

The Robinson-Patman Act has sometimes been used by FTC along with section 5 of the FTC Act in basing-point cases. Geographic pricing under the various basing-point systems generally means that customers in different localities are charged different prices which are systematically related to the distance from the controlling base but which bear no relation to the distance from the seller's mill. If these price differences are not shown to injure competition, they do not violate the Robinson-Patman Act. If they do injure competition they are illegal unless justified by the seller. And here it is that the perverse relationship which his price differences bear to his freight costs militates against the seller's successfully claiming that these price differences are not illegal discriminations because justified by differences in cost of delivery (one of the statutory justifications).

PRICE DISCRIMINATION

Just as collusion is the key to the problem under the FTC Act, injury to competition is the key to the price discrimination problem under the Robinson-Patman Act.

Section 2a of the Robinson-Patman amendment to the Clayton Act provides, in pertinent part, "That it shall be unlawful for any person * * * to discriminate in price between purchasers of commodities of like grade and quality * * * where the effect of such discrimination may be to substantially lessen competition * * *", excepting, however, by its proviso, "* * * differentials which make only due allowance for differences in the cost of manufacture, sale or delivery." This condemns price differences not justified by cost differences where the effect is to suppress competition among sellers or to injure competition among competing customers of the discriminating seller. Section 2b recites that a prima facie case is made by the mere showing of a "discrimination in price," but, in its proviso, states that a seller may rebut such a prima facie case "by showing that his lower price * * * was made in good faith to meet an equally low price of a competitor. * * *" In several cases, the Commission has found against this defense on the facts. In the Cement case, for example, collusion to avoid competition negatived the good faith of the multiple basing point system of matched prices as a meeting of competition (333 U. S. 683). In the Staley case, the matching of single basing point prices also failed to meet the good faith test (324 U. S. 746, 757). In Standard Oil of Indiana, however, the proof of injury to several hundred retailers of Standard's Red Crown gasoline resulting from Standard's subsidized discrimination practiced through its four so-called wholesalers (all of whom sold Standard's Red Crown gasoline at retail in competition, not with Standard, but with Standard's several hundred other retailers), was considered to counterbalance Standard's defense of good faith meeting competition of other sellers. Section 2b being held to be merely procedural, and not to provide a substantive defense, served only to offset the Commission's prima facie case; and since it did not outweigh the proof of injury to competition, no finding of either good faith or lack of it was found necessary in the case.

As stated by Representative Utterback, "a discrimination is more than a mere difference * * * some relationship * * * between the parties to the discrimination * * * entitles them to equal treatment * * *." The FTC, therefore, proceeds against a sellers' difference in price as an illegal discrimination only where its investigation indicates competition between his buyers or their customers and a "reasonable possibility" of injury thereto, or where, as in count II in the Cement case, it finds the discrimination to be of collusive origin and to result in injury to competition among sellers. Under FTC policy as a practical matter there must be more than a "reasonable possibility" of injury to some level of competition before the Commission will take action.

CONCLUSION

Instead of clarifying the law, enactment of S. 1008 may have the opposite effect. Price fixing is seldom accomplished by formal agreement signed and sealed in the blood. The agreement usually is shown to have existed by reasonable inferences drawn from all the surrounding facts and circumstances, rather than by the introduction in evidence of a written agreement to fix prices. The nub of the controversy over the recent court decisions appears to be whether FTC and the Federal courts should continue to be able to draw a reasonable inference of the collusive agreement to fix prices from the other facts established by direct evidence, such as, for example, the collective efforts of the industry to maintain its price structure. In the Cement case these were summarized by the Supreme Court at page 710 of its opinion, to include "* * * boycotts; discharge of uncooperative employees; organized opposition to * * * new cement plants; selling cement in a recalcitrant price cutter's sales territory at a price so low that the recalcitrant was forced to adhere to the established basing-point prices; discouraging the shipment of cement by truck or barge; and preparing and distributing freight-rate books which provided respondents with similar figures to use as actual or phantom freight factors, thus guaranteeing that their delivered prices (base prices plus freight factors) would be identical on all sales whether made to individual purchasers under open bids or to governmental agencies under sealed bids. * * *"

The Federal Trade Commission has not issued orders against anyone solely or even primarily on the basis of his individually quoting or selling at a price identical to or matched with that of a competitor. In cases where orders have issued they ran against matched prices maintained by collusion and generally were based on some direct evidence of the collusion as well as upon reasonable inferences drawn from the collective efforts of the industry members to effectuate certain programs such as those cited by the Supreme Court in the Cement case.

Whatever the feeling of businessmen generally may be as to whether collusion may continue to be inferred from direct evidence of such collective activities, a part of the business community do not urge S. 1008 on that ground, but on the ground that its enactment would legalize the kind of basing-point selling found illegal as collusive price fixing and in which the injuriously discriminatory geographic prices had the effect of suppressing price competition among sellers.

No case holds freight absorption illegal under the FTC Act in the absence of collusion. Nor can any hold it illegal under the Robinson-Patman Act in the absence of a showing of unjustified injury to competition. Section 1 of S. 1008, in legislatively declaring the legality of freight absorption, attempts to safeguard against a return of the Cement case type of freight absorption maintained by conspiracy.

As pointed out earlier, the results of litigation to test the adequacy or inadequacy of the section 1 safeguard would have to be predicted to appraise the real effectiveness of this effort to safeguard the public against a return of collusive geographic pricing. Delay and uncertainty in the interim, which is predictable, would handicap FTC in enforcement of its orders against continued use of geographic pricing involving freight absorption, previously found to have been maintained by collusion contrary to section 5 and/or to have resulted in unjustified discriminations destructive of competition contrary to the Robinson-Patman Act.

S. 1008 would legislatively reverse not only several decisions of the United States Supreme Court and other Federal courts, but also, insofar as its amendment of section 2B—"good faith"—proviso of the Robinson-Patman Act is concerned, the considered judgment and deliberate action of the Seventy-fourth Congress, taken after full hearings in both Houses, held following submission to the Congress of FTC's chain-store investigation (S. Doc. No. 4, 74th Cong., 1st sess.), showing the destructive effect on competition of price discrimination in favor of large buyers. Such a legislative reversal should be based on a showing of real need for the change rather than the showing of confusion regarding what new pricing methods may legally be substituted for those collusive and injurious geographic systems held illegal in the cases evoking the bill.

Very truly yours,

ROBERT ELLIOTT FREER.

Uncle Sam Refuses To Protect His People Overseas

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, when the conduct of our foreign affairs is so weak and inept that our citizens abroad remain unprotected against detention by the Communists it is time that Secretary Acheson resign his position. This is an act long overdue.

As part of my remarks, I am including an article by United Press which should compel every loyal citizen to hang his head in acknowledgment of a great wrong being committed against fellow citizens abroad. It will take more than feeble whisperings on the part of Mr. Acheson to correct this deplorable situation.

REDS DETAIN UNITED STATES CITIZENS IN CHINA—BUSINESSMEN VIRTUAL HOSTAGES

Chinese Communists are detaining a group of American businessmen as virtual hostages, it was reported today.

The Americans are safe in Shanghai but cannot leave because the Communists will not issue exit visas.

Authoritative sources here said the Communists were detaining the Americans to make sure that American-owned enterprises in China would continue to function.

Americans refused permission to leave were said to include responsible officers of the Shanghai Power Co., the Shanghai Telephone Co., Standard-Vacuum Oil Co., Caltex Oil Co., the Chase National Bank, and the National City Bank of New York.

On previous occasions, China's Communists have detained Americans until they completed payment of dismissal pay to Chinese employees. Under Chinese law, dismissal pay ranges up to 3 months' salary.

Authorities here believed the problem this time was more serious.

The Communists, it was said, want to make sure the American-owned utilities and basic business enterprises keep operating, at least until trained henchmen of the Communists can take over.

ONE THOUSAND THREE HUNDRED WANT OUT

About 300 Americans now in Shanghai are trying to leave the Communist-occupied city. Another 1,000 foreigners also asked United States officials to try to arrange transportation for them from Red-held areas.

United States Consul General W. P. McConoughy, Montevalla, Ala., is trying to help all the foreigners he can. But he was described as far from optimistic about getting exit visas for the American businessmen.

The American President Lines, through an arrangement with the State Department, plans to send three or four LST's into Shanghai to evacuate foreigners. Bigger ships cannot be used because Nationalists have mined the major water approaches to Shanghai.

ACHESON PROTESTS

The Nationalists' attempts to blockade Communist-held China have brought United States-Nationalist relations to a dangerous low.

Secretary of State Dean Acheson disclosed yesterday he once again has protested Nationalist attacks on blockade-running American freighters and has received no reply.

Salary and Privileges of the President

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. WOODRUFF. Mr. Speaker, a survey into the resources and the privileges of President Truman discloses that in addition to being one of the best, if not the best paid man in the world today, he also enjoys services undreamed of by his predecessors.

After taxes of $40,000 are paid on his original $100,000 salary, the President then receives $50,000 which is tax-free. How many other men today have a take-home pay of $110,000 a year?

The President has 42 facilities at his disposal for traveling, vacationing, and entertaining. These include his planes, the *Independence* and the *Sacred Cow*, the yacht *Williamsburg*, naval escort destroyers, a private pullman car, 35 White House automobiles, the Blair House, his vacation house at Key West, Fla., and Shangri-La, the woodland retreat in the Catoctin Mountains of Maryland.

It is estimated that it takes 665 persons to operate these facilities, either full or part time. These include ship crews, plane crews, maintenance forces, pullman staff, Shangri-La staff, White House servants, secret service, police, and auto drivers.

It is also estimated that the salaries of these 665 persons come to $1,491,540 a year. The original cost of the President's facilities—yacht, planes, private car, automobiles, and so forth—is placed at $30,433,000.

The White House travel bill for 1949 was $33,896, and $40,000 has been appropriated for 1950. Airplane travel cost is not included in this bill. It is charged to the Air Force, which maintains the planes.

The yacht *Williamsburg* has a crew of 100 men paid by the Navy. The yacht is also maintained by the Navy. It is estimated that if the *Williamsburg* was owned by a private citizen, it would take $225,000 a year to operate it. The crew costs alone are $190,000 annually.

The President's personal plane, the *Independence*, was built in 1947 at a cost of $1,133,000. It is a de luxe DC–6. It is operated by the Air Force and all its costs are assumed by the Air Force. The *Independence* has a crew of 8, drawing more than $3,000 a month in salaries and allowances. Four enlisted men draw $75 to $165 a month, plus allowances to keep the plane under a 24-hour guard. It is one of a few planes cared for by a maintenance crew of 56 men. Every hour in the air requires 3 man-hours of maintenance. Total crew costs are about $120,000 a year.

The President's other plane, the *Sacred Cow*, is a C–54, and has all the conveniences of the newer *Independence*—kitchen, refrigerator, sleeping quarters, and a built-in elevator. On long flights over water a crew of 8 is required, a crew of 4 for land flights.

Construction cost of the President's private railroad car is placed between $250,000 and $350,000. It is equipped with radio, telephone, private bedrooms, kitchen, dining room, and shower. A steward and two mess boys from the *Williamsburg* man the dining room and provide other services.

There is another White House railroad car which is attached to the Pullman on Presidential train trips. This is a specially built radio car, equipped by the Signal Corps with all the latest communication facilities.

When the President cruises in the *Williamsburg*, a Navy destroyer accompanies the White House yacht. The Navy says the average destroyer costs $876,000 a year to operate and has a crew of 10 officers and 247 men.

Twenty-five secret-service men protect the President. Their salary is $109,200 a year. In addition there is a special force of 107 White House police at a cost of $350,000 annually.

At Key West, the President occupies what once was the residence of the admiral in charge of the wartime facilities at that post. The *Williamsburg* is also used to house White House guests and personnel when the President is in Florida.

Shangri-La, the Maryland retreat, is a hide-out 70 miles from Washington and is guarded, when the President is in residence, by the Marines, 4 officers and 57 men who are on call for duty there. Shangri-La is maintained and administered by the White House.

When the President visits Shangri-La, cooks, waiters, and mess boys from the *Williamsburg* provide the servant staff.

At the White House itself there are 61 employees costing $150,000 a year. These include 6 engineers, 6 carpenters, a painter, 4 electricians, 8 gardeners, 3 plumbers, 3 laborers, a storekeeper, messengers, a housekeeper, 5 butlers, 7 cooks, 4 doormen, 7 housemen, and 4 maids.

The White House is getting a fleet of 10 new cars, including the specially built limousine, which can be entered while wearing a top hat, and which has gold plated doorhandles, vanities, and perfume cases.

In addition to the 10-car luxury fleet, there are between 20 and 25 other White House cars with 30 chauffers to drive them. Drivers salaries run to $90,000 annually.

Mr. Speaker, on top of all this, President Truman has the biggest and best paid staff of any Chief Executive. Mr. Truman's staff consists of about 225 persons and the White House salary list is $998,254 a year.

By comparison, President Roosevelt, in 1945, had a staff of 53, costing $256,431, and President Hoover's staff totaled 37 at a salary bill of $127,200.

The President has three top secretaries, a special counsel, five administrative assistants, and three high-ranking armed service aides, and a personal physician, an Army general.

The secretaries to the Presidents once walked to work, but they now arrive in White House cars. And their role and function has changed over the years. Originally occupied with clerical duties they now have turned to policy making.

A private citizen, to match the standard of living now enjoyed by the President, would need an income of between $3,000,000 and $3,500,000 a year.

Mr. Speaker, everyone should agree that economy in every walk of life is a most admirable thing. In these days of wild-eyed and reckless public spending for almost every conceivable thing, good or bad, it is my opinion that those in high office should be the first to set an example for the people throughout the country. The above facts disclose beyond peradventure that economy has become a lost art in the highest office of the land.

Labor Leaders and Politicians Pay Lip Service to FEPC

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the Negro Labor News of February 25, 1950, of Houston, Tex., calls the turn on the racketeers who have been exploiting the Negro vote in this country. I am including this front page editorial by Mr. C. W. Rice at this point in the RECORD.

AS I SEE IT—LIP SERVICE TO FEPC—LABOR LEADERS AND POLITICIANS GIVING LIP SERVICE TO FEPC TO HOLD NEGRO MEMBERS AND GET THEIR VOTES

(By C. W. Rice)

As I see it, one of the most notorious deceptions ever worked on the Negro race since the carpet-bagger era, when the northern politicians promised every Negro exslave 40 acres of land and a mule, is being pulled now

by politicians and union-labor leaders who make the Negro believe they want and are working to get the fair employment practice law enacted.

Any student of organized labor can readily see that it will be paradoxical for labor unions to go all out for a law that would transfer the hiring hall from the labor unions to government control in Washington.

For the past 18 years, labor unions have fought to control the government rather than to have the government control them. They dictated to the government and private industries as to whom to hire and fire during the dark and dismal days of the World War. During this time, we had every type of a strike to force labor's demand—the sit-down strike, the lay-down strike, strike to make employers collect dues, the strike over what tools to use, and even a strike over whether a worker should drink milk out of a glass or bottle, and yet, there was not a single strike to my knowledge called by labor unions to force the employment of Negroes where they were not employed.

The unions did not call a strike to force any industries to up-grade Negro workers. There is, however, a record of labor unions in Houston taking a strike vote which resulted in a vote of 8–2 to call a strike if the company would comply to a wartime FEPC directive order to upgrade Negroes from ditch diggers and other common laborers to truck drivers.

As I see it, Negro leaders who are leading the fight for the passage of an FEPC and at the same time, campaigning for the repeal of the Taft-Hartley law, are either uninformed or playing politics at the expense of the Negro working classes.
